1970 Census Summary Tape User Memorandum No. 35E

SUBJECT: Release of Summary Tapes and Printed Reports

This memorandum supersedes earlier issues of the No. 35 series. In addition to presenting the number of tape reels for each available State by summary tape count, as previous No. 35 memos have done, this memorandum reports on the availability and price of 1970 census reports in the report series which are now being published.

Readers interested in the reports should first note the chart on page 2, which indicates the report series now entirely in print and those which are still in process of publication. The report series still in process receive further treatment in attached tables. The tables present a price for each report in these series which is available for purchase.

Reports may be ordered from either of two sources: (1) Department of Commerce field offices -- addresses given on page 3; or (2) the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402. It is best to use order forms. However, if you have not received the appropriate order form and a report you are interested in is ready, a written request will be satisfactory. Be sure to specify the GPO catalog number, report series, report number, and State or other area (e.g., C3.223/6:970, PC(1)-B, No. 12, Georgia; or C3.224/5:970, HC(3), No. 31, Denver, Colorado). Checks should be made payable to: Superintendent of Documents.

Orders for summary tapes should be placed with the User Services Staff, Bureau of the Census, Washington, D.C. 20233. Tape reels cost $60 each, and checks should be made payable to: Census - Commerce. When ordering, please specify which of the following kinds of tapes is preferred:

7-channel -- 556 CPI BCD
7-channel -- 800 CPI BCD
9-channel -- 800 CPI EBCDIC
9-channel -- 800 CPI ASCII

If you desire additional information about the tapes, you may consult the 1970 Census Users' Guide or the CT series of the Data Access Descriptions. Also, detailed order forms are available from the User Services Staff.

Selected 1970 Census Final Reports

The following report series are either available in their entirity ("complete") or have one or more reports in print ("partial"). See attached tables for more information on the partially released series.

Series	Title	Release Status
PC(1)-A	Number of Inhabitants	Complete
PC(1)-B	General Population Characteristics	Partial
PC(1)-C	General Social and Economic Characteristics	Partial
HC(1)-A	General Housing Characteristics	Complete
HC(1)-B	Detailed Housing Characteristics	Partial
HC(3)	Volume III. Block Statistics	Partial
PHC(1)	Census Tract Reports	Partial
PHC(2)	General Demographic Trends for Metropolitan Areas, 1960 to 1970	Complete
PHC(3)	Employment Profiles of Selected Low-Income Areas	Partial

Where To Place Orders

U.S. Department of Commerce field offices (listed below) have some or or all of the reports for their areas on hand for public purchase.

Albuquerque, New Mexico 87101, U.S. Courthouse
Anchorage, Alaska 99501, 412 Hill Building
Atlanta, Georgia 30309, 1401 Peachtree Street, N.E.

PUBLICATIONS ORDER FORM

CENSUS BUREAU METHODOLOGICAL RESEARCH, 1970

An annotated list of papers and reports

U.S. DEPARTMENT OF COMMERCE
BUREAU OF THE CENSUS

CENSUS BUREAU METHODOLOGICAL RESEARCH, 1970

The fifth annual annotated list of papers and reports on methodological research conducted by the U.S. Bureau of the Census is now available. It describes methodological research documents, both published and unpublished, issued during 1970.

List of subjects covered:

Statistical Theory and Sampling Methods
Operations Research
- *Quality Control*
- *Time and Cost Studies*

General Planning and Procedures for Censuses and Surveys
Measurement of Coverage and Response Error
- *General*
- *1970 Census of Population and Housing Evaluation Projects*
- *Current Population Survey*
- *Other*

Geography
Field and Collection Procedures
Data Processing
Concepts and Techniques of Analysis
- *Economic Time Series*
- *Population Characteristics*
- *Population Estimates and Projections*

Data Access and Use
Other

Contents of most of the documents are described briefly. Sources and prices are shown.

The previous lists available cover the years 1967, 1968 and 1969. This series is an outgrowth of a continuing methodological research documentation program conducted by the U.S. Bureau of the Census to keep staff members informed of current research on the various Bureau projects. The annotated list of papers and reports is designed to inform statisticians and technicians outside the Bureau of available documents on the status and results of this research.

POPULATION—*A Threat to Survival*

This is the first in a series of articles on threats to the environment of the nation which will appear in TEXTILE LABOR.

Imagine if you can a morning on which you awaken to a world which has literally ceased to function. You go to make coffee and there is no water; your electricity and heating system are not working; your telephone is dead. Attempting to leave your home for help, you find all roads blocked by a solid mass of cars—abandoned when they could move no further. On foot, you make your way to a nearby shopping center where all shelves are completely bare and there is no sign of life anywhere.

As far as you know, you are earth's sole survivor with no food or water and no place to turn.

Just science fiction today, perhaps, but it could be terrifying reality tomorrow if Man's soaring population rate and destructive overexploitation of his environment continue at their present pace.

Projections based by the Census Bureau in Washington on the current annual rate of world population growth show that by the year 2000 there will be a staggering 6 billion people, 362 million of them in the United States, struggling for survival on the face of an Earth where survival may by then no longer be possible.

Even the world population of 3.6 billion in early 1970 was somewhere between three and seven times more people than the Earth can possibly

Adapted from "The Population Challenge," U.S. Dept. of Interior.

Hundreds of thousands of New Yorkers jammed city streets during Earth Day ceremonies in 1970. If population continues to grow at the present rate, this crowded scene could be an everyday sight in rural and urban areas throughout the nation.

(*Continued from page 11*)

maintain over a long period of time, according to Dr. Paul Ehrlich, well-known expert on the population crisis and professor of biology at Stanford University.

"We are able to sustain so large a population (mostly living in misery) at the moment only because we are burning our capital," Ehrlich points out. "Non-renewable resources are being exhausted at a horrendous rate, and we are destroying the capability . . . to renew the supply of renewable resources."

At the present annual rate of about 2% (or 70 million) world population doubles every 35 to 40 years. In more dramatic terms, the U.S. has suffered a total of some 600,000 battle deaths in all the wars it has ever fought—from the Revolution through Cambodia. World population now grows by that number every 3½ days.

Allowed to continue at this rate unchecked, humanity is likely to strangle itself to death in a sea of elbows within a few short generations if it doesn't starve first.

Georg Borgstrom, author of The Hungry Planet, has described today's world as a vast network of slums in which 60% of the inhabitants live in utter misery, 25% are on the borderline, and only 15% live in affluence.

Those who still ask when the often-forecast food-population crisis is going to become a reality are dangerously uninformed. It is already very much here. Each year, 10 to 20 million people are dying of starvation, some of them in the U.S.

While hunger is most prevalent in underdeveloped countries and among young children and mothers, no area or group is immune. Hunger attacks in two basic ways—undernutrition, or too few calories, and malnutrition which is a lack of protein and essential minerals in the diet. Up to two billion people are suffering from one or the other—or both—right now.

As Ehrlich points out, the so-called "food surpluses" we hear so much about are purely statistics, and have nothing to do with who is or is not being fed. Demand for food is not the same as need for it and people are starving because they have no money to buy it.

Even so, he says, there is not enough food available to provide all of today's population with an adequate diet.

"If all the food produced was equitably distributed, and a minimum was lost between the fields and the consumers to pests and spoilage, there would probably be enough calories—just barely—to go around. But there would still be a shortage of high quality protein."

When optimists maintain that there is plenty of food and that it will not be a problem in the future, they are only counting calories. They forget that insufficient protein can cause brain damage, dwarfing, crippling, blindness and other maladies as well as possible death.

Also, unlike population growth which persists at a fairly constant rate year after year, food growth is largely unpredictable.

In 1967, for example, good weather was responsible for fine harvests almost worldwide for the first time since 1964. This, plus the so-called Green Revolution—new varieties of wheat and rice—changed pessimism about the world food situation to limited optimism in the U.S. Department of Agriculture and elsewhere.

However, even if the Green Revolution proves as successful as its supporters hope, it will at best keep up with population growth for 10 or 20 years, which is no solution at all.

Further proof of the instability of food production lies in the fact that in 1969, with the Green Revolution well established in some areas, the United Nations Food & Agricultural Organization reported that there was no increase in world production at all. Much of this failure was due to deliberate crop cutbacks by overdeveloped nations who had produced large

(*Continued on page 17*)

Population—*A Threat to Survival*

(*Continued from page 14*)

unsaleable grain surpluses in 1968 which starving people in other nations could not buy.

In the blind race against time to meet the staggering demands of future millions on the world's already disappearing resources, we are hastening mankind's extinction through desperate attempts to stretch those resources—particularly in highly industrial countries like our own—which are polluting the land itself, the air and the sea from which an estimated 20% of animal protein now comes.

Our indiscriminate use of pesticides, synthetic fertilizers and other chemicals may eventually kill soil fertility entirely and empty our waterways of all life. Continued overexploitation of other resources could ultimately deprive us of fuel and the means to produce even the barest necessities of human existence.

Conceivably, these dangerous trends can be reversed or counteracted by science or legislation if the paramount problem of overcrowding is solved.

However, unless we keep our population growth down to a safe level, overcoming all other ecological threats will be for nothing because no amount of future technological wizardry can create additional living space once it has been exhausted.

Since 1967, U.S. population has been increasing an average of 1% a year and totalled 203,185,000 as of July 1, 1970. The fact that it is expected to go up another 161 million by the end of the century—just 28 years from now—is even more shocking when we stop to think that 175 years were required to add only 191 million from the first census in 1790 up to 1965.

Perhaps 1% doesn't seem like much but Dr. Philip M. Hauser, formerly of the U.S. Census Bureau and now director of the Population Research Center at the University of Chicago, proves how large that small figure can be.

"One hundred persons multiplying at 1% a year, not over the period of 200,000 to 1 million years of man's occupancy of this globe, but merely for the 5,000 years of human history," he declares, "would have produced a contemporary population of 2.7 billion persons per square foot of land surface of the earth."

Hauser admits that such arithmetic is "dramatic" but defends it as a "conclusive way of demonstrating that a 1% increase in world population could not have taken place for very long in the past; nor can it continue for very long in the future."

Actually, unless people themselves drastically revise their treatment of population and pollution problems, and their abuse of the environment in a shrinking world, life soon will not be worth living even if they do survive.

Indeed it is hardly worth living now for more than half the Earth's inhabitants—many of them Americans who are shamelessly ignored as their fellow citizens rush headlong to join them in their misery through greed, self-indulgence or ignorance with no thought of the grim reckoning to come.

As our highways, transit systems, schools, hospitals and other vital facilities rapidly approach the saturation point before our eyes, we foolishly accept false claims offered by self-seeking politicians and industrialists. Yet endless additions of one more road, car, desk or bed in a cramped hallway can only destroy the orderly pattern of living so carefully planned by the less frenzied founders of our vanishing society.

Unless we act now to stop it, the same fate awaits our national parks, lakes, seashore and secluded mountain areas where elbow room, fresh air, and cool water still provide those brief vacations from chaos which help to preserve sanity in an increasingly pressurized world.

Without such mutual action on the part of all citizens, the quality of life will surely diminish to zero, human dignity and compassion will disappear and we will find ourselves back in the Dark Age of civilization—if we can still find ourselves anywhere at all.

Recent seminar on grievance handling conducted by Toledo Joint Board and the Labor Education and Research Service of Ohio State University was attended by 51 officers and stewards from joint board-affiliated TWUA locals in the Toledo area.

Microfiche

The **NATIONAL TECHNICAL INFORMATION SERVICE** offers you this report and other 1970 Census of Population and Housing final reports on **MICROFICHE** (sheet microfilm). Microfiche is **COMPACT.** More than 1,000 average length documents fit into an ordinary file drawer. Federal agencies now use a standard size microfiche--4" x 6" (105mm x 148mm) that contains up to 70 pages on one sheet. **MICROFICHE** is economical, is easy to handle, and may be filed fast! Reproduce copies with reader-printers. Make enlarged photocopies of any or all pages quickly and easily with **MICROFICHE.**

Supplementary Reports—Series PC(S1)
In this series, the Bureau of the Census is publishing reports containing special compilations of 1970 census statistics dealing with a specific subject. Reports in this series will be issued intermittently during the census period. The following report is the 9th in this series.

PC(S1)-9—Population of Places of 10,000 or More by Wards: 1970
This report presents the 1970 population of the wards of those incorporated places of 10,000 inhabitants or more which supplied the Census Bureau with ward boundaries. In New York City, assembly districts are shown rather than wards, and in Nashville-Davidson, councilmanic districts are shown. Unlike the tables in other reports in this series, the ward data will not be presented elsewhere in the 1970 reports.

Price—95 cents.

For descriptions of **FINAL REPORTS** issued previously on **MICROFICHE,** write to the National Technical Information Service, Springfield, Virginia 22151.

For information on printed publications, write to the Publications Distribution Section, Social and Economic Statistics Administration, Washington, D.C. 20233.

(please detach here)

REPORTS ON MICROFICHE WILL BE SHIPPED WHEN AVAILABLE.

Prepayment is required by check or money order made payable to the **NATIONAL TECHNICAL INFORMATION SERVICE, NTIS** prepaid microfiche coupons, or charge to **NTIS** Deposit Account. When ordering individual reports by **NTIS** prepaid microfiche coupon, please type the complete order number and title on coupon.

No. 38
No. 39

1970 population data

Data from the 1970 Census of Population forms the basis for two new maps, in color, of the United States showing data by county. The maps are issued by the United States Department of Commerce, Bureau of the Census in its Series, GE-50, U.S. Maps. Each sheet measures 42 x 30 inches, at a scale of 1:5,000,000 (approximately 80 miles to the inch). The maps are available from the U.S. Government Printing Office, Washington, D.C. 20402. Prices vary.

Many maps in the GE-50 series are now out of print and, therefore, are not listed in numerical sequence.

no.38 Population Density by Counties of the United States: 1970. This map shows the population per square mile in each county of the United States according to four density categories: 250 persons per square mile and over; 50 to 249 persons per square mile, 10 to 49 persons per square mile, and under 10 persons per square mile. Each category is presented in a separate tint of blue, green, or yellow for easy identification.

no.39 Percent of Population Urban by Counties of the United States: 1970. This map shows the percent population that is classified as urban for each county of the United States according to four "percent" categories: 75-1007., 50-74.97., 25-49.97., and under 25%. Each category is in a separate tint of blue or green. Counties with no urban population are shown in yellow.

This order form supersedes the previous one issued Nov. 1971. The titles and map numbers 38 and 39 were reversed.

County Business Patterns 1971

Highlights the data businessmen, market researchers, and industrial and civic planners need for States, standard metropolitan statistical areas, and counties. This series includes a separate paperbound report for each State and a U.S. Summary. Data items are:

- Employment
- Number and Employment-Size of Reporting Units
- Taxable Payrolls

Data presented

The individual State reports present the principal data items by detailed industry——4-digit level of the Standard Industrial Classification (SIC)——for States and counties and by major industry group (2-digit SIC) for SMSA's. Also included, by major industry group, are data on the number of employees, by employment-size class; the number of reporting units with 500 or more employees, by employment-size class; the number of reporting units, employees, and taxable payrolls of administrative and auxiliary units.

The U.S. Summary includes data by detailed industry (4-digit SIC) for the United States and by major group (2-digit SIC) for each State. Also included are totals of the principal data items for each county and SMSA.

Data on cards and tapes

Published information by county and by industry will be available at cost, on punchcards and computer tapes. Inquiries should be addressed to Chief, Economic Statistics and Surveys Division, Bureau of the Census, Washington, D.C. 20233

Industries covered

Data are shown in detail for the following broad industry categories:

Agricultural services, forestry, and fisheries
Mining
Contract construction
Manufacturing
Transportation and other public utilities
Wholesale trade
Retail trade
Finance, insurance, and real estate
Services

How CBP data are used

County Business Patterns is a standard reference source of small-area data. CBP data are especially useful for:

Analyzing market potentials
Determining location and size of sales territories
Establishing sales quotas and advertising budgets
Comparing past sales volume with potential volume, by area
Locating production, marketing, and service facilities

May 10, 1972

1970 Census Users Bulletin No. 3

1970 Census Farm - Nonfarm Data

The continuing program of 1970 census data review at the Bureau of the Census has shown that a misclassification exists in the statistics on farm - nonfarm residence published in two series of reports and on the Fourth Count summary tapes. Affected by this misclassification are the statistics on rural farm and rural nonfarm population in the series PC(1)-C State reports and the statistics on occupied rural farm and rural nonfarm housing units in the series HC(1)-B State reports, as well as comparable statistics reported in both the population and housing files of Fourth Count summary tapes. The misclassification is limited to the farm - nonfarm components and is compensating between the components. Therefore, the population and housing unit figures for the rural areas as a whole are not affected, nor are the figures for urban areas and the State as a whole.

Corrected State rural farm and rural non-farm totals (total population and housing unit counts only) are now being prepared. These corrected totals for all States will be presented as soon as possible in a Census Users Bulletin, and those for counties will be available later in the summer.

Release of Fifth and Sixth Count Summary Tapes

The problem with farm - nonfarm data discussed above has caused some additional delay in tape release. The revised schedule is now:

Fifth Count	July 1972
Sixth Count	
Population	May - Sept. 1972
Housing	May - July 1972

Available Printed Reports and Summary Tapes

The following tables present information on the availability of 1970 census reports and summary tapes. See Census Users Bulletin No. 2 for ordering instructions.

MICROFICHE PACKAGES OF CENSUS REPORTS, 1968-1970

The National Technical Information Service (NTIS) of the Department of Commerce has recently produced microfiche copies of Census Bureau reports for 1968, 1969, and 1970. Microfiche is card-shaped microfilm on which page images (frames), up to 70 per microfiche sheet, are arranged in columns and rows. Except for 1970 Census of Population and Housing reports (available on microfiche from NTIS, but not part of this project), all Census Bureau reports in the following subject areas are included: General, agriculture, construction and housing, distribution and services, foreign trade, geography, governments, manufacturing and mineral industries, and population.

Because of handling difficulties and the small number of reports in some subject areas, the microfiche is being sold in single-year groups or as a complete 3-year package. The following table presents the prices and quantity of microfiche involved:

	Price	No. of Pages (Frames)
Three-year package (1968, 1969, 1970)	$295	110,000
1968 publications	125	31,000
1969 publications	145	45,000
1970 publications	125	34,000

To obtain additional information or place orders for microfiche, write to National Technical Information Service, Springfield, Va. 22151.

For sale by the Bureau of the Census, Washington, D.C. 20233, and U.S. Department of Commerce field offices. 10 cents.

SPECIAL TABULATION OF TRANSPORTATION DATA

Under a cost agreement with the Federal Highway Administration (FHWA), Department of Transportation, the Census Bureau has prepared a series of special computer programs which can be used at the Bureau to generate selected summary census data, specified by the FHWA and based on tabulations of the 1970 census 20-percent sample information, for traffic zones in the urbanized areas (UA's) of standard metropolitan statistical areas. The data summaries for each UA will be organized into four parts or groupings. Part I provide tabulations concerning characteristics of the residents and housing of each traffic zone within the UA; Part II, tabulations for the UA as a whole; Part III, tabulations concerning characteristics of the people working in each traffic zone in the UA; and Part IV, tabulations concerning mode of transportation for each traffic zone of residence by traffic zone of work within the UA (e.g., an estimated 75 persons travel by bus from traffic zone 10 to traffic zone 37 to get to work).

As in the case of the standard census summary data, these materials will be reviewed for disclosure suppression. The completeness of traffic zone of work data, as reflected in Parts III and IV, is dependent upon the adequacy of the work address furnished by each respondent. In the urbanized areas of SMSA's (generally confined to the city mail delivery area of these SMSA's), a respondent's reported place of work could usually be identified by census tract or block. However, some place-of-work responses could be coded only to higher-level geographic areas, such as the central city of an SMSA, the balance of the SMSA, a limited number of cities (namely, those of 20,000 or more population in 1970), or counties near the respondent's area of residence.

Each organization wishing to have these traffic zone tabulations prepared for an urbanized area will have to provide the Bureau with a listing of the codes for whole census tracts and/or census blocks which compose each of its traffic zones. To assist organizations, the Bureau will, as part of the cost of generating the data, provide a special listing of the tract, block, and enumeration districts (ED's) in the UA to which the organizations can attach the local traffic zone identification codes by referring to the census block maps of the area. The cross-reference listing as completed by the requesting organizations is essential in developing a set of traffic zone/census area equivalents which the Bureau can use when tabulating the data.

Based on current testing, estimated costs for producing the traffic zone data on IBM-compatible tape are shown below for selected urbanized areas (figures are approximate):

Albuquerque	$2,400
Duluth	2,800
Denver	8,300
Washington, D.C.	17,400
Los Angeles-Long Beach	28,000

If you wish to obtain a more complete description of the tabulations involved or to inquire about the cost of obtaining the traffic zone tabulations for a given area, please address a written request to the Users' Service Staff, Data User Services Office, Bureau of the Census, Washington, D.C. 20233. The preparation of an estimate will require approximately 2 weeks from receipt of your request.

Based on the current Bureau workload, once a signed cost agreement and funds are received by the Bureau, the user should allow 2 to 3 weeks for the preparation and delivery of his "equivalency" printout on which he will list the traffic zone numbers associated with each census tract, ED, or block. After the user returns the completed "equivalency" list to the Bureau, approximately 1 month will be required to complete the traffic zone data for a given area, depending upon the Bureau workload at the time.

PANEL TO DISCUSS CENSUS DATA

As part of the American Library Association's annual conference in Chicago, the Law and Political Science Section of the Association of College and Research Libraries will hold a panel discussion on "The U.S. Census from 1790-1970: a Multi-Media Approach." Scheduled for June 26 at 8:30 p.m., the discussion will focus on the availability and use of census material.

Panel participants are:

Judith S. Rowe, Manager, Princeton-Rutgers Census Data Project, Princeton University, who will discuss the development of social science data archives, the relation of these archives to the traditional library, and the problem of bibliographic documentation and control of machine-readable data files.

Jerome Clubb, Director of the Historical Archive, Inter-University Consortium for Political Research, University of Michigan, who will discuss the availability of census materials, from 1790 to the present, in machine-readable form, as well as the availability of related materials such as election statistics and congressional roll call data.

Theodore Hershberg, Director of the Philadelphia Social History Project, University of Pennsylvania, who will describe his project which includes the collection and conversion into machine-readable form the great quantities of census records relating to population characteristics for 19th century Philadelphia.

John C. Beresford, President, National Data Use and Access Laboatories, Inc. (DUALabs), Arlington, Va., who will discuss the newly organized Clearinghouse and Laboratory for Census Data.

Formal presentations will be brief, designed to provide orientation to librarians who may be familiar only with the printed census reports. After their presentations, the panelists will answer questions from the audience.

Further information concerning the conference can be obtained from the American Library Association, 50 East Huron, Chicago, Ill. 60611.

1970 Census Map Inventory Created

A variety of maps was prepared for use in the data collection activities of the 1970 census. These same maps are not only useful, but in many cases necessary, to relate the published statistics to the land areas for which they are tabulated. To facilitate acquisition of the maps, an inventory has been prepared which lists all of the maps available for each State, county, and place, along with the cost and number of sheets required. Names and codes of the geographic areas are also presented (see example on p. 4). Thus, by checking the inventory for any of these areas, the map sheets required and their cost can be quickly determined. The inventory includes all 50 States and the District of Columbia, but not the outlying areas.

The maps listed in the inventory are of four types: The Metropolitan Map Series (MMS), which essentially covers the urbanized areas of all SMSA's; county maps for areas not involved in the MMS; place maps for virtually all incorporated places reported in the 1970 census outside the MMS coverage; and vicinity maps used to show block numbers in the vicinity of localities which contracted for block statistics.

The census map inventory would normally not be of value to persons interested in obtaining MMS maps for an entire urbanized area, since the block statistics reports, series HC(3), include for such areas MMS maps which have color and shading and are less expensive than those referenced in the inventory. However, a person interested in maps for a portion of an urbanized area may find it less expensive to get specific map sheets directly from the Census Bureau. The inventory will indicate which map sheets to order, as well as their cost. It will also be useful when ordering place maps and county maps containing enumeration district and other census boundary designations that are not found in any census reports.

Department of Commerce field offices and the Bureau's regional Data Collection Centers have a census map inventory for the Nation on hand so that price information may be provided to users. Further information about the inventory may be obtained from the Users' Service Staff, Data User Services Office, Bureau of the Census, Washington, D.C. 20233. The price of the inventory is $2 for individual States and $75 for the complete set.

NIMH DEVELOPS SMALL-AREA PROFILES

The National Institute of Mental Health (NIMH) has almost completed its project to prepare demographic and socioeconomic profiles, using 1970 census and vital statistics data, of mental health catchment areas (service areas), census tracts, and counties. Items from the Second and Fourth Count Summary Tapes are used to prepare indicators of socioeconomic status, ethnic composition, household composition and family structure, "style of life" (urbanization), condition of housing, and community instability. A few of the indicators derived from the Second Count and presented for census tracts are shown in the table below.

Profiles drawing upon the Second Count tapes are now available; profiles drawing upon the Fourth Count tapes should be ready within the next few months. Persons interested in obtaining these small-area profiles should contact the State mental health authorities of the State for which they want data. If the State agency is not able to furnish the profiles or if information from more than one State is needed, write to Mrs. Beatrice Rosen, National Institute of Mental Health, Room 18C-18, 5600 Fishers Lane, Rockville, Md. 20852, for information on how the profiles can be obtained.

A detailed description of the project is provided in *Methodology Reports*, "1970 Census Data Used to Indicate Areas with Different Potentials for Mental Health and Related Problems" (Mental Health Statistics Series C, No. 3, DHEW Publication No. (HSM) 72-9051, October 1971), which outlines the data items selected from the Second and Fourth Count Summary Tapes and vital statistics sources. This report can be ordered from the Biometry Branch, National Institute of Mental Health, Room 18C-25, 5600 Fishers Lane, Rockville, Md. 20852.

DEPOSITORY LIBRARY PROGRAM FOR GOVERNMENT REPORTS

To assure wide availability of Federal Government publications for public reference, Congress has designated 1,077 libraries throughout the United States as Federal Government Depository Libraries. Through these libraries, reference copies of Federal Government documents are made available to residents of every State, the District of Columbia, Guam, Puerto Rico, and the Virgin Islands. The Depository Libraries are entitled to receive through the Government Printing Office all Census Bureau reports if they so choose. If they desire, the libraries may select only those series best suited to the needs of their patrons.

The Census Bureau Depository Library system is supplementary to the Government Depository Libraries. It is composed of 102 libraries designated by the Bureau in order to make Census Bureau publications available for reference use to areas or groups not served by Government Depositories. The Census libraries automatically receive copies of all publications published by the Bureau of the Census.

A list of Federal Government and Census Bureau Depository Libraries in your State can be obtained from the Publications Distribution Section, Social and Economic Statistics Administration, U.S. Department of Commerce, Washington, D.C. 20233.

Feedback Projects Underway

Two projects are now underway to obtain comments and suggestions from census users and Summary Tape Processing Centers on problems and improvements concerning decennial census products. In one project, a questionnaire will be sent to a large portion of *Small-Area Data Notes* subscribers. In the other, visits will be made to a sample of the Summary Tape Processing Centers in various parts of the country.

The questionnaire is now in the final stages of preparation. After printing, it will be sent to a sample (probably one-fourth) of *Small-Area Data Notes* subscribers. Persons receiving it will be asked for comments and suggestions concerning *Small-Area Data Notes*, *Data Access Descriptions*, the *1970 Census Users' Guide*, Census summary tapes, processing centers, and several other topics. It is hoped that the response received will help pinpoint problems in current products and services and include a number of good suggestions for improvements.

Staff members of the Census Bureau's Data Collection Centers, located in 12 cities throughout the country, will be largely responsible for the other project, which has just recently been

launched. They will visit a sample of approximately 50 processing centers in an effort to obtain information on center activities, problems with Bureau products, examples of data use, and similar subjects. In addition, members of the Data Access and Use Laboratory staff will visit a selected group of centers which, on the basis of materials sent to the Census Bureau during the past few years, seem to be especially active or innovative. The project should furnish useful feedback and also increase and improve communication between the centers and the Census Bureau.

Several other projects of this nature are being studied by the Census Bureau for the future. These would include seeking specific suggestions for adding, deleting, and modifying tabulations for future population and housing summary tapes, as well as making intensive efforts to obtain examples of census use which could be passed on to other users through *Small-Area Data Notes* or brief papers.

Federal Sources for Census Products and Services

The list below presents the name, address and phone number, and general activity of the main Federal sources of information about products and services resulting from the 1970 census. Some of the products and services listed are also available from the approximately 160 Summary Tape Processing Centers located throughout the country. These centers have announced their intentions of providing data services such as tape copying, preparation of printouts, extraction of selected data, etc., to users on a local, regional, or national level.

Users' Service Staff, Data User Services Office, Bureau of the Census, Washington, D.C. 20233.--Handles orders for 1970 summary tapes, DIME files, maps; provides information on special tabulations and release dates for census products.
Phone 301-763-5266.

Data Access and Use Laboratory (address same as above).--Provides general and technical assistance; provides user information services including seminars, conferences, SAD Notes, and Data Access Descriptions.
Phone 301-763-7454.

Census Use Study (address same as above).--Conducts research on use of DIME files and related software (FIXDIME, UPDIME, ADMATCH, GRIDS, etc.) and on geocoding systems for local data.
Phone 301-763-7491.

Publications Distribution Section, Social and Economic Statistics Administration, Washington, D.C. 20233.--Distributes order forms and other information about the printed reports and microfiche.
Phone 301-763-5853.

Government Printing Office, Washington, D.C. 20402.--Sells printed reports.
Phone 301-783-3238.

National Technical Information Service, Springfield, Va. 22154.--Sells microfiche of printed reports.
Phone 703-321-8549.

INTERGOVERNMENTAL SEMINAR

The Bureau of the Census held its Seventeenth Intergovernmental Seminar on Federal Statistics for State and Local Government Use during the week of March 13, 1972, in Washington, D.C. Conducted as part of the Bureau's intergovernmental services program, the seminar was attended by 21 representatives from State, county, and city governments, as well as members of regional planning organizations. Bureau Director George H. Brown opened the seminar with an overview of current Census Bureau programs and plans for future projects designed to meet data needs of local areas.

In addition to staff members of the Bureau of the Census, speakers on the seminar program were from the Office of Management and Budget; Bureau of Economic Affairs, Department of Commerce; Department of the Treasury; Department of Labor; Department of Housing and Urban Development; Department of Health, Education, and Welfare; Department of Transportation; and the Government of the District of Columbia.

The highlight of the seminar was the luncheon held March 16 at which guest speaker Edgar R. Fiedler, Assistant Secretary for Economic Policy, U.S. Department of the Treasury, discussed "Review and Appraisal of Federal Revenue Sharing Proposals."

TRANSPORTATION CENSUS CONDUCTS TRUCK INVENTORY

Another measure of the Nation's business activity was started in March with the mailing of some 9,000 questionnaires to truck owners in four States by the Bureau of the Census.

Called the Truck Inventory and Use Survey, the project is the second part of the 1972 Census of Transportation, one of the 1972 Economic Censuses. In February, questionnaires were

mailed out in the National Travel Survey, the first of the three major parts of the Transportation Census. The third part, to be taken in early 1973, is the Commodity Transportation Survey. The Census of Transportation is designed to obtain essential transportation statistics that are not available from other sources such as the Interstate Commerce Commission, the Department of Transportation, etc.

Statistics to be developed from the survey will yield data concerning the Nation's trucking resources, such as the number of trucks classified by their physical characteristics, occupational use, measures of the intensity of utilization, and geographic distribution of vehicles. Most of the data will be available in printed reports, but there will be additional data available on tapes.

New Summary Tape Processing Centers

The following organizations have been recognized as Summary Tape Processing Centers during the past month:

Managed Marketing

CENSUS USE STUDY

DIME File Workshops

The Census Use Study of the Bureau of the Census, with the cooperation of the National Association of Regional Councils and with the support of the Department of Housing and Urban Development and the Ford Foundation, is holding a series of training workshops to instruct local government personnel in the use of the DIME files and related computer technology. The first workshop, to be held in Indianapolis in June 1972, will launch the Census Use Study's national educational effort. Other workshops in different cities around the United States will be held during the coming year.

Representatives from 10 SMSA's have been invited to participate in the first workshop. Time, resources, and the nature of the training demand that the workshops remain small. Those who would benefit most from the training would be personnel with responsibility for making the DIME files operational or for understanding the capabilities of geographic base files as management tools.

Workshop participants will learn and apply techniques for small-area data analysis. Census Use Study professionals and other workshop experts will work with small groups of participants to explain the application of the techniques to actual local data problems developed by the participants themselves.

For further information, write to the Census Use Study, Data User Services Office, Bureau of the Census, Washington, D.C. 20233.

ADMATCH/OS Developed

A new version of the ADMATCH programs, specifically designed for more rapid processing of large files on medium and large computers, has been developed by the Census Use Study. Called ADMATCH/OS, this version will operate on the large 360 computers under the IBM System/360 Operating System (OS). It joins the existing versions of ADMATCH which are available for use under the 16K Disk or Tape Operating Systems (DOS or TOS). All the ADMATCH programs are written in IBM System/360 Assembler Language. A publication on "COBOL ADMATCH" is planned for release by this summer.

The ADMATCH/OS package includes two new programs not available with the DOS package. Under the new version, the minimum core storage requirement is 32K bytes; a line printer and three magnetic tape or disk units are needed. The ADMATCH/OS computer package (computer program tape and user's manual) is available for $70 from Users' Service Staff of the Census Bureau. The user's manual is available separately for $1 from the Publications Distribution Section of the Social and Economic Statistics Administration or from any Commerce field office.

DIME File Meetings

"Spatial Dimensions of Data," a brainstorming session on the quality, uses, and expansion of the DIME files, was held at the Census Bureau recently. Representatives were invited from the University of Pittsburgh, the University of Michigan, and the University of Kansas. Representatives from France and Israel, two countries which are now testing the benefits of the DIME file, also attended the meeting. Two of the Census Bureau's Associate Directors were present, as well as personnel from the Geography Division and the Census Use Study.

Additional meetings are planned for the future, including an international meeting in October of this year to provide an interchange of information and computer products among countries using the DIME file approach.

Papers

Two papers prepared by Bureau of the Census staff members for the Joint Computer Conferences conducted by the American Federation of Information Processing Societies, Inc., are available from the Census Use Study. "Geocoding Techniques Developed by the Census Use Study," by Caby C. Smith and Marvin S. White, Jr., was presented at the 1971 fall conference in Las Vegas, Nev. The second paper, "UNIMATCH: A Computer System for Generalized Record Linkage Under Conditions of Uncertainty," was recently delivered by Matthew A. Jaro at the 1972 spring conference held in Atlantic City, N.J. The UNIMATCH system will allow a more sophisticated solution to geographic coding problems associated with transportation and public safety information systems or subsystems.

The Methods and Materials of Demography, a two-volume work intended to serve as a text for courses on demographic methods and as a reference for professionals who work with population data, has been published by the Bureau of the Census. The volumes deal with the sources, limitations, underlying definitions, and bases of classification of demographic data, as well as with techniques and methods that have been developed for summarizing and analyzing them. Topics covered include formal demography and the study of many social and economic characteristics of the population.

The book attempts to give a comprehensive exposition of the methods used by technicians in dealing with demographic data. The derivation of the demographic measures described is typically illustrated by step-by-step examples using actual statistics. The material is presented in such a form, however, that knowledge of advanced mathematics is not essential to its understanding.

Volume One is divided into three parts: Demographic Data, Population Size and Distribution, and Population Composition. Volume Two has two parts: Population Dynamics; and General Methods, Estimates and Projections.

Copies of the two-volume set, *The Methods and Materials of Demography*, 959 pages, are available for $7 from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Order

* * * * *

The Federal Statistics Users' Conference (FSUC) Newsletter of February 14, 1972, is largely devoted to a summary of ***Federal Statistics: Report of the President's Commission.*** (***Federal Statistics*** is a two-volume report issued in 1971 and available from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402, at a cost of $4 per set, GPO No. 4000-0269.) The newsletter summarizes the treatment in ***Federal Statistics*** of such subjects as standards of quality, social statistics, and small-area statistics. Occasional FSUC comments on the commission report are included, and a paper by Dr. A. Ross Eckler, former Director of the Bureau of the Census, is presented in full.

The issue also contains an article on the recent reorganization of statistical agencies in the Department of Commerce and related organization charts. Copies may be obtained from the Federal Statistics Users' Conference, 1523 L Street, N.W., Washington, D.C. 20005.

The Federal Statistics Users' Conference is a nonprofit research, educational, and service organization whose member groups have a common interest in encouraging the development of adequate, timely, and reliable information of optimum usefulness at minimum cost from Federal statistical programs. FSUC's membership includes business firms, labor unions, nonprofit research organizations, State and local governments, colleges and universities, and trade associations. The FSUC regular monthly newsletter reports on the current availability of Federal statistical reports and studies, including highlights from such reports.

INTRODUCTION

The Bureau of the Census has been concerned with the development of reliable measures of housing quality since it first collected housing statistics on a large scale in the 1940 Census of Housing. In the decennial censuses from 1940 through 1960, the Census Bureau collected data about the structural condition of housing by direct observation. These data have proved to be unreliable and inaccurate.

In the 1970 census, the Census Bureau did not collect information on the structural condition of housing. It did collect data on the presence of complete plumbing facilities, which in 1940, 1950, and 1960 have been used in combination with condition data to provide a key criterion for evaluating the adequacy of the Nation's housing. In response to urgent requests from users of housing statistics, however, the Bureau agreed to provide estimates of substandard housing in 1970 for all cities of 10,000 or more and for counties.

The term "substandard" is not an official Census Bureau classification. For the purposes of this Data Access Description, the definition used by the Federal housing agencies has been adopted: A substandard housing unit is one which was (1) rated dilapidated by a census enumerator, or (2) lacked one or more of the following facilities: Piped hot water, flush toilet for private use, bathtub or shower for private use.

The Bureau of the Census suggests that those interested in evaluating the quality of housing at the small-area level use 1970 housing data, available on summary tapes and in the printed reports, as a basis for delineating and studying problem housing areas. A possible method of using 1970 data in the study of housing and neighborhood quality at the local level is described in this Data Access Description. In addition, background information is provided on the methods of collecting data on quality of housing in past censuses; the resulting data are evaluated; and the 1970 "substandard" housing estimates to be published in volume VI of the housing report series are briefly described.

There is no precise solution to the problems of defining substandard housing and of locating areas where such housing exists. The procedures outlined in this Data Access Description are designed to be suggestive. They are limited as to kinds of data and their use. Valuable data for delineating problem areas can also be obtained from police, welfare, health and education departments.

BACKGROUND--MEASURING HOUSING QUALITY IN PREVIOUS CENSUSES

In each of the decennial censuses from 1940 to 1960, the Census Bureau had enumerators

assess the structural condition of housing by direct observation. The criteria and terminology for judging structural condition were changed for each census, based on the results of data from each previous census. The method of collecting these data in the 1940, 1950, and 1960 censuses and the quality of the resulting statistics for each decade are discussed briefly below.

1940 Census of Housing

In the 1940 census, "state of repairs" was used as an indicator of the structural quality of housing units. Under the major classification of state of repairs were two categories: units "not needing major repairs" and units "needing major repairs." A unit was to be classified as needing major repairs if parts of the structure, such as floors, roof, walls, or foundation, required major repairs or replacements. The enumerator judged the repair to be major on the basis of whether or not the continued neglect of the deficiency would impair the soundness of the structure and create a hazard for its occupants.

This concept measured only the physical condition of the structure; it did not indicate the level of quality. Under this concept, a tarpaper shack or a unit with a dirt floor may have been classified as not needing major repairs even though it may not have provided adequate protection from the elements. In addition, the state of repairs measurement required a judgment by the enumerator regarding a future condition: Whether or not the continued neglect of the deficiency would impair the soundness of the structure and create a hazard.

Dissatisfaction with the results of the state of repairs concept was so great that an Interdepartmental Subcommittee on Housing Adequacy was appointed by the Bureau of the Budget in 1945 to investigate the problems of measuring the quality of housing. The subcommittee worked closely with representatives of the Census Bureau and the 1950 Census of Housing Technical Advisory Committee to develop the concept "condition of structure," which was to be used as the indicator of structural quality in the 1950 Census of Housing.

1950 Census of Housing

The concept of "condition of structure" was first employed in the 1950 census and, in accordance with it, housing units were classified as either "not dilapidated" or "dilapidated." A unit was to be reported as dilapidated if it had one or more serious deficiencies or was of such poor original construction that it provided inadequate shelter or endangered the safety of the occupants. In addition, a unit was to be classified as dilapidated if it had a combination of minor deficiencies to the extent that it did not provide protection against the elements or was physically unsafe.

Although the condition of structure concept was considered an improvement over the state of repairs concept, many users of the 1950 statistics, particularly those concerned with urban renewal, expressed the need for an intermediate level of condition. In preparation for the 1960 census, the Census Bureau, assisted by an Interdepartmental Subcommittee on Housing Adequacy, developed a two-fold classification--sound or deteriorating--to replace the 1950 category "not delapidated."

1960 Census of Housing

In the 1960 census, special efforts were made to maintain the 1950 definition "dilapidated." The 1950 "not dilapidated" category was subdivided in 1960 into two categories, sound and deteriorating. A sound unit was one which had no defects or only slight defects which normally would be corrected during the course of regular maintenance. A deteriorating unit was defined as needing more repair than would be provided during the course of regular maintenance.

The difficulty experienced by enumerators in 1960 in determining whether or not housing units should be classified as dilapidated had an adverse effect on the quality of the statistics for the standard-substandard classification as used by the Federal housing agencies. Evidence indicates that about one-fourth of the units which could be classified as substandard from the findings of one group of enumerators would have been differently classified according to the findings of another group of enumerators. The accuracy of data contained in cross-tabulations using the standard-substandard classification was affected adversely since, of necessity, it depended on the accurate rating of individual units. However, trends in substandard housing appear to have been measured adequately for the decade 1950 to 1960.

Procedural Summary

Procedurally, the application of the concepts for evaluating housing was virtually the same in the 1940, 1950, and 1960 decennial censuses. The enumerators were instructed to observe each unit and to make an overall judgment based on specified criteria. The overall judgment was to be made for each unit separately, regardless of the neighborhood, age of structure, and race of the occupants. Unlike 1940, when the Enumerator's Reference Manual was the only training source, the enumerators in 1950 were provided with detailed written criteria and instructions, as well as photographs depicting the two levels of condition (dilapidated and not dilapidated). In addition, audiovisual techniques were used to train enumerators. In 1960 the training techniques were essentially the same as in 1950, except that modifications were made to reflect the three-way

classification. The 1960 enumerators were instructed to determine, first, whether a unit was dilapidated or not dilapidated in order to maintain comparability with the 1950 enumeration of condition. Then, if the unit was not dilapidated, the enumerators were to determine whether it was sound or deteriorating.

However, post-enumeration studies after the censuses of 1950 and 1960 disclosed that the information collected on structural condition of housing in these censuses was unreliable. Of the occupied units classified as dilapidated by the post-census enumerators, only about 48 percent had been similarly classified by the regular census enumerators in 1950 and 38 percent in 1960. Also, the 1960 Content Evaluation Survey disclosed that there was a net understatement of more than one million dilapidated occupied housing units in 1960. Additional detail on the reliability and accuracy of statistics in the 1950 and 1960 censuses can be found in Census Bureau Working Paper No. 25, Measuring the Quality of Housing: An Appraisal of Census Statistics and Methods.

THE 1970 CENSUS OF HOUSING

Estimates of substandard housing will be published in volume VI, which is expected to be available by the end of 1972. These statistics will be presented as a single figure for each city of 10,000 or more inhabitants and for each county, SMSA, State, division, and region of the United States for the following categories: Negro, and white and other races, by renter- and owner-occupied units and year-round vacant units.

The 1970 substandard housing figure will be the sum of two categories: (1) units counted in the 1970 census which lack complete private plumbing facilities and (2) an estimate of the number of units with complete private plumbing facilities that would have been rated dilapidated in 1970, according to the Census Bureau's estimating procedure. The details of this computational method are described in "Proposed Procedure for Estimating Substandard Housing in 1970"; copies are available from Housing Division, Bureau of the Census, Washington, D.C. 20233.

USING 1970 CENSUS DATA LOCALLY TO DELINEATE PROBLEM HOUSING AREAS

Although 1970 census data are not sufficiently detailed to permit identification or classification of individual housing units as poor or substandard, it is possible to use census data to identify specific areas, such as blocks, tracts, and minor civil divisions, in which poor housing is probably located. These areas will be termed "problem housing areas."

It should be stressed that there is no generally accepted set of criteria for defining substandard housing. Nevertheless, although precise criteria are wanting, this term is generally understood to refer to housing which is characterized by conditions that are hazardous to health and safety and are detrimental to the general welfare. It is in that sense that the terms poor or substandard are used in this section.

The emphasis on small-area analysis at the local level stems from the view that an adequate assessment of the amount of substandard housing requires an evaluation not only of the residential structure but of its enviroment as well. This view is elaborated in the report to Congress and the President, "Building the American City," prepared in 1968 by the National Commission on Urban Problems. In one of a number of comments on this point, the Commission asks:

> "Is a unit correctly defined as standard under available data if the lot next door is littered with garbage; if police protection is limited; if street lights are not provided; if the sidewalk is buckled; if the street is full of potholes; if a liquor store is found on each corner; if sewers are nonexistent or inadequate; if the noise level is excessive; or if a rendering works is found in the block (as is true along the waterfront in the otherwise exclusive Georgetown area of Washington, D.C.)?"

Selection of Areas Suitable for Study

The basic unit of action in most localities is likely to be a group of city blocks. The scope of an area selected for treatment will depend upon a number of factors. One of the most important of these is the extent to which individual blocks in a selected area are similar or identical in their housing and household characteristics.

The definition of problem housing areas is best made by comparison. Therefore, it is suggested that the study area be defined to include fringe as well as hard-core problem sections.

Census Indicators of Problem Housing Areas

A number of measures are relevant as indicators of substandard housing. These are classified in table 1 according to type and availability by census tracts (or minor civil divisions) or blocks in the 1970 census publications. A more detailed outline of cross-tabulations of the items in table 1 is shown in tables 2 and 3, which refer to

data contained in the Third and Fourth Count Summary Tapes.[1] The tapes contain considerably more detail than do the printed reports.

The items listed in table 1 are not intended to be all-inclusive nor should they be considered equally applicable in all areas. Because circumstances vary from place to place, it is unlikely that every item will be of equal importance for all cities or even for all areas within the same city. For example, if low rent is selected as a criterion, one should be aware of the special situation posed by public housing. Census data should be used to supplement, not to replace, knowledge of local conditions.

Suggested Uses of Census Data for Studying These Areas

Once the areas in need of further investigation have been located and census indicators of problem housing considered, the next step is to decide how to use this information. Census statistics can be used in a number of ways to study problem areas. A suggested set of items useful for this purpose is shown below, identified by the column numbers under which they appear in the published 1970 census reports, Block Statistics, Series HC(3). Local conditions should determine which of these items are most appropriate in a given situation.

Suggested Items From Table 2, Block Statistics Reports

	Column Number
Structure and Facility Statistics	
1. All year-round housing units lacking some or all plumbing facilities	Col. 8
Occupancy and Utilization Statistics	
2. Housing units with 1.01 or more persons per room	Col. 21
3. Housing units with 1.01 or more persons per room, lacking complete plumbing facilities	Subtract col. 22 from col. 21
Economic Status	
4. Average value of owner-occupied housing units	Col. 14
5. Average contract rent of renter-occupied housing units	Col. 19
Household Composition	
6. One-person households	Col. 23
7. Families with female head	Col. 24
8. Units with roomers, boarders, or lodgers	Col. 25

At the simplest level of study it may be sufficient to identify blocks according to the characteristics--selected from those suggested above--which are present. For example, a checklist would identify blocks which have rent or value below specified amounts, percent of units which lack plumbing, etc. (See illustration on p. 5.) Blocks could be grouped according to the number or kind of items checked for each block. Perhaps the most difficult decision in this procedure would be the determination of a cutoff for rent and value which would represent a problem area and would depend upon local conditions. A visual examination of several pilot blocks, compared with their average rent as reported in the census, might provide a "feeling" for a practical cutoff. Such factors as type of housing unit, presence of public housing, and other environmental factors would have to be considered.

The use of maps to display the various kinds of data indicative of problem housing areas can be very helpful in understanding the geographic implications of the data. Different kinds of data can be displayed in varying patterns (i.e., color, shading, and crosshatching) and as a result, spatial relationships and trends become immediately apparent. Data maps can also be produced by computer.

At a more complex level, it may be useful to examine blocks not only according to the presence of certain characteristics, but also according to the degree these characteristics are present. One way to measure this degree is to limit the items to be checked off to those which exceed a specified standard. Citywide averages could serve as such a standard. Thus, suppose that 6 percent of the occupied units in a particular city are occupied by 1.01 or more persons per room. Using this hypothetical situation, one could locate problem areas by identifying those blocks in which the proportion of such units exceeds the citywide average (6 percent) plus some constant, e.g., 2 percent. Whatever the constant, it should distinguish blocks with a high concentration of the selected characteristic. It should also be possible, by employing a range of

[1] Part of a series of six summary tapes from the 1970 Census of Population and Housing. The Third Count Summary Tapes contain complete-count (100-percent) summary statistics for blocks. The Fourth Count Summary Tapes provide sample data down to the level of census tracts and minor civil divisions. Further information on this program may be obtained by writing to the Chief, Data User Services Office, Bureau of the Census, Washington, D.C. 20233.

Blocks by Selected Indicators of Problem Housing Areas

Block number	Rent (or value) below specified amount	Units lacking some or all plumbing facilities	Units occupied by 1.01 or more persons per room	Households with female head of family	Households with roomers, boarders, or lodgers	Total indicators in each block
101	X	X		X		3
102	X	X	X	X	X	5
103	X		X	X		3
104		X	X			2
201	X	X		X	X	4
202						0
203	X	X	X	X		4

cutoffs (e.g., city average plus 2 percent or less; city average plus 2 to 4 percent, etc.), to obtain some indication of relative severity of conditions in different neighborhoods.

The same method used for blocks can be applied to census tracts. Although a much wider array of data is available by census tracts than by blocks, census tracts have an offsetting disadvantage in that boundaries of problem neighborhoods may not correspond to census tract boundaries.

If census tracts are to be the basic survey areas, it is suggested that only those factors be recorded in each tract for which the level of occurrence is greater than a specified norm or standard, e.g., the citywide proportion of units with the specified characteristic.

A relatively simple method to determine the order of severity of poor neighborhood and housing conditions in blocks (or tracts) is to (1) rank each block or tract in the survey area by the percent of units or households with specified characteristics, (2) sum the ranks of the various characteristics for each block or tract, and (3) order the blocks or tracts by those sums. It is necessary that, for each characteristic, the rank of 1 have the same meaning. For example, if the highest percent of units that lack complete plumbing is assigned the rank of 1, then this rank number should uniformly indicate the block with the highest proportion of units that are potential problem areas. Thus, the block with the lowest average rent would also be ranked 1 with respect to rent. The ranking procedure is illustrated in table 4.

To take a specific example, table 4 shows that tract 501 ranked 1, based on the sum of ranks. That result should be considered a first step in sorting the tracts according to the concentration of housing and household characteristics indicative of problem neighborhoods and housing. A more detailed examination of the results will reveal, for example, that in some tracts the range in rank between highest and lowest is much greater than in others. This type of analysis can lead to a sorting of tracts according to their degree of diversity or homogeneity. It can also be observed that tracts differ from one another according to the characteristic which is most predominant. Keeping this fact in mind, one could perform another sorting based on more than one characteristic, e.g., availability of plumbing and occupancy by 1.01 or more persons per room.

In summary, no single statistic should be considered as a complete index to the type and degree of conditions indicative of poor neighborhoods and housing; rather, a combination of approaches, along with knowledge of local conditions, is likely to produce the most accurate delineation of problem housing areas.

FURTHER INFORMATION

For further information on the concept of substandard housing as it relates to Census Bureau data, address inquiries to:

The Census Bureau presents

The Statistical Abstract of the United States-1971

The U.S. Department of Commerce, Bureau of the Census presents the **1971 STATISTICAL ABSTRACT OF THE UNITED STATES.** This 92d edition of the "Stat Abstract," as it is popularly known, offers the Nation's most sought-after facts and figures in the world of government and private enterprise. Statesmen...businessmen...scientists... teachers and students alike **FIND** the information they want on the social, economic, and governmental characteristics of the United States - both current and historical. Statistics are presented in over 1,300 tables and charts derived from over 200 government, private, and international agencies. A special introductory table features **RECENT TRENDS** for selected measures of social and economic change. The **GUIDE TO SOURCES** lists over 800 statistical publications on 50 major subjects, such as population (including data from the 1970 Census of Population and Housing), government, health, education, agriculture, industry, construction, recreation, trade, and scores of other subjects. Whatever your line of work, business, profession, or avocational interests - when you need the facts, choose the comprehensive and authoritative **STATISTICAL ABSTRACT OF THE UNITED STATES, 1971.**

A New Report of National Interest---

MINORITY-OWNED BUSINESSES: 1969

U.S. DEPARTMENT
OF COMMERCE

Bureau of
the Census

Order

"Minority-Owned Businesses: 1969" MB-1

This report offers the first set of comprehensive statistical data, compiled in this area, on the minority ownership of businesses in this country. It focuses on the economic characteristics of the principal minority groups, i.e., Negro, Spanish-speaking, and other racial minorities. Wherever possible, the Spanish-speaking group has been classified in terms of ownership by those of Mexican-American, Puerto Rican, Cuban, and Latin American ancestry.

The report covers the industrial activity, geographic location, employment, receipts, and legal form of organization of minority-owned enterprises in total, and of each principal minority group. The report will be especially valuable in permitting objective analysis of various government programs concerned with fostering minority growth.

INTRODUCTION

This Data Access Description provides information on the low-income data available from the 1970 Census of Population and describes the sources of the data, the geographic detail, and the forms in which the data will be made available--printed reports, Fourth, Fifth, and Sixth Count Summary Tapes, 1970 public use samples, and special tabulations. The definition of poverty currently accepted by the Federal Government for statistical purposes and the basic thresholds utilized by the Bureau of the Census to determine the low-income status of families and unrelated individuals are discussed. A more detailed explanation of the poverty definition will be found in the Census Bureau report, Series P-23, No. 28, "Revision in Poverty Statistics, 1959 to 1968." Information on the availability of low-income data from the 1970 census, as described in this Data Access Description, is subject to possible minor revision.

Low-income statistics have not been published for previous decennial censuses. However, the poverty index originally developed by the Social Security Administration (SSA) has been applied annually to the income data from the March Current Population Survey, providing a consistent series of data for the past decade. The Bureau of the Census has published these data in several Current Population Reports in the P-60 series.

INFORMATION ON LOW-INCOME CONCEPTS

Background

The low-income statistics published from the 1970 census will be based on the poverty index originally developed by the Social Security Administration and modified in 1969 to reflect the recommendations of a Federal Interagency Committee. This modified definition is currently used in classifying families and unrelated individuals as poor or nonpoor for statistical purposes. It also forms the basis for income thresholds used

by various Federal agencies in determining eligibility for participation in such programs as the Neighborhood Youth Corps, the school lunch program, and the Job Corps.

The poverty index provides a range of low-income cutoffs adjusted for such factors as family size, sex and age of family head, number of children under 18 years old, and farm-nonfarm residence. At the core of the definition is a nutritionally adequate food plan ("economy" plan) designed by the Department of Agriculture for "emergency or temporary use when funds are low." The low-income cutoffs also take into account differences in the cost of living between farm and nonfarm families. The low-income cutoff for a farm family is set at 85 percent of the cutoff for a nonfarm family of similar composition. The cutoffs are revised annually to account for changes in the Consumer Price Index (CPI).

Weighted Average Thresholds at the Low-Income Level

The cutoffs used by the Bureau of the Census to determine the low-income status of families and unrelated individuals consist of a set of 124 thresholds arranged in a four-dimensional matrix. (See fig. 1.) This matrix is composed of family size (from one person to seven or more persons), cross-classified by number and presence of children under 18 years old (from no children present to six or more children present), sex of head, and farm-nonfarm residence. One- and two-person families are further differentiated by age of head as under 65 years and 65 years and over. The total family income of each family in the sample is compared to the appropriate dollar threshold to determine the low-income status of that family. If the family's total income is less than its corresponding low-income cutoff, the family is classified as poor; otherwise it is classified as nonpoor.

This detailed four-dimensional matrix is used as a basis for determining the weighted average thresholds shown in figure 2. These thresholds were weighted by the presence and number of children. For example, the weighted average threshold for the category "male-headed, nonfarm families of five members" is derived by multiplying the dollar amount of the threshold for each "number and presence of children" category (see fig. 1)--in this case, none, 1, 2, 3, and 4--by the total number of male-headed nonfarm families of five in each category. These products are then added together, and the aggregate is divided by the total number of male-headed, nonfarm families of five. The result is the weighted average low-income threshold ($4,418) for this category of families. The table of average thresholds is a convenient summary measure of the full 124-cell matrix.

Figure 1.—Low-Income Threshold Matrix

X represents low-income cutoff tabulations; -- represents no tabulations computed. These matrices apply for male head, nonfarm; male head, farm; female head, nonfarm; and female head, farm. Exact figures for the four matrices as used for the 1970 census are given in the 1970 Public Use Sample documentation as Technical Document 101, available for $3 from Users' Service Staff.

Family size	Number and presence of children						
	None	1	2	3	4	5	6 or more
1 member under 65 years	X	--	--	--	--	--	--
1 member 65 years and over	X	--	--	--	--	--	--
2 members under 65 years	X	X	--	--	--	--	--
2 members 65 years and over	X	X	--	--	--	--	--
3 members	X	X	X	--	--	--	--
4 members	X	X	X	X	--	--	--
5 members	X	X	X	X	X	--	--
6 members	X	X	X	X	X	X	--
7 members or more	X	X	X	X	X	X	X

Since family composition varies by farm-nonfarm residence, the weighted average thresholds at the low-income level for farm families, as shown in figure 2, will not be exactly 85 percent of the nonfarm levels. Family composition also varies from year to year due to the declining birth rate, an increase in female-headed families, and sampling variability in the annual Current Population Survey. Therefore, the weighted average thresholds for 1969 will not reflect, identically, the increase in the Consumer Price Index between 1969 and earlier years.

Since the basic thresholds used to determine low-income status are applied to all families and unrelated individuals, the weighted low-income thresholds are derived using all families and unrelated individuals, rather than only those classified as poor.

According to present plans, weighted average thresholds at the low-income level based on the 1970 Census of Population are not expected to be available until late 1972. Therefore, the thresholds presented in figure 2 are based on the March 1970 Current Population Survey. However, it is expected that these thresholds will not differ significantly from those based on the census.

Figure 2.—Weighted Average Thresholds at the Low-Income Level in 1969, by Size of Family and Sex of Head, by Nonfarm-Farm Residence

Number of family members	Total	Nonfarm			Farm		
		Total	Male head	Female head	Total	Male head	Female head
1 member	$1,834	$1,840	$1,923	$1,792	$1,569	$1,607	$1,512
Under 65 years	1,888	1,893	1,974	1,826	1,641	1,678	1,552
65 years and over	1,749	1,757	1,773	1,751	1,498	1,508	1,487
2 members	2,364	2,383	2,394	2,320	2,012	2,017	1,931
Head under 65 years	2,441	2,458	2,473	2,373	2,093	2,100	1,984
Head 65 years and over	2,194	2,215	2,217	2,202	1,882	1,883	1,861
3 members	2,905	2,924	2,937	2,830	2,480	2,485	2,395
4 members	3,721	3,743	3,745	3,725	3,195	3,197	3,159
5 members	4,386	4,415	4,418	4,377	3,769	3,770	3,761
6 members	4,921	4,958	4,962	4,917	4,244	4,245	4,205
7 members or more	6,034	6,101	6,116	5,952	5,182	5,185	5,129

Figure 3.—Earnings and Income Items, 1970 Census Sample Questionnaires

40. Earnings in 1969— *Fill parts a, b, and c for everyone who worked any time in 1969 even if he had no income.*
(If exact amount is not known, give best estimate.)

a. How much did this person earn in 1969 in wages, salary, commissions, bonuses, or tips from all jobs?
(Before deductions for taxes, bonds, dues, or other items.)
$ _____ .00
(Dollars only)
OR ○ None

b. How much did he earn in 1969 from his own nonfarm business, professional practice, or partnership?
(Net after business expenses. If business lost money, write "Loss" above amount.)
$ _____ .00
(Dollars only)
OR ○ None

c. How much did he earn in 1969 from his own farm?
(Net after operating expenses. Include earnings as a tenant farmer or sharecropper. If farm lost money, write "Loss" above amount.)
$ _____ .00
(Dollars only)
OR ○ None

41. Income other than earnings in 1969— *Fill parts a, b, and c.*
(If exact amount is not known, give best estimate.)

a. How much did this person receive in 1969 from Social Security or Railroad Retirement?
$ _____ .00
(Dollars only)
OR ○ None

b. How much did he receive in 1969 from public assistance or welfare payments?
Include aid for dependent children, old age assistance, general assistance, aid to the blind or totally disabled.
Exclude separate payments for hospital or other medical care.
$ _____ .00
(Dollars only)
OR ○ None

c. How much did he receive in 1969 from all other sources?
Include interest, dividends, veterans' payments, pensions, and other regular payments.
(See instruction sheet.)
$ _____ .00
(Dollars only)
OR ○ None

Alternate Low-Income Levels

Because the low-income levels currently in use by the Federal Government do not meet all the needs of the analysts of the data, two variations of the poverty definition were created at the same time that modifications were made to the poverty index. One of these alternate low-income levels was set at 75 percent of the official government standard; the other was set at 125 percent of this standard. In order to obtain the weighted low-income thresholds for families and unrelated individuals below 75 percent and below 125 percent of the low-income level, the weighted average thresholds shown in figure 2 are multiplied directly by 0.75 and 1.25, respectively.

SOURCE OF LOW-INCOME DATA

The 1970 census 5- and 15-percent questionnaires contained two items on earnings and income (fig. 3). Low-income data were derived from answers to these items.

The population covered in the low-income statistics presented from the 1970 census excludes inmates of institutions, members of the Armed Forces living in barracks, college students living in dormitories, and unrelated individuals under 14 years old.

AVAILABILITY OF LOW-INCOME DATA

Printed Reports

Low-income statistics, based on income data from the 1970 census, will be available to users in the form of printed reports, as described below.

The terminology of the table titles and table outlines in figures 4 through 10 is the same as appears in the 1970 census printed reports and summary tapes.

The 1970 Census of Population and Housing Census Tract Reports.--Census Tract Reports (Series PHC-1) are issued for standard metropolitan statistical areas (SMSA's). The reports include data showing a distribution of families by the ratio of family income to poverty level. Families and unrelated individuals with incomes below the poverty level are further described. These data are included in table P-4 of the reports and are given for each component county, city, and census tract. Figure 4 presents the information on low-income data available in table P-4. The census tract reports are scheduled to be published during the period December 1971 through August 1972.

1970 Census of Population, Volume I, Characteristics of the Population.--Low-income data are published in the 1970 Census of Population PC(1)-C reports, *General Social and Economic Characteristics.* There are 15 tables providing these data; titles of the tables and contents pertaining to low-income appear in figure 5. The data show the relationship between income and the poverty level for families, family heads, unrelated individuals, persons, and households. The PC(1)-C reports cover geographic areas ranging in size from places of 2,500 to States; they are to be published by State during the period November 1971 through August 1972.

The PC(1)-D reports, *Detailed Characteristics,* include nine tables providing low-income data for States, SMSA's of 250,000 population or more, and central cities. These tables are listed in figure 6. The PC(1)-D reports are scheduled to be issued by State between June and November 1972.

1970 Census of Population, Volume II, Subject Reports.--Current plans include the publication during 1972 of subject report PC(2)-9A, *Poverty Population.* Detailed cross-classifications of data from the 1970 census on the low-income status in 1969 of families and persons by their social and economic characteristics, for the United States, regions, and type of residence, will be published in this report. Refer to figure 7 for the general subject matter of each table to be included.

Publication of another subject report, PC(2)-9B, *Population, and Housing Characteristics of Selected Low-Income Areas,* is planned for late 1972. For the 50 largest cities data will be presented, by selected characteristics of the population, for the total city and for aggregates of census tracts with a 1970 census low-income rate (for persons) of 20, 30, and 40 percent or more. Data will also be presented by total population, white, Negro, and persons of Spanish heritage for the total city, the aggregate of census tracts with a 1970 census low-income rate (for persons) of 20 percent or more, and the remainder of the city.

Summary Tapes

Census data on low-income status will also be available on the Fourth, Fifth, and Sixth Count Summary Tapes.

Fourth Count Summary Tapes.--These tapes are the source of the PC(1)-C reports, *General Social and Economic Characteristics,* and the census tract reports. Fourth Count includes 25 tables providing data on low-income status, reported for census tracts, minor civil divisions (MCD's), census county divisions (CCD's), places of 2,500 inhabitants or more, counties, States, and other selected areas. These tables are listed in figure 8. The Fourth Count Summary Tapes will be available on a State-by-State basis from December 1971 through April 1972.

Fifth Count Summary Tapes.--These tapes are the only census product containing data summaries for ZIP code areas. Data on low-income status are provided in six tables; these tables are listed in figure 9. The Fifth Count Summary Tapes are expected to become available in June 1972.

Sixth Count Summary Tapes.--These tapes are the source of the PC(1)-D reports, *Detailed Characteristics.* In addition to the data for the central city and ring of SMSA's having over 250,000 inhabitants shown on the PC(1)-D tables, the tapes will include data for smaller SMSA's, individual counties inside the SMSA's, and large non-SMSA counties. The 11 tables for the Sixth Count related to low income are listed in figure 10. Sixth Count Summary Tapes will become available from summer through early fall on a State-by-State basis.

Acquisition of the Tapes.--The Fourth and Sixth Count files for each State will require more than one reel of tape per State per count and may be purchased at the cost of reproduction (currently $70 per reel). The Fifth Count files will be available, also at $70 per reel, as follows:

File A
3-digit areas..... 1 reel (includes entire U.S.)

File B, 5-digit areas within SMSA's:
ZIP codes beginning with 0..... 2 reels[1]
ZIP codes beginning with 1..... 2 reels[1]
ZIP codes beginning with 2 through 9..... 1 reel each

Total..... 12 reels

[1]It will be necessary for a user to purchase both reels for this ZIP code area.

echnical documentation for the Fourth Count, hich describes tabulations in detail, is included in art 2 of the *1970 Census Users' Guide*, which ıay be purchased from the Superintendent of Doc- ments, U.S. Government Printing Office, Wash- ıgton, D.C. 20402 for $2.75. Fifth Count ɔcumentation at $3 and Sixth Count documentation hich is in two sections (Population - $3; Housing $3), may be purchased from the Users' Service :aff, Data User Services Office, Bureau of the ensus, Washington, D.C. 20233. The Users' ervice Staff also accepts orders for summary ıpes from all counts.

Considerations relevant for using summary pes are discussed in *Data Access Description* o. 18, CT-1 (Revised), dated June 1970. Esti- ates of the number of tape reels per count for ıch State are presented in Summary Tape User emorandum No. 26, dated April 29, 1971.

ublic Use Samples

The public use samples of basic records from è 1970 census also provide low-income data. here will be six basic public use samples each which contains sample records for 1 percent of e population, or roughly 2 million individuals. he user may obtain a public use sample drawn om either 15-percent or 5-percent sample ecords and with one of three types of geographic lentification: (1) County Groups (including all MSA's over 250,000); (2) States; or (3) Neighbor- ɔod Characteristics. Census divisions (sub- ivisions of the country into nine State groups) ıd size of urbanized area are identified in the eighborhood Characteristics sample. The State les are expected to become available on a flow ısis between June and August 1972, and the ounty Group sample files in July and August 972. Neighborhood Characteristics sample files re expected to be available later in 1972.

No names or addresses appear in the public ɜe sample files. Furthermore, areas of resi- ɜnce defined in public use samples are suffi- ciently large to avoid disclosure of individuals.[2] Geographic information is limited to protect confidentiality, and geographic codes identify only areas with a population of more than 250,000 (e.g., States or SMSA's). For detailed information, refer to *Data Access Description* No. 24, *Public Use Samples of Basic Records From the 1960 and 1970 Censuses* (CT-8).

All of the characteristics of people and households as recorded in the census basic records will be on the public use sample records, but geographic information and names will not appear. Since income characteristics are included in the record of each household, the samples may be tabulated to compare demographic characteristics of poor and nonpoor populations. These tabulations can also be used for studies of low-income families according to alternate low-income definitions.

Family and personal incomes will be recorded in $100 intervals by type of income. The low-income threshold (discussed above) rounded to the nearest $100 will also be recorded for each family. The ratio of family income to the low-income threshold is included as the "poverty recode,"[3] and is given as follows:

Income less than .50 of low-income threshold

Income between .50 and .74 of low-income threshold

Income between .75 and .99 of low-income threshold

Income between 1.00 and 1.24 of low-income threshold

Income between 1.25 and 1.49 of low-income threshold

Income between 1.50 and 1.99 of low-income threshold

Income between 2.00 and 2.99 of low-income threshold

Income greater than 3.00 of low-income threshold

Not applicable

[2]The Bureau of the Census is precluded by law (Title 13, U.S.C.) from releasing data that would identify an individual person, household, or firm. Publicly available data from a census or survey appear as statistical summaries only. However, samples of basic data from the 1970 census, with all identifying information removed, may be made available for statistical purposes for large areas.

[3]A recode is a simplification of more detailed information derived from one or more existing codes.

In addition to the housing unit and person characteristics which appear in each public use sample, neighborhood characteristics samples also contain census-defined characteristics of the area in which the person lives. The neighborhoods themselves will not be identified, but will have an average population of 4,000 to 5,000 inhabitants. Characteristics of these neighborhoods will include the proportion of families below the poverty level, the percent of families with incomes under $5,000 and over $15,000, the percent of Negro or Spanish American population, average household size, etc. This will make it possible to tabulate characteristics of the population by type of neighborhood.

Special Tabulations

Special tabulations of low-income information will be undertaken on a cost-reimbursable basis. These tabulations can be performed for special areas of residence or levels of income and can consist of the standard census tabulations or of tabulations developed by the requester. *Information contained in the special tabulations as well as that in the summary tapes is subject to the same legal safeguards as printed reports to insure confidentiality of census data.*

The data file from the 1970 census from which the Census Bureau can prepare special tabulations on low-income data to meet the specifications of individual users is expected to be available by mid-1972. The number of geographic areas for which low-income information can be made available is limited by the coding on the census 5- and 15-percent sample basic records. To insure that the confidentiality of individual records is preserved, summary data are frequently suppresed where the number of reporting units in a tabulation is small. Consequently, suppression frequently occurs for low-income tabulations by race in small geographic areas where there may be relatively few persons in a particular racial category.

For additional information regarding special tabulations, refer to *Data Access Description* No. 21, *Census Bureau Unpublished Data and Special Services: Policy and Delineation*, dated December 1970.

DEFINITION OF SELECTED TERMS

Understanding of census definitions for the following terms is essential to the use of low-income data from the 1970 census.

Households below low-income level.--Households below the low-income level are defined as those in which the total income of the family or primary individual is below the low-income level. The incomes of persons in the household other than members of the family or the primary individual are not included in the total income of the family or primary individuals when determining the low-income status of a household.

Income deficit.--The income deficit is the difference between the total income of families and unrelated individuals below the low-income level and their respective low-income thresholds. In computing the income deficit, families reporting a net income loss are assigned zero dollars. For such cases, the income deficit is equal to the low-income threshold.

Aggregate income deficit.--The aggregate income deficit provides an estimate of the amount of money that would be required to raise the incomes of all poor families and unrelated individuals to their respective thresholds at the low-income level.

Median income deficit.--The median income deficit is the amount which divides the distribution into two equal parts, one having an income deficit above the median and the other having an income deficit below the median.

Mean income deficit.--The mean income deficit is the amount obtained by dividing the aggregate income deficit of a group below the low-income level by the number of families or unrelated individuals (as appropriate) in that group.

FURTHER INFORMATION

If further information concerning the matters discussed in this publication is desired, address inquiries to:

Director
Bureau of the Census
Washington, D.C. 20233

Geographic Base Files—Uses, Maintenance, Problem Solving

This report presents the proceedings of the third in a series of conferences devoted to local use of the Census Bureau's Geographic Base Files in computerized geographic coding. The conference was held in Arlington, Texas, on November 16 and 17, 1971, and the papers presented along with the resulting discussions centered on the theme of the Census **"Geographic Base File System—Uses, Maintenance, Problem Solving."**

The major purposes of this series of conferences is to improve communication among users and to provide a vehicle for the mutual exchange of information among users, the Census Bureau, and other Federal agencies. As expressed by the Geography Division, "One of the major purposes of today's meeting is to 'spread the word' . . . . to help those who have the need and to learn from those who have already taken the plunge into the techniques and the problems of DIME file management and use. . ."

In furthering this objective, presentations were made by representatives from different levels of city, metropolitan, and county planning. (Fort Worth City Planning Department; Dallas Department of Planning and Urban Development; North Central Texas Council of Governments; Wichita Falls City Planning Department; New York City, Office of Administration, Office of the Mayor; Southwestern Pennsylvania Regional Planning Commission; and Santa Clara County Planning Department.) Presentations were also made by representatives of the Office of Civil Defense; the Kansas City Health Department; and the University of Cincinnati Institute for Urban Information Systems. In addition, there was a presentation by the Geography Division of the Census Bureau.

Several significant points were brought out during the presentations and the discussions which followed. Among these were that the organization of address coded information into meaningful, usable, geographic units is required more and more by Federal, State, and local programs. The Census Bureau's Geographic Base (DIME) File is, essentially, a **management tool** and has its greatest potential at the local level. Data which in the past have been too voluminous or geographically complex to handle efficiently can now be "geographically" organized; and by so doing, a major step can be taken to make local data more usable and more understandable to those in decision-making positions, whether these decision makers are the mayor, the councilman, the director of the department of health or of planning, the president of a bank or the head of a local department store. One of the major problems most areas have today is lack of a staff that is technically proficient to take advantage of the capabilities that the Geographic Base (DIME) File provides at the local level.

This report serves as a valuable reference document for those who are dealing with masses of addressed data and who must organize them into meaningful, understandable, and usable information for use in both **public** and **private** sectors.

132 pp. $1.25

For copies of this new report in this series and the preceding two, fill out the order form on the adjacent panel.

Census Use Study

ADMATCH/OS
ADMATCH/DOS

Computer Program Packages

U.S. DEPARTMENT OF COMMERCE
Social and Economic Statistics Administration
BUREAU OF THE CENSUS

ADMATCH: An Address Matching System

ADMATCH is a package of user-oriented computer programs and documentation designed to assist in the assignment of geographic codes to computerized data records containing street addresses. Geographic codes for areas such as census tracts, school districts, and traffic zones can be readily assigned to data records in files of building permits, school census records, police complaints, etc. The ADMATCH system has been developed because the assignment of geographic codes to data records through address matching has become a very important step, not only in creating urban and municipal information systems, but also in many ongoing planning and evaluation studies.

Examples of address matching:

Assign census tract codes to building permit records and aggregate data by tract to determine the change in the housing inventory since the last decennial census and to prepare population estimates based on housing unit counts.

Code student records with census tract and block codes to assist school administrators in school redistricting and in relating student characteristics to census data describing the neighborhoods in which they live.

ADDRESS MATCHING WITH ADMATCH

The customary method of address matching consists of the manual process of locating the address of a data collection form on a map or street index and recording the appropriate geographic code on the form. ADMATCH also requires a reference source similar to a map or street index.

However, the reference source for ADMATCH must be computer readable. The Census Bureau has been assisted by planning agencies in most of the Nation's metropolitan areas in preparing reference sources that can be used with ADMATCH: address coding guides and geographic base files. Records in these files contain address ranges and geographic codes for block faces. Locally prepared street indexes with address ranges and geographic codes can also be used as a reference file. ADMATCH links the data records to the reference file records by matching the address on the data record to the address range in the reference file. When a match occurs, geographic codes from the reference file are attached to the data records.

ADMATCH OPERATION

The ADMATCH system requires that the data and reference files be processed in a three phase operation as follows:

Preprocessing—The ADMATCH Preprocessor program separates the various components of the address and creates a match key containing the items to be used in the match, including the street number, direction, name and type, and the ZIP code, city, and State. Special features of the Preprocessor include the ability to create city and State codes, standardize street type and direction (e.g., ST, AVE, N, EAST), correct misspelled street names on data records, and add records to the reference file to compensate for street names that are often misspelled or truncated.

Sorting—The data and reference files must be sorted on certain items in the match key including either the ZIP code or State and place codes, street name, and address number or range.

Matching—The ADMATCH Matcher program compares the various items in the match keys of the data file and reference file. When a match occurs, user-specified geographic codes from the reference file are attached to the data records. Since the quality of data files vary, the Matcher program can be directed to accept mismatches on the street type and direction to improve the chances for matching. Individual street addresses can be matched against individual street addresses as well as address ranges.

The ADMATCH programs have been tested with various types of data files. Based upon the successful results of these tests, ADMATCH is being made available. However, the Census Bureau staff will not be available to help resolve problems that arise in the use of these programs.

MACHINE REQUIREMENTS

The ADMATCH programs are written in IBM System/360 Assembler Language. Separate versions are available for use under the 16K Disk or Tape Operating Systems (DOS or TOS) and under the Operating System (OS) the minimum core storage requirement is 32K bytes, and a line printer and three magnetic tape or disk units are needed. The OS version of the ADMATCH package includes two additional programs not available with the DOS package.

PROGRAM TAPE

The computer program tape contains 80 column card images of the source and object programs for the Preprocessor and Matcher programs. An address component table and a street pattern recognition table, required for the Preprocessor program, are also included on the tape. Test files are also included on the tape.

The tape width is 1/2 inch. The tape reel is 10½ inches in diameter with a maximum length of 2,400 feet. The recording density is either 556 or 800 characters or bits per inch. The logical and physical record size is an 80 character punch card image. The size of the file is approximately 5,500 records.

AVAILABILITY

The ADMATCH Computer Program Packages (User's Manuals and Computer Programs) or the manuals only described here are available now and may be ordered by filling out the order form on the reverse side.

The Census Use Study is also developing two other computer program packages. These are:

DIME: A Geographic Base File System. A computer program package for creating a DIME geographic base file. Includes clerical instructions, a computer manual, and computer programs.

GRIDS: A Computer Mapping System. A computer program package for use on small-scale computers which provides three mapping options within a grid pattern: density, shading, and value maps. Includes users manual and computer programs.

For further information on the DIME and GRIDS computer program packages, write to the Publications Distribution Section, Social and Economic Statistics Administration, Washington, D.C. 20233.

Census Use Study REPORT SERIES

The following is a list of the reports being produced by the Census Use Study:

1. **General Description** —An overview of the Development and operations of the New Haven Census Use Study.

2. **Computer Mapping**— Outlines the use of computer maps, techniques available, requirements, and Census Use Study experience and recommendations.

3. **Data Tabulation Activities** —Describes contents and uses of special tabulations provided to local agencies from the 1967 special census of New Haven, Conn.

4. **The DIME Geocoding System** —Includes a description of the file and the edit system, uses of the files, and methods for creating a DIME file.

5. **Data Interests of Local Agencies**—Describes a series of surveys undertaken to explore the needs of local agencies for small area data.

6. **Family Health Survey**— A feasibility study of a mail-out/mail-back survey for collecting health related data for use with decennial type census data.

7. **Health Information System**— Reports on the development of a prototype information system for maternal and child health using local and census data.

8. **Data Uses in Health Planning** —Outlines the uses of data in health planning based on the general research conducted at the Census Use Study.

9. **Data Uses in Urban Planning** —Shows general findings of the Census Use Study as applied to urban planning.

10. **Data Uses in School Administration** —Based on activities conducted at the Census Use Study with local school administrators.

11. **Area Travel Survey** —Describes a sample survey conducted to augment the New Haven special census data with data for use in transportation planning.

12. **Health Information System - II**—The second report on the development and implementation of a computer-based health information system.

14. **Geocoding with ADMATCH**—Describes experiences in using the ADMATCH (Address Matching System) program with a variety of local geographic base files.

For further information on any of the THIRTEEN Census Use Study REPORTS, write to the Publications Distribution Section, Social and Economic Statistics Administration, Washington, D.C. 20233.

Publications Order Form

1970 CENSUS OF HOUSING

Final Reports

Metropolitan Housing Characteristics HC(2) Series

U.S. DEPARTMENT OF COMMERCE
Social and Economic Statistics Administration
BUREAU OF THE CENSUS

DESCRIPTION OF PUBLICATIONS

Metropolitan Housing Characteristics–Series HC(2)

During the period April through October 1972, the Bureau of the Census will publish a series of reports from the 1970 Census of Housing designated HC(2) and entitled, "Metropolitan Housing Characteristics." The series consists of one report for each of the 247 standard metropolitan statistical areas recognized in the 1970 census as well as a summary report for the United States. Statistics are presented for the SMSA, its central cities, and its places of 50,000 inhabitants or more.

Each report contains the following data in considerable detail and cross-classifications–occupancy and vacancy characteristics; utilization characteristics (number of rooms, number of persons, persons per room, and number of bedrooms); plumbing and structural characteristics (plumbing facilities, bathrooms, year structure built, and elevator in structure); equipment and appliances (heating, air conditioning, automobiles, second home, clothes washer, clothes dryer, dishwasher, and home food freezer); financial characteristics (value, rent, etc.), and household characteristics (household composition and income). In addition, for areas with Negro and/or Spanish heritage population of specified size, the reports present selected data for these groups.

FURTHER INFORMATION

THE REPORTS IN THIS SERIES WILL BE ISSUED ON A FLOW BASIS FROM APRIL THROUGH OCTOBER 1972. INFORMATION ON THE SPECIFIC MONTH WHEN ANY GIVEN REPORT WILL BE RELEASED IS NOT KNOWN IN ADVANCE. THE DETERMINING FACTOR IS THE DATE THE CENSUS BUREAU COMPLETES THE DATA PROCESSING FOR THAT PARTICULAR AREA. IT MAY TAKE SEVERAL MONTHS TO RECEIVE THE REPORT(S) YOU ORDER. IF YOU HAVE ANY QUESTIONS CONCERNING THE AVAILABILITY OF A PARTICULAR REPORT, PLEASE WRITE TO THE PUBLICATIONS DISTRIBUTION SECTION, SOCIAL AND ECONOMIC STATISTICS ADMINISTRATION, WASHINGTON, D.C. 20233.

(please detach here)

HOW TO ORDER

To order a full set of reports, mark the quantity desired on the Order Form (see below). To order separate reports, make the appropriate entries on the list for ordering individual reports and also on the Order Form.

Publications Order Form

1970 CENSUS OF POPULATION AND HOUSING

Final Reports

Geographic Identification Code Scheme

PHC(R)-3 Series

U.S. DEPARTMENT OF COMMERCE
Social and Economic Statistics Administration
BUREAU OF THE CENSUS

DESCRIPTION OF PUBLICATION

Geographic Identification Code Scheme

The 1970 Geographic Identification Code Scheme presents the names of political and statistical subdivisions, and related geographic codes, for which the Bureau of the Census tabulated data from the 1970 Census of Population and Housing. The geographic codes contained in these publications correspond to those on the 1970 census summary tapes, Master Enumeration District Lists (MEDLists), Geographic Area Code Index, and Geographic Base Files.

The 1970 Geographic Identification Code Scheme is presented in four publications, one for each census region: the Northeast, South, North Central, and West. There are two tables for each State: (1) "Counties, County Subdivisions, and Places" which lists these geographic areas within the State in alphabetic sequence; and (2) "Alphabetic List of Place Names" which lists all places within the State in alphabetic sequence with their respective county, minor civil division (or census county division), and place codes. The final table in each of the four publications provides an alphabetical listing of the standard metropolitan statistical areas and urbanized areas, or parts thereof, located within each of the regions and the numeric codes which each of these has been assigned.

For descriptions of **FINAL REPORTS ISSUED PREVIOUSLY** on the 1970 Census of Population and Housing, write to the Publications Distribution Section, Social and Economic Statistics Administration, Washington, D.C. 20233.

These reports are also available on **MICROFICHE.** For further information on **MICROFICHE,** see reverse side.

HOW TO ORDER

To order all four reports, mark the quantity desired on the Order Form (see below). To order separate reports, make the appropriate entries on the list for ordering individually and also on the Order Form.

CORRECTION NOTE

The following paragraph should be substituted for the 1st paragraph on page 1 of Census Users Bulletin No. 4.

"The DAUList programs designed to process the Fourth Count Population and Housing summary tapes and display their contents on a line printer are now available. The DAUList 4/Population program, developed on an IBM/DOS system, is written in FORTRAN with a COBOL read routine and requires approximately 60 K bytes of core storage. The DAUList 4/Housing program, also developed on an IBM/DOS system, is written in COBOL (level D) and requires approximately 50 bytes of core storage."

U.S. DEPARTMENT OF COMMERCE
Social and Economic Statistics Administration
BUREAU OF THE CENSUS
Washington, D.C. 20233

OFFICE OF THE DIRECTOR

June 14, 1972

1970 Census Users Bulletin No. 4

DAUList 4 Display Programs

The DAUList programs designed to process the Fourth Count Population and Housing summary tapes and display their contents on a line printer are now available. The DAUList 4/Population program, developed on an IBM/DOS system, is written in COBOL (level D) and requires approximately 60 K bytes of core storage. The DAUList 4/Housing program, also developed on an IBM/DOS system, is written in FORTRAN with a COBOL read routine and requires approximately 50 K bytes of core storage.

The programs can be obtained for $70 each from the Users' Service Staff, Data User Services Office, Bureau of the Census, Washington, D.C. 20233. Please specify whether the program tape should be in 7-track format with 556 or 800 cpi density in BCD characters, or 9-track format, 800 cpi density, in EBCDIC or ASCII characters.

Corrected Farm - Nonfarm Counts

As previously reported in a Census Users Bulletin, a misclassification exists in the statistics on farm - nonfarm residence published in the series PC(1)-C and HC(1)-B State reports and the Fourth Count summary tapes. The misclassification is limited to the farm - nonfarm components and is compensating between the components. Therefore, the population and housing unit figures for the rural areas as a whole are not affected, nor are the figures for urban areas and the State as a whole.

Corrected State figures are shown on page 2. Corrected figures for counties will be provided later this summer.

"Residence in 1965" Tabulations for Multi-State SMSA's

Table P-2 of the PHC(1) Census Tract reports and tabulation 29 of the Fourth Count/population summary tapes (files A, B, and C) contain certain incorrect data for components (counties, places, tracts, etc.) of those 30 SMSA's which cross State boundaries. One single-State SMSA is also affected because there is adjoining tracted area in another State.

NOTE: Data based on 20-percent sample tabulation.

The error concerns data presented in the "Residence in 1965" tabulation for persons who have changed houses since 1965 but live in the same SMSA. Persons who resided in the central city five years ago, but have since moved to a part of the SMSA in a different State, are misclassified as having lived "in other part of this SMSA" in 1965, rather than "in central city of this SMSA" (see the table P-2 excerpt, below). In cases where more than one State in a multi-State SMSA contains a central city of the SMSA (e.g., Duluth-Superior, Minnesota-Wisconsin), tabulations of persons moving from either of the central cities to the other State are affected.

RESIDENCE IN 1965

Persons, 5 years old and over, 1970 . . . . . .

Same house as in 1970 . . . . . .
Different house:
In central city of this SMSA . . . . . .
In other part of this SMSA . . . . . .
Outside this SMSA . . . . . .
North and West . . . . . .
South . . . . . .
Abroad . . . . . .

The Cincinnati, Ohio-Kentucky-Indiana SMSA provides an example of the "Residence in 1965" misclassification problem. 1970 residents of the Indiana and Kentucky portions of this SMSA who should have been counted as living in the central city of Cincinnati, Ohio, in 1965, were erroneously classified as living "in other part of this SMSA" rather than "in central city of this SMSA."

These tabulations will be rerun and errata sheets will be obtainable later this summer on request from the Director, Bureau of the Census, Washington, D.C. 20233.

The following 31 SMSA's are affected by this tabulation error:

Allentown-Bethlehem-Easton, Pa.-N.J.
Augusta, Ga.-S.C.
Binghamton, N.Y.-Pa.
Chattanooga, Tenn.-Ga.
Cincinnati, Ohio-Ky.-Ind.
Columbus, Ga.-Ala.
Davenport-Rock Island-Moline, Iowa-Ill.
Duluth-Superior, Minn.-Wis.
Evansville, Ind.-Ky.
Fall River, Mass.-R.I.
Fargo-Moorhead, N. Dak.-Minn.
Fort Smith, Ark.-Okla.
Huntington-Ashland, W. Va.-Ky.-Ohio
Kansas City, Mo.-Kans.
Lawrence-Haverhill, Mass.-N.H.
Louisville, Ky.-Ind.
Memphis, Tenn.-Ark.
Omaha, Nebr.-Iowa
Philadelphia, Pa.-N.J.
Portland, Oreg.-Wash.
Providence-Pawtucket-Warwick, R.I.-Mass.
St. Louis, Mo.-Ill.
Sioux City, Iowa-Nebr.
Springfield-Chicopee-Holyoke, Mass.-Conn.
Steubenville-Weirton, Ohio-W. Va.
Texarkana, Tex.-Ark.
Toledo, Ohio-Mich.
Washington, D.C.-Md.-Va.
Wheeling, W. Va.-Ohio
Wilmington, Del.-N.J.-Md.
Youngstown-Warren, Ohio

Misformatted Allocation Records for Several Tracts

A programming problem has resulted in misformatting of the allocation records on the Fourth Count (population) summary tapes for 31 census tracts in fifteen States and the District of Columbia. The tracts involved are ones for which no sample data were collected; therefore, no data records are needed, and only allocation records, showing 100% population and/or housing counts, are presented. However, the allocation records for these tracts incorrectly consist of five physical records, rather than two physical records as normally formatted.

Time constraints and limited funds make it infeasible for the Census Bureau to recreate and issue new summary tapes to eliminate this problem. A list of the affected census tracts is being sent to all summary tape purchasers and may be obtained by writing to the Data Access and Use Laboratory.

Correction of GPO Phone Number

The phone number listed for the Government Printing Office in the May issue of Small-Area Data Notes (p. 6) included an incorrect area code. The correct code is 202. The complete number is 202/783-3238.

Available Printed Reports

The following tables present information on the availability of 1970 census reports. See Census Users Bulletins No. 2 and 3 for ordering instructions and information on summary tapes.

Table 1

Selected 1970 Census Final Reports

The following report series are either available in their entirety ("complete") or have one or more reports in print ("partial"). See attached tables for more information on the recently completed and partially released series. Additional information on any series may be obtained by writing to the Data Access and Use Laboratory, Data User Services Office, Bureau of the Census, Washington, D.C. 20233.

Series	Title	Release Status
PC(1)-A	Number of Inhabitants	Complete
PC(1)-B	General Population Characteristics	Complete
PC(1)-C	General Social and Economic Characteristics	Partial
HC(1)-A	General Housing Characteristics	Complete
HC(1)-B	Detailed Housing Characteristics	Partial
HC(3)	Block Statistics	Complete
PHC(1)	Census Tract Reports	Partial
PHC(2)	General Demographic Trends for Metropolitan Areas, 1960 to 1970	Complete
PHC(3)	Employment Profiles of Selected Low-Income Areas	Partial*

*PHC(3) reports (numbers 69, 71, 72, and 73) for selected rural counties are now available: (69) Selected Rural Counties in Alabama, $2; (71) Selected Rural Counties in Arkansas, $2; (72) Selected Rural Counties in California, $1.50; (73) Selected Rural Counties in Missouri, $1. Reports 70 & 74-76 are not yet available. See Census Users Bulletin No. 2, table 5, for information on the other reports in this series.

BUREAU OF THE CENSUS

Publication Order Form

The Bureau of the Census Presents

Number 1 in a new series for school students— "WE, THE AMERICANS"

"WHO WE ARE" presents a summary of important 1970 census results and tells it "as it is" in a form easy to read. . .easy to understand. . .educational yet fun to read for teenagers.

UNITED STATES

"WHO WE ARE"

. . .tells of our growth in millions of people—men and women, young and old, racial identification, and where we live.

. . .shows we're city people now **but** more suburban than ever.

. . .gives State populations—which ones gained, which lost. . .shows the 10 largest U.S. cities and their 1970 and 1960 populations.

. . .tells how many people per square mile in the United States and the world.

. . .shows and explains apportioning seats in Congress.

. . .offers a guide for the future and asks should we limit the growth of cities? of suburbs? how many more mouths to feed? how many minds to educate? how many more homes and apartments to build?

ALL THIS and more is included in this fascinating new 20-page booklet designed for school students, using bright splashing colors, simple graphs, numerous photos and illustrations to show the latest facts about the Nation's population in a simplified and interest-holding presentation.

MILLIONS OF PEOPLE GAINED

This booklet is available now from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402 or from any U.S. Department of Commerce Field Office (listed on the back cover of this order form).

FORM BC-154 (JUNE 1972)

Microfiche Order Form

1970 CENSUS OF POPULATION

microfiche

Final Reports

Employment Profiles of Selected Low-Income Areas PHC(3) Series

Rural Areas

NATIONAL TECHNICAL INFORMATION SERVICE

SPRINGFIELD, VA. 22151

MICROFICHE

The NATIONAL TECHNICAL INFORMATION SERVICE offers you these PHC(3) RURAL reports and other 1970 Census of Population and Housing final reports on MICROFICHE. Microfiche is COMPACT. More than 1,000 average length documents fit into an ordinary file drawer. Federal agencies now use a standard size microfiche—4" x 6" (105mm x 148mm) that contains up to 70 pages on one sheet. MICROFICHE is economical, easy to handle, and may be filed fast! Reproduce copies with reader-printers. Make enlarged photocopies of any or all pages quickly and easily with MICROFICHE.

DESCRIPTION OF PUBLICATIONS

Employment Profiles of Selected Low-Income Areas—Series PHC(3) **RURAL AREAS***

During the period December 1971 through April 1972, the Bureau of the Census published a series of reports presenting data on the social and economic characteristics of the residents of selected urban and rural areas located throughout the United States. This series is designated as PHC(3) and is entitled "Employment Profiles of Selected Low-Income Areas."

The complete series, consisting of 76 reports, covers selected low-income areas in 51 cities and seven sets of rural counties. Each report in the **rural** areas provides statistics on employment and unemployment, education, vocational training, job history, income, residential migration, and factors which are problems in job holding or job seeking for the residents of these areas.

***This order form shows the reports for the RURAL areas only. A previous Microfiche Order Form for this series presenting 68 reports on URBAN areas was issued in February 1972. To obtain a copy, write to National Technical Information Service, Springfield, Virginia 22151.**

REPORTS ON MICROFICHE WILL BE SHIPPED WHEN AVAILABLE

Prepayment is required by check or money order made payable to the NATIONAL TECHNICAL INFORMATION SERVICE, NTIS prepaid microfiche coupons, or charge to NTIS Deposit Account. When ordering individual reports by NTIS prepaid microfiche coupon, please type the complete order number and title on the coupon.

(please detach along this dotted line)

DEPUTY DIRECTOR APPOINTED

Robert L. Hagan, who began his career with the Census Bureau in 1946, has been appointed Acting Deputy Director of the Bureau. He succeeds Joseph Wright, Jr., who has become Deputy Administrator for Management in the Social and Economic Statistics Administration.

Mr. Hagan joined the Bureau in Kansas after World War II military service. He became District Supervisor in Kansas City in 1948 and in 1956 was named Regional Director in St. Louis. In 1958, Mr. Hagan joined the Geography Division as Assistant Chief. He continued in that position until 1969.

As preparations for the 1970 Census of Population and Housing got underway, Mr. Hagan was reassigned to the Jeffersonville Census Operations Division (now the Data Preparation Division) as Assistant Division Chief for Decennial Census Operations. In 1971, he was named Chief, Data Preparation Division, Jeffersonville.

SPECIAL CENSUSES

The Bureau of the Census has a program for conducting special population censuses on a cost-reimbursable basis. The special census as normally carried out provides only total population and housing unit counts. At an additional charge, these counts can be tabulated for enumeration districts or blocks. Data on age, race, and sex can also be made available for enumeration districts at an additional charge. The enumeration districts for a special census can be delineated so that data will be available for wards, voting precincts, school districts, etc.

For an area having a special census population of 50,000 or more, a publication showing data for the area by age, race, and sex is prepared by the Census Bureau. If the area has census tracts, these data are shown by tracts. These reports are issued in *Current Population Reports*, series P-28. Other reports in this series are issued quarterly and annually, presenting population figures for all the special censuses conducted during the report period.

For sale by the Bureau of the Census, Washington, D.C. 20233, and U.S. Department of Commerce field offices. 10 cents.

A special census is undertaken on the authorization of an appropriate local government. The local government agrees to pay all the necessary expenses and to provide suitable office space and equipment. The cost of a special census is based on the population to be enumerated and the type of area for which the census is to be conducted. Per capita costs for a special census are slightly higher in metropolitan areas than in rural areas. The average cost for a city of 10,000 is $4,300. About 2 weeks are required to complete the enumeration for a city of this size. An official cost estimate may be obtained from the Chief, Population Division, Bureau of the Census, Washington, D.C. 20233. A request for a cost estimate should be accompanied by the latest population estimate for the municipality.

New Guide to Geographic Codes

The Bureau of the Census has published the *1970 Geographic Identification Code Scheme* (GICS), a four-volume guide to the geographic codes for the component parts of each State. Each volume reports on a different region of the country (Northeast, North Central, South, and West). For each State within a region, the GICS presents two tables. Table 1, arranged by counties within the State, shows the following codes, as appropriate, for counties, county subdivisions, and places: State, county, SMSA, economic subregion, State economic area, MCD, place, place description, and place size. Table 2 presents alphabetically all the places within the State with their corresponding county, county subdivision, and place codes. A third table, shown once for each volume, presents SMSA and urbanized area codes for the entire United States.

The *1970 Geographic Identification Code Scheme* is sold in four separate parts: Northeast, $1; North Central, $1.75; South, $1.50; and West, 60 cents. Copies of the GICS can be ordered from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402. Order forms are being sent to persons on the *Small-Area Data Notes* mailing list.

The information published in the *1970 Geographic Identification Code Scheme* is also available from two other sources--the Master Enumeration District List (MEDList) and the Geographic Area Code Index (GACI)--which are available from the Census Bureau on paper copy, computer tape, and microfilm.

T-GUIDE Program Released

The Data Access and Use Laboratory has developed a computer program, T-GUIDE, designed to create street reference files at the census tract level from the DIME files. The files produced by the T-GUIDE program contain all streets within every census tract included in the DIME files, indicating the low and high address range for each street. A separate record is produced for the odd and even side of each street to facilitate the use of the files with ADMATCH, as well as other computer matching programs.

The T-GUIDE program reads the DIME file, drops the nonstreet records (such as railroad tracks, streams, etc.), splits the street segment records, thus creating a record for each side of the street, and then collapses the address ranges of the block side records along the length of the street within each census tract. The program also provides additional breaks in address ranges at each minor civil division, place, county, or State boundary.

Tests conducted on existing files have resulted in an approximately 60-percent reduction in the size of the DIME files, thereby allowing for manual, as well as speedier mechanical, geocoding with the resulting files.

The T-GUIDE program is written for the IBM 360/40 (DOS) in COBOL and can be used with both the undigitized and digitized DIME files. A program listing and the record layout for the resulting T-GUIDE file can be obtained from the Data Access and Use Laboratory, Data User Services Office, Bureau of the Census, Washington, D.C. 20233.

Data for Non-SMSA Tracts

About 100 counties and places outside standard metropolitan statistical areas (SMSA's) were subdivided into census tracts for the 1970 census (see SAD Notes Vol. 5, No. 11 for a list of the tracted areas outside of SMSA's). Complete-count and sample data for the non-SMSA tracted areas were tabulated on the Second and Fourth Count summary tapes, respectively, but data for these areas have not been published in the *Census Tract Reports*, series PHC-1. However, photocopies of unpublished tables for the non-SMSA tracts, which are structured identically to the published tables, can be purchased from the Users' Service Staff. Tract outline maps covering the non-SMSA tracted areas can also be purchased from that office. For cost information, write to the Users' Service Staff, Data User Services Office, Bureau of the Census, Washington, D.C. 20233.

Differences in Complete-Count and Sample Totals

A number of inquiries have been made to the Bureau concerning differences in sample and complete census figures, as shown in the PC(1)-B and PC(1)-C reports, as well as related publications. Similar differences also exist between complete-count and sample data on the summary tapes. These differences do not imply that errors in processing the census were made. Information obtained from a sample will not have the same accuracy as that provided by a full count.

The differences observed when complete counts are compared to estimates based on the 20- or 15-percent sample for a given area come about for two reasons, basically. One is the way the sample data are weighted to estimate distributions for the entire population; the other concerns the establishment of the sets of areas within which the weighting is done.

There are several methods of weighting data collected from a sample of housing units. The simplest is to multiply the 20-percent sample data by five, and the 15-percent data by the ratio of 100 to 15. This is essentially the method used in the 1950 Censuses of Population and Housing. An improved method is to weight the sample units in such a way that the total number of persons given by the sample becomes equal to the number enumerated in the complete count for each of a set of areas. Still a third method attempts to create consistency between sample and complete counts not only for the total population, but also for major subgroups (determined, for example, by sex, race, age, etc.). The third method is the one used for the samples in the 1960 and 1970 censuses. A description of this method, as applied in the 1970 census, is given in appendix C of the PC(1)-C reports and in a related article in SAD Notes, Vol. 7, No. 1.

To apply this method, however, it was necessary to establish a minimum size for the area within which the weighting would be performed. Without such a minimum, there might be places with zero or a trivial number of sample cases to be weighted up to a population count.

To avoid such a problem, the Bureau decided to adopt a minimum size of 2,500 persons for the 20- and 15-percent sample weighting areas. Where a city, tract, or other tabulation area contained 2,500 or more persons, it was, wherever feasible, made into a separate weighting area. Smaller areas were combined (sometimes with areas over 2,500) to achieve the minimum size.

This decision means that in tabulation areas of less than 2,500, the sample estimates and complete census counts will frequently disagree. It also means similar discrepancies can occur for larger areas, since it was frequently necessary to combine small residual parts of places or counties with larger areas.

When data are needed on the total population, households, age distribution, or other subjects covered on a 100-percent basis, the PC(1)-A, PC(1)-B, or HC(1)-A reports--or the complete-count summary tapes--should be used. In the PHC(1) tract reports, tables P-1, H-1, and H-3, derived from the complete count, should be used in preference to other tables for complete-count characteristics. In the few cases in which there are large differences between the sample and 100-percent count, the sample distributions can be adjusted by the ratio of the complete count to the total for the sample. This, however, will produce only minor reductions in the sampling errors for most sample statistics. For these areas, the sampling errors are relatively high (in a place of 1,200 population, there will typically be about 80 households in the 20-percent sample and 70 in the 15-percent sample) and even under the best conditions, the sample distributions cannot be considered as very precise estimates of the total population.

New DAD's To Be Issued

Two new *Data Access Descriptions* will be released soon. DAD No. 28, "Delineation of Problem Housing Areas," series CEP-6, describes a possible method of using 1970 census data in the study of housing and neighborhood quality at the local level. Information is provided on the methods of collecting and evaluating data on the quality of housing in past censuses and on the 1970 substandard housing estimates to be published in volume VI of the housing reports series.

DAD No. 29, "Low-Income Data From the 1970 Census," series CEP-7, describes the availability of low-income data in various output forms: printed reports, summary tapes, public use samples, and special tabulations. Low-income concepts are discussed and the 1970 census questionnaire items used as the source of low-income data are identified. In addition, selected terms relating to low income are defined.

SAD Notes subscribers will receive copies of these *Data Access Descriptions*. Copies will also be available on request from the Data Access and Use Laboratory, Data User Services Office, Bureau of the Census, Washington, D.C. 20233, or from any Department of Commerce field office.

LOCAL PROJECTS WITH CENSUS DATA

Academic Census Data Center, a Summary Tape Processing Center in Pacific Palisades, Calif., has devised a reformatting program to display tabulations of related data. Medians, averages, and percentages are included in the tables when appropriate. For example, tables pertaining to housing value, tenure, and plumbing facilities may be displayed in adjacent columns to expedite and simplify comparisons of data.

Rather than numbering their tables sequentially, the Center has devised a scheme for relating the tabulation number to the actual data content. The first digit of each tabulation number indicates one of 10 major census data categories, as determined by the Center; the second digit identifies the particular variable under consideration. As compiled, the tables are adaptable for direct use in reports and may be used in producing publications in quantity without further typesetting.

Currently, the staff of the Academic Census Data Center is working on a "Census Thesaurus" or index to the contents of all 1970 census summary tapes and printed reports. The thesaurus will be organized in the data categories and variables mentioned above and will include several geographic indexes showing which tabulations are available for different types of areas (e.g., counties, places, census tracts).

The Center also provides interpretive newspaper articles on census findings, with particular emphasis on local areas and the social origins of existing conditions.

Additional information about these and other services may be obtained by writing to the Academic Census Data Center, 16332 Akron St., Pacific Palisades, Calif. 90272.

* * * * *

Another Summary Tape Processing Center, Becker and Hayes, Inc., in Los Angeles has inaugurated a unique census access service, CENSAC, on the network facilities of National CSS, Inc. CENSAC enables the National CSS user to purchase, on a self-service basis, a machine-readable file of 1970 census data for any area in the United States. The data file generated by CENSAC is in a binary format which can be efficiently processed with any of the standard compiler languages.

The user initiates a data request to CENSAC from his remote terminal by entering the geographic area and the data items desired into a specifications file. CENSAC's INFO function then analyzes the request and provides a cost estimate and statement of tape or storage requirements. The user can then acquire the census data file by invoking the CENSAC RUN function either on-line or as a batch run. CENSAC produces the binary census file on either tape or disk, supplies full file documentation, and generates a machine-readable file of FORTRAN data declaration and equivalence statements to assist the user in processing the data file.

CENSAC presently allows the user access to the First Count and Second Count Summary Tapes (File A) for the entire United States. Access to the national Fourth Count File A (population and housing) will be available in July 1972.

For additional information on CENSAC, contact a National CSS, Inc., representative or Becker and Hayes, Inc., 11661 San Vicente Blvd., Los Angeles, Calif. 90049.

Using census and other data, the Urban Growth Patterns Research Group at the Oak Ridge National Laboratory, Oak Ridge, Tenn., is conducting a research program for the Department of Housing and Urban Development to study national urban growth patterns, to determine the principal factors affecting such patterns, and to evaluate alternative policies which might be employed to modify or direct future population distribution. The principal sources of quantitative data that are being used in this program to measure and predict urban growth patterns are: (1) the 1960 and 1970 census data (all counts, as well as the public use samples), (2) census *County Business Patterns* data, (3) Internal Revenue Service data, and (4) the Social Security Continuous Work History Sample data. Several other specialized data sets are being utilized for research in specific areas.

Among the research areas receiving special attention are the following:

- Population distribution and concentration, specifically the processes of suburbanization and the effects of the interstate highway system
- Urban-suburban-rural differences in socioeconomic characteristics
- National and intrametropolitan labor force mobility

- City and urban area growth patterns by size of place
- Migration flows and the characteristics of migrants

The Bureau of Population and Economic Research of the University of Virginia is preparing and publishing reports for Virginia which draw upon 1970 census results. Thus far, three of these reports are available:

Selected Population Characteristics of Virginia 1970 and *Selected Housing Characteristics of Virginia 1970*.--These publications provide those data items from the First Count which appeared to be of most interest. The first volume contains data on race, age-sex composition, head counts of minor civil divisions, and intercensal population estimates for all counties and independent cities in Virginia. The housing volume shows the distribution of housing units by type (owner-occupied, renter-occupied, vacant for rent, vacant for sale, vacant year round, seasonal, and migratory), units by type of structure (single unit, multiunit, mobile), and housing characteristics of persons. These data are also provided for all counties and independent cities in the State.

Virginia's Population: A Decade of Change. I, "Demographic Profile".--This is the first in a projected series analyzing demographic and socioeconomic change within the State, as revealed by 1970 census data. The present publication provides an overview of basic census results, focusing on population growth in Virginia relative to the United States and other South Atlantic States; components of population change for the State and for local planning areas, cross-classified by race; the age composition of the State and local areas, also by race; the potential strength of newly eligible voters in the State; sex ratios; and patterns of urbanization. The basis of most of the analysis is the State planning district.

To receive these reports or to be placed on the mailing list for future materials, write to Assistant Director, Bureau of Population & Economic Research, University of Virginia, 1910 Thomson Rd., Lambeth House, Charlottesville, Va. 22903. The Bureau of Population and Economic Research is also interested in entering into publication exchange programs with other institutions.

The second issue of *Census News and Notes*, a newsletter published quarterly by the New England Regional Center for Health and Demographic Statistics, a Summary Tape Processing Center, appeared in April. Census data users interested in what public and private organizations in New England are doing with census data may want to obtain this and future issues.

Some subjects covered in the April issue are:

> Fourth Count software for deriving generic reports rather than total displays, being developed by the Social Science Data Center, University of Connecticut at Storrs. The first reports will contain income, occupation, and education statistics for each Connecticut town, shown for total, white, Negro, and Spanish American populations.
>
> Two studies, "Estimates of Peak Seasonal Population in Each Municipality in Maine 1970" and "A System for Generating Population Projections for Maine," recently undertaken by the Public Affairs Research Center, Bowdoin College, under contract with the State Planning Office of Maine.
>
> A miniprofile on all minor civil divisions in New England being produced from the Fourth Count tapes by the Resources Development Center at the University of New Hampshire, under contract with the New England Regional Commission and in cooperation with the New England Regional Center for Health and Demographic Statistics.

To obtain a copy of the April issue of *Census News and Notes* or to receive future issues, write to Director, New England Regional Center for Health and Demographic Statistics, New England Center for Continuing Education, Administration Building, 15 Garrison Ave., Durham, N.H. 03824.

New Summary Tape Processing Centers

The following organizations have been recognized as Summary Tape Processing Centers during the past month:

Infomark Corp.
Attn: Charles S. Miles
305 East 46th St., Suite 601
New York, N.Y. 10017

OSLA Financial Services Corp.
Marketing Research Division
Attn: Robert A. Anderson
Director, Information Services
6201 West Cermak Rd.
Berwyn, Ill. 60402

Iowa State University
Attn: Dr. H. C. Chang
Assistant Professor
Department of Sociology
and Anthropology
103 East Hall
Ames, Iowa 50010

CENSUS USE STUDY

GRIDS, DIME Computer Packages Developed

A computer package called "GRIDS: The Grid-Related Information Display System" has been developed by the Census Use Study. This is a generalized computer graphics system capable of performing a wide variety of mapping tasks. It produces density, shading, and value maps within a grid pattern. A routine supplied with the system allows DIME file street networks to be printed displaying segments, city and census tract boundaries, and nodes. GRIDS is written in ASA Basic FORTRAN IV and will run on any computer system with a suitable FORTRAN compiler and sufficient storage, regardless of computer word size or operating system. GRIDS will operate on a machine as small as an IBM System/360 Model 30 computer with 32K bytes of storage. The cost for the GRIDS computer package (computer program tape and users manual) is $70. Further information may be obtained from the Users' Service Staff, Data User Services Office, Bureau of the Census, Washington, D.C. 20233.

The Census Use Study is also releasing a computer package called "DIME: A Geographic Base File System." The DIME (dual independent map encoding) file is a machine-readable geographically coded reference file which may be used for automated address coding, spatial analysis, and computer mapping of socioeconomic and demographic data. The file can be used to assign data to blocks or other areal units such as traffic zones or planning districts. The presence of coordinates in the file makes possible the calculation of areas, block centroids, and distances between points, as well as providing the necessary input for computer mapping.

This DIME package was designed primarily for new SMSA's or non-SMSA cities which desire automated geographic coding capability. It includes both clerical and computer procedures. Further information may be obtained from the Census Use Study, Data User Services Office, Bureau of the Census, Washington, D.C. 20233.

Materials Prepared for HUD

At the request of the Department of Housing and Urban Development, the Bureau of the Census, through the Census Use Study, has produced a series of statistical maps and special census data tabulations for five large metropolitan areas: Boston, Detroit, Philadelphia, St. Louis, and Wilmington. These maps are being used by HUD to launch a new program of regional cooperation on urban problems called Total Option Process (TOP).

Part of the project involved preparation of a full set of special tabulations of census data, both 100 percent and sample, for locally defined planning districts. Elements of these tabulations were carried back to the 1940 census to indicate population changes. The mapping part of the process consisted of 31 statistical maps, using the Census Use Study GRIDS mapping system, for each of the five metropolitan areas.

"Introduction to Small-Area Geographic Subdivisions for Which the U.S. Bureau of the Census Collects and Tabulates Data".--A general introduction to selected sub-State geographic areas is presented in this paper, which was prepared by DAUL staff members for inclusion in a publication of the University of Leuven, Belgium. For each geographic area (e.g., SMSA, county, place, census tract, enumeration district), a definition is presented, the agency responsible for defining the area is identified, the origin and development of the area are traced, and the latest censuses for which data were collected for the area are listed. A limited number of copies are available on request from the Data Access and Use Laboratory, Data User Services Office, Bureau of the Census, Washington, D.C. 20233.

Current Population Reports, "Preliminary Projections of the Population of States: 1975 to 1990," series P-25, No. 477 (8 pp., 10 cents).--The projections in this report are presented for 5-year intervals from 1975 to 1990. Census counts for 1960 and 1970 are included for comparison. Four alternative series of projections are shown, based on differing assumptions concerning future national fertility and interstate migration. The projections are not intended as predictions, but as indications of the population distribution which would develop on the basis of these assumptions.

Available from the Government Printing Office, Washington, D.C. 20402, or any Commerce field office.

Current Population Reports, "Projections of the Population by Voting Age for States: November 1972," series P-25, No. 479 (11 pp., 15 cents).--This report presents projections of the population of voting age for States by race and broad age groups for the presidential election of November 1972. Also included are estimates of the proportion casting votes for President or Congress in 1968 and 1970 election years. Appendix tables show current residence requirements and dates of presidential and congressional primaries. Available from the Government Printing Office or any Commerce field office.

USES Report No. 1, *Census Fourth Count Summary Tape: Selected Socio-Economic Characteristics of Marion County, Indiana* (411 pp.).--This is the first in a series of reports published by the Unified Statistical Evaluation Study, a joint project of metropolitan Indianapolis and the Bureau of the Census. (See SAD Notes Vol. 6, No. 12.) This report provides selected socio-economic characteristics for three population groups: total, Negro, and Spanish American. Tabulations and bar charts used in this publication were produced with the Census Use Study FOURUSE system for selecting and processing Fourth Count data. (The FOURUSE system is currently being documented and will be available for test release very shortly.) For more information on USES Report No. 1, write to the Census Use Study, Data User Services Office, Bureau of the Census, Washington, D.C. 20233.

1970 Census Users' Guide Part 1 and Part 2

The 1970 Census Users' Guide is a two-part publication designed to furnish most of the information data users will need for effective access and use of 1970 census data products.

Part 1 of the **Guide** (standard, paper-bound publication) includes the text and three appendixes. The text covers such subjects as the collection and processing of 1970 data, data delivery media (computer tapes, microfilm, and printed materials), maps and information on how to obtain census materials. The appendixes are:

1970 Census Users' Dictionary - defines concepts associated with population and housing tabulations and geographic areas relevant to the collection and publication of data.

Comparison of Printed Reports and Summary Tapes summarizes and compares the contents of the reports and tapes.

Glossary - defines many terms used in connection with collecting, processing, and publishing census data, and lists many abbreviations relevant to the census.

Part 2 of the **Guide** (prepunched for 3-ring binder) contains appendixes specifically related to the use of census summary tapes and the Address Coding Guide.

Technical Conventions and Character Set - present information on the physical characteristics, format, and languages associated with tapes released by the Bureau.

1st-4th Count Technical Documentation - describes the arrangement of geographic codes and census data on the first four series of summary tapes.

Address Coding Guide Technical Documentation - furnishes information on the format and content of ACG's.

Many data users will find both Parts 1 and 2 of great value. Part 1, with its comprehensive coverage of the decennial census program, data products, and related services, is an important instructional and reference tool. Part 2, concerned exclusively with computer tape products, is designed particularly for those who plan to obtain tapes or who want complete information on the data content of the summary tapes.

CENSUS RETROSPECTIVE

1968 1969 1970

ON MICROFICHE

Comprehensive reports for the years 1968, '69, and '70 are now available from the National Technical Information Service. These reports are valuable for all types of statistical information from housing to consumerism to foreign trade. This three-year package in microfiche form is convenient, compact and economical.

Census information is helpful to those in business, industry, government, education and science. Subject areas include:

- Agriculture
- Construction and Housing
- Distribution and Services
- Foreign Trade
- Geography/Demographics
- Governments
- Manufacturing and Mineral Industries

Census reports give detailed information especially useful to business—markets, consumer habits, population changes and foreign trade information as well as sales and service statistics. These reports give you data about the past so that you can gauge and evaluate the future.

Microfiche—More Information—Easier to Work With

All this information is in microfiche form (sheet microfilm), making it easily accessible and easy to handle.

Microfiche is more economical than paper copies, and with reader-printers only what you need can actually be reproduced—as well as read. Enlarged photocopies of any or all pages in a report can be made quickly and easily.

MEMO FROM THE DESK OF:

LUCY WATKINS

1/19/73

To: Esser, Bowie, Harris, Campbell, Via, Anderson

From: Lucy

In the absence of maps, and their complete unavailability, I have gotten Bernice to get us 10 outline maps of the U. S., 5 all black and 5 with states indicated in black and counties in blue. The all-black may reproduce more easily, but the blue and black may be more useful for office purposes. Cities are not indicated, but county names are very clear.

We will still continue to look for the Census maps already prepared (and on order, just delayed for months), but we may have to do our own art work on these outline ones in order not to delay publications.

One more thing: Since U. S. Gov't publications are in the public domain, there is no problem about copyright laws in reproducing these.

Marshall

Definition –

Human Res. Develop. –

Improving econ productivity of people.

Also, improving quality of life

What do you do for those already disadvantaged (Salvage)

What for prevention –

Quality of Labor force & rec

Indirect Costs to business for inadequate Hum. Res. develop.

Pop. policies must be a part of overall Soc. policies –

Marshall – HRD – quality
rural areas contributed
to the migration to urban

1) Main So. HR problem
Low productivity
1/2 of U.S. poor
esp. important for NW & Rural

2) NW farm incomes are low
of wh – & gap widened
during the 60's
No improvement in real terms
for Bl. farmers (6%)
Whites 39% increase

3) Displacement from ag.
unprepared to transfer
Increasing underemployment
in ag. & rural areas
Why – jobs of rt. kind not
coming in – doesn't use the
displaced –
of displaced workers
Bl. – 50% are 40 yrs ed
White – 25%
2,291M full time jobs
eliminated.

Marshall

Only 4 of 50 maj non-ag. industries had less than 10 yrs of avg. ed. of its work force

total mig. was 7 times next for White males
4 times for Bl males —

What's required —
econ develop — job creation
better quality industry

(?) It is not true that low wage industry is leaving farther than other

So a basic is a mismatch between new jobs & existing work pop.

Don't discourage low-wage industries —

Marshall

talk about growth
center strategies has the
the weakness of no success
stories — but should be
tried —

No argument about welfare
& health needs — but
our have to meet —

Richard Brown

~~See Without Paper~~

Naylor

Population growth rates relation — to each factor

High growth can mean ~~high~~ scarcity of capital & raw material —

Yiarsetu —

Trays between P.R. about let part. without doubt — & going back to firm and seeing slim residuals — then hear M. Friedman say the duty of the firm is to make a profit & then goes on with P.R. that way out flat — Idea of free unrestricted enterprise

the things that are really wrong in Society are things we have ~~looked~~ let loose ourselves —

we have measured growth by a bad instrument — GNP — no questions about how acquired empl. practices — pollution etc.

4/1/1968 -

Geo. Wash, Buffr., T.J. moved in on the Rev. — & made it a successful "Rev." (?)

Mfg. has moved toward outsourcing (knocking out) labor

But Services are different — productivity is hard to measure —

Major inflation comes here — if you can't measure then you can be ripped (e.g. health)

Is there a natural or a competitive relation between Mfgs, MD's, Lawyers, other Services —

Regulation of services not by those from the service —

Services give use some somewhat symbolic economy — easier to meet a service than a product —

But capital flow has been developed for products so easier to finance them —

New paperbit movement —
Bl. protest
Students [reaction against Ed. monopoly]
Cops to Wash.
Conservation

Dangers of intuitive response to soc. situations as against indirected relations
e.g. Spank a child — relation of love but try text response in a soc. situation

emotional weakness —
(e.g. public officials)

Integrity is a virtue
not because of morality
but because there isn't time
to fool around —

No "welfare crisis" —
depending ratio is
because of longevity
will even out in 1985 —
Problem is we have put
the burden on localities
Put on Nat'l income
make an an income
maintenance —

The "March" is a 4th
Branch of your —
you will do it in 70s,
too good to leave it to
the minorities.

PAGE(S) PARTIALLY ILLEGIBLE

— Fest'l Services etc.

EASTERN

GENERAL PASSENGER INFORMATION

TRAVEL TIP: We recommend that you plainly mark all your baggage with your name, home address and telephone number. This will help to identify and return your baggage in the event it is temporarily misplaced.

NOTICE: Liquids and fragile items, such as cameras and portable radios, as well as articles not suitably packed, are carried at the passenger's risk. No claims for damage to, or caused by, such articles will be considered when they are a part of the contents of checked baggage.

BOARDING RULE: Eastern reserves the right to cancel the reservation of any passenger who fails to present himself at the airport loading gate at least 10 minutes prior to the scheduled departure time of the flight on which the reservation was made.

FLIGHT CONNECTIONS: If you are connecting to an Eastern flight and your baggage has already been checked to your final destination, go directly to the boarding gate at the connecting point. You do not have to recheck at the ticket counter.

INTERNATIONAL RECONFIRMATION: On an international itinerary (including Bahama Islands, Bermuda, Jamaica, Mexico, Puerto Rico and Virgin Islands), if you break your journey for more than 72 hours at any point, you must reconfirm your continuing or return reservation. Failure to do so at least 72 hours prior to departure of your flight, will subject reservation(s) to cancellation. To reconfirm simply advise Eastern, by telephone or in person, of your intention to use your reservation(s).

Carl Marshall
nee Van Adams

Hefner —

the costs of population growth

By Joseph J. Spengler, *Professor of Economics, Duke University*

"The entire human adventure — at least until now — is a desperate struggle against scarcity."

J. P. Sartre, *Critique de la raison dialectique*, 1960, p. 201.

"Far from scarcity disappearing, it will be the most dominant aspect of society."

Kenneth E. Boulding, in *Public Interest*, Fall, 1966, p. 43.

My concern is the set of costs which population growth imposes upon the individual members of a collectivity and upon the collectivity as a whole. By growth I shall mean both growth as such and increase in density. After examining the nature of costs as such, I shall put population costs in perspective and then examine them in somewhat more detail. This is not easy to do with precision because many of the costs associated with population growth are present even in a stationary population; numbers merely accentuate them. In the last part of my presentation I touch upon implications and solutions.

On the Nature of Costs

It is well to keep in mind what we mean by costs. In most general terms the cost of anything, of any good or course of action, is the opportunity, or set of opportunities, foregone in order to obtain that thing. If I choose *A*, I must forego *B*. If I eat my cake, I cannot have it also, though many politicians act as if I can. The cost of a given increment of population is that which must be given up in order to bring that increment into existence.

Costs may be variously divided for analytical or managerial purposes. For the purposes of my presentation, two distinctions are most useful, that between hidden and visible costs, and that between voluntarily and involuntarily assumed costs. The latter set I shall hereafter refer to merely as voluntary and involuntary costs.

Costs that are visible are those of which we are aware because we not only feel them but are conscious of the sources whence they issue. Costs which are hidden or lost in the murk of complexity are those which, though they affect our behavior, are not ostensible to us in their guise of costs. Illustrative are the hidden costs of augmented scarcity produced by supply-restricting tariffs, taxes, etc., by economically irrational efforts to free men of all the risks and uncertainties associated with driving cars or with developing and applying new drugs, and by forms of legislation which produce unintended adverse effects. Usually, of course, we can ferret out costs that are hidden to the ordinary economic eye and it is important that we do so, since one can respond more rationally to disclosed costs than to those which are not immediately visible.

I turn now to the distinction between voluntary and involuntary costs. By voluntary costs I mean the costs which one willingly incurs because the benefit resulting is considered at least equal to the costs entailed. If I choose *A*, I use certain of my assets in a particular way and thus deny myself the opportunity to use them in another way, say to acquire *B*. I act in this way, however, because I prefer *A* to *B* or to any other available alternative.

There is a certain amount of overlap, of course, between this distinction and that between visible and hidden costs. We are not always certain whether particular hidden costs would be voluntarily borne if they were known. In many instances they would not. For if we added the hidden costs of a course of action to its visible costs, the sum of these costs would often be great enough to make the action inadvisable.

I am here supposing, therefore, that I correctly estimate the costs of *A* and *B*, or at least that I believe I

PAGINATION INCORRECT

can do so. This supposition is likely to be valid when my choice of *A* over *B* is a single, complete act. Often, however, choice and costs are not so well defined. Often we embark upon courses of action that require months or years for completion. Then we incur a stream of costs over time, often of costs not completely foreseeable or sharply definable. If we choose to incur this stream of costs, we do so because we believe that the present value of the benefits that result exceed not only the present value of the stream of costs in prospect but also the present value of any other set of benefits we might realize from an alternative use of these cost items. We may, of course, be mistaken. We may overlook hidden costs or hidden benefits because we fail to study the cost-benefit relation carefully enough to uncover all the relevant aspects of an action.

It is essential to keep in view the stream-like character of costs. For the cost of population growth runs in terms of a stream. Adding an increment to a population entails costs over a period of 15-25 years.

The distinction between voluntary costs and involuntary costs has one important implication for students of population problems. Man can deal rationally with voluntary costs since he willingly incurs such costs only because he expects to experience or acquire offsetting benefits. This is not true of involuntary costs. We continually have costs imposed on us by others in exchange for which we receive little or no benefit. For example, a considerable portion of the cost of government imposed upon the taxpayer confers little or no benefit upon him; thus a young worker, upon whom the whole of the present social security tax is incident, must pay more for the supposed equivalent of a retirement annuity than a private insurance company would charge him. Similarly, a large amount of the cost which crowding and congestion impose upon individuals is uncompensated.

In a rational society *all* costs would be voluntary and it would be impossible for anyone to shift to others any of the costs entailed by his own actions. Decisions would always be made in the light of a comparison of *all* costs and *all* benefits. Unfortunately, we do not live in such a society; costs of actions often are partly incident upon those who do not benefit by the actions in question. This has long been recognized.[1] It is not adequately recognized, however, that today's actions respecting issues with long time dimensions (e.g., city plans) can entrap man's future, imprison him in a set of costs not of his own making, and force him to use inputs to escape this trap instead of to improve his conditions of life. In present-day parlance, today's careless, future-disregarding action shrinks tomorrow's range of options. Today's excessive fertility is a case in point.

Costs of Population Growth

The costs associated with population growth, especially those associated with net population growth, may be divided into primary and secondary. Under the head of primary costs may be included all inputs in the form of pre- and post-natal care of mother and child and subsequent medical care of the growing child, all inputs devoted to the support and education of the child until it becomes self-supporting, and all public, household, and industrial capital required on an average to equip a unit addition to a population. These costs consist essentially of the capital or potential capital incorporated into additions to the population or used to equip these additions, together with some expenses associated with the production of additions to disembodied science and culture and their eventual use. It should be noted that we are referring to the costs of population growth only, not to the cost of replacing a given population and of improving its quality and equipment in the process.

Under the head of secondary costs I include the effects of changes in age composition, urban concentration and pressure on environment, and differential fertility. When a population is growing, its age composition is less favorable to productivity than when it is stationary; the relative number of persons of productive age is lower and that of persons of unproductive age — old and young dependents — is higher. For example, if a population is growing two per cent each year, it will include only about 85 per cent as many persons of productive age as it would if it were growing one-half of one per cent or less. Accordingly, its potential productivity per head under similar conditions will be only about 85 per cent as high as in a population stationary or nearly so.

Another secondary cost is that associated with the pressure of population upon its natural environment. We may say, in general, that as accessible natural environment per person declines, the stock of reproducible capital per person must be increased to offset this decline and maintain the level of productivity or living. Illustrative is the increase in the costliness of exploiting mineral reserves as the accessibility of oil or ore diminishes, or of carrying on agriculture as cultivation is extended to inferior land. We tend to lose sight of the costs of extending exploitation and cultivation because we live in an age when technical improvements have swamped the Ricardian type of diminishing returns occasionally evident, for example, in the Middle Ages and in the Napoleonic period when Malthus's ideas had wide currency.

While we in the United States may not be aware of the pressures to which Ricardo gave his name, we have become very aware of another of the impacts of diminution in surface and near-surface space per capita, namely, that incident in larger urban centers. For, as population grows, an increasing fraction of the population has been locating not merely in urban centers but particularly in megalopolitan centers. In 1960, about twenty-eight per cent of our population were situated

in less than one-fourth of one per cent of our vast space. Space substitutes have been sought above as well as below the urban surface, but to little avail and at great cost.

A city may be viewed as the focal point of conduits whose function it is to carry people, products, messages, refuse, contaminants, etc., into and out of the environs of the city. Each conduit is of limited capacity. Moreover, the number of conduits which can be constructed is limited by lack of space and other constraints. Meanwhile, as a city's population increases, its requirement of conduit service increases, faster in fact than the city's population. In consequence, congestion of surface and air traffic channels increases, together with the rate of pollution of water and atmosphere. A large city may therefore be said to manifest Ricardian diminishing returns, though in urban as distinguished from agricultural space.

What may be called social diminishing returns often manifests itself within the familial environment. We may indeed call this a form of population pressure at the micro-level. Usually essential to the effective rearing of children, though by no means a guarantee of such rearing, is adequacy of parental time, means, and skill. When the number of children in a family exceeds that family's supply of time, means, and skill, the probability increases that one or more of these children will fail to develop a capacity for self-support in keeping with the requirements of life in modern society. Somewhat suggestive is D. P. Moynihan's finding that the rate of failure on selective service tests was over four times as high among selectees from families of six or more children as among those from smaller families.[2]

The type of population pressure that results may be accentuated also by increase in the number of genetically defective persons. For, as Dubos points out, "medical advance will modify the hereditary structure of prosperous populations by permitting the survival of persons with genetic defects who in the past had little chance of reproducing their kind."[3] Contraceptive action may, of course, serve to prevent this outcome.

Augmentation of the relative number of non-self-supporting persons in a society constitutes a threat to its social metabolism and its political stability. A. Toynbee recognized this when he pointed to the destruction of societies by their inner proleteriats.[4] Marx recognized this when he declared the principle of the Gotha program — from each according to his ability, to each according to his needs — to be realizable only in the far distant future. It is not recognized, of course, by modern literati hostile to our civilization,[5] or by those who depreciate the importance of the nexus between performance and reward. It is recognized by demographers, however, when they stress the importance of a population's qualitative composition.

Detailed Analysis of Costs

I turn now to a more detailed analysis of the costs of population growth, to its cost in terms of capital, environment, density, psychic well-being, and contribution to internal and international war. Most of these costs have a number of causes, however, of which population growth is only one, and often an indirect one at that.

(1) *Capital Cost.* Capital, as I have said, cannot be viewed in the narrow hardware sense prevalent for more than a century — at least not for the purposes of this analysis. We need to view "'capital' as including anything that yields a stream of income over time, and income as the product of capital." Capital then includes all inputs invested today in order to yield income tomorrow — inputs invested in equipment, construction, science, invention, and innovation, in productive education and health, in discipline and skill, in training and retraining, in the accumulation and conversion of scientific knowledge into applied knowledge, indeed, in everything embodied and disembodied that is tomorrow-facing. When we view capital this way, we may conceive of economic growth "as a process of accumulating capital in all [its] manifold forms," and we may correctly say that increase in potential productivity per capita as of income per capita is the result of increase in capital per head.[6]

Population growth is reducible to a conversion process even as is population replacement. Capital as we have defined it is transformed into population. A stream of capital is continually being converted into a stream of people; today's environment and activities become tomorrow's people. The major fraction of these people constitutes a mere replacement of those who have died; for example, given a stable population with an annual birth rate of 16 and an annual death rate of 13, 13/16 of the births represent population replacement while 3/16 represent an addition to the population, an addition amounting to three-tenths of one per cent of the population at the beginning of the year in question. It is the addition with which I am concerned here, though I believe that if the addition were negative for many years in much of continental Asia and parts of the Caribbean world, the people of these countries would benefit remarkably.

Since today's population increment represents yesterday's collection of capital inputs, it is evident that a choice was made yesterday, namely, to convert capital into additional population instead of into the improvement of the lot of the existing population and its replacements. Population growth is purchased at the expense of the improvement of the existing population. What is the purchase price?

It is not easy, it is impossible, to give a precise answer to this question, particularly an answer that fits many countries. In a particular country we can estimate how

much it costs to fit out a cross sectional thousand of people with physical equipment, education, etc. Suppose this figure comes to $15,000-25,000 a head. Then we can say that it costs between thirty and fifty billion dollars a year to add two million adults to a population. I choose a two million figure because we in the United States have been adding over two million persons a year to our population, over 47 million since January, 1950, of which nearly nine-tenths represent excess of births over deaths. We may proceed another way. We may suppose that it takes inputs worth 4 per cent of a nation's national income to provide material equipment for additions to a population growing one per cent per year, and to this we may add 2 more per cent to cover other forms of capital and allow for the adverse effect of population growth upon a country's age composition. Then it would cost a nation savings equal to 6 per cent of its national income if its population grew one per cent a year, and about 12 per cent if it grew two per cent per year. This mode of estimating suggests that it now costs the American population about $36 billion per year to grow 1.5 per cent.

It is well to keep in mind that the money cost of children rises more or less commensurately with family income. For as a family's economic condition improves it spends more upon its children than it formerly did. It finds itself trapped in a culture complex that continually presses the average propensity to consume in most families toward unity, given that institutionalized provision has been made for the support of parents in their years of retirement. Accordingly, whatever the current cost of, say, a natural growth rate of 1.5 per cent in the United States, it will rise as average income rises and the amount of inputs required to produce and equip a person increases. It may be argued that the American economy can stand this cost, though one is hard pressed to find any justification for doing so on aesthetic, eudaemonic, and similar grounds, or on those advanced by population boosters, speculators, and so on.

The countries constituting the underdeveloped world, many of them hardly viable and poverty-ridden states at best, cannot stand the cost of the population growth which they are now undergoing. The population of the underdeveloped regions is likely to grow about 2¼ per cent per year in 1960-2000, at the end of which period it may still be increasing close to 2 per cent per year.[7] These figures suggest that for a long time to come population growth will be absorbing 10-12 or more per cent of the income generated in the underdeveloped world. This percentage may vary, of course, from a relatively low level of 6-8 per cent in mainland China to a level close to 18 per cent in Africa and parts of Latin America. Let us translate these figures into terms of the rate of growth of average income. If a nation's population growth is absorbing 12 per cent of its national income and the rate of return on its new investment at the margin is 15 per cent, then it follows that were this nation's population not growing and were the resulting saving invested, the rate of growth of its per capita income could rise as much as 1.8 (i.e., .12 x .15 = 1.8) percentage points. Thus if its average income had been rising 1.5 per cent, it could now rise 3.3 per cent per year.

I am neglecting effects of the allocation of savings. For example, when population is growing rapidly relatively large amounts of savings tend to flow into housing and other investments in which the yield on capital, especially in the shorter run, is relatively low. Inquiry into the complexities of allocation will be ignored, however, since it would divert attention unduly from my main arguments.

Raising the rate of growth of average income in an underdeveloped country from (say) 1.5 to 3.3 per cent constitutes an important contribution to a nation's economic growth and political stability. If a country's average income grows only 1.5 per cent per year, it will double only once every 47 years, but given a 3.3 per cent rate of increase, average income will double in about 21 years. Given a relatively short doubling period, a nation's prospect of improvement is likely to make for political stability whereas given long doubling periods, cumulating frustrations are likely to generate political instability and thereby further lengthen the doubling period. It is well to recall that if average income is 10 times as high in an advanced as in an underdeveloped country, then even though this average grows three times as fast in the underdeveloped as in the advanced country, after a century has passed the underdeveloped country's average will still be only about six-tenths as high as that in the advanced country. It is very hard for laggard countries to narrow the absolute gap between their incomes and those of advanced countries. It is impossible for them to do so if they fail to restrict their population growth rigorously. The economic advantage attendant upon fertility reduction has been nicely demonstrated by A. J. Coale and E. M. Hoover, who found that if India curtailed her fertility, even her *total* income would rise faster than if she failed to do so.[8]

(2) *Environmental Cost.* Components of man's physical environment, when actually or potentially serviceable to man, answer to the description either of productive or of consumptive capital, though much more subject to depletion and exhaustion than man-made capital. Some of man's environment affects his welfare through market channels, and some of it through non-market channels. There is little I can do, however, except identify cost aspects and relate them to population growth.

(a) Man's physical environment embodies stocks of non-replaceable elements, among them appropriately situated space suitable for man's specific spatial needs. It is these which set limits to man's capacity to maintain an expanding standard of life, though these limits

are not always felt in the short run when relative abundance rules. For example, agriculture can be made much more productive than it is, especially in underdeveloped lands, and modern alchemy is capable of triumphing over many forms of natural-resource shortage, especially if the fusion process can be made to meet man's energy requirements. But, continuing with our agricultural example, suppose that in the underdeveloped world population grows 2 per cent per year while per capita food consumption grows one per cent per year — a tenable rate, given an income elasticity of demand for food of 0.5 and an annual increase of 2 per cent in per capita income. This combination produces a 3 per cent per year increase in demand. Then by the year 2050 the demand of this population for food would be about 14 times what it was in 1960, and by the year 2100, about 63 times. It is doubtful if even alchemists can supply this much food, and certainly not food of the sort a Brillat-Savarin would savor.

Correspondingly great demands would be made upon many other components of our physical environment. Many could be met, but not all, and costs would tend to rise except as technological progress offset Ricardian diminishing returns. In general, increase in the pressure of population upon man's physical environment generates problems whose solution absorbs inputs that otherwise might serve different purposes. Hence, to argue that problems created by population pressure are unimportant since they can be solved amounts to arguing that medicating disease is equivalent to preventing it by immunization.

(b) Destruction, uglification, and pollution of man's physical and ecological environment may not be entirely avoidable in a stationary population under the most favorable circumstances. These processes are accelerated, however, by growth of both population and gross consumption, by-products of which are waste, ash, and contaminants, now aggregating 4 to 5 pounds of solids per person per day, together with airborne and water-borne waste. Airborne wastes bring about deterioration of urban environments while waterborne wastes pollute the soil and generate obstructive algae and water plants. Both types of pollutants foster the growth of some forms of organic life whilst checking that of others. Even climates may be exposed to change, through the introduction of excessive amounts of carbon dioxide into the atmosphere.[9] Stewart Udall has described the outcome in terms reminiscent of John Stuart Mill's observations 117 years ago. Udall writes,

> We live in a land of vanishing beauty, of increasing ugliness, of shrinking open space, and of an over-all environment that is diminished daily by pollution, noise and blight.[10]

Much of this can be averted, but with increasing difficulty as numbers become great, concentrated, and subject to rapid growth.

(3) *Density and Concentration.* Some costs are associated with population density which increases generally as numbers grow and specifically as the growth process, when stochastic in character, concentrates an increasingly large fraction of the urban population in very large cities. The resulting costs are indirect, often hidden, and seldom voluntary. Most are associated with metropolitan and megalopolitan growth, of which aggregate population growth is a necessary though not a sufficient condition.

It may be useful to distinguish objective from subjective population density. By objective density D I mean mere numbers divided by something like area: call it P/A where A denotes area and P denotes population. There is much difference, however, between the significance of a unit of P in (say) the United States and that found in a traditional or a low-income society. The space daily traversed on an average in the United States is much greater just as the space traversed daily by a lion or an elephant is much greater than that traversed by a turtle. In other words, modern high-income man is a space-eater compared with his counterparts in low-income lands; and he is exposed to more varied and frequent communicative contact with his fellows. Moreover, his average demand upon surface and air space is increasing. High-income man therefore is much more sensitive to a given objective density than is low-income man. Let S denote subjective density, or Ds, when s denotes the average amount of space traversed by a unit of P, the value of which rises with modernization from a hypothetical value of unity in selected low-income societies. S reflects man's sensitivity to objective density D; it increases as s rises with modernization, even though P changes little or not at all. Our knowledge of the significance in cost terms of a rising S is limited as yet, though we have learned a great deal about the response of both fish and land animals to increase in their objective density, especially when it passes some critical level.

(4) *Individual Freedom.* As population increases in number and density, contacts among individuals multiply, within limits, much faster than population increases. One result is increasing demand for collectivistic controls over the lives of individuals. These demands reenforce other demands for collectivistic controls, many prompted by gross ignorance or dislike of market mechanisms and their analogues in all contexts in which market mechanisms are not employed. The eventual upshot of all this will be increasing separation of ruled from ruler and the emergence of garrison states run by bureaucracies only partially controlled by the collections of cliques who win temporary control of the apparatus of state. Population growth accentuates this

tendency and the resulting dissipation of man's individual liberties.[11]

(5) *International Relations.* Population growth may affect international relations in three ways. (i) It can worsen a country's terms of trade if it unduly augments its outflow of exports. (ii) It can, under certain circumstances, intensify the totality of conditions making for war.[12] (iii) Of much greater importance in today's underdeveloped world, however, is the tendency of population growth to generate frustrations and produce social unrest. As Ulla Olin observes,

> The road to economic development appears fraught with potentials for unrest. . . . The risk of social unrest rather than the increase in numbers as such would nevertheless appear to be the truly "explosive" aspect of economic development. Population growth seriously aggravates the risk of unrest by increasing the crowding and competition for scarce resources but it is not directly responsible for the situation.

Underdeveloped countries lack external outlets for excess population, unlike nineteenth-century Europe when its rate of population growth was much lower and it was developing economically. Those wishing to move out of the rural sector must therefore migrate to cities where they find getting employment difficult, income insecure, and exposure to seeming injustice marked.[13] All these difficulties are accentuated by the incapacity of a low-income high-fertility society to form domestic capital at a high rate, to obtain access to the corresponding amounts of foreign exchange so essential to economic development, and to make efficient use of this capital and exchange.

In my discussion so far I have devoted no attention to the advantages of having larger populations. That is not my assignment. There do exist, however, a number of countries which require larger populations for the most efficient exploitation of their resources and economies of scale, especially in a world in which international trade is unduly restricted and regionalism and federal arrangements are not flourishing. Where these conditions exist and larger populations are indicated, it is best that they be produced with rates of natural increase of one per cent per year or less, together with immigration of individuals with skills in short supply. It is also argued that when an underdeveloped country's population is growing rapidly not only is technical progress favored, but also the composition of both its capital structure and its population can change more rapidly and thereby accelerate modernization. This type of argument is of doubtful validity, however, because population growth absorbs so much capital that a nation's capacity to change the quality of its capital and labor force is restricted.

(6) *Qualitative Costs.* I indicated earlier that dysgenic selection could be fostered by reduction of child mortality and that adverse social selection tends to be accentuated by excessive family size. The social context within which a society has to deal with adverse selection changes as a society becomes more dynamic. The conventional wisdom of parents suffices to fit their children for life in a relatively static, traditional society. Parents are less adapted, however, to performing this task in a highly dynamic society, both because they lack knowledge and skill and because the plasticity of the human nervous system in early life makes youthful training essential. Whence Morison concludes that the family is "relatively poor at assimilating and transmitting knowledge essential to survival in a rapidly moving world."[14] In a dynamic society, therefore, agencies external to the family must take over much of the training and knowledge-transmitting role formerly carried on within the family.[15] This can be done most effectively when the rate of population growth is low and the potential rate of capital-formation is high. When this is the case, moreover, the scope for social mobility and hence for the beneficial effects of assortative mating is enlarged.[16] Social conditions are also more likely to be favorable to negative eugenic action.

While a slowing down of population growth increases a nation's average productive potential, it does make for increase in the relative number of those aged 65 or more years, raising it to 9-10 per cent under prospective conditions though a successful "Back to Methuselah" program could raise it to 15-20 per cent. Should man progress through life as Holmes's one-horse shay, there would be no problem. But he does not do so. Chronic conditions dog most persons over 65, many of whom enjoy little more than what Dubos calls "medicated survival,"[17] and they tend to be prematurely shunted out of employment so essential to the mental health of most. Hence society faces a problem which, however, can be met easily when a population is nearly stationary and productivity is high. Let us call the demands which social and physical life makes upon man D, and his physical and mental capacity to meet these demands C. Normally the ratio C/D will rise above unity in early youth to a peak much above unity in man's prime, often remaining near there in his sixties only to approach unity and finally sink below it in or after his seventies. Social death may be said to take place when C/D descends to a critical level below unity whereas physical death occurs only when C becomes zero. The problem is how to maintain C/D close to or above unity until near the advent of physiological death — how to make man emulate the one-horse shay.

Implications and Conclusion

I have pointed to the costs of population growth and stressed the importance of capital formation, in part because capital formation is conducive to moderniza-

tion, so essential to the decline of fertility.[18] Man responds most rationally to costs when he recognizes them, perceives their mode of incidence, and is made wholly responsible for those which he himself occasions. In modern societies, particularly in those dominated by a welfare-state apparatus far beyond that which De Tocqueville, Lord Bryce, and others feared, the costs of population growth are only imperfectly recognized, their incidence is imperfectly understood, and those who occasion these costs are largely free of the responsibility to bear them. In other words, some of the costs of population growth are hidden, their incidence is blurred, and many of them are borne involuntarily by persons who are not responsible for them but remain unable, as do the victims of tariffs, to evade them or force the governing coalition to remove them. The problem of costing is further complicated by the increasing inability of the familial reproductive unit to perform the tasks associated with rearing, training, and educating children in a dynamic society, since under these circumstances the state takes over an increasing share of the cost of performing these functions.[19]

It is much more difficult, of course, to regulate fertility in an underdeveloped country. There, knowledge of contraception and access to its means are far more imperfect than in modern countries. Hence the capacity to control fertility is limited. The incentive to do so is also limited, by conditions of the sort I have mentioned, together with the fact that children are believed to possess utility on social-security and other grounds no longer very operative in advanced countries. Whence high fertility checks capital formation and slightness of capital formation checks modernization, one of the most important preconditions to a decline in fertility.

There are few persisting incentives which are noneconomic in character. It is possible, therefore, in underdeveloped as in advanced countries, to develop a combination of economic negative incentives for those who produce more than a given number of children and a set of economic rewards for those who manifest due prudence. Given such combination, fertility can be brought down to, or up to, the desired level and the costs of population growth can be kept under control. It is important to keep in mind, however, that while science has helped man cope with growth of numbers up to now, science cannot be counted upon to offset this growth if it persists.

Return and Nonreturn In-Migration

EDWARD MILLER

MIGRATION can be studied from several viewpoints. If the primary emphasis is on the change in total population for a given area, it may be enough to examine only net migration. However, much of the migration mechanism can be examined only by considering in- and out-migration separately. This article will deal only with gross in-migration.[1]

The approach used is to regress the appropriate state migration rates for the period 1955-60 on the economic variables which may play a role in determining in-migration, including income levels, rates of employment growth, unemployment rates, educational levels, nature of employment available, and birth rates. While these variables have been investigated in the context of net migration, or gross migration between pairs of places, very little attention has been paid to their effect on in-migration. To examine whether their influence extends beyond the decision to leave to the choice of destination is the goal of this article. To the list of usual variables is added the logarithm of population to eliminate any bias from the more populous states which are also the big-city states.

This article will show that it is necessary to study return and nonreturn in-migration separately. Otherwise a systematic correlation of the number of potential return migrants with measures of attractiveness will lead to the underestimation of the role of such variables. To avoid this, one must express the migration of those returning home as a proportion of the population *at risk* (i.e., the number of persons born in the state and now residing elsewhere) rather than as a ratio to the population in the area of destination. In general, the more out-migration there has been, the greater the potential for return migration.

This has implications for the process of regional development since the more depressed the economy of an area has been, the more likely it is to have built up a pool of former residents who may return home as conditions improve. Thus, the unemployment-reducing, or wage-increasing, effects of employment expansion are attenuated in depressed areas which have had a long history of out-migration.

Dr. Miller is an economist in the Office of Tax Analysis of the U.S. Department of the Treasury.

Return Migration

EARLIER work on return migration has been limited to demonstrating its importance, using it to explain peculiarities in the age distribution of net migration, or studying special groups.[2] This article will briefly show the importance of return migration in total in-migration for certain states, and then go on to discuss the economic determinants of these flows. Once this has been done, it will be clear why return migration and nonreturn in-migration must be studied separately.

Nationwide, the 2,291,746 return migrants in 1955-60, while a large number of people, were only 14.6 percent of total migration across state boundaries. However, return migration was much more important for some states. For instance, 44 percent of the migrants into West Virginia were return migrants. Comparable figures for other states are 38.2 percent for Arkansas, 36.8 percent for Mississippi, and 35.2 percent for Kentucky.[3] Thus, certain of the less prosperous states derive a significant fraction of their in-migration from the return of those who had once left. The true effect of economic conditions on in-migration to the less prosperous states is concealed by the inclusion of these return migrants in the total in-migration.

The primary reason for examining return migration is to understand better the determinants of total in-migration, and hence of population growth. Moreover, return migration is important to the study of migration because return migrants are usually acting on much better information than nonreturn migrants. Much of migration theory assumes the potential migrant has sufficient information to make a rational comparison of two areas, and considerable interest is attached to an examination of behavior under these conditions. However, the migration of a person moving to an area he has not lived in before can be based on only the most imperfect knowledge. The potential migrant is usually very uncertain about what life will be like in the new area. He is worried about whether he will like the climate, the life-style, and the people. Such uncertainty may act as a

powerful deterrent to mobility. This creates major research problems. Failure to respond to an incentive for migration may be because the potential migrant does not value the advantages of the destination, or is unaware of them, or is merely afraid of taking the risk of finding out.

In contrast, except for those who left home at an early age, potential return migrants have a good, first-hand knowledge of the area to which they would be returning. In most cases they will have friends or relatives who can give them up-to-date information about the area. Thus, a decision to become a return migrant can be based on a rational and informed comparison of two areas. In particular, since the person has lived in the area to which he is returning, fear of the unknown is unlikely to prove a major deterrent to mobility.

Perverse Tendencies

At first glance the patterns of return migration do not appear to correspond to the economist's model of rational behavior. When the return migration rate (number of return migrants divided by the 1960 population aged 5 and over) is regressed on variables that one would normally expect to be positively correlated with it, a negative correlation is observed (see Table 1).[4] This contradiction is found with each of the following variables: managers, officials, and proprietors; professionals; urban residents; those who have attended college; and those living in state of birth. There is even a highly significant (t = 7.28) inverse correlation with family income, which alone explains 53 percent of the variance. Are we then to believe that potential return migrants prefer areas with low income and other undesirable characteristics?

Because of these perversities, it is not surprising that return migration turns out to be inversely correlated with the total in-migration of which it is a part. This is a clear sign that return migration differs in some important way from all other in-migration (nonreturn migration), and should be considered separately.

The key to explaining these results is the wide variation in the number of natives of a state living in other states. The percentage of those born in a state but living elsewhere in 1960 varied from 58.8 percent for the District of Columbia, 50.5 percent for Wyoming, and 49.9 percent for Arkansas to 11.9 percent for California.[5] It is to be expected that states with a large number of natives residing outside their borders would have more return migrants than states with few such ex-residents. As a measure of the population at risk, the ratio of those born in a particular state but now living outside of it to the state's population was calculated. This variable was found to be significant in explaining the return migration rate (t = 8.96) and able to explain 63 percent of the variance when used alone.[6]

TABLE 1. PERCENT OF VARIANCE EXPLAINED BY MIGRATION RATES ON SINGLE INDEPENDENT VARIABLES

	Nonreturn Migration	Return Migration	Back Migration[a]
Unemployment rate, April 1960	.13	.18	.....
Median family income	8.28*	52.98**[b]	6.65
Percent managers, officials, and proprietors	43.53**	.08[b]	12.72*
Percent professionals	16.45*	25.76**[b]	10.97*
Percent 25 and over with one or more years of college	37.20**	5.77[b]	5.48
Percent of population enrolled in college	.....	.15	.03
Percent of population urban	6.76	41.99**[b]	13.84*
Males in armed forces as percent of employed males	21.60**	1.23	1.64
Percent who worked 50-52 weeks	.....	....	4.34
Percent living in state of birth	.....	8.95*[b]	7.60
In-migration rate	.....	2.84[b]	.....
Industrial mix component of industrial growth[c]	4.23	....	11.56*
Percent rural-farm	9.11*	34.47**	18.22*[b]
Out-migration rate	29.94**	....	.....
Logarithm of population	.....	9.24*	.....
Percent salaried managers and officials	31.69*	15.81**[b]	14.57*
Engineers as percent of male labor force	6.32	29.35**[b]	.....
Percent of those born in a state living out of the state	5.61[b]	63.09**	.....

* Significant at .05 level.
**Significant at .01 level.

[a]Back migration is the fraction of those living outside their state of birth who returned to their state of birth during 1955-60.
[b]Inverse correlation.
[c]Surrogate for presence of rapidly growing industries.

This variable explains why the coefficients for other variables had what appeared to be the wrong signs. There is a high degree of stability in out-migration rates, and the conditions which are now discouraging in migration (low incomes, etc.) have caused out-migration for many years. As a result, the very states that have built up a large reservoir of potential return migrants are also the states with the weakest attraction for migrants who were not born there.

The observation that return migration is generally negatively correlated with the variables that influence non-return migration (and hence total in-migration) has strong implications for research into the causes of migration. The effect of the inclusion of return migration in total in-migration is to reduce the level and significance of the coefficients for most causal factors. The solution for this problem is to divide migrants into return and nonreturn migrants and to discuss these groups separately, as is done here.

PAGINATION INCORRECT

Back Migration

It was shown above that the most important determinant of return migration rates is the number of people born in the state but currently residing elsewhere. This is the population exposed to the risk of return migration. The ratio of the number of return migrants to the number living out of their state of birth in 1960 will be referred to as the back-migration rate to distinguish it from the return migration rate (defined earlier as the ratio of the number of return migrants to the 1960 population aged 5 and over).

In general, the back-migration rates showed positive correlations with the same variables as nonreturn migration rates. This, as indicated by Table 1, is in contrast to the return migration rates which tended to be negatively correlated with these variables.

In particular, the negative correlation with the percent rural-farm lends no support to the idea that those from farm backgrounds are especially likely to become return migrants. Likewise, although the negative correlation of return migration with income, education, and percent professional might suggest that return migrants tend to be the less skilled and the less educated, the positive correlation of these variables with back-migration rates does not indicate any tendency for the less-educated inhabitants to return home oftener than out-migrants from other areas. The large historical out-migration from such areas explains the large numbers of return migrants.

The logarithm of population was used to control for the differing sizes of states. Its coefficient here is expected to be positive because the larger the state, the more likely an individual is to return to the state in subsequent moves. For instance, a Californian who moves to Nevada is more likely to find that his next move is back to California than a Nevadan in California is to find his next home back in Nevada.

After controlling for population size, it was found that there was a positive relationship between the back-migration rates and the nonreturn migration rates (in contrast to the negative correlation between return and nonreturn migration), as indicated by the following equation.

$$\text{BMIG} = -15.123 + \underset{(.240)}{1.286\text{LOGP}} + \underset{(.0428)}{.1666\text{NMIG}}$$

$$R^2 = .4067$$

The numbers in parentheses are standard errors; see the Appendix for definitions.

This equation indicates that the number of back-migrants responds in the short run to the same forces that affect the number of nonreturn migrants even though over the long run these forces will also reduce out-migration and the size of the pool of potential migrants from which return migrants are drawn.

A more powerful explanatory equation was

$$\text{BMIG} = -8.785 + \underset{(.1972)}{.8881\text{LOGP}} + \underset{(.01333)}{.06954\text{OBEG}}$$

$$R^2 = .5044$$

This indicates that (aside from size of state) the most powerful determinant of back-migration rates is the rate of growth of employment.

Although family income is positively correlated with back migration, this correlation is not statistically significant at the 5 percent level ($t = 1.828$), nor is it statistically significant when included with the rate of growth in employment. Thus, it appears that people are induced to return home more by the availability of jobs in a rapidly expanding economy than by a high level of earnings. However, the unemployment rate proved not significant.

The effect of return migration is to make the short-term response of in-migration to improved economic conditions greater than the long-term. The short-term response is increased in-migration both by those who were born out of the state and by those who were born in the state. However, if economic conditions remain good, the effect is also to reduce out-migration. Both this and the increased return migration reduce the pool of ex-residents who might move back. The result is that after the passage of many years the in-migration rate must decline. When estimated in a cross-sectional model, gross in-migration rates are these long-term rates, the rates that exist after the pool of ex-residents has reached its equilibrium size. The rates will be less than would exist in the initial period after a rapid improvement in economic conditions.

Nonreturn In-Migration

THE above has shown that while return migration is sensitive to economic conditions, the inclusion of return migration in total in-migration conceals the effect of economic conditions on other in-migration. Thus, in the following, in-migration will be discussed excluding return migrants.

Nonreturn in-migrants are native Americans born in a state other than the one to which they are migrating. While this definition will include some who are returning to a state in which they previously lived, the census data do not permit exclusion of these individuals. The in-migration rate being examined here is the number of native Americans moving into a state other than their state of birth between 1955 and 1960, divided by the total population aged 5 years or older in that state.[7]

Hypotheses to Be Tested

A number of hypotheses were investigated in the work reported here. Many of these had been originally proposed and investigated in conjunction with research on either net migration or flows between specific pairs of places, by such workers as Blanco, Lowry, Greenwood, Nelson, Fabricant, Sjaastad, Muth, Mazek, Bunting, Gallaway, and Raimon.[8] There is not space here to review this extensive literature; however the principal differences with the present research will be pointed out.

The previous work has attempted to explain either net migration or the magnitude of the gross population flows between pairs of places. There has been little discussion of the determinants of in-migration, although Lowry hypothesized that the tendency for net migration to respond to economic conditions was due to migrants going *to* areas where conditions were good, rather than coming *from* areas with unfavorable economic conditions. Of the little work that has been done on in-migration, none has dealt with nonreturn in-migration. This has made it impossible to separate the effects of changes in economic conditions into the short-run changes caused by the return of previous migrants, and the long-run effects caused by nonreturn migration.

Much of the previous work failed to investigate the effect of employment growth on migration, considering only the effects of wage level and unemployment. Blanco, Raimon, Lowry, and Muth found that employment growth was important in explaining net migration. This article finds that it is the key to explaining nonreturn in-migration.

The following are the specific hypotheses being examined.

1. *The larger the population of an area, the more likely will jobs be filled from inside the area.*
2. *In-migrants are attracted by the availability of jobs, and as a result areas with rapidly growing employment will experience rapid in-migration.*
3. *Areas with lower unemployment rates will experience higher rates of in-migration.*
4. *If an area has a high birth rate, the native population will fill some of the available jobs, thereby reducing the incentive for nonnatives to come in.*
5. *Because the educated are more mobile than the noneducated, areas with a high proportion of jobs for the educated will have high in-migration rates.*
6. *High wages lead to in-migration.*
7. *Areas with a high proportion of soldiers will show high in-migration rates.*

Tests of Hypotheses

In the course of the research a large number of regressions were run, most of which cannot be reported here. The most useful equation was

$$\text{(1)}\quad NMIG = 56.59 - \underset{(.377)}{2.279}LOGP + \underset{(2.78)}{26.65}OBEG - \underset{(1.54)}{5.340}BR + \underset{(.1335)}{.4329}COLL - \underset{(.652)}{1.999}FINC + \underset{(12.08)}{.4820}ARMF$$

$$R^2 = .8667$$

Taking the hypotheses one by one, we reach the following principal conclusions.

Size of population. It is to be expected that migration across the boundaries of a small state would be proportionately greater than for a large state. In particular, the larger the state, the easier it is to find a qualified applicant for a job from within the state. It is desirable to control for this variable because the states with large populations tend to be those with big cities, having a high percentage of population urban, a low dependence on agriculture, and a high wage level. If size of state is not controlled for, its effect will be partially ascribed to other variables, biasing downward the estimates of their effects. In equation (1) population size was controlled for by including the logarithm of the 1960 population. This variable was highly significant with a value six times its standard error. When used alone it can explain about a quarter of the total variance. The coefficient indicates that an increase in the population by a factor of 2.71 (the mathematical constant e) increases gross in-migration over a five-year period by 2.28 percent of the 1960 population. When land area was used as a measure of state size, it was found to be statistically insignificant.

Employment growth. The most important determinant of gross in-migration rates is the rate of growth of employment, here measured as the average growth in the number of working individuals including the self-employed (among them farmers) and the military, for the period 1950-60. This variable alone can explain over 60 percent of the variance even though the growth of employment for 1950-60 can only be a surrogate for the growth of employment in 1955-60. It appears that a growth of employment of 1 percent over ten years will produce a nonreturn in-migration of .267 percent (of 1960 population) over five years.

The mechanism by which growing areas attract in-migrants is a combination of rational response to economic forces and a random matching of people to jobs. The rational migration occurs when job hunters decide to seek work in a particular area because it has a large

number of jobs available. This is the traditional economic model impelled by the actions of the rational, economic man. However, increased migration to states with expanding economies can also occur without anyone making a conscious decision to move to such areas, and indeed without the migrants even knowing which areas have expanding economies. Potential workers apply for jobs in a number of different areas, and the firms that hire them tend to be located disproportionately in the areas with expanding employment. Thus migrants are directed to the area where their labor is most needed without anyone necessarily being aware of the process.

Of course, regressions can never prove a direction of causation. It could be argued that the observed correlation between in-migration and employment growth really shows that the in-migration increased the labor supply and led to the growth in employment.[9] Although the author would not agree with this interpretation, a good statistical argument is not available.

One statistical bias should be noted. The measure of employment used includes the self-employed, among whom are most farmers. Thus, if a self-employed individual moves into an area because he believes he can earn more in that area, his migration will increase the reported employment, and part of his in-migration will be attributed to employment growth rather than to higher income in the destination area. Since the coefficient for employment growth is only about a quarter of the growth in employment, the other three-quarters are left to be explained by income. Thus the bias should not be large.

Near the end of the project, experiments were conducted with the Bureau of Labor Statistics' (BLS) measure of employment reported in *Employment and Earnings.*[10] This is the same measure of employment growth that Blanco found so powerful for explaining net migration.[11] It is based on place of employment rather than place of residence and excludes the self-employed and the military. In addition, it could be calculated for the period 1955-60. Using this measure of employment growth, the following equation was obtained.

$$\text{(2)}\quad NMIG = -.16144 - \underset{(.335)}{2.158}LOGP + \underset{(.0766)}{.4234}BLSG - \underset{(1.369)}{4.900}BR + \underset{(.131186)}{.011385}COLL + \underset{(.568)}{1.176}FINC + \underset{(9.92)}{27.17}ARMF$$

$$R^2 = .8940$$

As can be seen, the BLS employment measure has the higher explanatory power (R^2 = .8940 versus .8667) and has the highest level of significance for the employment measure (t = 11.24 versus 9.59). The equations are generally similar except that the coefficient for COLL is not significant in equation (2) and the coefficient for the armed forces is not significant in equation (1). However, for back migration and out-migration, this measure of employment growth gave worse results (in regressions not reported here).

Unemployment. Experiments were conducted with the 1960 census unemployment rate. This variable consistently failed to have any explanatory power. This could be either because migration is completely unaffected by unemployment (which the author doubts), or because the unemployment rate for April 1960 is a poor measure of the unemployment which prevailed during the whole of the 1955-60 period.

Birth rate. The level of in-migration is reduced for the states with a high birth rate as measured by the number of children per 1,000 women ever married in the 35 to 44 age bracket. This relatively old cohort was chosen partially because it was desired to have a measure of completed family size, and not one distorted by differences in the age of marriage or the timing of the birth of the first child. Also, it was expected that the effect of a high birth rate would be felt not when the children were born, but when they entered the labor force, filling jobs that would otherwise be filled by in-migrants. This was best achieved by examining the childbearing behavior of older women, whose children would be entering the labor force, or close to entering it, by 1960. The coefficient suggests that an increase in family size of one child would reduce the in-migration over a five-year period by 5.3 percent of the 1960 population.

Education. States whose industries require educated workers have high in-migration rates. In particular, states with a high proportion of citizens who have been to college for at least one year have high in-migration rates, as indicated by the statistically significant coefficient in equation (1). Experiments were conducted with the average years of education, the percent who completed high school, and the percent who completed college, but these measures of educational attainment gave poorer results. This is in accord with other information which shows a large difference in migration behavior between those who have been to college and those who have not.[12] Educational attainment of the population already living in a state serves as a surrogate for the educational requirements of the jobs in the state. In general, the higher these requirements, the more likely the successful applicant is to come from out of state.

In some cases this reflects the specialized nature of these jobs and the resulting need to look outside the state for a qualified applicant. In other cases it reflects only the greater mobility of the educated. However, the

educational attainment of the inhabitants of a state also serves as a surrogate for the educational level of the surrounding states, whence come many of the in-migrants. This is because there is a certain similarity in educational levels in the different regions of the country. Since the educated are more mobile, being surrounded by educated people is conducive to high in-migration.

Wage level. Wage level theory predicts that an area with high wages will experience a high rate of gross in-migration. Median 1959 family income was used as a measure of the wage level. Experiments were conducted using male per capita earnings, but these had lower explanatory power. Although average family income includes investment income, the error from this source is reduced by the strong correlation of ownership of investments and earned income. By using annual family income, instead of an hourly wage, the opportunity to increase income by working longer hours, or by having more than one family member employed, is treated as equivalent to the opportunity to increase income by earning a higher hourly wage. Part of the high income of the wealthy states is due to higher average educational levels, rather than to higher pay rates for work requiring equal levels of education. This is partially controlled for by including the percent that have attended college. Without this control, the effect of wage differences would be overstated. (A problem with this solution is that college attendance is also promoted by high incomes.)

The coefficient for family income in equation (1) is statistically significant, indicating that each $1,000-increase in average family income produces an in-migration of 2 percent of the 1960 population over five years. The reader should note that while this income effect does exist, it is relatively weak, and it might take several decades for increased in-migration to expand the labor supply enough to decrease wages in a labor shortage area, or to increase wages in a labor surplus area.

Military personnel. The armed forces as a percent of male employment was inserted to prevent the high mobility of soldiers from biasing the results. Most members of the armed forces did not live in the state where they were stationed before induction. In equation (1) the coefficient for the percent in the armed forces was not significant. It was, however, in a number of the equations tried.

Return and Nonreturn

WHEN return migration is expressed as a fraction of the population living outside their state of birth, both it and nonreturn migration are found to respond to the availability of jobs, as shown by the growth rate of employment. In addition, the wage level in a state attracts nonreturn migrants, and probably attracts return migrants. Several other variables, including the birth rate and the educational requirements for employment in a state, influence nonreturn migration. From a methodological viewpoint, it was shown to be necessary to separate return migration from other in-migration. Only if the actual number of return migrants is related to the number of potential return migrants does return migration appear to respond to economic incentives.

APPENDIX

ARMF Number of men in armed forces divided by number of employed males (both from U.S. Department of Commerce, Bureau of the Census, *U.S. Census of Population: 1960,* vol. 1, *Characteristics of the Population,* pt. 1, United States Summary [Washington, D.C.: Government Printing Office, 1964], Table 119).

BLSG BLS employment growth rate. This is the growth in employment 1955-60 divided by 1960 employment and converted to a percentage. The employment used here was taken from U.S. Department of Labor, Bureau of Labor Statistics, *Employment and Earnings: States and Areas, 1939-1968,* Table 4 (various years). The military and self-employed are excluded, and the employed are counted where they work.

BMIG Ratio of number of return migrants (U.S. Department of Commerce, Bureau of the Census, *U.S. Census of Population: 1960, Subject Reports, Lifetime and Recent Migration,* Final Report PC(2)-2D, Table 5, "Native, born in state of residence, living in different state in 1955 and 1960") to the number living outside their state of birth (from U.S. Department of Commerce, Bureau of the Census, *U.S. Census of Population: 1960, Subject Reports, State of Birth,* Final Report PC(2)-2A, Table 11).

BR Birth rate, as measured by number of children ever born per 1,000 women ever married aged 35 to 44 (*United States Summary,* Table 117).

COLL The percentage of the population aged 25 and over who have completed one or more years of college (*United States Summary,* Table 115).

FARM Ratio of rural-farm to total population (*United States Summary,* Table 107).

FINC Median family income (*United States Summary,* Table 106).

LOGP Natural logarithm of total population of state (calculated from *United States Summary,* Table 18).

MSB Ratio of those born in a state but now living elsewhere to the state's 1960 population (*State of Birth,* Table 11).

NMIG Nonreturn migration rate expressed in percent (*Lifetime and Recent Migration,* Table 5).

OREG Rate of increase in total employment from 1950 to 1960 (including military), calculated from U.S. Department of Commerce, Office of Business Economics, *Growth Patterns in Employment by County, 1940-1950, and 1950-1960* (Washington, D.C.: Government Printing Office, 1963).

RMIG Return migration rate (expressed in percent). The number of return migrants divided by the total 1960 population aged 5 and over (*Lifetime and Recent Migration*, Table 5).

FOOTNOTES

1. The author has discussed out-migration in "Is Out-Migration Affected by Economic Conditions?" *Southern Economic Journal*, January 1973, in press. The research on which the present article is based was done while the author was employed by the New England Regional Commission. Special thanks go to Mr. Jay Jones who assisted with the preparation of the data and to Dr. James Miller who made many useful comments. The opinions expressed are the author's own and do not necessarily correspond with those of either the New England Regional Commission or the U.S. Department of the Treasury.

Myers, "Schooling, Experience, and Gains and Losses in Human Capital through Migration," *Journal of the American Statistical Association*, vol. 62, no. 319 (September 1967); Hope T. Eldridge, "The Influence of Return Migration upon Rates of Net Migration" (Paper delivered at the Thirty-fourth Session of the International Statistical Institute, Ottawa, Canada, 1963); Yochanan Comay, "Determinants of Return Migration: Canadian Professionals in the U.S.," *Southern Economic Journal*, vol. 37, no. 3 (January 1971), pp. 319-22; and Dale E. Hathaway and Brian F. Perkins, "Occupational Mobility and Migration from Agriculture," *Rural Poverty in the United States: A Report by the President's National Advisory Commission on Rural Poverty* (Washington, D.C.: Government Printing Office, 1968).
3. Calculated from Table 5 of U.S. Department of Commerce, Bureau of the Census, *U.S. Census of Population: 1960, Subject Reports, Lifetime and Recent Migration*, Final Report PC(2)-2D (Washington, D.C.: Government Printing Office, 1963). The percentages given are the ratio of "Native, born in state other than that of 1960 residence, living in different state in 1955 and 1960" to the total native-born population. Thus, the foreign-born migrants from abroad and those whose state of birth is unknown have been excluded.
4. The regressions utilize data for the forty-eight continental states plus the District of Columbia. Alaska and Hawaii were excluded because of lack of contiguity with the other states and because of the exceptional role played by military personnel in in-migration to these states.
5. U.S. Department of Commerce, Bureau of the Census, *U.S. Census of Population: 1960, Subject Reports, State of Birth*, Final Report PC(2)-2A (Washington, D.C.: Government Printing Office, 1963), Table 11.
6. The actual equation was

$$\text{RMIG} = \underset{(.1206)}{.7533} + \underset{(.324)}{2.9066}\text{MSB}$$

$$R^2 = .6309$$

7. The migration rates used here are taken from Table 5 of Bureau of the Census, *Lifetime and Recent Migration*. Return migrants are those "Native, born in state of residence, living in different state in 1955 and 1960." Nonreturn in-migrants are those "Native, born in state other than that of 1960 residence, living in different state in 1955 and 1960."

Census

E.V. Have you ever read Susan's memo to Martin Karr, attached? It seems to me it is good enough, with only a little editing, at least to be issued to the media as background stuff. I don't think it is a special report, because it's largely just acompilation of trends, etc. But we ought to be able to make some further use of it.

b.a.

Of the ebbs and flows that characterize the movements of America's people, the most basic trend of the century has been the decline of the country's rural population. In 1900, 39.7 per cent of the nation's population was classified as urban. By 1960 that figure was 70.0 per cent.[1] According to the advance reports issued by the Census Bureau, 149,280,769 people, or 73.5 per cent of this country's total population are urban residents.[2] Conversely, the number of people living in rural areas has declined from 60.3 per cent in 1900 to 30 per cent in 1960. The 1970 advance census reports place America's rural residents at 53,884,804 or 26.5 per cent of the total population.

URBANIZATION OF THE SOUTH

The shift from rural to urban America has been especially evident in the South. In 1900 only 18 per cent of the region's population lived in urban areas. By 1960 that figure had reached 58.5 per cent.[3] The 1970 advance reports from the census bureau show 64.6 per cent of the 'census south'[4] as urban residents. (The census is comprised of the 11 Deep South states plus Maryland, Delaware , West Virginia, Kentucky, Oklahoma and the District of Columbia.)

A more representative statistic for the more homogeneous South would include the totals from Virginia, North Carolina, South Carolina, Georgia, Florida, Alabama, Mississippi, Tennessee, Arkansas, Louisiana and Texas. This Deep South region contains 50,046,056 people with 32,280,140 urban residents and 17,765,916 rural residents.[5]

DECLINE OF THE FARM POPULATION

A natural corollary to the rural-urban shift is the decline of the farm population. The 1971 Manpower Report to the President[6] states that only 30 years ago one out of every four people lived on a farm. Today, the figure is one out of twenty. Between 1940 and 1969 the farm population dwindled from 30.5 million people to 10.3 million. The number of people living on farms decreased one-third between 1959 and 1969 alone. Of the future trends, the Manpower Report observes:

> In the mid-1960's the volume of out-migration began to taper off. For the period 1965-69, the rate of net out-migration from farms, at 5.2 per cent of the population, was not much different from the rate in the first half of the decade, 5.7 per cent. However, with the steady reduction in the farm population, the actual number of out-migrants has declined and is expected to be still smaller in the 1970's. But the end of the movement off farms is not in sight, since continuing mechanization and consolidation of farms are anticipated.

It has been pointed out however, that the reduction in absolute numbers of those leaving the farm does not represent any decline in the actual propensity to migrate. The fact that the annual net

out-migration from farms was 1,115,000 in the period from 1950-55, and fell to 711,000 in the years from 1965-68 reflects the fact that less people comprise the farm population, not that the inclination to migrate is any less.[7]

Any accurate picture of the shifts occuring in population distribution must take the growth of the rural non-farm population into account. All those who leave farming do not re-locate in the city. Many off-farm migrants become members of the rural non-farm population. (The census defines rural non-farm population as residents living in areas of less than 2,500 or in open country but not engaged in farming.) The President's Manpower Report points out that the growth of the rural non-farm population "has increased enough since 1960 to offset the decline in farm population; so, on balance, the rural population has remained at about the same overall level during this decade." The report also notes that although rural non-farm residents now outnumber farm residents 4 to 1, the nature of non-farm areas should be appreciated. "it is surprising to note that many rural residents already live within metropolitan areas or the surrounding counties. In 1960, 26 per cent of the people classified as rural residents lived within the boundaries of SMSA (Standard Statistical Metropolitan Areas) counties, and 22 per cent more were within a fifty mile radius of metropolitan areas."

The South is unique in the sense that historically the region

has supplied other parts of the country with residents in substantial numbers while the long-term migration trend showed little evidence of a balanced influx to the region. C. Horace Hamiliton[8] notes that

> between 1910 and 1920 the South lost over a million people by migration and more than a million and one-half between 1920 and 1930. During the Depression decade of 1930-40, the net loss of southern population dropped to about three-fourths of a million; but rose to more than two million during the World War II decade--1940-50. However, during the following decade, 1950-1960, the net loss by migration dropped back to just under one and one-half million.

CHARACTERISTICS OF MIGRANTS

Some consideration must be given to the special characteristics of the people who migrate. According to Hamiliton:

> Although net loss of southern non-whites has been both absolutely and relatively much greater than the net loss of southern whites, the gross out-migration of whites both to and from the South has been absolutely and relatively greater than the gross out-migration of non-white population. This may seem like a paradox, but it is true because the in-migration of non-white people of the South, as compared to out-migration, is absolutely and relatively much smaller than the in-migration of whites. Out-migration of the non-whites from the South is almost a one-way street.

For example, from 1955-60, 2,033,000 whites migrated from the South; 2,367,000 whites migrated to the South; 6,047,000 whites moved within the region making a net gain of 334,000 white residents. On the other hand, 402,000 blacks migrated from the South; 123,000 blacks migrated to the South; 762,000 blacks moved within the region making

a loss of 279,000 blacks during the same period.[9]

The substantial losses of black population from the South are evident when the distribution of the nation's non-white population is viewed on a long-term basis. In 1840, 38.0 per cent of the South's population was black. By 1930 that figure had dropped to one-fourth and by 1960 to 20.9 per cent or almost one-fifth. Hamiliton points out that as late as 1910, about 9 of every 10 blacks lived in the South and 8 of every 10 southern blacks lived in rural areas where three-fourths of the region's farmers were farm tenants and over one-half of the black tenants were sharecroppers. Despite large migratory losses, the present total black population in the South is still growing, because of the excess of natural increase over net out migration.

The annual net migration of blacks from the South has declined from 160,000 per year during the 1940-1950 decade to less than 90,000 per year during the 1960-1969 period. Correspondingly the South's black population has increased from less than 10,000,000 in 1940 to more than 11,500,000 in 1969.[10]

The 1970 census figures show a reversal of the historical migration trends for the South. The 'census south' gained 6.6 million people during the 1960-1970 decade and became the most populous region in the nation with close to 62 million people. For the first time since the 1870's the region gained more people than it lost.

Slight shifts in racial composition showed approximately 19 per cent of the South's population as black (opposed to 20.9 per cent mentioned above for 1960) or an 11 per cent black population figure for the entire country. Almost as many black people live outside the census south as within the area; 52 per cent of the nation's black citizens are southerners.[11] A number of other generalizations than those based on race, can be made about migrants. Age and sex are common indices used in describing the type of people who migrate. It is known that young blacks contribute heavily to those migrating out of the region and that older whites characterize those moving into the area. "As a matter of fact, among white females, all of the net out-migration is found among females under 40 years of age, and all of the net in-migration is found among females 40 or more years of age. The in-out dividing point in net migration among white males occurs at 55 years of age. Among the non-white sex groups, only among those 55-65 years of age is any net migration found."[12] The age distribution of migrants is important especially in the South because the region has lost so much of its most valuable asset--its human resources. The majority of rural to urban migrants are young adults in their prime working ages. They leave behind a disproportionate number of children and old people who have a higher rate of dependence. Since migrants tend to be better educated than those remaining at the point of orgin, the areas of net out-migra-

tion lose their most "productive elements" in the population.[13]

> In 1969, less than one-fifth of the farm population were in the prime working age group of 25-44, compared with about one-fourth of the people. About 23 per cent of the farm population 55 years of age or over; the corresponding figure for metropolitan areas was about 18 per cent. . . .In 1970, nearly half (45 per cent) of the farm residents aged 25 or over had only eight years of schooling or less. In contrast, one-third of the people in rural non-farm areas had as little as eight years of education, and the proportion was much lower still--about one-fourth--for those in metropolitan areas. . . . The educational deprivation was much greater for Negroes than whites. Three out of every four Negro farm residents aged 25 or over had only eight years of schooling or less--often much less--in 1970.[14]

The age and educational disparities of the farm population are obvious drawbacks to the industrial development of depressed rural areas where the remaining work force is lacking in education and skills.

The most recent trends in the destination and origin of migrants are as meaningful as their volume and characteristics. The 1970 census figures show that although the population increases in the country's Standard Metropolitan Statistical Areas was less during the 1950's than 1960's, 75 per cent of the nation's growth occurred in metropolitan areas in the past decade. (The SMSA is used by the census bureau to denote a city of at least 50,000 and surrounding counties with strong economic and social links to the city.) The medium sized rather than the largest metropolitan areas are making the greatest population gains. (Only three of the largest 12 cities in the country grew at a faster rate than the national average.) Twenty-three of the thirty-one metropolitan areas containing between 750,000 and two

million people grew faster than the national average. Of these twenty-three fastest growing areas, eight were in the states of the old Confederacy: Houston, Atlanta, Miami, New Orleans, Tampa-St. Petersburg, San Antonio and Fort Worth. Most growth within the metropolitan areas continues to be in the suburbs. By 1970 16 of 25 largest cities in the country had lost population. The surburban rings around the cities grew at a rate five times as fast as the central cities in the 1960's surpassing the 1950's surburban growth rate of four times as fast.[15]

Much of the growth of southern metropolitan centers occurred between 1960-1970 in the satellite cities rather than core cities and their immediate surburbs. In Alabama for instance the larger core cities of Birmingham, Montgomery, Mobile, Gadsden and Tuscaloosa showed population losses in some instance as heavy as those in rural areas, according to preliminary 1970 census reports. The rural areas, primarily the Black Belt, lost approximately 77,000 people while the surburbs and satellite cities of the state gained about 74,000 residents. The Birmingham News[16] cites this example:

> The gains in emerging satellite cities areas were even more impressive: Shelby County gained 10 per cent; St. Clair and Walker each picked up more than Homewood; Cullman which could qualify as a satellite to both Birmingham and Huntsville, gained over 10 per cent.
>
> Autauga County, a satellite to Montgomery, gained 25 per cent and Baldwin County, right across the bay from Mobile, increased its

> population roughly by 15 per cent. In North Alabama, almost every county bordering a major metropolitan or industrial area showed gains varying from five to 25 per cent.
>
> Conversly, of the state's major cities only Huntsville registered a truely significant increase in population.

A similar trend is evident in the Atlanta area where the city itself gained 98 residents. According to 1970 census figures, Fulton County (containing most of Atlanta) grew 9.2 per cent and neighboring DeKalb County gained by 61.8 per cent. Among the major growth areas however were nearby Clayton County which gained by 111.5 per cent, Cobb County which grew by 72.4 per cent, Gwinnett County which showed a 66.2 per cent gain and Rockdale County which increased its population from 1960 by 71.1 per cent and Henry County by 34.7 according to final census figures.

Shifts in population distribution are closely related to employment opportunities. The continued out-migration from rural areas reflects the continued decline in traditional agricultural employment. U.S. farm employment dropped from 7.9 million in 1947 to 3.5 million in 1970.[17] The Monthly Labor Review of the Bureau of Labor Statistics[18] states that

> there is no indication of any drastic slowdown in the movement of farm labor out of farming in the South. Although the South has lagged behind other regions in mechanizing agriculture, the rate of substitution of capital for labor has accelerated in recent years.

The article notes that as of 1966, migration from the farm to rural

non-farm employment or cities showed a higher rate of population loss per year than during the 1950's.

> Migration from farms in the South during the 60's is expected to exceed that of other regions by a considerable proportion. Migration of whites from southern farms during the decade of the 60's has been estimated at about 43 per cent. About 63 per cent of non-white men are expected to migrate from southern farms to non-agricultural areas during the same period . This compares with an expected migration of less than 40 per cent of all men in the United States.

The proportion of workers in the manufacturing and service industries is increasing as agricultural employment contines to decline.

> A large percentage of the farm resident population (14 years and older) do non-agricultural work, for example, a recent Bureau of the Census and ERS Report (P27, No. 41, June 18, 1970) shows that in 1969, 51.1 per cent of the South's farm population employed labor force was engaged in non-agricultural work. The comparable figure for the nation was 44.1 per cent.[19]

Non-farm employment growth has actually been faster outside metropolitan areas than within urban. (Between 1962 and 1969, private non-farm wage and salary employment increased by over five per cent per year outside metropolitan areas as opposed to a four per cent increase with such areas.) What does the future hold for the South's labor force? The Monthly Labor Review believes "whether the South has an adequate labor force by 1975 depends primarily upon the rate of migration from the region." And the rates at which people leave their homes is ultimately dependent on the quality of their lives. While 26.5 per cent of the total population lives in rural America, over half the

the nation's poor people in 1969, about 12 million, lived outside metropolitan areas. The Manpower Report to the President notes that:

> Poverty is not only more frequent but also more severe among rural than among urban families. The median income of poor families in metropolitan area was $2,125 in 1969, compared with $1,973 for those living outside such areas. Poor farm families had an income of only $1,669. Their income level was too far below that of the urban poor to be offset by the lower cost of living in the countryside. And since rural families are typically larger than urban families, the disparity in living standards is greater than appears from the difference in cash income.
>
> The incidence of poverty is much higher among Negroes than whites in rural areas, as in the country generally. More than half of all Negroes living outside metropolitan areas had incomes below the poverty line in 1969, compared with one out of every seven white people.
>
> . . .60 per cent of all the poor outside metropolitan areas, including nearly all of the Negroes in this category, live in the South.

The future of the South's economic development will depend largely on the extent to which it develops its human resources through education and training and on the degree of efficiency shown in utilizing both the black and white members of the region's future labor force.[21]

Census

Emory:

A thought for you to munchm on:

At some point we shouldmmdem consider devoting a 12-page issue of South Today to the census findings and their implications. I think this could be a highly significant issue. I'm not sure, though, that it's manageable with our resources. m We might explore what's available when, see what other outfits are doing with it, etc., and gmxma make our plans from this information. Is it possible Horace will soon be available for such exOlorations and recommendations ? Someone else ? At our staff meeting to discuss census information, it was suggested that Horace might serve as a sort of contact-man-to-find-out-whO-knows-what on this subject. mm mmmm I don't remember whether that splendid suggestion was taken.

THE POPULATION EXPLOSION AND YOUR TAXES

BY

MARRINER S. ECCLES

FORMER HEAD OF THE
FEDERAL RESERVE SYSTEM

end

U. S. Population Explodes

We are prone to think the population problem applies to the underdeveloped countries and that so far as the United States is concerned this is a problem of the future if at all. It is true that for the better part of our history as a nation, we were under-populated. Fresh in our memory is the frontier and the wilderness and the sagas of the wide open spaces. Recent as it may seem, this period is now past.

The United States in 1960 had over 180 million people. Our present rate of growth (birthrate less deaths plus immigration) equals 1.8%. **Projecting this rate of growth, our population will double or reach 360 million by the end of the next generation. At this rate, it will reach over one billion in a century —a relatively short period in the history of a nation.**

What is the significance of this population growth in the United States? What problem does it raise in the field of taxation?

A good deal of the tax burden it will be seen upon examination, derives from the social problems resulting from too rapid population growth.

There are those who say that even though total taxes increase, there are more people to pay them. But there is fairly general agreement that the total tax load is too high. Public expenditures at all levels passed $150 billion in 1960, 30% of our national product. Defense and international affairs account for only one-third. The other two-thirds, the lion's share, is influenced by the growing population. This is especially true of state and local governments where the impact of providing necessary public services for an ever-swelling urban and suburban population is severely felt.

PAGINATION INCORRECT

From 1950 to 1960 our population increased 18%, whereas federal expenditures for our domestic requirements increased 36%, or twice as fast. Expenditures of state and local government went up more than 110% in this same period—from $25 billion, 600 million to $56 billion. Even though there were more people to pay taxes, the per capita tax was $172 in 1950 and $317 in 1960. State and local taxes are becoming an increasingly large proportion of the total tax take—going from 16.5% in 1946 to 36.8% in 1960. Even the tremendous increase in these taxes has not provided these taxing units sufficient income to go on a pay-as-you-go basis. In 1950 the state and local debt was $20.7 billion. By 1960 it had nearly trebled, reaching approximately $60 billion. With a continuation of the present population growth, many communities will find themselves in financial difficulties.

Mounting Taxes and Debt

Our enlarging population in considerable degree is responsible for our rapid per capita increase in taxes and public debt. Population density creates and increases a whole series of public services as well as public problems. Next to defense, education is the largest and most important item of public expenditure—amounting to $18 billion in 1959. Private gifts and expenditures for education matched or exceeded this figure. It is estimated that college enrollment will double during the sixties. It is obvious that this essential obligation can only be met by further increases in taxes and borrowing against the future. It is said that the waves of college-bound students will begin to mount in earnest during the 1963-1975 period.

At present one-third of all state and local government expenditures are for education. California has just placed on the November ballot a college bond issue of $220 million.

These funds are for new college construction and will fill these needs of the State colleges only until 1965. This is an example of population pressures which are taking place in many parts of the country. It is shocking to envision the growing burden of taxation for education. Education is a national and not a local problem, second only to defense. We are threatened intellectually by the Communists as well as militarily. We must procure teachers and skilled manpower in sufficient quantities to maintain our position of leadership. Strength lies not in numbers, but in education, training, skills, character, discipline and freedom. The backward conditions in the rapidly growing and underdeveloped areas of the world are the best evidence of this fact.

Transportation is an increasing, a defeating and frustrating problem as the death toll and accidents mount and the federal and state governments spend more and more billions in what seems to be a losing battle to reduce congestion as the new drivers take to the highways. The purchasing of costly right-of-ways, the building of tunnels and bridges, and the installation of whole new arteries and webs of connecting highways seems to have no terminal point as to cost, or time of solution.

Mounting Crime and Delinquency

We have watched with dismay and distress the mounting rate of crime and juvenile delinquency in spite of all the efforts of the churches, schools, cities, states and federal government as well as numerous private organizations to cope with this menacing problem. The increasing rate of crime exceeds that of population growth. From 1960 to 1970 juvenile delinquency in the 15 to 19 year age group at the present rate of acceleration will increase by 44%. This is because of the increase in the numbers in this age group—a primary feeder of the adult criminal class.

Our hospitals and health services have an increasing problem to keep pace with population growth. Our society is getting both younger and older at the same time. This means we may be reaching the peak in our standard of living as the ratio of the dependent groups increases. Public expenditures and hence taxes are mounting to enable us to meet these needs.

There are nearly a million new workers every year coming onto the labor market. They will rapidly increase with population growth. Our nation has been unable to absorb these new workers and keep old workers employed. Hence the number of our unemployed runs between 5% and 6% of our total labor force. This army of idle workers must be supported. This means more taxes.

As our population grows and congestion increases in our urban complexes, where 63% of the U.S. population now lives, recreation becomes an increasing necessity. To provide parks and essential recreational areas for our teeming millions is a huge physical as well as financial challenge. It takes billions of dollars of state and federal funds—more taxes—in a futile attempt to meet the need, especially in the congested northeast. Last year 102,000,000 people visited the national forests. At the present rate of increase the demands on national forest recreational areas alone will double in eight years. How will the growing demands be met for beaches, playgrounds, swimming pools, city parks, picnic grounds, etc., etc.?

There is the pressing national problem of water conservation and pollution of the streams and the atmosphere, of sewage disposal and sanitation. These problems and their cost increase rapidly as the population grows. This again means mounting taxes.

Mounting Bureaucracy

The growth and complexity of our society has brought about an unbelievable bureaucracy in city, county, state and the nation, all supported by the taxpayers.

Our large and not sufficiently restricted immigration adds approximately 700,000 people per year to our too rapid population growth. It also adds to our unemployment, cost of education and other public services.

Foreign aid is also closely related to population and taxes. "It is as closely linked with a bridge or road in Mexico as in Los Angeles," a friend of mine recently wrote. "The cost of servicing the Chilean debt becomes a part of the cost of servicing our own debt; capital expended to provide new jobs for Brazilians is, in part, capital withheld from domestic industry."

Our total tax load as a percentage of our national income is likely to increase unless there is a drastic reduction in our rate of population growth.

How can the U.S. develop or influence a needed population policy for other countries when we fail to recognize or do what is urgently required about our own situation? It has been said, "Our critical foreign policy decisions involve a solution of our own internal difficulties and hesitations with reference to population policies in general and birth control in particular. A positive approach to the world's population problem, then, requires that we view the many related problems within our own society with the same frankness with which we approach those of other countries."

Conclusion

If we are to avoid further tax increases and adequately

MEET our pressing problems of **education**—

REDUCE juvenile delinquency and adult crime—

OVERCOME increasing transportation congestion—

PROVIDE adequate hospitals and medical care, housing and recreational facilities for our teeming millions—

MEET the problem of water conservation and pollution—

REDUCE poverty and unemployment—

Then our rapidly growing population must be curbed.

This means **BIRTH CONTROL** and not just planned parenthood, useful as this may be in many cases. It also means greatly **REDUCED immigration.** We cannot temporize longer—time is fast running out.

Our entire concept of a healthy and a happy world at peace, with pestilence and premature death eradicated, is totally unrealistic unless we recognize the severe limitations of population growth which are necessary in the United States, as well as the rest of the world.

We cannot hope to live in this age much longer, enjoying security and abundance with a congested, poverty-stricken world around us.

Census

Blacks and Whites: Measuring the Changes

Status of blacks during past decade analyzed

The civil rights legislation and visible changes in social conditions during the 1960's make it one of the most significant decades in America's racial history.

Measuring and interpreting the significance of the changes during the past decade is a challenge, however, to the general public and to researchers. Developing reliable yardsticks—racial indicators—to show where black Americans stood in comparison with white Americans and where both seem to be going is a major research commitment at The Urban Institute.

The Institute's Indicators program, led by Harvey A. Garn, undertook to collect and display available social and economic measurements that would give a balanced picture of the status of blacks and whites in the 1960-68 period. The result this summer was, *Blacks and Whites. An Experiment in Racial Indicators,* prepared by Michael J. Flax. In his foreword to this 79-page publication, Institute President William Gorham says, "These indicators and the explanations of them provide some reference points for improving the quality of the public and private interpretation, understanding and discussion of racial issues."

Racial data have been compiled in the past, including *The Social and Economic Status of Negroes in the United States,* published by the Census and the Bureau of Labor Statistics. While relying heavily on these data, the Institute study is unique because of its use and presentation of the material.

Flax provides several alternative views of the available figures in 16 areas of social and economic activity, and also attempts to interpret recent research for the general audience. First, he examines the data to determine whether blacks and whites, viewed separately, made progress in the 1960's. Second, he compares progress toward racial equality in both relative and absolute terms. Third, he shows some of the possible implications of a continuation of the 1960-68 trends into the near future. In a later chapter, Garn discusses how recent research findings explain present and future relationships between income and other social and economic factors.

As the summary table on pages 4-5 shows, the 16 indicators used in the study are grouped in six categories. Twenty-six further tables in the publication present the specific data backing up the summary findings.

The second major question asked in the summary—Are nonwhites catching up to whites? —illustrates the complexity of the current racial picture. Specifically, are nonwhites improving at a faster rate than whites (a relative measurement), and is the gap between whites and nonwhites getting smaller (an absolute measurement)? In many instances, Flax found that the relative and absolute answers point in different directions. He therefore warns readers of racial indicators that "the progress of nonwhites can sometimes be made to look good or poor depending upon how the data are used."

The median family income indicator serves as an example of this phenomenon of catching up relatively while falling behind. Nonwhite income increased at a faster rate than white—4.9 percent compared to 3.4 percent. But at

PAGINATION INCORRECT

the same time, the actual gap between white and nonwhite median income widened from $3,063 in 1960 to $3,347 in 1968.

How is this possible? Take the case of one man earning $17,000 whose 3.5 percent pay increase amounts to $595 while a second man making $8,000 gets a 5 percent boost of $400. The $8,000-a-year man increased his income at a higher rate, but the first man's dollar increase is larger. The gap between the two thus increases from $9,000 to $9,195.

Similarly, the last decade saw higher black rates of improvement but a widening of the gap between whites and blacks in the following aspects: the percentage of families with income of $8,000 or more, the percentage of persons completing four years of college, and the percentage of illegitimate births.

Catching up or falling behind? Depends on perspective

The point is this: interpret with care. Distorted conclusions about racial status have been disseminated that were based, through error or intent, on too narrow a selection of data. The Institute report deliberately tries to minimize such misinterpretations by juxtaposing rates of change, changes in gap size and trends.

The study makes clear that the choice of indicators themselves may alter the picture. Flax compares the life expectancy of whites and nonwhites for persons aged 35. Using this indicator, it appears that nonwhites improved their life expectancy at a faster rate than whites between 1960 and 1967 and reduced the actual gap in years. But the author points out that a different picture emerges from focusing on the 25-year age level; there the white rate of improvement is higher and the gap is widening.

A high government official, speaking recently of black progress, revealed the need for careful scrutiny of data and indicators when he announced that the median income of certain young Negro families had equalled that of young white families. That same figure appeared in the newest edition of *The Social and Economic Status of Negroes,* but there it was put in more qualified terms: In northern and western regions, young black families in which the husband and wife both worked achieved a median income of $10,130, just short (99 percent) of the $10,267 earned by young white families in the same circumstances. However, seven out of ten young Negro wives worked compared to five out of ten white wives. In

the white and nonwhite communities because of cultural differences.

b. Data indicate that no change occurred.

c. A lowering of the fertility rate is assumed desirable. Where income is limited a decrease would tend to encourage desirable trends in many of the other categories measured.

d. Attitudes toward illegitimacy affecting accuracy of reporting have been found to differ among whites and nonwhites, therefore, the significance of similar figures may not be the same. It is assumed here that a higher illegitimacy rate is not desirable.

e. The white illegitimacy rate is increasing at double the nonwhite rate, therefore the slower nonwhite change may be expressed as a relatively greater "rate of improvement."

f. The earliest year is ranked lowest (1).

husband-wife families where only husbands worked, Negro income was only 71 percent of whites'. The median income for all black families nationwide in 1969 was only 61 percent of white family income. In short, the official's .statement could have been a useful and mildly hopeful statement if put into proper perspective; out of context, it appears both overly optimistic and misleading.

Devising indicators confronts researchers head-on with another problem—deciding what is forward or backward. For most indicators in this study, there is general agreement on what constitutes progress, but some caused difficulties. For instance, regarding the birth rates, decreasing fertility is "considered desirable," but it is conceded that the statistics "may have different implications for the white and nonwhite communities because of cultural differences." Differences may also occur over the concern about or significance of female-headed families and illegitimacy. With respect to the latter, it is widely believed that there is an accuracy problem in the data due, among other things, to the greater reluctance of white mothers to report children born out of wedlock.

Other research on racial questions can help clarify the issues and the indicators further. For example, Robert B. Hill of the National Urban League issued a paper, *The Strengths of Black Families,* soon after the Institute report was released. It highlights important data that adds to and modifies previous characterizations of black life. Flax and Garn believe such data should be included in future racial indicator studies. Critiques of the Institute report also may become the basis for future improvements in the clarity and usefulness of the indicators.

Projecting Data of Past Decade

Although it is an initial experimental study, the Institute report is being described in periodicals and newspapers as both a useful look at recent trends and a helpful indication of what these trends portend for racial equality in the future.

The projections in the study emphatically are not forecasts. By giving a time dimension, they are intended to throw further light on the meaning of the rates and directions of change during the 1960's.

The last column in the summary chart shows when blacks would reach the 1968 white levels, assuming that the 1960-68 black rates of change continue. These levels would be reached soon for several aspects of life—the percentage completing high school, in 1973; the percentage employed in clerical work, in 1974; and the percentage of families with incomes greater than $8,000 a year, in 1974. The achievement by blacks of these 1968 white levels would be long delayed according to other indicators—the year 2019 for life expectancy of 35-year-olds, 1994 for infant mortality, 1992 for the percentage of persons in poverty. Note, of course, that this does not imply that parity in the racial measurements will have been achieved by these dates, since it is likely that whites will continue to improve their status in the meantime, and rates for blacks will probably not remain constant in the future.

Time dimension shows how fast or slow racial indicators are converging

An attempt was made to select yardsticks of social and economic activity that could be easily updated. This is important because the behavior of some of the indicators has already shown some change since 1968, most notably in the area of unemployment.

The white jobless rate of 4.9 percent in 1960 fell to 3.2 percent by 1968. Nonwhites started the period at 10.2 percent, finished at 6.7 percent, about the same rate of reduction as for the whites. The actual gap in this case decreased, from 5.3 percentage points in 1960 to 3.5 percentage points in 1968. The trend of this indicator, had circumstances remained unchanged, would have brought the nonwhite unemployment rate down to the 3.2 percent white level by 1982.

This cyclical effect takes on added significance in light of the report's chapter by Garn discussing the movement and prospects for more equality between black and white income distribution. While noting that the 1960-68 period saw improvements, the changes "have all been dependent upon rapid rates of economic growth and low national unemployment rates."

Closing black-white gaps tied to nation's economic health

Garn concludes, therefore, that there is "little ground for optimism or complacency if the national growth rates decline and unemployment rates rise, as they did in 1970, unless alternative means are found to narrow the income gaps. The effect of such a deteriorating situation will be relatively more serious for nonwhites than for whites and the gains seen may well be lost in a period of economic decline." □

Gearing Up for Peace

(Continued from page 2)

to Bergsman, if appropriate new priorities are coupled with sound economic policies.

Some occupational categories would suffer a net decline in jobs, and many people in the hardest hit of these would have to change occupations. Meanwhile, in other job categories, there would be shortages of qualified workers. Some localities would suffer substantially increased unemployment. Some highly specialized business firms might not be able to adapt.

The biggest problem Bergsman finds with the bills already introduced to deal with conversion relates to their scope. Most are designed to help a particular category of workers, particular communities or specific companies. Does a worker unemployed because of conversion deserve more help than one who is unemployed for other reasons? Should we try to maintain the economy of every community in the country? And if a firm cannot compete as priorities change, should it be subsidized?

Bergsman does not see the answers to these questions as a flat no, but he does argue for the adoption of sound national policies which, while helping those who are displaced, would be of benefit to the entire community. □

About the Institute: The Urban Institute is a nongovernmental, nonprofit research organization established in 1968 to study problems of the nation's communities. It cooperates with federal agencies, states, cities, associations of public officials, the academic community and other researchers.

About Search: A bimonthly that supplements and summarizes many of the reports, papers, reprints, seminars and other communications of the Institute. Research findings and opinions, representing a broad range of interpretations, reflect the views of particular authors and are offered as an independent, nonpartisan educational service. Editor, Walter Rybeck. For publication lists and other information, write: B. J. Stiles, Director of Publications.

Operation Clean Sweep

Photo rating system used in anti-filth campaign

In mid-August the District of Columbia launched an intensive three-month campaign to clean its streets and alleys. James P. Alexander, Director of the District's Department of Environmental Services, explained that Operation Clean Sweep was intended to break the "cycle of filth" that plagues so many cities.

For almost a year before the campaign started, Alfred Schwartz, Louis H. Blair and Alease Vaughn of The Urban Institute worked with District personnel to help develop a practical set of procedures to permit a local government to evaluate systematically its solid waste collection program. This effort in Washington is based on earlier research undertaken by the Institute in this field.

One photo guiding inspectors in rating streets—this shows cleanest category

Operation Clean Sweep proceeds for a week or two through each of the city's nine service areas, using a massive concentration of men and equipment. A week before this occurs, an inspection team goes through the area, systematically rating the cleanliness of streets and alleys. The week following the clean-up, the area is re-inspected using the same procedures so that a before-and-after record is developed. About two months later, the process will be undertaken again to evaluate whether improvements in sanitation are achieved and maintained.

A visual rating system was devised with four sets of photos each for streets and for alleys. These define refuse conditions as clean, moderately clean, moderately littered and heavily littered (see two examples). In addition, other measurements of waste collection effectiveness are advised, including surveys of citizen satisfaction.

Early in the experiment phase, filling out handwritten rating forms proved too time-consuming for traveling inspectors. Tape recorders were substituted that inspectors could use while driving along at about 15 miles an hour, increasing locations covered from 60 to 200 or 300 a day. The ratings are transcribed and tallied by office clerks.

Abandoned autos and fire, health and safety hazards also are being reported with these procedures. The measurement system is precise enough, Schwartz is convinced, so that, with minor modifications, it could be used further to help determine causes of filth—for instance, whether it stems from littering by transients, poor use of trash containers by residents, or careless operations by sanitary crews. The information produced should lead to substantial improvements in dealing with solid waste collection problems.

Alleys like this are rated 4, the worst condition, in D.C. war against filth

District of Columbia officials believe that Operation Clean Sweep will have a marked impact on the capital city. They are hopeful that continued use of the ratings and analytic techniques developed by the Institute after the campaign will then sustain the higher levels of street and alley sanitation. The rating system itself will test whether these aspirations are well founded. □

Universities and PPB

Training aimed at local officials must overcome certain handicaps

Institutions of higher learning can play a vital role in helping local officials learn to apply the analytic techniques involved in Planning-Programming-Budgeting (PPB) systems.

Academic and government experts have developed and participated in PPB training efforts. When brought together by the Urban Institute to review this experience, they pointed out however that more attention needs to be given to a communications gap between professors and trainees.

The academics, needed for their background in analytic methodology, frequently lack sufficient knowledge of the programs and problems faced by the government officials who come to them for training. The trainees, on the other hand, often lack the academic background to fully grasp the approaches being taught.

These and other difficulties—and proposals for overcoming them—are described in the Institute report, *University Training in PPB for State and Local Officials.* The need for better illustrative training materials is cited by university participants in these programs as a major handicap. For this reason, two PPB studies applied to specific local government problems are included in the report. □

ICMA GOALS

- To strengthen the quality of urban government through professional management.
- To be the professional and educational Association of appointed urban managers.
- To strengthen the competence of appointed urban managers and to ensure qualified talent to meet urban government needs.
- To contribute to the understanding and resolution of urban issues.
- To provide information and analysis of data, management ideas, and methods for urban government management and to stimulate and to participate in the development and translation of new concepts for urban government management.

GENERAL DESCRIPTION

The International City Management Association is a professional membership organization of chief appointed management executives in cities, towns, townships, villages, counties, and councils of governments. The purposes of ICMA are to increase the proficiency of city managers and other administrators and to strengthen the quality of urban government through professional management.

To meet its objectives ICMA carries on a broad range of activities which include research, publications, and professional development. Aware of the challenges of urban living, ICMA seeks to meet the future by dissemination of information, the stimulation of ideas, and the development of new concepts and methods of urban management and organization. To that end it offers its services to all persons interested in municipal management.

ICMA maintains administrative relationships with federal agencies and with university and public interest groups serving federal, state, and local officials. Through task forces, special committees, and informal consultation, ICMA members and staff work on matters of common interest with public and private groups concerned with urban affairs.

ICMA is a professional organization in the best sense of the term. Its members are men and women of developed skills and abilities serving their fellow man through their commitment to democratic local government. The quality of local government is judged by two measures: high quality management and administration and the advancement of a responsive and dynamic democratic process.

ICMA SERVICES

The strength of the Association rests in the individual member — and how well he does his job in his community. To further these efforts, ICMA conducts a wide variety of programs in professional development, information, and publications.

PROFESSIONAL DEVELOPMENT

The Association works closely with universities, colleges, and junior colleges in efforts to interest young people in local government careers and in planning and sponsoring in-service training and career development programs. These cooperative efforts include preparing study guides, developing and revising training texts, sponsoring seminars, and awarding certificates.

The Institute for Training in Municipal Administration helps city and county officials apply tested procedures to local problems through fifteen correspondence courses. Since the Institute was founded in 1934, more than 50,000 local government employees have been enrolled. The Institute courses are built around a series of books, the Municipal Management Series, developed specifically by ICMA for training administrative personnel. These courses are available both for group and individual enrollments and cover general management, supervision and leadership, police, fire, planning, and other subjects.

The Association continually is developing conferences and short courses in response to current developments. The Advanced Management Training Program gives participants an opportunity to examine municipal management in terms of practical experience. Urban Policy Seminars, conducted in cooperation with the Brookings Institution, are open to urban administrators, school superintendents, city planners, and others to explore the implications of broad urban problems on specific aspects of the management job. Other special programs have been held on computers, information systems, and systems analysis in various parts of the country.

The Association is vitally interested in encouraging young people to make local government a career. Summer internship programs are developed in coordination with other groups so that college students can get on-the-job experience in city halls. College visitation programs permit city managers and other urban administrators to confer with students on local government careers.

Cooperative relationships are continually being developed for a variety of training programs with junior and senior colleges and universities in all parts of the country.

INFORMATION SERVICES

ICMA has always been a leader among local government associations in compiling, analyzing, and publishing information for administrators. The *Municipal Year Book*, a statistical compendium issued annually since 1934, is the backbone of a wide-ranging program that includes monthly research reports, monthly statistical data reports, special computer tabulations from ICMA's data files, and inquiry services. ICMA's information program is built around two subscription services.

MANAGEMENT INFORMATION SERVICE. MIS assists officials in more than 1,500 subscribing cities and counties through monthly research reports and information by mail, telegram, or telephone. The service is available for two groups of cities — over and under 25,000 population.

URBAN DATA SERVICE. Launched in 1969, this is a fast-reacting information program that can, within hours, put facts and figures at your disposal. Subscribers receive timely monthly reports and access at cost to computer tabulations that are tailor-made for individual requirements.

PUBLICATIONS

Regular ICMA publications include: *Public Management*, the Association's monthly magazine which is dedicated to serving the urban administrator; the semimonthly *ICMA Newsletter* which brings timely Association news to members as well as information on administrative appointments and positions open in urban management; *Career Topics*, a monthly publication on information for administrators to use in their personal development; the *Municipal Year Book*; and several annual directories and special publications.

In addition to these regular publications, other books, monographs, and special reports are issued to serve the Association program, including 15 books in the Municipal Management Series that provide the basis for the correspondence training program; the ICMA Research Series, monographs that have been commissioned by ICMA on specific urban problems; public information folders and bulletins; reports on the municipal management profession; and special reports.

The Municipal Management Series includes training books in general management, supervision, police, fire, planning, library administration, public works, and other subjects. These titles, some of which are in their sixth and seventh editions, have been developed to serve administrators and emphasize common elements of executive management.

An ICMA publication list, showing all titles and prices, is available on request.

MEMBERSHIP

ICMA membership, available for anyone involved or interested in local government administration, totals almost 5,000 persons. Nearly 2,000 are management executives actually in the service of a municipality as managers, chief administrative officers, or directors of councils of governments. The remainder includes administrators of municipalities not recognized by the Association as providing for positions of overall professional management, professors, students, corporation officers for urban programs, employees in state offices for local government, and other persons interested and involved in local government.

Membership classifications are in two broad groups: corporate and noncorporate. Corporate Members are eligible to vote for and hold Association office.

CORPORATE MEMBERS

MEMBER — City, town, and county managers and administrators, chief administrative officers in cities, counties and towns, and directors of councils of governments. They must have served in a municipality or a council of governments which is recognized by the Association as providing for a position of overall professional management[1] for at least three years and have subscribed to the Association's Code of Ethics. Their applications have been endorsed by two Members in good standing and published in the *ICMA Newsletter* for review prior to appointment.

ASSOCIATE MEMBER — Includes two groups:

1. City, town, and county managers and administrators, chief administrative officers in cities, counties, and towns, and directors of councils of governments who meet all qualifications for Member except that they have not completed three years of service.
2. Administrative assistants, assistant city managers, assistant administrators, assistant directors of councils of governments, and persons holding similar responsibilities for a two year period. Their applications must be endorsed by two Members or Associate Members, one of whom is the applicant's immediate superior who has certified that the applicant holds significant general administrative responsibility in a municipality or council of governments which is recognized by the Association as providing for a position of overall professional management.[1]

NONCORPORATE MEMBERS

COOPERATING MEMBER — Persons who by personal attainment and interest are eligible to cooperate with practicing managers or administrators in the advancement of professional knowledge and practice.

JUNIOR MEMBER — Persons active in some branch of public administration for at least two years or who have graudated from or are students in a course in public administration. Applicants for Junior Membership have not yet reached the age of 26.

HONORARY MEMBERS — Honorary members have been elected by a three-quarters vote of the Executive Board and a majority of the Corporate membership attending an annual conference. They have been elected because of their distinguished public service and are not otherwise eligible for Corporate membership.

[1] Recognition of a municipality as providing for a position of overall professional management is the procedure the Association uses to determine whether a municipality or a council of governments provides an environment in which a professional administrator is able to make a professional contribution to the quality of administration and management of a local community. It is necessary that certain requirements for his appointment and specific responsibility and authority characterize the position. An ICMA statement, Criteria for Recognizing Cities with Overall Management, is available on request.

BEST COPY AVAILABLE

GOVERNANCE OF THE ASSOCIATION

The governing body of ICMA is the Executive Board. Its members consist of a president, eleven vice presidents elected regionally, and three past presidents. The President and five or six of the vice presidents are elected each year at the annual conference by all Members and Associate Members in attendance. All officers are Members and are actively serving in a municipality. The Executive Director is an officer of the Association and serves at the pleasure of the Executive Board. He is responsible for the management of the Association's affairs and activities.

There are state associations in most of the states in the United States and in Quebec and Ontario in Canada. Most of the Association's activities are conducted in conjunction with state associations in order to maintain a close relationship with individual members. Other ways by which individual members become actively involved include service on task forces and special study committees, service on committees at the state, regional and national level, and personally bringing matters to the attention of the officers.

ICMA actively pursues constructive and meaningful participation of the membership at the sensitive decision points in program and policy development. Most of the professional services have the benefit of a membership advisory committee and proposals for important new activities and services are usually referred to *ad hoc* committees of members. In this manner professional insight and membership responsiveness are maintained.

CITY MANAGEMENT CODE OF ETHICS

THE PURPOSE of the Internationla City Management Association is to increase the proficiency of city managers, county managers, and other urban administrators and to strengthen the quality of urban government through professional management. To further these objectives, certain ethical principles shall govern the conduct of every member of the International City Management Association, who shall:

1. Be dedicated to the concepts of effective and democratic local government and believe that professional general management is essential to the achievement of this objective by responsible elected officials.

2. Affirm the dignity and worth of the services rendered by government and maintain a constructive, creative, and practical attitude toward urban problems and a deep sense of his social responsibility as a trusted public servant.

3. Dedicate himself to the highest ideals of honor and integrity in all public and personal relationships in order that he may merit the respect and confidence of the elected officials, of other officials and employees, and of the public which he serves; believe that personal aggrandizement or profit secured by confidential information or by misuse of public time is dishonest.

4. Submit policy proposals to elected officials, provide them with facts and advice on matters of policy as a basis for making decisions on community goals, and defend municipal policies adopted by elected officials.

5. Recognize that elected representatives of the people are entitled to the credit for the establishment of municipal policies; credit or blame for policy execution rests with the member.

6. Make it his duty continually to improve his ability and his usefulness and to develop the competence of his associates in the use of management techniques.

7. Keep the community informed on municipal affairs; emphasize friendly and courteous service to the public; and recognize that the chief function of local government at all times is to serve the best interests of all the people.

8. Resist any encroachment on his responsibilities, believing he should be free to carry out official policies without interference.

9. Handle all matters of personnel on the basis of merit so that fairness and impartiality govern his decisions pertaining to appointments, pay adjustments, promotions, and discipline.

10. Seek no favors, and handle each problem without discrimination on the basis of principle and justice.

This code, originally adopted in 1924 and amended in 1938 and 1952, was revised again in 1969 and approved by vote of the members of the International City Management Association.

BEST COPY AVAILABLE

For many years ICMA stood for the International City *Managers'* Association. On July 1, 1969 the constitution was amended to change our name to the International City *Management* Association. At the same time the qualifications for membership were changed so that all persons working as professionals in overall management positions in urban areas could be included in the professional association. Prior to this time full membership was limited to city managers serving in communities having the council-manager plan. The Association continues to view the council-manager plan as a superior form of local government organization and further recognizes that there are alternative means of providing for professional management positions in local government.

Stamler vs. HUAC: Heart Specialist, Called by Committee, Responds by Challenging HUAC's Legality

Encounters between scientists and congressional committees investigating alleged subversion—common in the 1950's when McCarthy and McCarthyism seared university campuses—have today become something of a rarity. One exception is the case of Jeremiah Stamler, M.D., whose current involvement with the House Committee on Un-American Activities or, as it is commonly called, HUAC, is part of a new chapter in the committee's history.

Stamler, 45, is a well-known heart specialist with impressive professional credentials. He is currently an employee of the Chicago Board of Health, where he is director of the Heart Disease Control Program and the Division of Adult Health and Aging, and executive director of the Chicago Health Research Foundation, the Board's research arm. He is also an assistant professor in the department of medicine at Northwestern University Medical School, and Western Hemisphere editor of the *Journal of Atherosclerosis Research*. Since 1949, the year after he was licensed to practice medicine, Stamler has published over 150 articles on diseases of the heart and blood vessels, and he is also the author of several books. He is currently the principal investigator on three research grants awarded by the National Heart Institute of the National Institutes of Health, where his activities are very highly regarded, and is at work on a number of other projects as well.

Early in May 1965, on the same day that he was named winner of the Albert Lasker Award in Medical Journalism for his co-authorship of a series of articles on the prevention of heart disease, Stamler was subpoenaed to appear before HUAC during the committee's planned stint in Chicago to investigate an alleged resurgence of Communist activities there. Mrs. Yolanda F. Hall, a research nutritionist associated with Stamler at the Board of Health, was also ordered to appear. The committee never revealed why the two had been called. Their lawyers claim that the committee was attempting to deter Mrs. Hall from involvement in civil rights activities in her community, by harassing both her and Stamler, a close professional associate. The names of the subpoenaed witnesses were released to the Chicago press, and Stamler, the most eminent of those called, was immediately engulfed in headlines announcing "City Doctor Gets Red Quiz Subpoena," "Heart Expert Subpoenaed in Red Quiz," and so forth. Most newspapers featured Stamler's name in the lead paragraphs of their stories; at least one ran his photograph as well. (In response to the publicity—and the concern of his employers—Stamler signed what amounted to a loyalty oath for the Chicago Board of Health. Subsequently—after the hearings—the Board in effect gave him a vote of confidence and voted to retain his services.)

Such jolts to individual lives have not been uncommon in the years that HUAC has been at work. What was uncommon was Stamler's response to it. He and Mrs. Hall, after conferring with many people, decided neither to go along with the committee nor, as often occurs in such cases, to avoid testifying by taking the Fifth Amendment. Instead they chose to attempt a counteroffensive, and they brought a suit challenging the committee's constitutionality. In this action they had the support and counsel of one of Chicago's best-known lawyers, Albert E. Jenner, Jr. Jenner, who is a Republican, is, among other honors and offices, a past president of the Illinois Bar Association. He was also a senior counsel to the Warren Commission.

The day before the hearings were to begin, Jenner brought a motion before the Chicago federal court asking that the committee be declared unconstitutional and that it be enjoined from holding hearings. The petition was overruled—chiefly on the ground that it was premature—and the hearings began as scheduled. The case is now pending before the U.S. Court of Appeals, and will probably be argued there around October.

The essential argument in the case is that Rule XI of the House of Representatives, a rule adopted in 1946 establishing HUAC, violates the U.S. Constitution. According to the Rule, HUAC is authorized to investigate (i) "the extent, character, and objects of un-American propaganda activities in the United States," (ii) "the diffusion . . . of subversive and un-American propaganda that . . . attacks the principle of the form of government as guaranteed by our Constitution," and (iii) "all other questions . . . that would aid Congress in any necessary remedial legislation." The Jenner brief argues that Rule XI violates the First and Fifth Amendments because "it is unduly vague, uncertain and broad." Rule XI, the argument continues, has authorized the "creation of a governmental mechanism with the sole purpose . . . of forcing public disclosure of beliefs . . . and associations of private citizens which may be unorthodox or unpopular, resulting in public stigma, scorn and obloquy;" it authorizes "compulsory examination of witnesses" so all-inclusive that it violates the due process clause of the Fifth Amendment; and "it violates the prohibition against Bills of Attainder . . . in that it authorizes and provides for legislative punishment."

Further complaints contained in the brief were that the subpoenas were not issued for "any legitimate legislative purpose"; that Hall and Stamler were not informed as to the purpose and scope of the hearings; that the committee, in calling open hearings, violated its own rule that testimony likely to be defamatory be taken in closed sessions; and that the advance publicity (for which the brief blames the committee) was improper.

Unfortunately, the hearings themselves did more to verify Jenner's arguments than to refute them. To judge from the hearing transcript, the 3-day sessions were rather like a purge trial staged by Ringling Brothers. Jenner, writing to Chicago's Mayor Daley after the hearings, said that he observed "many shocking occurrences, all of which were designed to fortify us in our determination to test the legality of the Committee and to challenge directly the tactics . . . of intimidation and public exposure for exposure's sake." Among objections to the proceedings Jenner cited were the following:

- The committee claimed to be seeking information as the basis for legislation, "yet the only two witnesses who testified . . . were paid informers for the FBI for many years, and the Committee had already heard their testimony in executive session."
- The committee refused to hear testimony about Stamler and Mrs. Hall in executive session.
- The committee mistreated witnesses' attorneys and "verbally abused" the witnesses themselves.

In addition, Jenner stressed that not a single witness during the 3-day hearings referred to Mrs. Hall at all, and only one witness mentioned Dr. Stamler. All other references to Stamler and Hall "were merely assertions or innuendos contained in questions of Committee counsel put to witnesses who declined to answer. . . ."

The one reference to Stamler, Jenner pointed out, was a "hearsay statement as to something which [the witness] recalled hearing another person say in 1959."

None of these arguments against HUAC is startlingly new. They have been heard before from individuals who have felt similarly victimized by the committee's operations from a legion of disinterested outside critics, and in occasional court cases. They have also been heard on the floor of Congress, where moves either to abolish the committee entirely or at least to arrange an official confrontation between the committee and its critics have been slowly but steadily gaining ground. Some have attributed the committee's recently announced decision to investigate the Ku Klux Klan to an attempt on the part of committee chairman Edwin Willis (D–La.) and some of its more moderate members to shed its "red-baiting" image and prove its wider usefulness. As to whether HUAC will really change its spots, most observers seem very doubtful; and while the 58 votes last February in favor of an anti-HUAC move in the House is some measure of how much the opposition has grown (opponents in the past few years have rarely numbered more than a handful), it is also some measure of the reluctance of legislators to seem to condone "subversion." A vote against HUAC, the reasoning seems to be, is an apparent vote "for communism." Anti-HUAC sentiment seems to have been increased by the events in Chicago —the sessions were characterized by organized demonstrations, verbal hostilities, and other indices of mutual disrespect between the committee and the audience. But it appears, nonetheless, that HUAC is still snugly ensconced and that it will be around—and powerful for some time.

The difficulty of the position taken by Stamler and Mrs. Hall should not be underestimated. To avoid rendering moot the constitutional case pending in the Court of Appeals, Stamler and Mrs. Hall were advised to decline to answer the committee's questions. In addition, they expressly refused to claim the Fifth Amendment privilege against self-incrimination. Instead, they both submitted brief statements, then left the hearing room—and were threatened with contempt citations as a result.

Science and HUAC

In a statement addressed to scientists and physicians, Stamler argued that the operation of HUAC was a threat to the independence of science. The statement reads, in part:

> As a working scientist, I learned early that false initial assumptions inevitably lead to false conclusions and erroneous proposals. Thus, as long as the false notion persisted—prior to Galileo, Kepler and Copernicus—that the sun rotated around the earth, there could be no real science of astronomy. As long as the belief held on—prior to Harvey—that the blood surged to and fro, and did not circulate, there could be no real science of physiology or medicine. As long as the superstition held sway that persons with mental illness were possessed by devils, there could be no scientific psychiatry. And in my own field of research on atherosclerosis, there could be no substantial progress until the false premise had been dispelled that this was not a disease but rather an aspect of normal aging.
>
> The Committee on Un-American Activities—I am deeply convinced—is in profound error precisely because it proceeds throughout on the basis of totally erroneous premises. Its fundamental false assumption is that it has the right and ability to define Americanism, and to fix its criteria for Un-Americanism—and on the basis of these arbitrary self-selected standards ferret out "Un-Americans."
>
> As already emphasized, the adoption or imposition of false premises and hardened dogmas in science has a grossly debilitating effect. It is a truism that the forward advance of science—including biomedical science—in its continuously expanding effort to master nature for the benefit of mankind, requires a healthy free intellectual climate, a true open market place—national and international—for the exchange and flow of ideas. Repressive political interference in science can have only one effect—to stifle and hold back the acquisition of vital knowledge, to do great harm to research programs that have the potential to bring great benefit to all Americans and all humanity. This threat is very real and concrete in the present instance.

An additional factor which influenced his decision, Stamler said recently, was a belief that the particular projects in which he is engaged might have suffered had the committee been given an opportunity to put the spotlight on the federal and other public institutions that support his work.

Some might disagree with Stamler's conclusion that HUAC threatens science, either in general or in his particular case. Federal agencies have withstood similar sniping in the past, and the city of Chicago has indicated that it intends to continue its support. Nonetheless, although it is too early to judge how far it will spread, the Stamler case seems to be arousing substantial interest in the academic community. A Legal Aid Fund has been established to help pay the legal costs, which, it is expected, may rise to the neighborhood of $50,000. The chairman of the fund is Paul Dudley White of Boston, and the treasurer is Robert W. Wissler, professor and chairman of the Department of Pathology at the University of Chicago. Mailings sent out by two independent groups of physicians and scientists in the Midwest have already brought in over $10,000 in contributions. In addition, a committee of well-known scientists and other academicians is in the process of formation, not only to support Stamler but to lead in the exploration and exposition of the constitutional principles that his case against HUAC poses.

WEDNESDAY, FEBRUARY 9, 1966 PAGE A20

Loyalty to What?

The House of Representatives once again must decide whether contempt for its Un-American Activities Committee necessarily constitutes contempt of Congress. We think that it does not.

The current contempt citations raise a special problem. They involve Dr. Jeremiah Stamler, a renowned heart specialist who is director of the Heart Disease Control Program of the Chicago Board of Health, and two of his professional associates. They declined, on advice of counsel and on asserted grounds of principle, to answer some abusive questions put to them by the Committee. They also filed an action in a Federal District Court—dismissed there but now pending before the U.S. Court of Appeals for the Seventh Circuit—challenging the Committee's constitutionality and seeking an injunction against enforcement of its authority.

Deferring all judgment on the motives and merits of this action, we think the House of Representatives ought to await a decision by the Court of Appeals—and by the Supreme Court, too, if it should come to that—before citing these persons for contempt. For the questions they raise are important and cry out for judicial determination. Moreover, this kind of civil action is a far better way to find out if a witness is obliged to answer committee questions than a criminal prosecution putting him in jeopardy of a prison sentence.

Years ago, Kenneth Keating, when he was in the House of Representatives, introduced a bill which would have required the House to go to a Federal Court for an enforcement order in the case of recalcitrant witnesses; this would have given the witnesses an impartial judicial decision as to the validity of the committee's questions and a chance to answer in the light of this knowledge. A witness refusing to answer after being ordered to do so by a court would, of course, be in contempt of court and punishable accordingly. This is at once more sensible and more civilized than a contempt citation by Congressmen blindly supporting one of their own committees.

In the Stamler case, HUAC violated its own rules by releasing the names of subpoenaed persons in advance of the hearings and causing grave injury to their reputations. It asked questions redundantly, although it was clear that the witnesses did not intend to respond, in an obvious effort to pillory them. And it refused their request to testify in executive session. These circumstances and tactics have led more than 100 eminent law school professors to join in a letter to all members of the House urging them to reject the contempt citations.

Congressmen owe a measure of loyalty, of course, to the committees they have established. But they owe loyalty also to the good name and the high traditions of the House of Representatives. For the sake of loyalty to the Un-American Activities Committee, they have voted contempt citations in more than 130 cases since 1950; and only nine of these have resulted in final convictions. And they have allowed this Committee, exercising the majestic investigating power of Congress, to browbeat, torment and intimidate witnesses in a manner reminiscent of the Court of Star Chamber which was abolished in 1641. Now would be a good time to call a halt to this tyranny.

The New York Times.

TUESDAY, FEBRUARY 8, 1966.

Where Does the Contempt Lie?

The House of Representatives votes tomorrow on a resolution to cite three Chicago residents for contempt of Congress for their refusal to testify before the Committee on Un-American Activities.

The committee wishes to cite Dr. Jeremiah R. Stamler, who has won awards for his research as head of the Heart Disease Control Program of the Chicago Board of Health, and two of his associates. They were subpoenaed to appear before the committee last May 25 as part of a series of hearings on "Communism in the Chicago area." The United States District Court refused to enjoin enforcement of the subpoena, but an appeal is now pending. More than 100 law professors have signed a letter stating their opinion that there is a reasonable prospect that the Supreme Court may uphold Dr. Stamler and his associates.

A contempt citation at this time would in no way clarify the important constitutional issues nor would it provide information for a committee of the House. A contempt citation is a serious action. Like a grand jury indictment, it is not definitive, but it begins a process of judicial action that can lead to fine or imprisonment and, at the very least, it damages one's personal reputation. When it cites for contempt, the House is exercising one of its gravest powers against a private citizen.

In the past fifteen years the Un-American Activities Committee has asked the house to cite 129 individuals for contempt and the House—routinely, mechanically, irresponsibly—has acceded to every request. Yet only nine of these citations resulted in final convictions.

Last week's action against seven leaders of the Ku Klux Klan was typical. Members of the House freely admitted that they had had no opportunity "to study all these citations, the statements of fact, or the hearings from which these citations have come," as one Representative expressed it. Yet the members shouted down a sensible proposal to refer the cases to a select committee for review and voted instead to send them on their way to the Justice Department.

There is neither necessity nor sound historical precedent for such conduct. The House runs the danger of bringing itself and its own procedures into contempt. That is a far deeper wound on the body of free government than any recalcitrant witness could inflict.

CHICAGO DAILY NEWS

Justice and Dr. Stamler

The House Un-American Activities Committee has delayed asking Congress for contempt citations against Dr. Jeremiah Stamler, heart disease authority, and two fellow Chicagoans who refused to testify at committee hearings. The pause should give the committee and its parent body time to review what we believe to be an ill-considered position.

Dr. Stamler, whose prominence makes him the principal target, has not taken the Fifth Amendment, and his counsel has said that he has no such intention. The physician's demurrer is based upon his contention that a lawsuit he has filed, challenging the constitutionality of the law establishing HUAC, should take precedence over the committee proceeding.

We believe that Dr. Stamler has taken a reasonable position in contending that it is premature for the committee to proceed when its very right to exist is in litigation.

Nor do we believe the Stamler suit, brought by a prominent Chicago attorney, Albert E. Jenner, is in the least frivolous. The HUAC methods have been under fire for years as denying accused witnesses rights they would have in any court of law. As one example: At last spring's hearings a committee lawyer called Dr. Stamler "one of those in charge of setting up the Communist Party underground" during the 1950s. Yet no witnesses and no evidence were introduced to support the charge. Another key question raised by Stamler's suit is whether public exposure is a lawful activity of a legislative body, particularly when, as the suit charges, a principal purpose of such proceedings is "to embarrass, ridicule and expose" persons named in testimony, but against whom no legal evidence has been found.

We are pleased to find some Chicago area congressmen of both parties—including Republican Donald Rumsfeld—joining in criticism of the committee's methods, and we hope their influence will help persuade House leaders to delay the contempt citation efforts until Stamler's suit is tried.

We also commend Mayor Daley and Dr. Eric Oldberg, Stamler's boss on the Chicago Board of Health, for refusing to be stampeded into firing Stamler from his city job, pending some concrete showing of culpability. And praise is due Bert Jenner for putting his own considerable prestige on the line to defend the principle of the presumption of innocence.

If HUAC is found to be a lawful body engaged in proper activities, there will be time enough for it to get back to the Stamler case, and we assume from his counsel's statement that the doctor will in those circumstances make good on an implied promise to speak out so long as legal safeguards, such as the right to cross-examine witnesses, are provided.

Meanwhile, it may be hoped that a public review of HUAC's methods will result, at the least, in a vigorous overhaul of committee methods, so that guilt-by-association and condemnation-by-innuendo can be replaced by methods that respect the fundamental rights and dignity of every American.

February 24, 1966

Dear Colleagues:

Enclosed is a copy of a statement that was sent to Congress from more than 100 professors of law, concerning the threatened contempt citation against Dr. Jeremiah Stamler and others who are testing the legality of the House Committee on Un-American Activities. (Background information on the legal suit of Dr. Stamler, heart researcher, is summarized in the attached article from Science.)

We are encouraged by the postponement of the vote on these citations, originally scheduled for February 9th.

Mounting public opposition, as reflected in the enclosed editorials from The New York Times, Washington Post and Chicago Daily News, can be decisive in finally defeating the citations.

We are asking our colleagues in the field of political science to join us in support of the law professors' letter to Congress. The enlarged list would be forwarded to every Congressman, as soon as possible in the days ahead.

Thank you for your interest.

(Please return to Theodore Lowi, Department of Political Science, Foster Hall, University of Chicago, Chicago, Illinois 60637.)

Dear Congressman:

The Committee on Un-American Activities has recommended that the House vote contempt citations for Dr. Jeremiah Stamler, Director of the Heart Disease Control Program of the Chicago Board of Health, his research assistant, Mrs. Yolanda Hall, and social worker Milton Cohen.

Dr. Stamler, Mrs. Hall, and Mr. Cohen were subpoenaed to appear before the Committee in Chicago on May 25, 1965. Despite Rule 16 of the Committee, forbidding any member of the Committee or its staff to make public in advance the name of any person subpoenaed, the fact that Dr. Stamler, Mrs. Hall, Mr. Cohen, and others, had been subpoenaed in a "Red Probe" was publicized in the Chicago press twelve days before the Committee's hearings began. On May 24, Dr. Stamler and Mrs. Hall, represented by Albert E. Jenner, Jr., former President of the Illinois Bar Association, initiated an action in the Federal District Court in Chicago to enjoin enforcement of the subpoenas. Injunction was denied and an appeal is now pending in the United States Court of Appeals for the Seventh Circuit. Mr. Jenner has requested that action on the contempt citations be postponed until the appeal is determined.

On May 27, after request persuant to Committee Rule 26(m) for an executive hearing for themselves and any others who might testify concerning them had been denied, Dr. Stamler, Mrs. Hall, and Mr. Cohen, on advice of counsel and without reliance upon the privilege against self-incrimination, refused to testify before the Committee.

Almost eight months later, on January 13, 1966, the Committee voted to seek citations against three persons -- along with seven members of the Ku Klux Klan who have only recently refused to answer the Committee's questions.

Because of the Committee's disregard of its own rules, because the entire matter may be rendered moot by pending litigation, and because this is merely one more instance of this Committee's continuing abuse of its powers to no apparent legitimate legislative purpose, we urge you to vote against all the contempt citations.

ENDORSERS OF THE PETITION PROTESTING THE CONTEMPT OF CONGRESS CITATIONS RECOMMENDED BY THE HOUSE UN-AMERICAN ACTIVITIES COMMITTEE OF DR. JEREMIAH STAMLER, MRS. YOLANDA HALL, AND MR. MILTON COHEN.

ACLU of Ga — 1965-1966-1967 release

EU — Civil Liberties — Invasion of Privacy

Watch Out! That Goldfish May Be Bugged!

EDITOR'S NOTE—The next time you take the olive out of the martini look at it closely—it may be bugged. In fact one specialist in evedropping claims he can wire a fish for sound. Congressmen, jurists and civil libertarians are becoming increasingly concerned with what they consider the destruction of one of man's greatest treasures—his privacy. Here's why.

By JULES LOH
Associated Press Writer

"The most comprehensive of rights and the right most valued by civilized man," runs a celebrated dissent of the late Justice Louis D. Brandeis, is "the right to be let alone."

As if in mockery, an ever-multiplying horde of surreptitious snoopers is gnawing away at the privacy of citizens today with the eagerness of an army of cornborers turned loose in Iowa. Areas of their lives most civilized men consider nobody else's business indeed have become the staple of a big business, which is getting bigger — while nearly all its victims remain blithely unsuspecting.

"The average urban citizen," says Bernard Fensterwalt Jr., chief counsel for a Senate subcommittee investigating invasions of privacy, "can't go a single day without being spied on, listened to, or peeped at."

IF THAT grim picture seems overdrawn, consider some actual examples.

A New York department store has hidden tiny microphones on the counter to broadcast customers' conversations to a back room where the eavesdropping salesman can decide what pitch to make. Other stores have two-way mirrors in the women's dressing rooms — to prevent shoplifting, of course. Closed-circuit television cameras scan the aisles, loading docks and employes' lounges of supermarkets and stores in a growing number of cities, and any big company that doesn't keep a concealed camera to snap your picture when you cash a check just doesn't have enterprise.

"The frightening thing about it," says Rep. Cornelius Gallagher (D-N.J.), "is that people are becoming conditioned to this sort of snooping as a normal part of their existence. We're getting dangerously close to Orwell's world of 1984."

THAT WORLD, as the novel envisioned it, was one in

Associated Press Photos

FANTASTIC TINY DEVICES MAKE EAVESDROPPING EASY
This Buttonhole Mike Picks Up Sounds Within 10 Feet

ters," and others of similar genre.

"To put this sort of information down on a formal test which can be kept in a permanent record is an outright invasion of privacy," says Rep. Gallagher.

GALLAGHER HEADS one of no fewer than five congressional subcommittees sufficiently alarmed at the steady erosion of privacy to be examining one or another aspect of the problem.

There are, indeed, many aspects, but one concern most of the subcommittees seem to share is the apparent ease with which subscription lists, personal files and the like float about the country.

A subcommittee headed by Sen. Edward V. Long (D-Mo.) has turned up an incident in which a headmaster was hounded out of his high school post by a group of parents who were suspicious of his masculinity. It turned out that a student, as a prank, had subscribed to a questionable magazine in the headmaster's name. The senator's files don't reveal how the parents learned of the subscription.

THE TRADE in questionnaires, name lists and the like, though flourishing as never before, is one in which most who resort to snooping

build his own miniature transmitter from diagrams out of a hobby magazine and $20 worth of parts.

These tiny bugs broadcast their pilfered conversations over an FM frequency which any properly tuned radio can pick up. Most, though, work in conjunction with a small tape - recorder placed a block away, or two blocks, or 10. The recorder turns on by itself when voices start, shuts off when they stop. No wasted tape.

TRANSMITTERS—powered by second - generation transistors so tiny 50,000 can fit in a thimble, or by integrated microcircuits which are even tinier and draw their energy from the sun, or a light bulb, or a nearby radio station — hardly exhaust the catalogue of modern snooping devices.

Other gadgets include tubes you can look through to see in the dark (in Orwell's world, nightfall offered some respite); invisible laser beams you can bounce off a window to overhear the conversation in a distant building; secret signalers to tell your partner, through mild electric shocks, that you hold three aces.

While few would try to rationalize cheating at cards, most who resort to snooping

terly innocent persons who phone him, perhaps including his doctor, lawyer of minister."

ANOTHER apparent danger is that when a practice such as eavesdropping becomes a matter of routine, controls tend to fade away. Internal Revenue agents once kept a wiretap on a Miami racketeer for 13 months. It was no bother at all. They simply hired a $100-a-week informer to do their listening for them.

If those trying to restrict police eavesdropping seem to be fighting an uphill battle, those struggling to curb business spying resemble Canute trying to hold back the sea. Industrial espionage has become so commonplace businessmen now refer to it casually as I.E.

No executive is likely to admit publicly that HIS company would do anything unethical, certainly not, but a great many seem to feel they have reason to mistrust the competition — not to mention the employes and the customers. Industrial security specialists have their own trade association, and displays of the latest electronic wares are a big feature at their meetings. Barry Levine of New York, whose Zelex

New York Stock Exchange. Another agency, Bondwitt Sound Engineering Co., has found evidence of spying in about 12 per cent of its routine sweeping assignments. Jamil, who insists "there is no such thing as privacy," firmly believes that before too long a tap-detector will be standard equipment on executive telephones.

Bugging a board room is one matter, but apparently I. E. doesn't stop at that. Recently Lewis S. Rosensteil, president of Schenley Industries, Inc., discovered a bug in his office, a tap on his private phone — and a miniature transmitter embedded in the bar at his Florida home.

"WHEN A MAN is not free to speak his mind in the privacy of his own home," commented Rosensteil's congressman, Rep. Claude Pepper (D-Fla.), "he has lost the treasure of liberty. He is no longer a free man."

In 1950 Pepper, then a senator, conducted hearings on the problem of wiretapping in the District of Columbia. At that time, he recalls, "it seemed to us that wiretapping could be stopped by a minimum amount of restriction. We had no idea that wiretapping and electronic eavesdropping would become the big business it is today."

A minimum amount of restriction, ineffective at that, really is about all there is.

"IN THIS whole area of invasion of privacy," says Sen. Long, "we are in both a legal desert and a legal jungle." Not only is there a paucity of law, but what law there is is confusing."

A few years ago three private detectives were caught bugging a room at the Mayflower hotel in Washington where meetings were being held involving a $160 million gas distribution franchise. Two years later the detectives were convicted. Of what? Invasion of privacy? Trespassing? Nothing so logical as that. The best the prosecution could get them on was broadcasting without a license over an aircraft wavelength.

Last month the Federal Communications Commission banned use of wireless transmitters and similar devices for recording private conver-

GROWTH IN SNOOPING BUSINES S BRINGS COUNTER MEASURES
This De-Bugging Meter Can Detect Transmitter in Phone

sations by anyone except law enforcement officers, and set a penalty of $500 for each day of violation. Only seven states have laws on the subject, and five of the seven, in conflict with the FCC rule, permit eavesdropping if the eavesdropper has the permission of just one of the persons overheard.

PRIOR to the new and as yet untested FCC ruling (which reflected, the order said, "growing public indignation with increased intrusions into the traditional right of privacy"), the only legislation was a 32-year-old statute involving wiretapping which has been subject to various interpretations over the years and hasn't convicted a single law enforcement officer.

The key words of the law prohibit anyone, including policemen, from secretly intercepting AND divulging information gained by wiretap, and forbid any use of such information for his own or someone else's benefit.

Police frankly admit they "use" wiretap information — otherwise why wiretap?—and have interpreted the other clause to mean it's all right to intercept if you don't divulge.

COUNSEL Fensterwald feels the prohibition would be a good deal more plain if the "and" were simply changed to "or." Attorney General Nicholas Katzenbach feels the statute ought to be rewritten altogether.

"Only by a clear revision of the present law, eliminating present ambiguities," Katzenbach says, "can we expect a clear-cut national policy."

What worries Fensterwald is the apparent unconcern of many Americans who take a "that's life" attitude toward invasions of privacy. "My real fear, and Sen. Long's fear," he says, "is that by the time the people finally become indignant enough to demand that something be done it will be too late." There are about 200 firms selling bugging equipment.

AS FOR the spread of eavesdropping by the police, Justice William J. Brennan Jr. has another sort of fear.

"If electronic surveillance by government becomes sufficiently widespread," he warned in a recent dissent, "the hazard that as a people we may become fear-ridden and furtive is not fantasy."

Rep. Gallagher doesn't think it is either. He observes that some American embassies abroad are equipped with a bug-proof "room within a room" for holding confidential meetings. "If it should come to this in our private lives too," he says, "civilization will end there—not when the bomb goes off."

IF THAT grim picture seems overdrawn, consider some actual examples.

A New York department store has hidden tiny microphones on the counter to broadcast customers' conversations to a back room where the eavesdropping salesman can decide what pitch to make. Other stores have two-way mirrors in the women's dressing rooms — to prevent shoplifting, of course. Closed-circuit television cameras scan the aisles, loading docks and employes' lounges of supermarkets and stores in a growing number of cities, and any big company that doesn't keep a concealed camera to snap your picture when you cash a check just doesn't have enterprise.

"The frightening thing about it," says Rep. Cornelius Gallagher (D-N.J.), "is that people are becoming conditioned to this sort of snooping as a normal part of their existence. We're getting dangerously close to Orwell's world of 1984."

THAT WORLD, as the novelist portrayed it, was one in which "you had to live — did live, from habit that became instinct — in the assumption that every sound you made was overheard. . . ."

With today's modern gadgets telephone tapping has become a game any number can play. Federal investigators have tapped the pay phones in lobbies of public buildings; and a survey showed not long ago that at least 5,000 telephones in Washington federal offices were tapped —not by enemy agents, but fellow bureaucrats. A San Francisco telephone company executive has estimated that 10,000 business firms in northern California secretly monitored the calls of their employes.

"THE MERE thought that someone may be eavesdropping on a conversation with one's wife or lawyer or business associate," says law professor Herman Schwartz of the State University of New York, "will discourage full and open discourse."

How widespread is today's assault on full and open discourse?

Even getting a drink at the office water cooler can harbor a hidden risk. In at least one instance the cooler was bugged. One executive of a large firm, bent on knowing what the employes were talking about, went so far as to hide tiny transmitters in the toilet paper rolls in the ladies' room. Yet another company bugged its desk calendars to make sure the clients were polite when customers came in to pay their bills.

PERSONAL FACTS many consider rather unimportant, when put together like a jigsaw puzzle can leave a person's private life utterly exposed.

Many existing dossiers contain personal information of the most intimate sort, gleaned from a variety of psychological tests administered to prospective employes or potential executives. One such test requires subjects to respond "without any thinking or deliberation" to a battery of statements including "I feel sure there is only one true religion," and "many of my dreams are about sex matters." This record is an outright invasion of privacy," says Rep. Gallagher.

GALLAGHER HEADS one of no fewer than five congressional subcommittees sufficiently alarmed at the steady erosion of privacy to be examining one or another aspect of the problem.

There are, indeed, many aspects, but one concern most of the subcommittees seem to share is the apparent ease with which subscription lists, personal files and the like float about the country.

A subcommittee headed by Sen. Edward V. Long (D-Mo.) has turned up an incident in which a headmaster was hounded out of his high school post by a group of parents who were suspicious of his masculinity. It turned out that a student, as a prank, had subscribed to a questionable magazine in the headmaster's name. The senator's files don't reveal how the parents learned of the subscription.

THE TRADE in questionnaires, name lists and the like, though flourishing as never before, pales in comparison to the opportunity for invading privacy which has unfolded with a new space-age industry called microelectronics.

For sheer diabolical efficiency, today's ultrasophisticated spying gadgets would beggar the imagination of an Orwell.

The device that monitors an astronaut's heartbeat can record with equal ease the voices in a conference room. The martini-olive transmitter with toothpick antenna was clever enough in its day, but that was a year ago. Today's transmitter can be, and is, disguised as a shirt button, fountain pen, sugar cube, wristwatch, tooth, or simply reduced to a size small enough to fit under a fingernail, or made of metallic thread and, yes, woven into a vest.

"DON'T BOTHER asking what's the latest device," says Ben Jamil, a 32-year-old enterpreneur whose New York showcases fairly bristle with all those little playthings. "Just tell me what you want done.

"I can bug a fish under water. Did you know fish squeak? You laugh, but I'm serious. I can find out for one fish what another fish's girl friend is doing — if you want to put it that way."

Jamil also can find out for the cat what the mice are doing. One of his customers wanted to take a vacation but couldn't bear to leave his help unwatched. For $1,000 Jamil outfitted him with an "infinity transmitter," a pocket-sized microphone and transmitter hidden within the office wall and attached to the telephone line...

FROM ANYWHERE in the United States the employer could dial the office number and activate the transmitter by blowing a specially-pitched harmonica into his end of the line. With no one the wiser, he could listen at leisure to all the conversation in the office. Coast-to-coast bugging.

Ordinary garden variety bug however, aren't nearly that expensive and can be just as wickedly efficient. A purposeful amateur can bug a room easily for less than $75 — or then "pilfered" conversations over an FM frequency which any properly tuned radio can pick up. Most, though, work in conjunction with a small tape - recorder placed a block away, or two blocks, or 10. The recorder turns on by itself when voices start, shuts off when they stop. No wasted tape.

TRANSMITTERS—powered by second - generation transistors so tiny 50,000 can fit in a thimble, or by integrated microcircuits which are even tinier and draw their energy from the sun, or a light bulb, or a nearby radio station — hardly exhaust the catalogue of modern snooping devices.

Other gadgets include tubes you can look through to see in the dark (in Orwell's world, nightfall offered some respite); invisible laser beams you can bounce off a window to overhear the conversation in a distant building; secret signalers to tell your partner, through mild electric shocks, that you hold three aces.

While few would try to rationalize cheating at cards, most who resort to snooping regard it as morally permissible in the circumstances or at least regrettably unavoidable because, after all, the opposition is doing it and one must protect oneself.

THIS IS THE reasoning generally advanced in the two sectors where electronic devices find their widest use: Business spying and law enforcement.

Wiretapping, of course, has come to be almost a police folkway and as the state of the art develops there seems little danger of the custom dying out.

Until last Summer, when Internal Revenue Commissioner Sheldon Cohen found out about it, the Treasury Department held classes in wiretapping (as well as lockpicking, bugging, and other trades) for government agents even though the department's own regulations expressly prohibited the practice.

Police authorities make persuasive arguments for "monitoring," as they refer to eavesdropping. Indeed Manhattan District Attorney Frank S. Hogan regards wiretapping as "the single most important weapon in the fight against organized crime."

ON THE OTHER hand a recent Senate inquiry showed that only one in three state attorneys general desired wiretapping authority — perhaps reflecting the once stated view of FBI Director J. Edgar Hoover:

"The discredit and suspicion of the law enforcing branch which arises from the occasional use of wiretapping," said Hoover, "more than offsets the good which is likely to come of it."

Hoover made the statement in 1940, but since then we have come a generation closer to 1984 and today's police officers who worry much about fetching discredit from that source are in little evidence.

"The hellish thing about wiretapping," says subcommittee counsel Fensterwald, "is that when you tap the phone of a known or suspected criminal you also invade the privacy of the many utis that when a practice such as eavesdropping becomes a matter of routine, controls tend to fade away. Internal Revenue agents once kept a wiretap on a Miami racketeer for 13 months. It was no bother at all. They simply hired a $100-a-week informer to do their listening for them.

If those trying to restrict police eavesdropping seem to be fighting an uphill battle, those struggling to curb business spying resemble Canute trying to hold back the sea. Industrial espionage has become so commonplace businessmen now refer to it casually as I.E.

No executive is likely to admit publicly that his company would do anything unethical, certainly not, but a great many seem to feel they have reason to mistrust the competition — not to mention the employes and the customers. Industrial security specialists have their own trade association, and displays of the latest electronic wares are a big feature at their meetings. Barry Levine of New York, whose Zelex Corp. markets "monitoring" equipment (businessmen, too, prefer the euphemism), also conducts seminars to teach his clients how to get the best results.

"BUGGING," philosophizes the 27-year-old Levine, "is not a game to its practitioners. It's a business and a profitable one. And fines—should a person be caught and convicted—must be reckoned on as a business expense."

Large corporations have become a fertile hiring market for former FBI agents; one, for example, has 32, another 10. Smaller companies generally hire private detective agencies to do their spying.

Many private agencies specialize in a particular business field. John J. Saviano, head of a specialized New York agency, says he has planted spies in 40 different drug companies. District Attorney Richard Gerstein of Miami, Fla., says he knows of detective firms caught in the ludicrous situation of installing protective equipment for one client to forestall the spying service they were providing for another.

"VISUALIZE, if you will," says Gerstein, "the happy hunting ground this provides for the electronic private eye as he sets 'em up and knocks 'em down."

Matter of fact this very thing happened to bug dealer Jamil, who also hires out as a debugger. "The toughest job I ever had," says Jamil, "was finding some bugs my meters said were hidden in a room. But I couldn't locate for the life of me. When I finally found them, they turned out to be my own stuff!"

A good measure of the extent of industrial spying is the boom in bug-detection equipment, and in a growing service called "sweeping" — checking out electronically board rooms, offices, executive suites.

NORMAN JASPAN Associates, one of the largest counter-espionage agencies, has 500 employes (listed as "management engineers") and claims that more than 100 of its clients are members of the really is about all there is.

"IN THIS whole area of invasion of privacy," says Sen. Long, "we are in both a legal desert and a legal jungle." Not only is there a paucity of law, but what law there is is confusing."

A few years ago three private detectives were caught bugging a room at the Mayflower hotel in Washington where meetings were being held involving a $160 million gas distribution franchise. Two years later the detectives were convicted. Of what? Invasion of privacy? Trespassing? Nothing so logical as that. The best the prosecution could get them on was broadcasting without a license over an aircraft wavelength.

Last month the Federal Communications Commission banned use of wireless transmitters and similar devices for recording private conver- a penalty of $500 for each day of violation. Only seven states have laws on the subject, and five of the seven, in conflict with the FCC rule, permit eavesdropping if the eavesdropper has the permission of just one of the persons overheard.

PRIOR to the new and as yet untested FCC ruling (which reflected, the order said, "growing public indignation with increased intrusions into the traditional right of privacy"), the only legislation was a 32-year-old statute involving wiretapping which has been subject to various interpretations over the years and hasn't convicted a single law enforcement officer.

The key words of the law prohibit anyone, including policemen, from secretly intercepting AND divulging information gained by wiretap, and one else's benefit.

Police frankly admit they "use" wiretap information — otherwise why wiretap?—and have interpreted the other clause to mean it's all right to intercept if you don't divulge.

COUNSEL Fensterwald feels the prohibition would be a good deal more plain if the "and" were simply changed to "or." Attorney General Nicholas Katzenbach feels the statute ought to be rewritten altogether.

"Only by a clear revision of the present law, eliminating present ambiguities," Katzenbach says, "can we expect a clear-cut national policy."

What worries Fensterwald is the apparent unconcern of many Americans who take a "that's life" attitude toward invasions of privacy. "My real fear, and Sen. Long's fear," the people finally become indignant enough to demand that something be done it will be too late." There are about 200 firms selling bugging equipment.

Equal Justice — Representation

LEGAL REPRESENTATION AND CLASS JUSTICE†

Jerome E. Carlin*

Jan Howard**

Half a century ago Reginald Heber Smith delivered the following indictment of our legal system:

> The administration of American justice is not impartial, the rich and the poor do not stand on an equality before the law, the traditional method of providing justice has operated to close the doors of the courts to the poor, and has caused a gross denial of justice in all parts of the country to millions of persons.[1]

Smith saw this denial of justice as arising from the very nature of our legal system which requires the services of trained lawyers for its effective use but prices such services beyond the means of large numbers of individuals.

> [T]he machinery of justice can be operated only through attorneys . . . attorneys must be paid for their services . . . and the poor are unable to pay for such services. This is the great, the inherent and fundamental difficulty—inherent because our legal institutions were framed with the intention that trained advocates should be employed, and fundamental in the sense that no amount of reorganization or simplification, short of a complete overturn of the whole structure, can entirely remove the necessity for the attorney.[2]

He also proposed a solution: an expansion of the newly emerging Legal Aid organizations.

> They are, indeed, the key to the solution of the whole problem, for if we can speedily give them resources which they need and deserve, they

PAGINATION INCORRECT

> will move forward and become the instrument through which we can attain the desired end.[3]

The administration of justice in the United States still results in a radically different quality of justice for the rich and the poor. This class system of justice rests very largely, as Smith saw, on differences in availability and quality of legal representation. We do not believe, however, that inequality in legal representation is simply a function of differential income or that the situation can be effectively remedied by Legal Aid organizations.

In the first part of the paper we shall summarize the available data on class differences in use of lawyers, and in the quality and integrity of the legal representation that is provided. The second part of the paper advances the thesis that these differences result in a denial of justice to the poor, since the poor do have many legal problems and neither the private bar nor its traditional substitutes are effectively dealing with them. The third part considers certain factors leading to inequality of legal representation, and part four suggests some of the conditions that must be met for the provision of adequate legal services to the poor. Finally, we shall briefly examine two recent proposals for extending legal services: group legal service and the neighborhood law office.

I. Class Differences in Legal Representation

A. *Use of Private Lawyers*

The use of lawyers is considerably less prevalent among lower than upper classes in the United States. Surveys of laymen in several states over the past years indicate that about two-thirds of lower-class families have *never* employed a lawyer, compared to about one-third of upper-class families. (See Table 1.)

A recent study of lawyers in private practice in New York City corroborates the findings from these surveys of laymen. Thus, it was found that less than five per cent of the lawyers report that the median income of their clients was under $5,000 a year, although half the families and unrelated individuals in New York City have incomes under this amount. Conversely, 70 per cent of the lawyers report that the median income of their clients was in excess of $10,000, though less than 10 per cent of New York's families and unrelated individuals received incomes that high.[4]

---

* Number in parenthesis indicates the number of respondents.

[a] *Public Opinion Poll for the State Bar of California*, Lord and Thomas, 1940. No indication given as to selection of sample or definition of income groups. Percentages reported here are based on the number of respondents experiencing one or more problems listed in the questionnaire.

[b] *Lay Opinion of Iowa Lawyers, Courts and Laws*, Iowa State Bar Association, 1949. "This Survey was conducted on the same cross-section used by the Iowa Poll, designed and kept current by Dr. Norman C. Meier of the State University of Iowa. The 'quota sampling' method was used, the regular Iowa Poll Practice." The sample consisted of 978 persons. No indication given as to how income groups were defined.

[c] *The Family and the Law*, Earl Loman Koos, National Legal Aid Association, Rochester, 1949. 4,150 questionnaires were mailed to middle-class families in the six cities and 2,027 responses were received. "These [mailed] questionnaires were matched for each city with an approximately equal number of interviews with working class families," 2,050 in all. No indication given as to how the socio-economic status of the families was determined. Figures for the middle class appear to be based on use of lawyers within the 12 months prior to the study, whereas, the figures for the working class refer to use of a lawyer *ever*, with no limitation on the time.

[d] *What Texans Think of Lawyers*, Joe Belden and Associates, 1952. The sample of 1,000 was designed to be representative of the adult population of the State. Less than 1 per cent refused to start the interview and even fewer quit in the middle. "Each interviewer received an assignment that told him the exact quotas of different types of people to interview. These quotas . . . impart to the total sample the proper proportions of people by section of the state, by size of city, by urban-rural residence, . . . by sex, by age, by socio-economic level, and by race. . . . The socio-economic level classification was made by the interviewer for every respondent, on the basis of apparent social position, financial well-being, education, appearance of the home, occupation and the like." The "upper and upper middle" class represents about 40 per cent of the Texas population, and the "lower and lower middle" the remaining 60 per cent.

[e] *Prentice-Hall Missouri Bar Study*, Missouri State Bar Association, 1963. 2,500 laymen were chosen as a layman sample. Seven geographic regions covering all of Missouri were used as the basis for selecting the sample. Interview quotas by occupation, sex and socio-economic status were established on the basis of the U.S. Census of Population, 1960. This is the only one of the five studies in which the proportion using lawyers does not refer to those who have employed or hired a lawyer. Therefore, those who have gone to Legal Aid offices could be included, and this might account for the larger percentage of lower class use of lawyers than shown in the other studies.

B. *Quality of Representation*

Lawyers representing lower-class persons tend to be the least competent members of the bar, and those least likely to employ a high level or wide range of technical skills.

In the highly stratified professional community of the metropolitan bar, for example, the large firms serving wealthy individuals and large corporations claim a lion's share of the best legal talent.[5] Lawyers available to lower-class clients, on the other hand, practice almost exclusively in the smaller firms,[6] and consequently are at the lower end of the bar in terms of quality of training and academic achievement.[7]

Lawyers available to lower-class clients are not only less competent, but whatever legal talents they have are less likely to be employed in handling matters for their poorer clients. In [illegible]

---

[5] See SMIGEL, THE WALL STREET LAWYER ch. 3 (1964).

[6] The median income of clients by size of firm in New York City (1960) is as follows:*

Median Income of Clients:	Size of Firm: Individual Practitioner	Small Firm (2-4 Lawyers)	Middle Firm (5-14 Lawyers)	Large Firm (15 + Lawyers)
Under $5,000	11	12	1	0
$5,000-$9,999	36	25	11	1
$10,000-$20,000	32	28	23	19
Over $20,000	23	36	64	80
Total	100%	100%	100%	100%
No. of Cases	(329)	(138)	(116)	(49)

* Drawn from CARLIN, *op. cit. supra* note 4. Lawyers in individual practice and small firms represent 64 per cent of the lawyers in private practice in New York City.

[7] The following table* shows that (in New York City) the smaller the firm a lawyer is in the less likely he is to have had a full four years of undergraduate training, to have attended a top quality law school, or to have attained a high academic standing in law school:

PROPORTION OF LAWYERS WITH SPECIFIED CHARACTERISTICS IN EACH SIZE OF FIRM

Training Characteristics	Size of Firm: Individual Practitioners	Small	Middle	Large
A Four-Year College Degree	47	52	56	77
Attended a Fulltime University Law School	19	22	43	77
Attained High Academic Standing in Law School (Law Review)	9	13	27	32
No. of Cases	(376)	(161)	(204)	(60)

* From CARLIN, *op. cit. supra* note 4.

Data from this study also indicate that it is primarily the younger and hence the least experienced lawyers who are most likely to represent low-status clients.

is a direct consequence of the fee. Thus, Hubert O'Gorman reports that among matrimonial lawyers in New York City (practically all of whom are individual practitioners or in small firms) the size of the fee has considerable impact on the quality of service provided. Not only is the amount of time spent on legal research "conditioned by the anticipated compensation," but fees may also "dictate the strategy and tactics employed in legal representation." In particular:

> In giving advice about types of actions, places of jurisdiction, gathering of evidence, negotiation and litigation, a lawyer must consider carefully his client's finances. Sound professional guidance is useless if the client cannot pay the costs involved.[8]

The quality of service rendered poorer clients is also affected by the non-repeating character of the matters they typically bring to lawyers (such as divorce, criminal, personal injury): this combined with the small fees encourages a mass processing of cases. As a result, only a limited amount of time and interest is usually expended on any one case—there is little or no incentive to treat it except as an isolated piece of legal business. Moreover, there is ordinarily no desire to go much beyond the case as the client presents it, and such cases are only accepted when there is a clear-cut cause of action; *i.e.*, when they fit into convenient legal categories and promise a fairly certain return.[9]

A final significant fact about quality of representation is that lower-class clients are most likely to be provided with remedial service only. If a poor person gets to a lawyer it is generally after the fact—after he has been arrested, after his wages have been garnisheed, or after his property has been repossessed.

The quality of legal service provided the poor, of course, is a far cry from that available to the well-to-do client. In representing these clients lawyers provide a much wider range of services and they are of a more continuous and preventive nature. Such services include: (1) planning and setting up legal arrangements by establishing contractual relationships to effectuate the client's wishes and to insure certain legal advantages, and (2) clarifying and fashioning the law to provide maximum protection of the client's interests by means of lobbying in legislative and administrative agencies, and by presenting carefully worked out legal arguments before various official bodies, including appellate tribunals.

---

[9] See Carlin, Lawyers on Their Own ch. 2 (1962).

C. *Integrity of Representation*

In addition to the foregoing, the lawyers available to lower-class clients (those in smaller firms) are less likely to conform to the minimal ethical standards of the bar; which means, among other things, that they are most likely to take advantage of their clients.[10] A study of individual practitioners in Chicago has shown, for example, that lawyers with lower-status clients who become dependent on intermediaries to supply them with a large number of "one-shot" matters often consider their clients expendable and are apt to exploit them.[11] Data from a study of the New York City Bar also show that lawyers with a low-status, high-turnover clientele are most likely to succumb to temptations to exploit clients.[12]

II. Denial of Justice to the Poor

Class differences in legal representation need not necessarily constitute a denial of justice to the poor. To the extent that there is exploitation by lawyers, there is, of course, a denial of justice; but with respect to class differences in the use and quality of private representation, one could maintain that inequality is not tantamount to injustice. It could be argued that:

(1) The poor are less likely to use lawyers because they are less likely to need lawyers, the contention being that they have fewer problems requiring legal representation. Proponents of this view may go even further and claim that the problems of the poor are inherently non-legal—that they are essentially economic, social, or psychological in character.

(2) Although private counsel may be inaccessible to the poor, adequate substitutes for such representation are provided in the form of Legal Aid, court-assigned counsel, public defenders and special tribunals.

Let us now carefully consider the validity of these arguments.

---

[10] This includes such infractions as: conversion of clients' funds, overreaching, abuse of confidential information. See Carlin, *op. cit. supra* note 4.

[11] "In the case of those lawyers specializing in personal injury, local tax, collections, criminal, and to some extent divorce work, the relationship with the client, as we have seen, is generally mediated by a broker or business supplier who may be either another lawyer or a layman. In these fields of practice the lawyer is principally concerned with pleasing the broker or of winning his approval, more so than he is with satisfying the individual client. The source of business generally counts for more than the client, especially where the client is unlikely to return or to send in other clients. The client is then expendable; he can be exploited to the full." Carlin, *op. cit. supra* note 9, at 161-62.

[12] See Carlin, *op. cit. supra* note 4.

A. *The Poor Have Fewer Legal Problems*

The thrust of this argument is as follows: Since the poor are, by definition, less likely to have the kinds of property or business interests that require legal services, they quite naturally have less need for legal representation. Data from the layman surveys referred to above seem to support this contention. For example, as shown in Table 2, the California survey indicates that lower-class families are less likely to make wills, to enter into contracts or into lease and deed agreements, and to sue or be sued.

TABLE 2
RELATIONSHIP BETWEEN SOCIAL CLASS AND VARIOUS EVENTS*

	Social Class			
% Reporting	Lower	Lower-Middle	Upper-Middle	Upper
Made a Will	7	14	25	46
Entered Into a Contract	14	20	32	44
Made a Lease or Deed	15	26	37	50
Sued Another	7	13	18	26
Sued By Another	6	8	12	19
No. of Cases	207	579	734	582

* Public Opinion Poll for the State Bar of California.

Furthermore, this survey shows that among those who do make wills, enter into contracts, etc., lower-class persons are as likely as the upper class to use lawyers. Upon further reflection, however, it appears that these findings do not necessarily indicate that the poor have fewer legal problems. Although the events represented in Table 2 are legal acts, they hardly exhaust the list of such acts.

Further, the bases for this line of argument appear to be unsound. In the first place, the different rates of making wills, contracts, etc., do not necessarily represent different *needs* for legal services. They represent differences in legal *faits accomplis*. The actions presented in Table 2 reflect problems that have been translated into legal events. One who makes a will or enters into a contract or files a suit obviously has already defined his problem as one that calls for some kind of legal action. There need not be, however, a one to one relationship between the *existence* of a legal problem on the one hand and the recognition and the exercise of legal rights on the other.

Furthermore, those who pursue this particular argument to show that the poor have fewer legal problems generally adopt a quite narrow and somewhat unrealistic definition of property. It is undoubtedly true that lower-class persons are less likely to own

or to be involved in transactions concerning the more traditional forms of property such as real estate or corporate securities. These traditional forms of property, however, do not necessarily exhaust the full range of economic interests that already have or may well deserve to be given the protection of property. Job rights, social security, unemployment compensation, public assistance, health insurance, retirement funds, and a host of similar interests tend to be the characteristic forms of economic wealth for the poor. The fact that these interests may not always be recognized as property may well be the result of the failure of the poor to establish or pursue their legal rights in these areas. Indeed, Charles Reich argues that to insure the dignity of the individual these benefits must be recognized as property and protected as a matter of right.

> The concept of right is most urgently needed with respect to benefits like unemployment compensation, public assistance, and old age insurance. These benefits are based upon a recognition that misfortune and deprivation are often caused by forces far beyond the control of the individual, such as technological change, variations in demand for goods, depressions, or wars. The aim of these benefits is to preserve the self-sufficiency of the individual, to rehabilitate him where necessary, and to allow him to be a valuable member of a family and a community; in theory they represent part of the individual's rightful share in the commonwealth. Only by making such benefits into rights can the welfare state achieve its goal of providing a secure minimum basis for individual well-being and dignity in a society where each man cannot be wholly the master of his own destiny.[13]

If one now considers the whole range of problems that might call for legal representation, there appear to be a number of areas in which the poor encounter at least as many legal problems as do the rich. Let us turn to a consideration of some of these areas.

1. Criminal

Crime is principally a poor man's problem. Research findings show that "the lower classes presumably violate the law more frequently than the upper classes; in any event, they are more likely to be caught and punished."[14] Moreover, as Arnold Trebach noted:

> Those most affected by injustice or inefficiency in the criminal process are almost always socially powerless if not insignificant. They stand at the bottom of the social heap. They are the privates of society. They are not movers and manipulators. If they are maltreated, they are often

[14] BERELSON & STEINER, HUMAN BEHAVIOR: AN INVENTORY OF SCIENTIFIC FINDINGS 488 (1964).

> tough enough to get up from the floor but not sophisticated or powerful enough to bring a complaint to the proper authorities and to fight it through successfully.
>
> For this and other reasons, it sometimes seems as if wrongs, rather than rights, in the criminal process are institutionalized.[15]

The need for legal representation in this area arises at every stage of the criminal process, from the time of arrest to final appeal. The Report of the Attorney General's Committee on Poverty and the Administration of Criminal Justice points out: "There is a strong argument that the time a defendant needs counsel most is immediately after his arrest and until trial."[16] Failure to provide counsel in the earlier phases of the proceedings often operates to deny the accused full protection of his legal rights; and it has been noted that this is particularly true "in those cases in which the guilt of the accused is to be contested and in which there is need to locate witnesses for the defense and to plan trial strategy."[17]

The necessity for counsel at the trial stage was clearly stated by Mr. Justice Sutherland in *Powell v. Alabama:*

> The right to be heard would be, in many cases, of little avail if it did not comprehend the right to be heard by counsel. Even the intelligent and educated layman has small and sometimes no skill in the science of law. If charged with crime, he is incapable, generally, of determining for himself whether the indictment is good or bad. He is unfamiliar with the rules of evidence. Left without the aid of counsel he may be put on trial without a proper charge, and convicted upon incompetent evidence, or evidence irrelevant to the issue or otherwise inadmissible. He lacks both the skill and knowledge adequately to prepare his defense, even though he have a perfect one. He requires the guiding hand of counsel at every step in the proceedings against him. Without it, though he be not guilty, he faces the danger of conviction because he does not know how to establish his innocence.[18]

Legal representation is also required after conviction in preparing an appeal and in obtaining various other post-conviction remedies.

The fact that the poor have legal problems and that they require competent legal representation to assert and protect their rights is, perhaps, most evident in the criminal area. Indeed, the Supreme Court of the United States has given increasing recognition to the proposition that legal representation for the accused is itself a fundamental constitutional right.[19] Less obvious are the legal

problems of the poor in the civil area. An examination of these might prove useful.

2. Landlord-Tenant

Poor people ordinarily live in slums or semi-slums and often face a multitude of housing problems; many of these clearly have legal implications. In a paper entitled, "Why Tenants Need Lawyers," Nancy LeBlanc suggests three ways in which lawyers can help lower-class tenants in their "perennial battle with the landlord":[20]

(1) They can help make tenants aware of their legal rights, either by direct contact or through social workers.

(2) They can make it possible for tenants to exercise existing legal rights—"rights which are often so hedged in with technicalities that even lawyers have problems."[21]

(3) They can help develop and clarify the law of landlord-tenant relations and bring it into harmony with the realities of modern urban living.[22]

We shall examine the second and third points.

Exercising Existing Legal Rights

Most states have laws requiring landlords to maintain their premises in a habitable condition, *e.g.*, to provide heat, water, and electricity, and to keep the premises free of vermin.[23] These laws are often violated, and the tenant who is without counsel has a particularly difficult time forcing the landlord to fulfill his obligations. The so-called "rent strikes" in New York City were situations in which tenants who had access to attorneys took advantage of a legal remedy which had rarely before been exercised.[24]

In some instances a tenant may be able to have a criminal summons issued against a landlord who fails to provide essential services. However, in a criminal case the question of intent becomes

---

[20] See LeBlanc, Why Tenants Need Lawyers 1 (paper presented at Conference on the Extension of Legal Services to the Poor, sponsored by the U.S. Department of Health, Education and Welfare, Washington, D.C., Nov. 12, 1964).

[21] *Ibid.*

[22] *Id.* at 2.

[23] *Id.* at 11.

[24] "What the tenants do is refuse to pay rent to the landlord so that he will bring a summary proceeding for non-payment of rent. Then the tenant interposes the defense of violations of record tantamount to a constructive eviction and asks for a stay pursuant to § 755 of the Real Property Actions and Proceedings Law, permitting him to pay his rent to the court until the landlord corrects the violations." *Id.* at 9-10.

important. In discussing the situation in New York City,[25] Leblanc comments:

> so far the courts have held that any attempt, no matter how small and meaningless, on the part of the landlord to do something about providing heat, etc., will defeat the charge. With a lawyer available to carefully prepare the case and to take an appeal this could possibly be changed to at least require that the attempt show a reasonable anticipation of success.[26]

Tenants not only have the problem of forcing landlords to comply with the law, but they have difficulty protecting their rights as defendants in proceedings brought by landlords. In New York City, for example, landlords and process servers sometimes deliberately by-pass legitimate means of summoning the tenant. Accordingly, the tenant may not hear of the action against him until the court has already authorized his eviction. At this point he is totally at the mercy of the landlord unless a lawyer is available to vacate the eviction order on the grounds of non-service. Because many tenants do not know their rights or do not have access to lawyers, they simply pay the landlord the rent and whatever court costs he demands, often twice as much as the law allows.[27]

Tenants also need legal representation to challenge the administrative discretion of public agencies; for example, a rent control agency or a public housing authority. According to LeBlanc, the rent control situation in New York City (admittedly unique) shows that legal representation may be essential even in dealing with an agency supposedly established for the benefit and protection of tenants and to do away with the necessity for an attorney.[28] She suggests that the process by which rents are reduced, restored, or raised is far too technical for the tenant to cope with without counsel and that the rent control agency does not fully protect the tenant's interests.

Legal problems for tenants arise in public as well as private housing. For example, Sparer notes that lawyers are needed to test the standards and procedures of eviction in public housing and that such tests could serve to clarify admission as well as termination standards.[29]

---

[25] Although most of LeBlanc's examples are taken from New York, she argues that except for Louisiana, landlord-tenant law is basically the same throughout this country and the problems which beset the New York slum tenant are similar to those of slum tenants elsewhere. *Id.* at 2.

[26] *Id.* at 13.

Helping to Develop and Clarify the Law of Landlord-Tenant Relations

For years many tenants have been illegally evicted, and yet the question of whether they have a right to re-occupy their apartments or merely the right to monetary damages has apparently never been resolved by the New York courts. LeBlanc maintains that this ambiguity exists because tenants have not had adequate counsel at their disposal.[30]

The courts generally treat the leasing of apartments in multiple dwelling units as a leasing of real property, even though a tenant rents services and facilities in addition to physical space. It has been argued that when a tenant does not receive full consideration with respect to these services and facilities, he should be allowed to rescind the lease and abandon the premises or be granted a pro rata reduction in the rent.[31] Certain cases point in this direction, but according to LeBlanc:

> It is clear from the paucity of cases and by the dates of these cases scattered as they are over the past 50 years, that the failure to have long ago pushed through the concept that we are now fighting for, is related to the lack of legal counsel readily available to those most concerned with this problem—poor tenants.[32]

Finally, there is a need (in New York at least) for lawyers to challenge the law which requires that there be a violation of record before tenants can invoke defenses against landlords who have failed to provide essential services.[33]

3. Civil Rights

The legal problems of the poor are magnified by the fact that a disproportionate number of them are discriminated against because of their race or nationality. Where low economic status is associated with minority group status—and this is often the case—it may be hard to determine where the legal problems of the poor leave off and those of race and nationality begin. Most of the legal problems faced by minority group individuals are probably characteristic of the poor in general. We are most interested here in the special legal problems of minority groups—those they encounter in the course of challenging their deprived status. These problems are of three types:

---

30 LeBlanc, *supra* note 20, at 6-7.
31 *Id.* at 12.
32 *Ibid.*
33 *Id.* at 10-11.

(1) Problems generated by the emergence of new legal rights designed to remove certain kinds of discrimination.

Through federal, state, and local legislative acts, executive orders, and judicial decisions, a whole new set of rights and remedies for minority persons is being developed and clarified. These rights are applicable to such areas as employment, housing, education, public accommodations, and voting. The mere existence of rights, of course, is not sufficient to guarantee their fulfillment. There must be active, aggressive attorneys to employ the legal machinery effectively. This is particularly true in the civil rights area, where there is widespread and organized resistance to change. Civil rights lawyers often must pressure administrative agents to implement the law; they may have to educate the judiciary and opposing counsel with respect to new laws; and they may have to mobilize public sentiment on behalf of their client's cause.

(2) Problems generated by the deliberate resistance of the majority group to legal changes in the status quo.

Those who seek to implement civil rights are often frustrated, intimidated and harassed not only by the citizenry-at-large but by agents of the law as well—judges, lawyers, police, and other public officials. One of the problems in this area is the deliberate delay by some courts—particularly in the Fifth Circuit—in the processing of civil rights cases:

> The delays occasioned in *Meredith* and *Lynd*, and caustically noted by the appellate court, do not appear to be accidental or limited; they are a generic feature of civil rights litigation in the deepest South—Georgia, Alabama, Mississippi, and Louisiana.[34]

These delays are occasioned by

> the reluctance of district court judges to grant timely or compliant enforcement of civil rights. At pre-trial, trial, pre-verdict and post-appellate verdicts stages, a district judge's considerable freedom to schedule and dispose of his calendar provides ample opportunity for subjecting plaintiffs to the passage of time, which, as in Meredith, may threaten to moot or, as in Lynd, to frustrate. The prevalence of delay tactics in civil rights cases, and their impact on the constitutional rights of litigants, warrants inquiry into the methods judges may use to achieve delay, and the instruments available to force greater adherence to traditional norms of impartial performance by the judiciary.[35]

Delay can also be achieved quite successfully by the refusal of

---

[34] Comment, *Judicial Performance in the Fifth Circuit*, 73 YALE L.J. 90, 93-94 (1963).

[35] *Id.* at 94-95.

trial courts to rule in accord with appellate court decisions. Many southern federal district judges rule against civil rights litigants, thereby forcing an appeal to higher courts even when the judges know they will be reversed.

> It is one thing for a district judge to avoid breaking new ground by refusing to apply the equal protection principle to situations not previously decided in the courts. It is quite another matter, and a more dangerous one, for him to use his office as a fortress of resistance to the mandates of the Constitution as interpreted by the higher courts.[36]

More disturbing than the recalcitrance of some courts is the fact that in certain communities where minority groups have attempted to exercise newly gained civil rights, public officials have often permitted or encouraged the selective breakdown of law and order. Thus, they may refuse to protect minority group persons leaving them to the mercy of the mob.[37] In addition, the law itself may be used as a weapon of harassment and intimidation against civil rights workers. For example, attempts may be made to control demonstrations and other activities by enacting statutes of questionable validity and then setting exorbitant bail for those charged with violations.[38] Moreover, because they are vulnerable, civil rights workers may be forced to live up to the letter of the law in driving, walking, and other public behavior to a degree not required of others.

> [T]he police make arrests in some cases and then decide what the charge should be; in others, a lesser charge is filed and then changed to one carrying a heavier penalty; and sometimes the number of charges made against the defendant seems to be limited only by the arresting officer's imagination.[39]

Compounding all of their other problems is the generally accepted fact that minority persons who try to exercise their civil rights (and whites who are part of the civil rights movement) have a particularly difficult time obtaining counsel.[40] The problem is magnified by the relatively small number of Negro lawyers.[41]

---

[36] Lusky, *Justice With a Southern Accent*, Harpers, March 1964, p. 73.

[37] For example, Mayor C. E. Sampson of Greenwood, Mississippi, disclaimed any responsibility for assuring the safety of Negroes who were trying to enter businesses catering to whites, despite the threat of assaults by angry whites. "We're not going to help them integrate any place." Schorr, *Civil Rights Bill Fails to Dent Segregation in Small Dixie Town*, Wall Street J., Aug. 27, 1964, p. 1.

[38] See Sitton, *Mississippi Is Said to Misapply Laws*, N.Y. Times, July 12, 1964, p. 53, for views of out-of-state lawyers who served as volunteers in Mississippi in the summer of 1964.

[39] *Ibid.*

[40] Pollitt, *Timid Lawyers and Neglected Clients*, HARPERS, Aug. 1964, p. 83.

[41] Although about 11% of the population are Negroes, only about 1% of the Bar are Negroes. U.S. Dep't of Commerce, Bureau of the Census, U.S. Census of the Population 1960, vol. 1, pt. 1, table D-205, p. 1-544, table B-56, p. 1-164.

Robert Zellner, a white civil rights worker arrested in Mississippi, wrote to no less than 40 different white lawyers, asking for representation. None offered his services, and some were sharply critical of the defendant.[42] CORE charged that during the Jackson, Mississippi sit-in litigation it was "unable to get any local white lawyers to represent the defendants and there were not enough local Negro attorneys available."[43] In southwest Georgia, Negro attorney C. B. King is swamped with more than 2,000 cases arising from voting, bus, employment, and other demonstrations![44]

The Justice Department has expressed concern that lack of counsel may discourage Negroes from pressing for their rights in voting, education, and transportation.[45] And the American Bar Association's Committee on the Bill of Rights has taken cognizance of the "great difficulty in obtaining local counsel for Negroes arrested in the South on charges growing out of sit-in and similar protest movements."[46] Because of the unavailability of counsel, those involved in civil rights cases may have to accept any representation—competent or not. James Farmer, National Director of CORE, said that his organization had been forced to employ Negro lawyers of whatever competence to defend "Freedom Riders."[47] Incompetence induced by these exigencies may result when a few lawyers are overburdened with civil rights cases. Under such circumstances they have little opportunity to give each case thorough attention.[48]

Lawyers who do take civil rights cases are often forced to suffer adverse consequences. This interferes with the proper representation of clients, and deters other lawyers from taking civil rights cases. The Lawyers' Committee for Civil Rights Under Law, which includes eight past presidents of the ABA, reported that in many southern communities Negroes cannot obtain counsel "because a white lawyer involved in civil rights litigation representing Negroes faces loss of clients, impairment of social status, public criticism, and often threats of physical harm to himself and his family."[49] Political harassment is also used. For example, certain

48 See also *id.* at 14 where it is suggested that civil rights lawyers may not have the opportunity to obtain a "working knowledge" of judges and jurors.

49 Pollitt, *supra* note 40, at 82; see also the statement of attorney Clifford Durr of Montgomery quoted in, Kuntsler & Kinoy, *Lawyers Walk in Fear*, Nation, June 8, 1964, p. 577 and the remarks of law professor G. W. Foster in N.Y. Times, Oct. 30,

civil rights attorneys in Louisiana were charged with failure to register as members of organizations alleged by Louisiana authorities to be "Communist Fronts" (*e.g.*, the Southern Conference Educational Fund).[50]

Because very few southern lawyers are willing to represent civil rights litigants, out-of-state counsel is often necessary. These outside attorneys may, in turn, be intimidated by the southern bar and bench. They may be challenged by the local bar and denied the right to appear in court,[51] or judges may take advantage of the distances they are required to travel by making them appear in court as often as possible.

(3) Problems generated by "direct action."

Participants in the civil rights movement have to an increasing extent turned to such direct methods of protest as civil disobedience. Through the use of such provocative tactics as sit-ins, lie-ins and shop-ins, they often antagonize the police, judges, and other public officials—and this frequently results in mass arrests and other punitive consequences. These activities have clearly increased the need for legal representation.

* * * * *

One of the less obvious ways in which lawyers can help implement civil rights is by promoting a climate of respect for law and order. Their presence as watchdogs, advisers, mediators and advocates can restrain the punitive hand of public officials and the violent hand of the public. This was made clear during the Mississippi Summer Project, when some 150 lawyers representing various groups moved into Mississippi on behalf of the civil rights workers.[52] One of the authors of this article personally observed the activities of lawyers in the Summer Project. She concludes that their very presence led to more favorable treatment of civil rights workers. As one of the law students participating in the Project commented:

> The amount of actual legal work we've done could be engraved on the head of a pin. But our mere presence is a real deterrent. With the

---

1961, p. 14. Negro lawyers are also subjected to similar pressures, *e.g.*, the bombing of Arthur Shore's home in Birmingham and attempts by a Virginia State Committee to take client's files from the firm of Jordan, Dawley & Holt in Norfolk. Kuntsler & Kinoy, *supra* note 49, at 577-78.

> lawyers here, the chances of a person's being beaten are much less and the chances of getting a person released in his own recognizance instead of by putting up a lot of bail are much better.[53]

In a sense these lawyers functioned as representatives of the larger American society. They brought with them traditional concepts of law and order, and they attempted to impose these more general norms on the "closed society" of Mississippi. The civil rights workers believed that the lawyers had a certain "mystique" about them which protected those in their presence. This belief may have functioned as a self-fulfilling prophecy. As the workers felt more secure, they asserted their rights more forcefully, and this may well have forestalled a certain amount of intimidation.

On the basis of this discussion it is evident that there are numerous legal problems in the civil rights area and that they merit the attention of individual lawyers and the organized bar. Although we have emphasized injustices in the South, there may be as much legal work to be done in the North. Special kinds of representation may be called for—filing amicus briefs, creating special organizations like the Lawyers Constitutional Defense Committee, educating the public, and recruiting lawyers for trouble spots like Mississippi.[54]

4. Domestic Relations

The greater likelihood of family dissolution through divorce, separation, or desertion in the lower classes[55] suggests that in this area the poor have many problems that require legal representation. With respect to divorce there is a variety of legal problems relating not only to the division of property, but to such volatile issues as custody of children, support and visitation rights that may arise before, during, and after the actual divorce proceeding. Lower-class individuals are often unable to obtain a divorce because they cannot pay lawyers' fees or because, as noted below, divorce is discouraged by Legal Aid attorneys. Under a legal or de facto separation, legal problems may still arise with respect to support, visitation and protection against harassment or violence.[56]

Many of the legal problems of the poor in this area tend to be hidden from view (or at least from the lawyer's view) because of

---

[53] *Ibid.*

[54] Lewis, *Lawyers Acting in Racial Crisis*, N.Y. Times, Aug. 14, 1963, p. 1.

[55] See BERELSON & STEINER, *op. cit. supra* note 14, at 312; GOODE, AFTER DIVORCE 44-55 (1956).

[56] See Paulson, The Legal Needs of the Poor in Family Law 3 (paper presented at the Conference on the Extension of Legal Services to the Poor).

the administrative handling of the family problems of the poor. Thus, according to tenBroek, there are in fact two separate systems of family law—one for the rich and one for the poor.[57] The family law of the poor is public law, administered largely through state and local agencies, and more concerned with minimizing the costs of relief than maximizing the rights and interests of the recipients. The rules are "heavily political" and "measurably penal." tenBroek finds that civil family law (which is created, developed and administered by the courts) is non-political and less penal, but that it is not designed, in either substantive provisions or judicial administration, to meet the needs of the poor. He asks whether "separate" is not "inherently unequal" in the context of family law just as it is in the context of school segregation.[58] The answer, rather clearly, is that the inequality does exist and that it will continue to exist so long as the poor are denied adequate legal representation.

5. Welfare

With the development of the welfare state,[59] a whole new area of legal problems has emerged for the poor. There are legal problems for those already on welfare and legal problems for those not on welfare but entitled to it.[60]

Most of the legal problems in this area relate to the control of administrative discretion. Reich's study reveals that public agencies tend to subscribe to the philosophy that welfare benefits are "held by . . . recipients conditionally, subject to confiscation in the interests of the paramount state."[61] In other words, welfare is

---

[58] *Id.* at 258.

[59] See generally Reich, *The New Property*, 73 YALE L.J. 733 (1964).

[60] Approximately 8,000,000 persons in the United States today receive some form of public assistance. See Wickenden, The Legal Needs of the Poor from the Point of View of Public Welfare Policy 1-2 (paper presented at the Conference on the Extension of Legal Services to the Poor). In New York City, a third of a million people are assisted under the Aid to Dependent Children Program alone. See Sparer, *supra* note 29, at 6. Data suggest that twice as many people may be eligible for aid as actually receive it. James Dumpson, New York City's Commissioner of Welfare, estimates that a million persons in New York City are "poverty-stricken," in the sense that they are members of families whose total income is less than $2,000 a year, or in the sense that as unattached individuals they earn less than $1,500 a year. *Ibid.* Yet, only about half a million New Yorkers receive public aid under the various welfare programs. *Ibid.*

[61] Reich, *supra* note 59, at 768. Reich calls this doctrine the new feudalism. "Just as the feudal system linked lord and vassal through a system of mutual dependence, obligation, and loyalty, so government largess binds man to the state." Reich, *The New Property*, 73 YALE L.J. 733, 769-700 (1964).

viewed by the agencies as a *privilege* rather than a *right*. This theory consequently permits a significantly wide scope of administrative discretion and a relative absence of procedural safeguards.[62] Thus, the welfare applicant or recipient may be faced with a wide range of problems that call for legal representation. These may be grouped into the following categories.

(a) Eligibility. Eligibility rules establish standards with respect to *need*, *intent* (proving that one is not deliberately scheming to get welfare),[63] *residence*, and *morality* (proving that one is not morally unworthy for receiving aid). Another category might be entitled "the determination of social interest." This would include determining whether it is more "socially desirable" for the applicant to stay where she is or move to another part of the country where relatives can be of assistance.[64]

Proving that one meets these requirements may be a simple matter. However, unjust rejections appear to be common. For example, in 1961 more than 250,000 applications for public assistance were made in New York; 39 per cent of them were rejected.[65] In light of Dumpson's estimate of the size of New York's "poverty-stricken" population,[66] Edward Sparer suggests that this rejection rate was too high.[67] If the poor had greater access to legal representation, more rejected applicants might effectively challenge the grounds for their rejection.[68]

(b) Emergency aid. The problems associated with obtaining emergency aid are not conceptually distinct from those related to eligibility. The law may prescribe that emergency assistance be granted to those in immediate need, regardless of whether they are eligible for long-term aid. New York has such a law,[69] but apparently it has been violated in practice. Sparer suspects that for some time welfare workers granted emergency aid (under the "Welfare Abuses" law) only to those who agreed to leave the state, although "the regulations and procedures adopted under the statutes are explicit in not limiting emergency aid to such persons."[70]

(c) Delay. Welfare benefits may be held up because an investigation of continued eligibility is pending or simply because of

[70] *Id.* at 22.

bureaucratic red tape. To quote Sparer: "Is there a remedy in law to force a reasonably prompt determination and grant? Under New York law there is, but how is it to be obtained without a lawyer's help?"[71]

(d) Increasing the welfare benefits. One's welfare status may change over time so that he is eligible to receive greater benefits. Legal representation may well be an asset when one is trying to have his status redefined. Lawyers can also help raise the legal ceiling on welfare benefits. In 1957 an Iowa district court held unconstitutional a state law setting a maximum level to grants regardless of family size.

(e) Civil rights. In one sense, all the legal problems relating to procedural fairness are civil rights problems. In addition, there seems to be a special civil rights problem in the welfare area. Because they are in a dependent position, welfare recipients are especially vulnerable to being deprived of such basic constitutional rights as the right to privacy. Reich comments that:

> A not uncommon psychology leads those who dispense welfare to feel it only just that the beneficiaries give up something in return. To some public officials, opening one's home to inspection evidently seems a reasonable condition to impose on those whose homes are supported by a public agency. In many other ways, subtle and obvious, the recipients of public bounty are made to pay a similar price. They may be asked to observe standards of morality not imposed on the rest of the community. They may be forced to endure official condescension and prying.[72]

Agency infringement of civil rights is quite obvious in the case of "midnight searches," of which Reich is so concerned. Such searches are often made without warrant and in the middle of the night to determine if a man is present who might be "filching welfare money or dodging child support."[73] Reich contends that these invasions of privacy are unconstitutional under the fourth and fourteenth amendments and that the federal Department of Health, Education and Welfare has a legal responsibility to prohibit these acts.[74]

Why has this practice continued so long? One answer is: "persons on public assistance are in no position to enforce a constitutional right of privacy. They lack the means and knowledge to litigate constitutional questions. And the available legal remedies are most

inadequate."[75] And again, in part, adequate legal remedies have not been developed because those whose interests would be served have not been adequately counseled, nor has their cause been effectively advocated.

6. Mental Illness

"At least in the United States, mental illness is more prevalent in the lower classes than in the upper; more severe there; less likely to be treated; and when treated, more likely to receive custodial or organic therapy than psychotherapy."[76]

This suggests that the poor who are mentally ill are very likely to be treated in institutions and that once again there is a need for legal representation to control administrative discretion. The first point at which the need may arise is the time of admission, particularly when it is non-voluntary. A lawyer may be needed to advise the patient (or his family) of the right to a commitment hearing and to act as an advocate in that hearing. All too often, it appears, the issue of personal liberty is decided in a summary, non-adversary proceeding without even the semblance of procedural fairness. With respect to the admission proceedings at Bellevue, it has been observed:

> *There is no regular representation of the patient's rights;* many observers point out that the hearing may not meet minimum constitutional requirements. The judges can and do try to explore the patient's side of the case, but often they must make a decision on the grave issue of personal liberty with little more than scanty evidence.[77] [Emphasis added.]

Protection may be required against vindictive or opportunistic attempts by family members and others to have the patient committed. Although many judges consider legal representation to be unimportant in mental illness proceedings, some have acknowledged that it may be advisable "in cases of hospitalization by the petition of a spouse when there is hostility between the two and in cases of hospitalization of aged patients whose families are eager to be rid of the burden of caring for them."[78]

See also, Scheff, *Social Conditions for Rationality: How Urban and Rural Courts Deal with the Mentally Ill*, 7 THE AMERICAN BEHAVIORAL SCIENTIST 21-24 (1964) and *The Societal Reaction to Deviance: Ascriptive Elements in the Psychiatric Screening of Mental Patients in a Midwestern State*, 11 SOCIAL PROBLEMS 401-13 (1964).

[78] SPECIAL COMM. TO STUDY COMMITMENT PROCEDURES OF THE ASS'N OF THE BAR OF THE CITY OF NEW YORK, MENTAL ILLNESS AND DUE PROCESS 189, 272 (1962).

The legal problems of the mental patient at commitment hearings may be aggravated by the appearance of doctors in the role of the patient's antagonist. For example, the doctor may reveal confidential information or make other assertions which the patient may wish to challenge or rebut.[79]

During the period of commitment a lawyer may be needed to protect the rights of the patient at periodic reviews of the grounds for detention,[80] to advise of alternative means of securing a discharge,[81] and to assist in protecting the patient's interests in the outside world, such as his job rights and social security benefits.

A lawyer may also be essential at the time of discharge to maximize the patient's rights. In many instances a patient is not really discharged but merely released to convalescent care, and, consequently, he may be rehospitalized without a re-admission hearing.[82]

7. Consumer

Installment buying has generated a whole complex of legal problems in the consumer area. These problems have been magnified by the sharp increase in the amount of installment debt. Caplovitz reports that "between 1920 and 1960 *installment* debt, exclusive of mortgages, rose from one billion to 42 billion dollars."[83] In the 1950's alone the personal debt load of Americans climbed more than twice as fast as their disposable income.[84] By mid-1964 installment debt in the United States stood at 56 billion dollars.[85]

Credit buying has a special impact on the poor. First, low income groups are more likely than high income groups to have a large proportion of their income tied up in debt payments. Further, the

82 *Id.* at 183. Also note the following statement: "One hospital director commented that absolute discharges are used only for those patients who are completely recovered or who are in civil service or other employment in which discharge to convalescent care could embarrass them and impede their rehabilitation." *Ibid.* This comment suggests that a lawyer could affect the type of discharge granted.

83 See CAPLOVITZ, THE POOR PAY MORE 1 (1963).

84 According to *Consumer Reports* the amount of personal debt went up 160% during this period while disposable income increased by 61%. 25 Consumer Reports, Jan. 1960, p. 43.

85 *Consumers Installment Credit*, 50 FED. RESERVE BULL. 1111 (1964). See Katona *et al.*, 1961 SURVEY OF CONSUMER FINANCES 43 (1962) where it is observed that: "[V]ery high debt payment/income ratios occur primarily among low-income people." This trend is especially pronounced when only the population having debts is used as the base. See *Id.* at 53-54.

poor are especially vulnerable because they often lack the savings to back up their debts. Caplovitz found that over half of his sample had outstanding personal debts of at least $100; yet only 27% had at least $100 in savings.[86] Finally, the poor are particularly susceptible to the lure of "compensatory consumption." Appliances, automobiles, clothes and houses can become compensations for blocked social mobility.[87] When liberal credit is available on "easy terms," the poor are likely to overextend themselves in the process of seeking psychological and social gratification.

The legal problems of the poor in the consumer area can be classified into four categories:

(a) Problems stemming from missed payments (the "debtor spiral").

Caplovitz found that one-fifth of his subjects had experienced legal pressure because of missed payments.[88] Their goods had been repossessed, their wages had been garnisheed, or they had been threatened with garnishment.[89] Our recent interviews with authorities in the consumer field suggest that missed payments often set off a "debtor spiral." A missed payment can lead to a repossession and/or a deficiency judgment; and the deficiency judgment can lead to a wage attachment; and the wage attachment can lead to loss of job. One of our respondents reported that it is common practice in the San Francisco area for private industries to dismiss employees after three wage attachments. Caplovitz says that "many employers simply will not be bothered with garnishments and do not hesitate to fire workers whose salaries are attached."[90] Bankruptcy proceedings may be another facet of the debtor spiral, although our interviews suggest that bankruptcy is too expensive for many of the poor.[91]

Obviously, anyone who is entangled in the debtor spiral needs the services of an attorney—to tell him what his rights may be (*e.g.*,

---

[86] See CAPLOVITZ, *op. cit. supra* note 83, at 108; Caplovitz, The Legal Needs of the Poor: Consumer Problems 3 (paper prepared for the Conference on the Extension of Legal Services to the Poor). Caplovitz's data were derived from the study of 464 low income families in New York City.

[87] See CAPLOVITZ, *op. cit. supra* note 83, at 13.

[88] See Caplovitz, The Legal Needs of the Poor, *supra* note 86, at 3.

[89] The practice of *threatening* wage attachment may have accounted for the fact that all the families interviewed were familiar with the word "garnishee." Caplovitz speculates that "this may well be one word in the language that the poorly educated are more likely to know than the better educated." See CAPLOVITZ, *op. cit. supra* note 83, at 21.

[90] See Caplovitz, The Legal Needs of the Poor, *supra* note 86, at 5.

[91] Another problem that flows from the debtor spiral is a damaged credit rating, with its consequences for future buying and character reference.

how much of his wages can be attached), and to intervene on his behalf at a number of points along the line (*e.g.*, to work out a "deal" before the repossession, to challenge the proposed amount of the deficiency judgment). If legal representation were obtained before the signing of the initial contract, missed payments might be avoided altogether.

(b) Problems stemming from fraudulent and "shady" business practices.

Fraud and misrepresentation on the part of merchants are perhaps the most common legal problems in the consumer area. Thus, twice as many respondents in the Caplovitz study reported that they had been cheated by a merchant[92] than reported a missed-payment problem.[93]

Several types of "shady" sales practices have been noted, including what might be called bait advertising, misrepresentation of prices, misrepresentation of merchandise, irreversible credit transactions (*e.g.*, where one cannot exchange the merchandise once one has signed the contract), and anonymous credit transactions (*e.g.*, where one cannot discover who the actual seller is in a door-to-door sale).[94]

Sometimes missed-payment problems are linked to problems of fraud. Families capable of maintaining payments may stop paying when they discover they have been cheated. Instead of gaining retribution by this practice, the cheated person often finds himself subject to all the legal penalty applicable to one who misses payments.[95]

(c) Problems stemming from inept (or biased) law enforcement.

Default judgments against the consumer are quite common in cases involving the poor. Often they are the consumer's "fault": he may be reluctant to leave his job or to travel a long way to court; or he may be unaware of the legal implications of failing to appear. But many times the consumer fails to respond to a summons simply because he never received it. Process servers (hired by the plaintiff's lawyer) may shirk their responsibility of delivery and simply throw the summons away. This happens with such frequency that a special

---

92 CAPLOVITZ, *op. cit. supra* note 83, at 137.

93 Professional help was sought by only 9% of the families who reported that they had been cheated. Half of them did nothing at all about their problem, and the other 40% tried to deal with the merchant themselves (a technique that was seldom successful). *Id.* at 171-72.

94 *Id.* at 142-54.

95 See Caplovitz, The Legal Needs of the Poor, *supra* note 86, at 5.

term, "sewer service" is used to refer to it. Low-income families are particularly vulnerable to the consequences of "sewer service" because they are ignorant of their legal rights and of the available means of protection.[96]

Another problem which has been described is the questionable practice of city marshals who serve as collection agents. In New York City, a defendant's salary can be attached only if his property is insufficient to satisfy his debt. The city marshal is supposed to investigate the defendant's resources, make an attachment, and arrange a sale. Only as a last resort is he supposed to garnish wages. However, since the marshal's income is totally derived from fees, he is naturally eager to dispose of his cases rapidly. Consequently, he sometimes moves directly to garnishment without investigating the defendant's property at all.[97]

> It is the combination of "sewer service" and this practice on the part of some marshals that accounts for the fact that consumers sometimes never learn of the action taken against them until their employers notify them of the garnishment. And by that time it is often too late for the consumer to protect his job, let alone his rights in the legal action.[98]

Finally, there is the passive or biased role of regulatory agencies. Such agencies as the FTC and the Food and Drug Administration are supposed to protect the interest of the consumer as well as those of the business community. However, David Hamilton observes that:

> by and large, the consumer interest remains unorganized as a political force. As a result, Congress and the President, even when sympathetic to consumer interests, experience more effective political pressure from just those business interests who oppose any further "extension of governmental power." Thus, the inadequate budgets of agencies which protect the consumer interest persist. . . . In order to make these agencies more effective and thus make the market safer for the consumer, it would be necessary to increase their budgets and to change the attitudes of the body politic, the courts, and the administration.[99]

State and local governments also seem to be overly cautious about offending the business community.[100] According to Hamilton, state regulatory agencies are usually staffed by representatives of industry; and instead of controlling industry, they often sanction established practices.[101] As one of our respondents put it: "This is like having the foxes guard the chickens."

101 *Id.* at 365.

Aggressive legal advocacy on behalf of the consumer may be necessary to alter the passive, biased stance of these government agencies.

(d) Problems stemming from inadequate laws.

The poor consumer is inadequately protected by the law. For example, the poor are most in need of usury laws because their high-risk situation makes it difficult for them to obtain low-interest loans. Yet, George Brunn reports that laws regulating interest rates are either inadequate or not enforced. "Such interest ceilings as legislatures impose on retail installment credit and small loans—ceilings which often become the norm—are set at the behest of credit extenders and without study."[102]

Whatever public interest there is in consumer problems seems to be primarily oriented toward those of the middle class,[103] truth in lending, deceptive packaging, misleading advertising, misleading labeling, short weighting and price fixing.[104] Although new laws in these areas might be helpful to the poor, what they really need is protection against the "debtor spiral." Thus, low-income consumers may require lawyers to frame and promote laws more directly in their interest.

As suggested above, the argument that the poor have fewer legal problems than the rich and therefore less need for lawyers, often merges into the welfare oriented idea that the problems of the poor are inherently non-legal. This view entails the risk of misconceiving the individual in such a way as to rob him of the dignity of citizenship.

Those who argue that the problems of the poor are essentially social or psychological rather than legal tend to conceive of the poor as incapable of comprehending, let alone altering, their predicament. The poor are thus seen as "human material that will be worked on, helped, and hopefully transformed,"[105] as objects to be manipulated or treated by those who claim to know what is good for them

—*i.e.*, social workers, psychiatrists, probation officers or marriage counselors.

Although advanced as an empirical fact, this conception of the poor is essentially a value judgment that tends to stigmatize them and reinforce their impotency. In a discussion of the limitations of the New Haven program for combating poverty, it was pointed out:

> A service program fills a need, but experts, not recipients, designate the need to be filled and establish the criteria for eligibility for aid. Typically, there is no effective means of challenging the basic criteria or for obtaining review of particular decisions applying those criteria. The pattern of aid is one of a donee's unquestioning acceptance, of an expert's dictation of what is "good for the client," and of an administrator's unchecked and unreviewable authority to terminate assistance. That power defines a status of subserviency and evokes fear, resentment and resignation on the part of the donee.[106]

We propose that a distinctive characteristic of the poor, and an essential condition of their predicament, is their lack of participation in the legal and governmental process. Thus the answer to the question of whether the poor have legal problems and need lawyers turns ultimately on the strength of our commitment to the extension of citizenship, for enfranchisement necessarily rests on the capacity to participate in and make effective use of the legal order—in our legal system, this means access to competent legal representation.

Finally, the contention that the problems of the poor are inherently non-legal is based on an extremely narrow view of the law and of the lawyer's role. What is needed is a wider view:

> The lawyer's function is essentially that of presenting a grievance so that those aspects of the complaint which entitle a person to a remedy can be communicated effectively and properly to a person with power to provide a remedy. Slum dwellers have many grievances not thought of as calling for lawyers' skills. Yet the justiciability of such grievances should not be prejudged; they require the scrutiny of a skilled advocate, for it is altogether possible that for many a remedy is available if the grievance is properly presented—even though the decision-maker may be a school board, principal, welfare review board, board of police commissioners, or urban renewal agency.[107]

B. *There are Adequate Substitutes for Private Legal Representation*

Whatever class differences exist in legal representation have also been defended on the ground that the poor are provided with adequate substitutes for private lawyers in the form of Legal Aid,

---

[106] Cahn & Cahn, *The War on Poverty: A Civilian Perspective*, 73 YALE L.J. 1317, 1321-22 (1964).

[107] *Id.* at 1336.

assigned counsel, public defenders, and special tribunals which have been purposely designed to obviate the necessity of counsel. In order to evaluate this contention it is necessary to examine each of these traditional substitutes.

1. Legal Aid

Much can and should be said in praise of those who have contributed so much time and energy to the cause of providing legal services to the needy. Although there is tangible evidence of their labors, it is our opinion—shared by a number of Legal Aid workers themselves—that Legal Aid is seriously handicapped both in meeting the vast potential need for legal representation and in dealing with cases that are actually handled. Moreover, we suggest that the effectiveness of Legal Aid is undermined by the way it is organized and financed and the way it conceives of its task.

Limitation in Meeting Potential Need for Legal Services

Over the past 50 years the hoped for growth in Legal Aid (voiced by Smith and others) has simply not materialized. Thus, Emery Brownell conceded in the early fifties:

> The unhappy truth is that we have made almost no substantial progress up to the close of 1947. Using the standard which was applied in Chapter I of ten cases per thousand of population as being an approximation of the full need for Legal Aid services in a community, it will be seen that the proportion of need being met over the country as a whole has been virtually static. *The ability of the established organizations to meet the full need in their communities had risen only from 51 per cent in 1916 to 55 per cent in 1947.* . . . Like the Red Queen of Alice in Wonderland, the Legal Aid forces have been obliged to run as fast as they could to stay where they were.[108]

Raynor Gardiner, for many years the general counsel of the Boston Legal Aid Society, voiced similar pessimism when he wrote the following in the late forties for the Survey of the Legal Profession:

> The fundamental defect in legal aid service today is that, from a national point of view, it hardly exists. It is true that nearly all of the larger cities in this country have legal aid organizations, good, bad and indifferent, but the great majority of our citizens have no access to legal aid and to pretend anything else is just pompous nonsense.[109]

The situation since the late forties has, if anything, become worse.[110]

---

[108] BROWNELL, LEGAL AID IN THE UNITED STATES 33 (1951). (Emphasis added.)

[109] Gardiner, *Defects in Present Legal Aid Services and the Remedies*, 22 TENN. L. REV. 505 (1952).

[110] From 1916 to 1947 the number of new cases annually processed increased from 5.1 to 5.5 per thousand population. BROWNELL, *op. cit. supra* note 108, at 33.

What fraction of the potential need is actually being met is, of course, a difficult question; it assumes that we have some meaningful way of estimating that need. Brownell advanced the rate of 10 per thousand population as a "reasonable" measure of those needing Legal Aid services.[111] That this is undoubtedly far too conservative an estimate is indicated in a report issued in 1958 by the Bar Association of the District of Columbia.[112] The authors of this report contended that although the rate of new cases handled in the District exceeded the Brownell standard,[113] the number of cases still "falls far short of the community's need."[114] The reasons advanced for their conclusion were as follows: (1) Their Legal Aid organization has never kept up with its work: "Whether the number of attorneys be large or small, clients are almost always waiting."[115] (2) Their interviews with those close to the problem—social workers, churchmen, and others—"disclose the unanimous view that Legal Aid is needed by many who do not get it because they do not know of its availability, or do not realize their need for it, or are afraid to seek it."[116] (3) Their conviction—based on some evidence—that publicity as to the availability of Legal Aid "would bring a flood of clients far beyond its capacity."[117]

The authors then suggest a new formula of 18 per thousand population which is based on an estimate of (1) the number of families with incomes below minimum levels to provide the necessities of life, and (2) the proportion of these families having legal problems—arrived at on the basis of the Koos findings.[118]

By 1963, however, only 30 out of the 212 cities with legal aid organizations submitting reports, processed as many as 5 new cases per thousand population; and only 6 (Santa Monica, Denver, New Haven, District of Columbia, West Palm Beach, and Southwest Harbor, Maine) processed as many as 10 per thousand population. NATIONAL LEGAL AID AND DEFENDER ASSOCIATION, 1963 ANNUAL REPORT. Although the 16 largest cities (with a million or more population) seemed to fare somewhat better than the average for the 212 cities, in that they processed approximately 5 cases per thousand population, this was still no better than the 1916 rate of 5.1 per thousand population. Moreover, if we consider the total population of the United States (not just the population of the cities with legal aid organizations), then there were only a little over 2 new cases processed per thousand population. (422,569 new cases handled in 1963 divided by the U.S. population in 1963 of approximately 188,616,000. *Ibid.*)

111 BROWNELL, *op. cit. supra* note 108, at 19.

112 REPORT OF THE COMMISSION ON LEGAL AID OF THE BAR ASSOCIATION OF THE DISTRICT OF COLUMBIA (1958).

113 In 1958 the district legal aid organization handled 12.2 cases per thousand population. *Id.* at 139.

114 *Id.* at 140.

115 *Ibid.*

116 *Ibid.*

117 *Ibid.*

118 Of the lower class families interviewed in the Koos Study, 35.6% reported

If we accept this new rate, then it would appear that only about 10 per cent of those persons needing Legal Aid are actually serviced. We arrive at this percentage as follows: 18 per thousand population (the "need") divided into 1.76 per thousand population (the actual number of new cases processed per thousand population in the total United States less the 20 per cent who are found to be ineligible).

Orison Marden, president of the Association of the Bar of the City of New York, writing in 1962 summed up the situation as follows:

> Despite the substantial progress already made we are very far indeed from meeting the actual need. On the civil side, there are still nine central cities in this country of 100,000 or more population which are without any organized Legal Aid facilities whatsoever. Some twenty cities of 75,000 to 100,000 population have no Legal Aid service. The existing Legal Aid facilities in twenty-four cities of 100,000 or more population do not meet even the minimum requirements established by the American Bar Association and the National Legal Aid and Defender Association. All too few of the existing Legal Aid offices are actually covering the requirements of their own localities. Many are hampered by poorly paid and inadequate staff; others are badly directed by disinterested or inactive boards of directors.[119]

That Legal Aid is capable of meeting only a small fraction of the potential need is partly a function of its extremely limited resources. In 1963 less than 4 million dollars was spent to finance the operations of all Legal Aid organizations in the United States handling civil cases.[120] This is less than two-tenths of one per cent of the total expenditures for legal services in the United States in 1963.[121] No wonder, then, that there may be fear of increasing the availability of existing Legal Aid services. Many offices, as shown below, are already swamped with cases, and again and again the fear is voiced of opening the flood gates. Lack of resources, however, is not the only factor limiting the capacity of Legal Aid to meet the potential need for legal services. We must also take into account the various grounds for excluding clients and cases. Although these grounds may be motivated in part by fear of increasing the already swollen size of the Legal Aid caseload,[122] other interests

---

having a (legal) problem. Koos, THE FAMILY AND THE LAW 4 (1949). This may underrepresent the proportion having legal problems because the list of problems presented to lower class respondents is by no means comprehensive (*e.g.*, no mention of welfare problems) and because respondents may not comprehend the meaning of the categories.

[122] Brownell notes, for example, that the restrictive policy on divorce "is justi-

seem to be involved. These reflect the relationship of Legal Aid to the local bar and to the local business community, and the orientation Legal Aid adopts towards its task and clients.

(a) Exclusion of cases that might profitably be handled by a private attorney.

A Manual of Practice prepared some years ago by John Bradway summed up the general policy of Legal Aid in this area as follows: "The first qualification of a legal aid client is that he should be unable to pay a fee."[123] The ability to pay a fee includes having a large enough claim so that a private lawyer may take the case on a contingent basis. Thus, with respect to personal injury cases, the recommended practice of the National Legal Aid and Defender Association (NLADA) is as follows:

> Except for good cause in individual instances, accept personal injury cases in which the client is unable to pay any fee and in which the amount of recovery is not sufficient to induce a reputable attorney to accept the case on a contingent fee basis.[124]

It has been estimated that "nationwide, about 20 per cent of the applicants are found to be ineligible,"[125] on all grounds. In most of these cases, applicants are turned away because they are able to pay a fee. Those who can pay a fee are generally referred to a private attorney, either directly, or through the Lawyers Referral Service of the local bar association. For example, between 1946 and 1956 about 17 per cent of the applicants to the Legal Aid Bureau of the District of Columbia were referred to lawyers in private practice.[126]

Granted the local bar may benefit from such a high rate of exclusions on economic grounds,[127] these exclusions suggest several serious drawbacks of the Legal Aid system.

Depriving the Applicant of Any Representation

What proportion of those who are turned away find a lawyer at all, or obtain a reasonably responsible and competent attorney?

---

fied by legal aid organizations on the ground that otherwise the volume of divorce cases would overwhelm their limited staffs at the sacrifice of other more necessary law work." BROWNELL, *op. cit. supra* note 108, at 72.

123 BRADWAY, LEGAL AID BUREAUS: A MANUAL OF PRACTICE 61 (1937).

126 DISTRICT OF COLUMBIA REPORT, *op. cit. supra* note 112, at 74.

127 "It is clear . . . that such new legal business [for private attorneys] is found through the Legal Aid program and that Legal Aid does a real service both to those needing lawyers and to the lawyers in private practice." NATIONAL LEGAL AID ASSOCIATION, THE TWELVE POINT BRIEF FOR LEGAL AID 6 (1954).

Those who are sent to the Lawyers Referral Service must go through yet another step before ending up with a lawyer. How many of these potential clients become discouraged and simply give up?

Penalizing the Thrifty

How many of those who can afford to pay a modest fee are being penalized in the sense referred to by Bradway?

> A definite hardship results when paupers are cared for but the man in the class above, who has displayed more industry and saved a little money, is, in a sense, penalized by being made to pay an attorney's fee.[128]

Alienating the Applicant

How many of those who are turned away are undoubtedly soured by the experience? An attorney of the Baltimore Legal Aid Bureau noted the following, apparently not uncommon, reaction on the part of applicants refused Legal Aid assistance:

> [W]hen those clients would get into an attorney's office and the attorney took the statistical information and then said, "you don't qualify as a Legal Aid client, so don't you know an attorney? If you don't, we will be glad to refer you to one on the reference list," the client was apt to say, "Well, I have just got a very small problem, and I want just a little advice. Aren't you a member of the bar? Aren't you an attorney? Can't you answer this question?"[129]

Depersonalizing the Lawyer-Client Relationship

To avoid such embarrassing situations as the one described above and to conserve the valuable time of the professional staff, many offices have instituted a system of pre-screening of applicants by non-lawyers to determine eligibility.[130] This not only accentuates the already impersonal, mass-processing character of the agency, but it may possibly leave to a non-lawyer the important matter of determining the legal merit of a case.

One may ask why Legal Aid turns away so many applicants

---

[128] BRADWAY, *op. cit. supra* note 123, at 61.

[129] NATIONAL LEGAL AID ASSOCIATION, PROCEEDINGS OF THE 31ST ANNUAL CONFERENCE 91 (1953).

[130] "So we decided that the thing that we ought to do was have the clients interviewed first, if possible, to determine eligibility. We said, as to the person interviewing that client, that he didn't necessarily have to be a social worker, but we said it ought to be someone who is a competent interviewer and knows something about wage scales and financial status, and so forth, and what earnings are made in the community. But that person should not be an attorney. So that if the client pops the question and says, 'Aren't you an attorney?' he or she can truthfully answer 'No, I am not an attorney, and I can't answer the question. But we have this referral service available for you.'" *Id.* at 92.

who themselves feel that they cannot afford a private attorney. The answer in part is that the organization is already overburdened, given its meager resources and small staff. An equal, if not more pressing consideration, is the fear of committing the cardinal sin: competing with private lawyers. As Emery Brownell has stated: "It is necessary to emphasize here the general policy scrupulously observed by all existing Legal Aid organizations: that Legal Aid is not competitive with the private practice of law."[131]

There can be little doubt that the policy against competition with private practitioners *is* scrupulously observed. Moreover, we suspect that the eligibility requirements are more often interpreted in favor of the local bar than in the interest of the needy clients. This is the price that is paid for the financial and moral support of the bar.

(b) Limitations on accepting divorce cases.

In the early days of Legal Aid, divorce cases were rejected outright. In *Justice And the Poor,* Smith noted:

> In divorce matters there is a clear and well-justified rule to refuse to institute divorce proceedings . . . . There is a strong policy against making divorces easy and cheap . . . . The issue is not between divorce and no relief; non-support proceedings will secure support and separation proceedings will protect against brutality or physical abuse.[132]

While this rule has been softened,[133] the spirit which inspired it still lingers on—namely, that divorce is a privilege or luxury that will be allowed the poor only on condition they deserve it. Wayne Theophilus, the attorney in charge of the Legal Aid Society of Pittsburgh, declared:

> People may say that poverty prevents [the poor] from having the same rights to get a divorce as a person with money, yet we must remember *obtaining a divorce is not a right but a privilege.* For most Legal Aid clients, a separation is just as useful and practical as a divorce.[134] [Emphasis added.]

Another Legal Aid attorney noted that the policy in his office is "that divorces are luxuries and will not be given as legal aid to indigents." The following remarks of Raynor Gardiner suggest that this view is held by the majority of legal aid offices.

---

131 BROWNELL, *op. cit. supra* note 108, at 66.

132 SMITH, JUSTICE AND THE POOR 155 (1919).

133 The current NLADA recommended standard on divorce is as follows: "Accept a divorce case for a plaintiff first, where the client cannot afford to employ counsel; second, where there is a good prima facie case; and third, where *social need* exists." HANDBOOK, *op. cit. supra* note 124, at 6. (Emphasis added.)

134 22 Legal Aid Brief Case, No. 4, April, 1964, p. 211.

> A left-wing minority [of legal aid organizations] believes that divorce is a legal remedy open to all, that anyone who has a good legal case and no money is entitled to a divorce just as much as they are entitled to relief for collecting wages.[135]

Whether the Legal Aid client will be allowed the luxury or privilege of a divorce depends on a determination of social need. In making that determination the Legal Aid attorney frequently relies on the judgment or certification of a social worker. This, in turn, may mean that the client will have to submit not only to an investigation by a social worker, but also to some form of marriage counseling as a condition for obtaining a divorce. Such counseling is rarely required of those who can afford a private attorney. In view of the fact that the overwhelming majority of persons who come to Legal Aid with a marital problem are already separated, with little hope of reconciliation,[136] the restrictive policy on divorce seems particularly harsh and futile. Yet the policy seems to be widely followed. One empirically based survey found that of the 40 Legal Aid organizations that responded, 4 reported they did not accept divorce cases under any circumstances, 31 accept them only where a social need exists (*e.g.*, where the welfare of a minor child is involved), 21 require a social service investigation and 27 accept only after approval by the governing board of the organization or a committee thereof.[137]

The restrictive rule on divorce is apparently motivated in some agencies by a desire to minimize the cost of public assistance. Thus, one Legal Aid attorney observed:

> Our experience is that indigents already have a large family supported by the community and to permit them a free divorce allows the man particularly to remarry, frequently a much younger woman, and procreate a fresh batch of public charges.[138]

A similar concern may be noted in the remarks of a Legal Aid attorney in California:

> It has been learned through experience that nearly all divorce cases involving indigents, where the husband is not incarcerated for some reason or other, *are merely a device to entitle the wife and children to go on the Public Assistance rolls.*[139]

139 LEGAL AID SERVICES IN LOS ANGELES COUNTY, COMMITTEE SURVEY REPORT OF THE SPECIAL STUDY 55 (1963). (Emphasis added.)

He goes on to say that a social need arises only when a divorce "is necessary to protect either the wife or the children from immediate or threatened physical harm, or moral jeopardy."[140]

The underlying attitude here is that the poor person is essentially a welfare client, rather than a citizen capable of having rights and duties and of knowing his own best interests. As a result, Legal Aid is deemed a privilege which may be granted solely within the discretion of the grantor, and only if the grantee is found to be morally as well as financially deserving.

(c) Restrictive rule on bankruptcy

The NLADA's recommended practice on bankruptcy is as follows:

> Accept bankruptcy cases only in instances where everything possible has been done to make an adjustment with creditors and where it is obvious that a client will *never* be able to pay his debts and will be harassed by creditors for a long period.[141]

The Legal Aid client seeking this type of remedy may also be required to submit to a social work investigation as a condition of obtaining legal help.[142]

Brownell claims that "the chief reason for the [bankruptcy] rule seems to be the desire not to lose the good will of merchants and other creditors from whom the societies must seek settlements for other clients."[143] Others have perhaps been more candid by indicating that what is feared is not simply the loss of good will but the loss of Legal Aid funds. Several participants at the 1948 conference of NALAO observed: "that they encountered objection to their handling [of] these [bankruptcy] cases from merchants, doctors, small loan companies and others *who contributed generously to the Community Chest.*"[144] Insofar as the local Community Chests provide the main source of financial support for Legal Aid (in 1963 they provided 53 per cent of such support),[145] it is not surprising that the heavy contributors will press for protection. This financial dependence on local business interests that may be threatened by effective legal action on behalf of the poor client is a major structural weakness of the Legal Aid system that seriously undermines its capacity to provide adequate legal representation.

Limitations in Dealing With Cases Actually Handled

Given the size of their case loads, Legal Aid attorneys are usually capable of providing only routine, perfunctory services for their clients. The standard caseload requirement set by the NLADA for Legal Aid offices in cities of more than 100,000 population is: "One full-time employed attorney for the first 750-1,000 cases per year; an additional full-time attorney for each additional 1,200 cases; or equivalent part-time attorneys."[146] Apparently, even this low standard is not always met. The Los Angeles office, for example, handled 14,361 new cases in 1961 with only 7 attorneys. This meant that one lawyer was available for 2,000 clients.[147] One consequence of these high caseloads is that clients may be forced to wait a long time before they can even see a lawyer. In Los Angeles it was reported that "there is an inordinately long waiting period for the applicants—an average of more than two hours, we are told, and sometimes as long as four hours."[148] And in the District of Columbia it was noted:

> It is not unusual for a staff attorney to learn from a client against whom a default judgment has been entered, that the client had previously come to the Bureau, but had had to leave because of his inability to wait long enough to see an attorney.[149]

An even more serious consequence of handling such a large number of applicants is the unavoidable tendency toward the mass processing of cases. This is reflected not only in the procedures developed for the initial screening of applicants, but also in the fact that most cases (75%, if we exclude those who fail to meet the eligibility requirements) are disposed of by a single consultation.[150]

The amount of time given to the investigation of facts, to legal research and drafting of legal documents, and to court work is necessarily minimal. In fact, many offices are incapable of handling cases that require extensive investigation or time-consuming litigation. In a report prepared for the Survey of the Legal Profession, Raynor Gardiner concluded:

> There are not more than one-half dozen offices in the entire country

150 NATIONAL LEGAL AID AND DEFENDER ASSOCIATION, 1963 SUMMARY OF CONFERENCE PROCEEDINGS 25-49. Commenting on the high proportion of single-interview cases, the chief attorney of the Boston Legal Aid Society noted: "Most of these clients are only interviewed once, otherwise it would be physically impossible to take care of them with a staff of 12 lawyers." BOSTON LEGAL AID SOCIETY, ANNUAL REPORT (1954).

> that are equipped to provide a client with adequate representation in Court. The average Legal Aid office lacks the personnel or the money to engage in much litigation.[151]

That litigation limits the number of cases that can be processed is apparently borne out by the finding that Legal Aid offices in which 6 per cent or more of the cases involve court work are handling only half as many cases per attorney as offices in which less than 6 per cent of the cases involve court work. It is not surprising, therefore, to find the following official complaint lodged against a California Legal Aid office:

> The attorney-in-chief spends too much time on individual cases, interviewing clients and *actually handling some litigation*. This situation, we realize, has developed because of a shortage of staff. However, in spending time on these duties—as important as they are—he has fewer hours to devote to administrative responsibilities and work with the bar association and the community generally on broader Legal Aid matters.[152]

A further indication of the perfunctory service often provided Legal Aid clients is the immense disparity in caseload between Legal Aid and private attorneys. In New York City, for example, only 2 per cent of the private attorneys reported that they handled as many as 500 cases a year, and half reported handling no more than 50.[153] Even if we recognize that most private lawyers give the bulk of their time to business clients who are served on a more continuous basis, the difference in caseload is still startling.

The quality of service provided legal aid clients is also affected by the low salaries of the Legal Aid lawyers, the high turnover in professional staff, and the fact that clients generally wait too long before coming to Legal Aid, thereby minimizing the opportunity for effective help.

The principal limitations of Legal Aid, then, seem to be these: 1) grossly inadequate resources, 2) vulnerability to demands of the local bar and local businessmen (which may and often do conflict with the best interests of the Legal Aid client), and 3) the tendency of Legal Aid to adopt a social-welfare orientation toward its clients and toward its overall goals. This not only undermines the dignity and self-respect of the client, but also weakens the capacity of the agency to recognize legal rights and seek effective legal remedies.

153 CARLIN, ETHICS AND THE LEGAL PROFESSION (in press).

2. Assigned Counsel and Public Defender

Each year approximately 60 per cent of defendants in criminal actions in federal and state courts are financially unable to obtain counsel.[154] There are essentially two methods by which indigent persons may be provided with legal representation in criminal cases: assigned counsel and Public Defender.[155]

Assigned Counsel

The assigned counsel system consists in the appointment, by the court, of individual lawyers to represent defendants who cannot afford private counsel. This is presently the only method for providing the indigent with legal representation in the federal courts and in about 95 per cent of all the counties in the United States.[156] Moreover, approximately 70 per cent of all felony defendants in 1963 were in counties using the assigned counsel system.[157]

Critics of this system have raised the following objections to its operation:

(1) "Assigned attorneys are often young attorneys or others who lack experience in criminal law, hence they are no match for the prosecuting attorney."[158] This conclusion was reached by Lee Silverstein on the basis of a state-by-state audit of practices with respect to representation of indigent accused. A recent study of the federal system came to a similar conclusion.

> A prominent defect [of assigned counsel] is the dependence upon young inexperienced lawyers for all but the most difficult or serious cases. The typical assigned counsel is little versed in the technicalities of the criminal law or the questioning of accused persons and has had little if any previous courtroom experience. But use of inexperienced lawyers seems almost inevitable under a noncompensatory system.[159]

Although the assigned counsel method may provide valuable training for young lawyers, it can have dire consequences for the client. As Arnold Trebach observed:

> A sink-or-swim philosophy for young attorneys in the criminal courts—whereby, if there is any "sinking" to be done, unfortunately it is done

158 *Id.* at 7. On this and certain other points discussed here, see Note, *Representation of Indigents in California—A Field Study of the Public Defender and Assigned Counsel Systems*, 13 STAN. L. REV. 522-65 (1961).

159 Note, *Representation of Indigent Criminal Defendants in the Federal District Courts*, 76 HARV. L. REV. 579, 596 (1963).

> by the defendants—is fundamentally at odds with the concept of effective defense in an adversary system. When the defendant happens to be indigent, the criminal courts cannot be considered an extension of the law school Moot Court system.[160]

(2) Assigned counsel have insufficient resources to prepare an adequate defense: they are generally not reimbursed for out-of-pocket expenses for investigation and preparation and are paid little or nothing for their services.[161] These defects were found to be present in both state and federal courts. The Attorney General's Committee Report states:

> Assigned lawyers are awarded no compensation for their services, [are ordinarily] supplied with no funds to meet the most ordinary and essential expenses of maintaining a defense, and are not compensated for out-of-pocket expenses actually incurred in the course of representation.[162]

Without resources to prepare a defense and without compensation for his time, the assigned counsel is under considerable pressure to plead his client guilty. Findings presented in the Attorney General's Committee Report lend support to this view:

> [I]n all the districts studied, pleas of guilty are entered much more frequently by defendants with assigned counsel, than those represented by private counsel. Thus, in the Northern District of Illinois in fiscal 1961, an initial plea of guilty was entered by approximately 75% of all defendants represented by assigned counsel whereas the figure was about 20% in cases represented by private counsel.[163]

Absence of resources also adversely affects the quality of the defense in those cases where it has been decided to go to trial.

(3) "Lawyers are not appointed early enough in the criminal proceeding."[164] The current practice in the states is apparently to assign counsel either at the stage of arraignment, or, somewhat less frequently, after the filing of the indictment, but before arraignment.[165] Silverstein reports that the majority opinion of both assigned counsel and public defenders was "that the ideal stage for providing counsel is immediately after arrest, or before the police have interrogated the defendant."[166]

In the federal district courts, counsel is generally appointed at arraignment. The Attorney General's Committee also believes that counsel should be made available at a much earlier stage of

the proceeding, and that failure to do so represents a "serious deficiency."[167]

(4) A large proportion of indigent accused persons are still not represented at all. This occurs because there may be too narrow a definition of indigency,[168] because there may be a failure to inform defendants of their right to counsel,[169] and because counsel are rarely provided in misdemeanor cases.[170]

The conclusion reached in the Attorney General's Committee Report as to the adequacy of the assigned counsel system in the federal courts is as follows:

> For a quarter-century the constitutional rights of counsel have failed to receive full implementation in the federal courts. In no district has a system of adequate representation been achieved; nor, for reasons stated in this chapter at length, are the practices employing the uncompensated services of attorneys capable of constituting such a system.[171]

Public Defender

It is said that many of the inadequacies of the assigned counsel system can be remedied by the establishment of a public defender office which presumably will have a full-time staff of experienced attorneys and sufficient funds for investigation. Although a few Public Defender offices appear to have these resources,[172] Arnold Trebach observes:

> Many of [the public defender offices] consist of one lawyer who has a private practice and serves as a defender on a part-time basis for a small annual retainer. For example, out of the 33 defender offices in Illinois, 28 are staffed with part-time lawyers. And in California, which is second to Illinois in the number of defender offices, only the defenders in those counties having a population of over 600,000 are on a full-time basis. . . . Moreover, the great majority of defenders handle cases only in second-level courts. These defenders do not enter a felony case at the preliminary examination stage, nor are they able to provide vital post-conviction service. . . . [N]ot more than 18 [out of a total of about 100] defender organizations in this country have full-time investigators on the payroll.[173]

Silverstein comes to a similar conclusion based on his study:

> Nearly all the public defenders who were interviewed said they needed

> more funds to operate their offices properly. In particular many said they needed an investigator or funds for investigation. Some of the defenders said there is no career possibility in the job since the salary is low and will not be increased as they gain experience in the position. In some jurisdictions it appears to be a policy to encourage a fairly rapid turnover in the defender office, and in one county the judges follow a policy of appointing defenders for one year only.[174]

In sum, we feel there is persuasive evidence that neither the use of assigned counsel nor the public defender system, as presently constituted, is capable of providing adequate representation to accused persons: far too many accused persons are not represented at all, and when counsel is provided he generally has neither the resources, skill, nor incentive to defend his client effectively; and he may enter the case too late to make any real difference. Indeed, insofar as he induces his client to plead guilty, he may actually undermine his client's position.

3. Special Tribunals: The Small Claims Court

Special tribunals may be considered a partial substitute for private legal representation to the extent that they are capable of providing a forum in which the poor person has an opportunity, without counsel, to pursue his legal rights and remedies. The Small Claims Court, in the view of its founders and supporters, was designed to serve precisely this purpose. It was assumed that the poor person could be provided with such an opportunity if the tribunal were made readily available to him (by sharply reducing court costs) and if the presentation of his case were not encumbered by formal pleadings and other procedural rules. Whether in fact the Small Claims Court has fulfilled this purpose, however, is open to serious question. Indeed, it appears that there is little correspondence between the professed aims of the Small Claims Court and the ends it actually serves.

One of the conclusions reached by those who have observed the actual operation of these courts is that they are primarily used by businesses and other organizations for the collection of debts. Thus, a recent study of the Oakland-Piedmont Small Claims Court[175] found that 2 out of 3 plaintiffs were either business firms (jewelers, department stores, mail order houses, finance companies) or, to a lesser extent, government agencies (principally the County of Alameda).[176] The large majority (85%) of these organizational plain-

[175] McClosky, Reinis & Pagter, The California Small Claims Court (prepared for a seminar in court administration, Boalt Hall, University of California 1963).

[176] Claims brought by the County were mainly for the value of hospital services rendered, and unpaid taxes.

tiffs were filing group claims (more than one claim filed by the same plaintiff at the same time); and most of these plaintiffs were repeat users of the court.[177] A number of these organizations handle such a large volume of claims that they have established their own collection departments which make routine use of the court.[178] Thus, it is primarily the business community, not the poor, that reaps the advantage of the inexpensive and speedy process provided by the Small Claims Court. Furthermore, the poor person who comes into the court as a defendant has the disadvantage of facing an experienced businessman or agent as his opponent.

The Small Claims Court system, then, operates in such a way as to subvert the aims of its founders.[179] Moreover, the trend throughout the country appears to be toward the increased use of the small claims procedure for collection purposes. The Institute of Judicial Administration has noted that:

> [C]ollection agents and professional men employ the Small Claims Court's facilities in increasing number. However, no serious objection has been raised to this tendency; in fact, two states . . . have deleted from their statutes a limitation on the number of claims which an individual may bring before the court during a particular week or month. This action would seem to encourage the use of small claims courts by repeating claimants as well as by the occasional litigant.[180]

The use of an inferior court as an instrument for the collection of debts is by no means a recent phenomenon. According to Smith:

> In our judicial history small cases were first entrusted to justices of the peace. This plan for a while gave simplicity and despatch, but when applied to cities it failed utterly. The justices, being subject to no supervision, and depending so much on their fees that J.P. came to mean "Judgment for the Plaintiff," formed unholy alliances with collection agencies, instalment houses, and the like, and very generally became actually corrupt. . . . In the cities, the justice of the peace was first supplanted by specially created magistrates who, as the cities continued to grow, became just as inefficient and even more corrupt.[181]

Indeed, Smith was not unmindful of the possibility that the newly emerging Small Claims Court would also be captured by the collection agencies. But he felt such undesirable tendencies could be controlled:

---

177 "As many as 97 claims were filed by a single plaintiff, although the average size of group claims appeared to be about 10-15." McClosky, Reinis & Pagter, *supra* note 175, at 15.

178 *Id.* at 27-28.

179 For a similar conclusion see, Comment, *Small Claims Courts as Collection Agencies*, 4 STAN. L. REV. 237, 241-42 (1952).

180 INSTITUTE OF JUDICIAL ADMINISTRATION, SMALL CLAIMS COURTS IN THE UNITED STATES 1-2 (Supp. 1959).

181 SMITH, JUSTICE AND THE POOR 42-43 (1919).

> The other objection [to the Small Claims Court] is that collection agencies will flood [these] courts with their business. Judge Levine of Cleveland answers this by saying that collection agencies were not deterred by the former procedure and costs. In fact, it played into their hands by giving them, in addition to the judgment, a large bill of costs with which they could further harass their debtors. The result of the small claims court is to save a debtor anywhere from two to ten dollars. If any undesirable tendency manifests itself, it can readily be controlled by requiring the original claimants, and not their assignees, to sign the statement of claim and to present the case to the judge in person.[182]

Why has the initial purpose of these tribunals been repeatedly thwarted? The answer lies in part in the erroneous assumption that the poor are barred from the use of the courts simply because of high costs and attorney fees. As will be suggested in Part III, there are a good many other factors that prevent the poor from making effective use of the legal system which include the lack of awareness of rights, the lack of confidence in the fairness or usefulness of the legal apparatus, and the lack of security and capacity to assert rights even when they are recognized. Furthermore, since the poor are least likely to be members of or active participants in organizations, they generally lack the organizational support that would otherwise promote their use of the court or put pressure on the court to remain true to its principles.

In sharp contrast to the unorganized character of potential lower-class users of the Small Claims Court are the many highly organized, strongly motivated, and clearly articulate business firms. For many years they have recognized the advantages to be gained from using these courts to facilitate the collection of debts, and that is precisely what they have done.

III. Causes of Inequality in Legal Representation

A. *Factors Involved in the Unequal Use of Lawyers*

Lack of economic resources is undeniably a factor limiting the use of lawyers. However, this represents only one element in a complex social process leading an individual to seek out and obtain legal representation. At least four steps are involved: (1) awareness or recognition of a problem as a legal problem, (2) willingness to take legal action for solution of the problem, (3) getting to a lawyer, and (4) actually hiring a lawyer.

---

[182] *Id.* at 54.

1. Awareness of a Problem as a Legal Problem

Certain situations or actions may objectively give rise to legal problems, but the individuals experiencing such events may not perceive them as generating problems of a legal nature. They may be ignorant of the rights at stake and unaware of the possibility of legal remedies. We suspect this is particularly true of lower-income persons. Precisely what their legal rights and remedies are as tenants, as recipients of welfare benefits, or as creditors, may not be known or clearly understood by those with limited formal education. For example, David Caplovitz has noted that in the consumer area lower-income families have little understanding of their legal rights or of how to exercise them:

> Many consumers have almost no idea of the complex set of legal conditions embodied in the contracts they sign. The penalties that can be brought to bear on them, such as the loss of possessions already paid for, the payment of interest on money owed, the payment of lawyer and court fees, are matters that some families become rudely aware of only when—for whatever reasons—they miss their payments.[183]

Awareness of rights may also be attenuated by the attitude of many welfare agencies and legal aid offices that the poor have "problems," not "grievances."

2. Willingness to Take Legal Action

Awareness of legal problems does not in itself result in seeking a lawyer's help. The person must be willing to take legal action, and this presumably means he accepts the appropriateness, efficacy, and fairness of legal solutions to his problems. The indications are that lower class individuals are much more reluctant to take any legal action even when they recognize they have a legal problem. Thus, in a study of persons who had been mildly injured in auto accidents in New York City, it was found that the lower the socioeconomic status of the injured person the less likely he was to take any action to recover: 27 per cent of the lower-class respondents did nothing, compared to only 2 per cent of the higher-class respondents.[184] Similarly, a study in Newark disclosed that close to 90 per cent of the Negroes interviewed who reported alleged acts of discrimination took no action at all in such cases.[185] When asked,

[183] CAPLOVITZ, THE POOR PAY MORE 155 (1963).

[184] Carlin, How Accident Victims Get to Lawyers: Summary of Findings 8 (1959) (mimeographed paper on file at Columbia University's Bureau of Applied Social Research). Based on interviews conducted in 1957 with 155 persons collected at random from official records. We recognize that part of the class difference noted above could be explained by a difference in awareness.

[185] Zeitz, Survey of Negro Attitudes to Law 25, in Blumrosen & Zeitz, Securing

"Who would you turn to if you ran into discrimination?" close to 40 per cent who answered the question said they didn't know or that they would do nothing.[186] The researcher concluded, "that there is an awareness, for a majority at least, of their problems is clear, but what is equally clear is the profound inertia gripping our sample."[187]

Two factors seem to be involved in the reluctance of lower-class individuals to take legal action: (1) prior contact or experience with the "law," resulting in alienation from the legal process, and (2) a general condition of dependency and insecurity leading to fear of reprisal if legal remedies were to be pursued.

Most contacts of lower-class individuals with the law are with police, probation and parole officers, inferior courts, and the like. As to the police, Zeitz concludes from his interviews with lower-class Negroes that "The police are seen, at least in their active roles, as antipathetic (at best) to the interests of the Negro. Mention of the police brought forth a deluge of complaints ranging from callousness and apathy through brutality and extortions."[188] Contact with courts appears to be equally alienating. Thus, a study of auto accident victims in New York City found that the more often respondents had come in contact with courts the less likely they were to take any action to recover for their injuries. And this was especially true of lower-class respondents.[189]

Many actions and decisions of the legal system with respect to the poor tend to degrade and stigmatize them. The following observations regarding the effect on the poor of the process of proving and maintaining eligibility before an administrative agency are clearly in point:

Equality: The Operation of the Laws of New Jersey Concerning Racial Discrimination (1964) (unpublished manuscript in Rutgers School of Law).

186 *Id.* at 26.

187 *Id.* at 25.

188 *Id.* at 28.

189 The relationship between prior court contact and taking some action (on their own or through a lawyer) to recover for losses arising out of the accident, for low and high socio-economic groups, is as follows:*

Per Cent Who Do Nothing** to Recover for Injuries

No. of Times in Court	Socio-economic Status	
	Low	High
2 or more	42(12)	15(13)
Once	24(17)	5(20)
Never	13(46)	4(47)

* Source: Carlin, How Accident Victims Get to Lawyers, *supra* note 184. Number in parenthesis indicates the number of respondents.

** *I.e.*, neither filed a claim themselves with an insurance company nor sought help from a lawyer.

> An applicant becomes eligible for assistance when he exhausts his money, gives a lien of his property to the welfare department, turns in the license plates of his car and takes legal action against his legally responsible relatives. When he is stripped of all material resources, when he "proves" his dependency, then and then only is he eligible. Welfare policies tend to cast the recipient in the role of the propertyless shiftless pauper. This implies he is incompetent and inadequate to meet the demands of competitive life. He is then regarded as if he had little or no feelings, aspirations or normal sensibilities. This process of proving and maintaining eligibility in combination with the literal adherence to regulations and procedures tends to produce a self-perpetuating system of dependency and dehumanization.[190]

Consequently, the law is frequently viewed by the poor person as something that works against his interest, as his enemy,[191] and as a device that can only be effectively employed through pull and connections. As Zeitz notes:

> Political and legal redress for wrongs is viewed as being part of a patronage system, rather than as a culturally approved part of a system of legal institutions. Thus, the Negro, seeking restitution or redress of wrongs, would prefer to deal on an individual level with a powerful patron, than to deal with the more formal . . . legal institutions.[192]

Insofar as the poor have contact with lawyers, it is mainly with prosecuting attorneys or lawyers representing collection agencies, landlords, etc. Furthermore, those who consult lawyers often come too late to get any effective help. They may also be treated with indifference (as part of a volume clientele) or with condescension (as in Legal Aid), and at worst they may be exploited. It is little wonder that many poor persons have a negative image of the law and of lawyers and hesitate to turn to them for help.

Alienation from the legal process is heightened by fear of reprisal from those interests against whom effective action would have to be taken—landlords, employers, local merchants, suppliers of public assistance, police—in short, all those in positions of power vis à vis the poor. The poor person is naturally reluctant to challenge these people.

3. Getting to the Lawyer

Awareness of legal problems and willingness to take legal ac-

190 *Report to the Moreland Commission on Welfare*, in FINDINGS OF THE STUDY OF THE PUBLIC ASSISTANCE PROGRAM AND OPERATIONS OF THE STATE OF NEW YORK 73 (Nov. 1962) (Greenleigh Associates, Inc.). The use of first names or the term "boy" in referring to Negroes in southern courts has a similar degrading effect. See Hamilton v. Alabama, 376 U.S. 650 (1964).

191 "The poor man looks upon the law as an enemy, not as a friend. For him the law is always taking something away." From Attorney General Robert F. Kennedy's Address on Law Day, May 1, 1964 at the University of Chicago Law School.

192 Zeitz, *supra* note 185, at 44.

tion are still not sufficient to put the person in the hands of a lawyer; he must also have access to a lawyer and believe it possible to obtain his services. Lower-class individuals have less access to lawyers; they are less likely, compared to the upper class, to be acquainted with or related to lawyers, and are less likely to know someone who can refer them to lawyers both comparatively and absolutely. A California survey, for example, found that less than 30 per cent of lower-income individuals have either a friend or relative who is a lawyer, compared to 75 per cent of upper-income individuals.[193] Caplovitz reports, moreover, that in answer to the question, "Where would you now go for help if you were being cheated by a merchant or salesman?" 64 per cent of the respondents replied that they didn't know, and of those who knew of some source of help, only 8 per cent mentioned a private lawyer.[194]

The poor are not only out of touch with private attorneys, but they lack knowledge of the availability of free or low cost legal services. An Iowa study, for example, shows that over 80 per cent of lower-class persons interviewed had no knowledge of where free or low cost legal services could be obtained.[195] And, as we have seen, the legal aid societies are generally not eager to advertise their services.

Lack of geographical proximity to a law office is a further impediment to use of lawyers by lower-class individuals. Private attorneys, and even Legal Aid lawyers, tend to be located in the business centers of the city, and this means that considerable time and expense may be involved merely in travelling to the lawyer's office. The extent to which this constitutes a real obstacle to employment of lawyers is suggested by the fact that over 40 per cent of lower-class individuals interviewed in the California study reported they would consult a lawyer more frequently if the law office were near their home.[196]

Apprehension over costs of legal service may also prevent a poor person from seeking a lawyer's help. There appears to be widespread ignorance as to how much lawyers charge,[197] and fear that, whatever the charge, it would be more than he could afford.[198]

---

193 Public Opinion Poll for the State Bar of California, *supra* p. 383.

194 CAPLOVITZ, *op. cit. supra* note 183, at 175.

195 Lay Opinion of Iowa Lawyers, *supra* p. 383, at 34.

196 Public Opinion Poll for the State Bar of California, *supra* p. 383.

197 Two out of three lower-class respondents in a Texas study did not know how much lawyers charge for giving advice, compared to half of upper class respondents. See p. 383 *supra*.

198 In the California study 55% of lower-class respondents said they would not consult a lawyer for simple advice because of the expense. Public Opinion Poll for the State Bar of California, *supra* p. 383.

4. Hiring a Lawyer

Assuming the potential client has actually contacted a lawyer, there is a final obstacle in the possible refusal of the lawyer to represent him. And here again, class seems to make a big difference. The indications are that lower-class persons are more likely to be screened out by lawyers. Thus, in a study of individual practitioners in Chicago it was found that most lawyers interviewed had turned away clients, and mainly for economic reasons.[199] Moreover, other reasons given for turning away clients (dislike of the client or of the case, lack of legal merit) possibly mask economic or class considerations. Dislike of the client (because he is "obnoxious," "mentally unbalanced," "drunk," of "low moral character," a "sponger," etc.) may reflect the cultural distance between the lower-class client and the middle-class lawyer. Dislike of the problem (*e.g.*, criminal, divorce) suggests that it is precisely those cases that are most distinctive of lower-class clients that are being rejected. These cases may not be accepted because they often involve lawyers in unethical practices or simply because they are brought by low-status clients. Lack of legal merit is indeed a legitimate reason for turning down a case. However, lawyers who reject clients on this basis may be unwilling (given the small fee) to put in the time and effort necessary to find a legal solution.

It would appear, then, that lawyers systematically exclude lower-class clients, and that this is based mainly on the following considerations: low expectation of financial gain, a desire to avoid a less prestigeful type of practice and clientele, and perhaps, also, conceptions of what merits consideration in the legal arena. Further, lawyers act as gatekeepers not only by selectively excluding cases and clients, but also by selectively soliciting clients. And here, too, with the exception of personal injury cases (handled primarily on a contingent fee basis), lawyers are unlikely to be looking for legal business from lower-class clients.[200]

At every step of the way, lower-class persons are handicapped by a lack of organizational support. The poor are characterized by a relatively low level of organizational participation; they belong to few if any voluntary organizations, and they are ordinarily not

---

199 These findings are based on further analysis of interview data from the study reported in CARLIN, LAWYERS ON THEIR OWN (1962).

200 To quote Wickenden: "You will have to admit that not many lawyers have been brought before bar associations for unethical behavior in aggressively seeking welfare cases!" Wickenden, The Legal Needs of the Poor from the Point of View of Public Welfare Policy 3 (paper presented at the Conference on the Extension of Legal Services to the Poor).

even members of unions.[201] As a result there are few organized groups to alert them to their legal rights, to encourage them to take legal action, or to provide them either with lawyers or with the resources for obtaining lawyers.

B. *Factors affecting class differences in quality and integrity of legal representation*

Class differences in the quality of legal service obtained and the integrity of lawyers providing the service are related to the system of stratification of the legal profession. As we have seen in Part I, individual practitioners and lawyers in smaller firms (particularly in the large metropolitan centers) are least competent, least likely to exercise a high level of technical skill, and least responsible. The question is: Why are lower-class persons almost exclusively represented by lower-status lawyers? The answer is that lower-class persons are least able to afford higher-status lawyers, and they generally have access only to those informal referral networks that are tied into lower-status lawyers.[202] Finally, the small fees and high-turnover clientele characteristic of lower-status lawyers lead not only to a low level of technical skill (because of the standardization of practices in handling a volume clientele), but also to a weakening of the lawyer's capacity to resist opportunities for exploiting clients.

IV. Conditions for Extending Adequate Legal Services to the Poor

What are the conditions for providing effective legal services to the poor? Any list would certainly have to include the following: (1) subsidization of legal services, (2) accessibility of services, (3) organizational support to promote the use of lawyers, (4) appropriateness of the services provided, (5) autonomy and independence of the suppliers of services, and (6) provision of services as a matter of right.

A. *Subsidy*

It should be quite obvious that lower-income groups simply cannot afford the range and type of legal service that is required for effective solution of their legal problems. Existing expenditures for legal aid to the poor are patently insufficient. Well over two billion

---

201 See authorities cited note 222 *infra*; see also Harrington, The Other America 18, 26-27 (1964).

202 Carlin, *op. cit. supra* note 199, at ch. 3.

dollars a year are spent on private legal services in the United States,[203] but less than eight million goes to Legal Aid (both for civil and criminal cases).[204] A much greater outlay is necessary, and we suspect it will have to come from the government. The legal profession may not necessarily be opposed to government subsidy. Thus, 65 per cent of the lawyers interviewed in New York City agreed with the statement that: "There should be a tax-supported program to provide free or low-cost legal service to needy individuals in criminal and civil cases": only 4 per cent strongly disagreed. Support for such a program, moreover, was found in all levels of the Bar, including lawyers in the large firms (59 per cent of whom said they would approve such a program).[205]

B. *Accessibility*

It is essential that those providing legal services take the initiative in "going to the people." As Zeitz points out:

> Lower-class people cannot be aided by middle-class devices. Rather than giving aid, we find that institutions which sit back and wait for the needy to take the first step only widen the distance that separates them, and [unintendedly] exacerbate the conditions. It is necessary for the [Civil Rights] Division to seek out the needy and to offer their help concretely. We adhere to the position that the Negro who simply is aware of this problem has taken the first step, and that it is now the responsibility of the community, with its multitude of resources, to come to him.[206]

An obvious requirement is geographical proximity; legal services must be situated in a place that is as close as possible to those needing it. This is a crucial ingredient, of course, of the neighborhood law office proposals. Thus the Cahns point out: "Because the ready availability of legal services is a prerequisite to their increased use, it would seem desirable that the proposed firm maintain several offices scattered throughout the target neighborhood."[207] They go on to suggest that: "Suitable locations would be: in (or in proximity to) the public housing project, the junior high or high school, the shopping center, the police precinct station, the welfare office, or the well-baby clinic."[208]

Social proximity is as important as geographical. Provision

[208] *Id.* at 1350 n.46.

of legal services must be tied into informal referral networks; there have to be social links between lawyers and potential clients, and informal social support (from friends and others) for using lawyers.

C. *Organizational Support to Promote the Use of Lawyers*

As we suggested earlier, organizational support could play a crucial role at every stage of the process by which potential clients are led to lawyers. This kind of support may help develop in the poor a sense of security that is perhaps a basic condition for asserting claims of right.

Middle-class persons are more likely to belong to organizations that can inform them of their legal rights, act as watchdogs of agencies, provide resources for seeking legal help, and even initiate legal action on their members' behalf. Labor unions often serve these purposes, but the poor are frequently unemployed or in occupations that are non-unionized. It may be necessary, therefore, to create new types of organizations for the poor. As has been suggested, these may take the form of "an association of tenants, of recipients of welfare, of consumers whose purchases are bought through certain finance companies. It may even include the incorporation of a block, neighborhood, or community."[209]

D. *Appropriateness of Service*

It is crucial that the legal problems of the poor be dealt with at an institutional level. This would include: (1) bringing about changes in the routine practices of landlords, finance companies, and local merchants, that tend to weaken or violate existing legal rights, and (2) reforming administrative regulations and official procedures (within welfare agencies, certain courts, police departments) that are inconsistent with or violate standards of due process. These changes can be effected in a variety of ways: on an individual case-by-case basis ("the assertion of a right in even a single case may have community-wide ramifications"),[210] by representation of group or class interests (organization of a rent strike on behalf of tenants), and by lobbying in the applicable administrative agencies and legislative committees. All this suggests, as we have already indicated, that lawyers serving the poor must be capable of exercising as high a level of technical skill and ingenuity as lawyers serving the wealthy individual or large corporation. It also suggests that these lawyers will have to engage in what might be termed

---

[209] Cahn & Cahn, *supra* note 207, at 1339.
[210] *Id.* at 1338.

selective or strategic advocacy.[211] This in turn may raise new problems with respect to the lawyers' commitment to particular clients and their individual interests: thus, it has been noted that "taking a case because of its highly 'symbolic character' could easily result in sacrificing an individual client to a 'greater cause.' "[212]

E. *Independence*

The earlier discussion of Legal Aid agencies underlines the importance of maintaining the autonomy of the groups providing legal services to the poor. It would appear to be essential, therefore, to avoid excessive involvement with or dependence upon those groups that will necessarily be threatened by effective legal representation of the poor. This would seem to rule out financial support from local merchants or the local bar. The difficulties involved in finding a formula to assure autonomy should not be minimized.

F. *Legal Representation as a Right*

One of the principal drawbacks of the Legal Aid system is its welfare orientation. This tends to undermine the very awareness of rights and capacity for asserting rights that is so crucial for overcoming apathy and promoting full participation in the legal order. It also seems to discourage a legal approach to problems. If we are to encourage the dignity and full enfranchisement of the poor, legal services must be provided them as a matter of right.

V. New Forms of Legal Representation

The various efforts over the past fifty years to eliminate class differences in legal representation have largely failed: denial of justice to the poor is a fact today as it was in 1919. The institutions that have been developed to provide legal services for the poor have been unable to reach them in any significant number, and often those who have been reached have not received significant help. Indeed, certain institutions, such as Legal Aid, may even have worked against the interests of the poor by undermining their capacity for asserting legal rights. What are the prospects for the future? There are two developing forms of legal representation that hold some promise for extending legal services. Let us now consider each briefly.

A. *Group Legal Service*

By group legal service (or group legal practice) we mean the

---

211 See *id.* at 1336, 1347-48; see also p. 437 *infra.*

212 Cahn & Cahn, *supra* note 207, at 1348.

various types of arrangements through which organized groups provide their members, in their individual capacities, with access to legal representation.[213] We are not referring to legal representation for the organization per se, although we recognize that there often is no clear boundary line between the legal interests of individuals and those of their organization.[214] The organized groups may be trade unions, professional associations, corporations, or groups specifically formed to provide pre-paid legal services to their members.[215] The lawyer may be employed on a full-time basis (as "house counsel"), may be engaged on a retainer,[216] or simply be recommended by the organization.

Group legal practice is not a new institution. For many years, corporations, unions and other organizations have used their formal and informal ties with attorneys to help solve the legal problems of their members, officials, or employees. Because certain arrangements have violated or have appeared to violate the Bar's Canons of Professional Ethics with respect to solicitation and the use of intermediaries, group practice has had an unethical or quasi-ethical status, and the lawyer-organization arrangement has often been subrosa.

With its decision in *BRT v. Virginia*, the Supreme Court has given legitimate status to group practice: "By finding that the Brotherhood's plan and activities are protected by the First Amendment, the Court has given such activities and plans the broadest possible protection against infringement or limitation by the Bar or the courts."[217]

This newly acquired legitimacy should increase the use of group practice. The question that concerns us is whether these arrangements can help the *poor* obtain effective legal representation. But before we reach that question, it is helpful to identify the general advantages which flow from group practice.

(1) It can increase the recognition of problems as legal problems.[218] Because they have an organizational base, lawyers who en-

---

[213] This definition is adapted from that suggested by the California Committee on Group Legal Services. *Group Legal Services*, 39 CAL. S.B.J. 639, 661 (1964) [hereinafter cited as *Progress Report*].

[214] For example, where the legal problems are of "common interest" to all members of the organization (*e.g.*, employment contract problems, industrial accident problems).

[215] *Progress Report* 640-41, 661.

[216] In the case of trade unions, the organization's arrangement with the lawyer may actually be established in a collective bargaining contract and be financed through employer contributions. *Id.* at 641.

[217] *Id.* at 696.

[218] *Id.* at 662.

gage in group practice have a ready-made structure for educating their potential clients as to their legal rights.[219]

(2) It can counter the reluctance to seek legal representation. When an organization provides its members with counsel, it certifies the lawyer's integrity, and it sanctions and encourages the assertion of rights. It may even instill in the members a sense of duty to protect their rights, especially where the legal problem has group relevance. Through group practice, common legal problems (such as employment problems) can often be handled as a unit, reducing the likelihood of reprisals against any one individual. Moreover, with the organization behind him, the individual is more likely to feel secure in asserting his rights.

(3) It can increase the accessibility of lawyers, both by reducing the cost of legal services (for example, through an insurance principle that spreads the risk)[220] and by opening channels to lawyers. The group may advertise the lawyer's availability and specialty;[221] or officials may simply recommend the lawyer when a member comes to them with a problem.

(4) It can increase the appropriateness of legal service. Through its lawyer, the organization can exert pressure to discourage certain informal practices and official procedures that adversely affect the rights of its members.

These are some of the ways in which group practice could increase the use and effectiveness of legal representation. But whether it will help meet the legal needs of the *poor* depends primarily on whether the poor are organized into groups which have or might have arrangements with lawyers. The indications are that persons of low income are the least likely to be members of organizations.[222] Moreover, within those organizations that provide legal service for their members, the poor may be least likely to avail

---

219 They can educate directly by speaking at meetings, or they can work through officials of the organization. For example, certain trade unions have orientation sessions for shop stewards to apprise them of the members' rights to industrial accident benefits and unemployment insurance.

220 *Progress Report* 664.

221 For example, by announcements at meetings, by articles in the organization's official journal.

222 See BROOM & SELZNICK, SOCIOLOGY: A TEXT WITH ADAPTED READINGS 189 (1955); KAHL, THE AMERICAN CLASS STRUCTURE 147 (1957); Knupfer, *Portrait of the Underdog*, in BENDIX & LIPSET, CLASS, STATUS AND POWER 256-57 (1953). CAPLOVITZ, *op. cit. supra* note 183, at 133 where he reports: "For the sample as a whole, and within each racial group, the more solvent families more often belong to voluntary associations. This is particularly true of Negro families."

themselves of representation. It cannot be assumed that all members of the organization will have equal access to the attorney. Furthermore, the cost of representation may still be a barrier to use. Legal problems having organizational relevance may be handled at a reduced rate, but this may not be true of other problems. Finally, since the group-practice lawyer is dependent upon the organization for referrals, he may be reluctant to take cases that conflict with the interests of the organization (*e.g.*, a member's claim against his union). This latter point, of course, does not only affect the poor.

B. *Neighborhood Law Office*

Unlike group legal practice, the newly proposed neighborhood law office is specifically designed to bring needed legal services to the poor.[223] Some version of a neighborhood law office has appeared in the last few years in New Haven,[224] Boston,[225] and New York.[226] All these law offices are connected with a coordinated community service program.[227] In New Haven and Boston, lawyers are assigned to multi-service centers as members of a "social-legal" team. The Legal Services Unit of Mobilization for Youth in New York appears to be more of an independent law office. All three programs deal with the social and legal aspects of the clients' problems and stress the importance of mutual referrals between lawyers and social service caseworkers.[228] Close contact with local law schools is encouraged for the purpose of recruitment of personnel, legal research, or for lending an air of legitimacy to the program.[229]

Because lawyers are placed within the slum community and because of their close ties with the social worker, the neighborhood law office plan has the potentiality of reaching the poor. Its success in doing so rests in part on the caseworker's sensitivity to legal

---

[223] Neighborhood law offices have been in existence in Philadelphia for a number of years. These were designed, however, to provide services to middle income persons on a modest fee basis: persons unable to pay a fee are referred to the local legal aid society. [229] See Grosser, *supra* note 226, at 2.

problems. For this reason some attempt is made to acquaint caseworkers with the legal rights of their clients.[230]

The Legal Services Unit in New York appears to have gone further than the others in stressing the importance of advocacy (particularly before administrative tribunals) as an instrument of social change.[231] The New York group also feels this type of representation will "do most to familiarize local residents with the fact that the law could be their champion as well as their enemy."[232]

We see three major problems with the neighborhood law office program: First, the more independent and aggressive the neighborhood office, and the more it is dedicated to bringing about institutional changes (in welfare agencies, police departments, landlord practices, etc.) the more likely it is to alienate those very interests upon which it must depend for financial support.[233] Second, the more the neighborhood lawyer becomes integrated with other staff persons in the multi-service center, the greater the risk of his succumbing to the "social welfare ideology" and becoming less committed to seeking legal solutions. Third, there is the problem of staffing the neighborhood law office with competent, dedicated lawyers, particularly after the initial enthusiasm for this program begins to wane. Practice in the larger firms still represents the most lucrative and prestigeful career for the bright young law graduate. It is doubtful to what extent the neighborhood law office will be able to compete for these fledgling lawyers.

* * * * *

This inquiry into class differences in legal representation reveals the urgent need for an advocacy explosion. This does not mean that every poor person has to have a trained lawyer at his side. It does mean, however, that every person should have the right to some form of legal representation. This may include the following:

(1) Class advocacy—representation of the poor with respect to their common or collective interests, *e.g.*, through the establishment of "house counsel" for groups of tenants, recipients of welfare benefits, consumers.

---

230 See Wells, *supra* note 225, at 6.

231 See Grosser, *supra* note 226, at 3.

232 *Id.* at 4.

233 With respect to difficulties encountered in New Haven see Cahn & Cahn, *supra* note 207, at 1348; Parker, *supra* note 224, at 6. Problems in New York City are discussed in Kempton, *When You Mobilize the Poor*, The New Republic, vol. 151, no. 23, Dec. 5, 1964, pp. 11-13.

(2) Selective (or strategic) advocacy—challenging certain established practices, procedures, and regulations (of police departments, welfare agencies, special tribunals, finance companies, landlords) that adversely affect the rights of large numbers of poor persons.

(3) Lay advocacy—use of social workers, clergymen, union officials, and others having continuous relations with the poor, to assert the legal rights of their clients or constituents. Thus, union officials may (and often do) represent their members not only with employers, but before employment agencies, social security agencies, and the like, and social workers may (and do) act as intermediaries with landlords, police, and others. The effectiveness of the lay advocate will be enhanced by increasing his sensitivity to the legal problems of the poor, and by the unequivocal establishment of the poor man's right to legal representation. The latter may provide the same leverage (through the threat of legal action) that is now enjoyed by local merchants when they threaten garnishment proceedings.

(4) Organizational advocates—use of such groups as consumer councils, defense organizations (like the NAACP and CORE), or possibly of specially created agencies like the Scandinavian Ombudsman,[234] can aid in controlling administrative discretion and promoting new legislation.

Finally, we want to make it clear that we are not suggesting that legal representation is the panacea for poverty, but, rather, that lawyers may have a special role to play in alleviating poverty. First, they can promote the dignity of the poor by strengthening their self-assertiveness, their capacity for criticism and dissent, and their ability to affect the basic conditions of their existence. Second, lawyers are essential to further the enfranchisement of the poor, not only by facilitating their participation in the legal and governmental process, but by promoting more effective low-income constituencies for administrative as well as legislative bodies. And this may be a step in bringing about a more equitable distribution of power in our society.

CRISIS

COMMUNITY CRISIS INTERVENTION: A CALL FOR STUDY AND ACTION

This is the first issue of a newsletter designed to provide a medium for exchange of ideas, strategies and accomplishments among individuals and groups who are working in various capacities to achieve social change. The intended audience is diverse: community groups, governmental agencies, research projects, community leaders, community organizers, professional advocate planners, mediators, educators and interested citizens.

COMMUNITY CRISIS INTERVENTION PROJECT

The newsletter is published by the Community Crisis Intervention project (CCI), Laboratory of Community Psychiatry, Department of Psychiatry, Harvard Medical School, under the direction of James H. Laue, an urban sociologist and former official of the Community Relations Service, a federal community intervention agency. The project has been operating informally since mid-1969 and formally through a Ford Foundation grant since October 1970, with a two-year duration in mind. The CCI project combines research, evaluation, action and education in attempting to answer the following central question:

Is there a definable discipline of community crisis intervention, with a discoverable body of techniques which can be systematized, taught, applied, evaluated and refined to help communities achieve positive social change through resolution of the crisis?

A CALL FOR MATERIALS AND NAMES FOR CCI

Readers are encouraged to be in touch with the CCI Project about their activities, and to send materials for inclusion in **CRISIS AND CHANGE**, especially:

— Case studies (which may be abstracted in this newsletter—see p. 2).

— Items for **AT ISSUE**—(p. 3).

— Published and unpublished materials on both theory and practice of intervention.

Suggestions of persons, projects, community organizations and agencies who should be on the CCI mailing list also are invited.

THE PROBLEM AND THE NEED

Crises are becoming commonplace in the neighborhoods, institutions and communities of American society as we seem unable to deal with the problems that generate crises — racism, urban decay, economic insecurity, etc. Many public officials, executives, consultants and others have been responding to crises in a hit-or-miss fashion, with little long-term, systematic assessment of their goals and techniques. Good intentions aside, their intervention often results in mere cooling of symptoms or coopting of protest. What is most desperately needed, in the view of this project, is a body of knowledge to help intervenors act in a way that will address underlying problems and achieve basic social change—an equitable distribution of power and resources, and democratization of decision-making processes.

GOALS OF INTERVENTION

The CCI Project staff believes that the development and practice of community crisis intervention must take place within a context of **specific change goals for the outcome of the crisis.** Many projects and agencies in this field study or practice the processes of conflict and its resolution with no specific goals for the resolution or, in our judgment, the wrong goals. Too many intervenors claim to be working in a value-free context as "simply technicians", not realizing or not caring that their inputs (often geared to the requirements of status quo institutions) do work toward particular ends for the various parties. A major commitment of the CCI Project is helping intervenors, researchers and trainers become more specific about their ultimate goals for intervention—and therefore more aware of their goals and impact. The project attempts to point always beyond settlement of a crisis per se to a consideration of needed redistribution of power in the systems involved.

A CASE STUDY ON HEALTH CARE SERVICES IN CRISIS: WHAT IS COMMUNITY CONTROL ?

During the past few years, low-income communities around the nation have begun to challenge both the right and ability of medical institutions to design health care programs and facilities in their neighborhoods. Community inroads into the planning process have varied from outright control over the planning and operation of health services to minimal representation on planning committees or advisory boards.

The case study abstract presented below describes an attempt by a community group in Boston to achieve control of a health care program that was offered to the community by a major medical institution.

In April 1969, the Harvard Community Health Plan (HCHP), a prepaid comprehensive medical program, organized a series of meetings for residents of the Mission Hill-Parker Hill area in Boston, (a physically deteriorating, ethnically mixed section of the city—population, 12,500). The meetings were convened to discuss HCHP's proposal for including the area in their health plan and to facilitate additional input from members of the community in designing a community-based center to be funded by the Public Health Service (PHS).

By late summer, a nucleus of about 10 community residents decided to form a permanent committee of their own, the Mission Hill-Parker Hill Health Advisory Committee (HAC). HAC members intended to further communicate with HCHP about the health program and to translate their ideas for an Outreach Center into definite shape.

CRISIS AND CHANGE

A quarterly newsletter published with support from the Ford Foundation by the Community Crisis Intervention Project, Laboratory of Community Psychiatry, Department of Psychiatry, Harvard Medical School, 58 Fenwood Road, Boston, Massachusetts 02115.

Entered as third-class matter at Roxbury Crossing Station.

Project Director and Editor: James H. Laue.
Associate Editor: Alana Cohen.
Associate Editor: William Lee.
Editorial Assistant: Heidi Mann

Productive negotiations proceeded slowly throughout the fall. From the beginning, HCHP indicated that the Outreach Center would play a minimal part in the delivery of health care—mainly to interpret services available to community Plan members and to transport patients to the main health center. HAC, however, envisioned a satellite center, not a storefront center, with full scale medical and social services. HAC members were frustrated by the attitude of HCHP's chief liaison staff member who questioned the legitimacy of their recommendations and who appeared to want the community committee to rubber stamp the Plan's plans.

In January 1970, H C H P informed HAC that the Plan's PHS grant renewal application was due February 1 and that HCHP would like to consult the Committee before writing the renewal forms. Several members of HAC decided that they had to confront HCHP at this time and refuse to settle for a "consultative" role if community participation in health planning or an even more potent goal—community control of the Outreach Center—were to be assured.

The HAC chairman contacted several advisers to help plan a strategy for securing HAC demands. Two professional health advocates, a community legal aid lawyer and a researcher-activist (the CCI staff member) agreed to work with HAC members.

Several crucial events followed: (1) HAC leaders, at the suggestion of the HAC advisers, decided to make formal demands for the inclusion of medical services and for community control of both the Center staff and programs. The demands were formulated in a Memorandum of Agreement to be attached to the PHS grant application. The Plan needed the PHS funds which would be received for enrolling Mission Hill-Parker Hill residents. HAC advisors suggested that community residents appeal to the PHS if strong community participation were not allowed in planning and running the Outreach Center. The ever-present possibility of such an appeal, questioning HCHP's compliance with PHS requirements for consumer participation, was a strong sanction for the community committee in negotiations with the Plan.

(2) Committee leaders presented the Memorandum at a monthly full-membership meeting to press for its approval. HAC advisors agreed that inaction at this point would severly undercut community influence. A negotiating team was chosen to present the Memorandum to HCHP.

(3) After long, tough, negotiating sessions, HCHP and HAC agreed on a compromise agreement: limited medical services in the Outreach Center, community control of staff and programs and $5000 in PHS funds for HAC.

OUTLINE FOR CASE STUDIES IN CCI AVAILABLE . . .

The Community Crisis Intervention Project has developed a long and short form of an outline for analyzing intervention activities. Both focus on evaluating the role and impact of intervenors in achieving basic change from crisis situations. Write for copies.

Although, in accordance with the Memorandum, mechanisms for instituting community control of staff and programs have been established, the amount of actual power won by the community is as yet unclear. Racial tension and distrust have hurt the effectiveness of HAC to date. The future cohesiveness of Committee members will determine how control is implemented—whether HAC will initiate programs in the Outreach Center or whether it will merely approve or veto HCHP proposals. An aggressive Committee will firmly establish lines of responsibility between Outreach Center staff and itself; an unaggressive Committee will concede this role to HCHP. Unless HAC members can function independently of HCHP and develop a strong power base, they will be unable to press for additional powers in operating the Center — (1) control of the

AT ISSUE . . .

A Round-up of Current Intervention . . . Research . . . Training . . . Activism . . . . Advocacy . . . Crisis-Produced Change and Crisis Events Past, Present and Future.

In each issue of CRISIS & CHANGE a page will be devoted to current activities related to community crisis intervention, including:

— Crisis events which have some bearing on the development of CCI as a discipline.

— Notices of grass roots activities, national conferences, agency programs, etc.

— Word of research and training (in game theory applications to intervention and in community-police relations, for example).

— The work of professional advocates, change-agents and mediators.

— Important instances of positive social change resulting from crisis situations, with an emphasis on intervention and resolution strategies that contributed to change.

Readers are invited to submit materials for inclusion in this section.

SELMA REVISITED — "To anyone who was here in the spring of 1965 . . . Selma today is hardly recognizable. Police cars cruise down Broad Street manned by black officers, the schools, restaurants and motels are fully integrated, the ministers are meeting in interracial gatherings, the old dirt roads in the black sections are being paved, the dismal wooden shacks are giving way to new housing developments and more than 12,000 blacks are registered voters. Most significant of all, there is clearly a new sense of cooperation and communication between black and white."

This is the assessment of the situation in Selma, Alabama, today by Haynes Johnson of the Washington Post, who covered the intensive voter registration activities and March to Montgomery in 1965. The campaign, which involved sustained and high-risk activism by thousands of blacks living in the Selma-Dallas County area, was sparked by the work of the Student Nonviolent Coordinating Committee and the late Dr. Martin Luther King's Southern Christian Leadership Conference. From a CCI perspective, the most significant impact, not cited in Johnson's analysis, is the registration of more than 1.5 million new black voters throughout the South under the Voting Rights Act of 1965—whose introduction and passage were a direct result of the Selma crisis and national television coverage of some especially brutal responses by Dallas County and Alabama officials to registration attempts and demonstrations.

THE MEDIATORS — A number of persons, projects and agencies throughout the country are practicing and studying the application of negotiation, collective bargaining and mediation to disputes outside the labor-management area — notably in racial, community and university crises. Several important activities in this field are noted below.

— The Center for Teaching and Research in Disputes Settlement, Law School, University of Wisconsin (Nathan Feinsinger).

— The National Center for Dispute Settlement of the American Arbitration Association in Washington, funded by the Ford Foundation (Willoughby Abner).

— The Racial Negotiations Project, Institute of Labor and Industrial Relations, University of Michigan and Wayne State University, funded by the Ford Foundation (W. Ellison Chalmers).

— The Board of Mediation for Community Disputes (Ronald Haughton) and the Center for Mediation and Conflict Resolution (George Nicolau), funded by the Ford Foundation at Automation House in New York.

More about these and other approaches in a future Special Issue on mediation and negotiation approaches to community crisis intervention.

NATIONAL LETTUCE BOYCOTT — The United Farm Workers Organizing Committee (AFL-CIO), headed by Cesar Chavez, is involved in another sustained national boycott after winning unionization for Chicano grape workers. The campaign against non-union lettuce-growers and non-representative unions has followed the same pattern successfully applied in the grape strike.

A month's moratorium on the boycott ended April 26. It was part of a program to work out a permanent settlement between UFWOC and lettuce growers.

SELF DETERMINATION: RED, BROWN, BLACK — This was the theme of the 24th annual National Conference for Human Rights Workers, which drew 300 persons to Tulsa last October. It was sponsored by the National Association of Human Rights Workers (formerly NAIRO—the National Association of Intergroup Relations Officials). The theme and program directed the attention of the field to helping minority groups build power for self determination in contrast to the more typical professional roles as liaison between minority and dominant groups. A series of workshops entitled "Professionals and Social Change" focused the participants (minority leaders as well as human rights professionals) on the intervention activities and impact of professionals. The crucial questions were and are: Which side are you on? Does being professional mean you must always be "neutral"? Is your major goal social change or conflict resolution?

Speakers and resource leaders included Miss Jessica Govea, coordinator of the UFWOC's lettuce boycott; Mrs. Stella Leach of the National Indian Women's Action Corps, a leader in the Indian reclamation of Alcatraz; Rev. Charles Koen of the Black United Front in Cairo, Illinois; W. Haywood Burns, Director of the National Conference of Black Lawyers; Armando Mendoza, founder and first President of Mexican American Self Help at McNeil Island Federal Prison in Washington State; and Jack Agueros, Director of Mobilization for Youth in New York City.

More information on the National Association of Human Rights Workers: from their office in Washington (2027 Massachusetts Avenue, N.W. 20036, Alexander Paxson, Director). More information on the intervention cases prepared for the workshops: from the CCI Project office, which coordinated the conference program.

AHEAD IN "AT ISSUE . . ." — More on crisis intervention as it applies to law enforcement. Federal, state and local efforts in crisis and conflict resolution. Drug programs—for a problem which has been of crisis proportions among some relatively powerless groups for many years, and is now becoming publicly recognized as a "crisis" because of its intrusion into the dominant middle class society. Student rights and student unrest. Laboratory experiments in crisis and intervention.

Change is power to the people.
Change is more power to the people.
Change is more power to the people who already have it.
Change is
Diffusion of power.
Equalization of resources.
Greater self-determination.
Violence is an agent of **Change.**
Conflict is a **Change**-agent.
All conflict results from **Change.**
Change need not result in conflict.
All **Change** results from conflict.
Black **Power,** Brown **Power,** Red **Power,** Woman **Power.**
Power: who gets what, when, how?
Power is control over decisions—and lives.
Power makes might right.
The consequences of **Change** will almost certainly be tension-producing as well as possibly tension-reducing.
¡ Todo el Poder al Pueblo!

FREDERICK DOUGLASS ON CRISIS AND CHANGE (1863)

Those who profess to favor freedom, and yet deprecate agitation are men who want crops without ploughing up the ground. They want the rain without thunder and lightning. They want the ocean without the awful roar of its many waters. . . Power concedes nothing without a demand. It never did and never will. . . Men may not get all they pay for in this world; but they must certainly pay for all they get.

Intervention stimulates democratic decision making.
Intervention is counter-revolutionary.
The **Intervenor** chooses either to enable people to make choices or to assert his own choices.
Individuals and institutions are more suggestible during **Crisis.**
A mobilization of new resources occurs in personalities and the social system in **Crisis.**
Crisis represents both danger and opportunity—but always a turning point.
Crisis means the establishment group can no longer ignore the sanctions of the subordinate group.
The **Crisis Intervenor** is an information broker.
The **Crisis Intervenor** promotes change.
The **Crisis Intervenor** helps parties keep options open.
The **Crisis Intervenor** helps parties define goals and strategies.

(CCI: continued from page 1)

ROLE OF NON-PROFESSIONALS

The role of non-professionals in community crisis intervention is a crucial concern. Is intervention the sole property of trained professionals? Can the activities of unpaid community organizers and grass roots leaders be called "intervention"? Community intervention is now being practiced consciously almost exclusively by professionals with limited change goals, who often prepare community people to be willing recipients of aid rather than provide them with the impetus and skills to mobilize their own resources. Unless community crisis intervention can become legitimated as an appropriate activity for non-professionals, it too may go the way of other change techniques—coopted, domesticated and defused by establishment institutions.

CCI: AHEAD

Whether a systematic, change-oriented discipline of CCI can be achieved depends largely on the development of a network of communication among intervenors throughout the country—non-professionals as well as professionals with a variety of backgrounds and training. CRISIS AND CHANGE is intended to serve as a starting point for that network.

(Case Study: continued from page 2)

budget and (2) an all-community governing structure rather than the mixed HAC/HCHP structure (with a 4-to-3 community majority) that now exists.

HAC secured limited-referral-emergency-type care in the Outreach Center rather than full medical services. Although the community did not win complete say in designing HCHP's Community health care component, the Plan did concede some of the control it had intended to exercise and recognized more fully the right and expertise of the community to plan its health care services.

Report From A National Workshop on Community Crisis Intervention.

ADDRESS CORRECTION REQUESTED

CRISIS

[apparently words "AND CHANGE" did not photocopy visibly.]

Report from the National Workshop On Community Crisis Intervention

On April 21-23, 51 persons gathered in Cambridge to explore the possibilities for pooling their knowledge and experiences in affecting social change. They were black, brown, and white community activists; advocates-for-change from government agencies, religious bodies, human rights organizations and educational institutions; professional mediators; and researchers and evaluators working in community crisis and change.

The participants were convened by the Community Crisis Intervention Project to help develop an overview of the field of intervention and to institute a critical evaluation of the diverse kinds of activities currently underway.

The overriding concern of the CCI Project in sponsoring the workshop was that accumulated knowledge and techniques in community crisis intervention should benefit grass roots, minority and otherwise powerless groups seeking self-determination.

This issue of *Crisis and Change* reports on a National Workshop on Community Crisis Intervention sponsored by the Community Crisis Intervention Project April 21-23, 1971, at the Sheraton-Commander Hotel in Cambridge, Massachusetts. The complete 100-page report of the Workshop is available free of charge from the Project. It includes intervention theory and techniques which emerged from the Workshop, a strategy training device and the report of its play at the Workshop, and a list of invitees and participants. Address:

Community Crisis Intervention Project
Social Science Institute
Washington University
St. Louis, Mo. 63130

The Project moved to Washington University from Harvard Medical School on September 1 when its director, James Laue, assumed the position on Vice Chancellor for Campus Affairs at the University.

Case studies, materials on intervention and crisis theory, and information on the activities of *Crisis and Change* readers are welcomed by the Project.

Workshop Program

Wednesday, April 21, 1971 — Evening Session

1. Introduction and Plan for the Conference
2. Two Crises

Local: Dispute over expansion of Harvard Medical School and teaching hospitals in surrounding residential areas. Robert S. Parks, President, Roxbury Tenants of Harvard Association.

Regional/National: The continuing crisis for migrant workers in America, and the advent of unionization for farm workers. Marcos Munos, Northeast Regional Coordinator, United Farm Workers Organizing Committee, (AFL-CIO, Cesar Chavez, President).

Thursday, April 22, 1971 — Morning Session

Strategizing Sessions on Community Crisis Intervention: The Rainbow Park Land Dispute (a hypothetical crisis in which participants divided into groups of Activists, Advocates, Mediators, and Evaluators to develop intervention strategies for a dispute over usage of a tract of inner city land.

Afternoon Session

1. Strategy reports by Activists, Advocates, Mediators
2. Critique of Strategies by Evaluators and Participants

Friday, April 23, 1971 — Morning Session

Workshops on Intervention Problems and Techniques

1. Teaching Intervention Skills: Is It Possible?
2. Large Scale Disorders: Is There a Role for Crisis Intervenors?

Afternoon Session

Community Crisis Intervention: Where Do We Go from Here?

Development of Directions for CCI Project Staff and Workshop Participants in Developing a Crisis Intervention Network. *(Continued on page 2)*

Two Crises, Local and National

The opening session of the Workshop was focused on techniques and strategies developed by grass roots organizations for both creating and dealing with crises regarding their own situations. Two Workshop invitees, Robert Parks and Marcos Munos, talked about ongoing conflicts in which they were deeply involved.

Parks and members of the Roxbury Tenants of Harvard Association have been engaged in a land dispute with Harvard Medical School. This conflict is primarily local in scope.

Munos, as New England Regional Coordinator for the United Farm Workers Organizing Committee, has organized California regional farmers and mobilized economic and political pressure in New England against Southwest growers. This conflict has a state, regional and national focus.

Workshop participants, commenting on the presentations, noted that common outcome of the tenants' and migrant workers' response to crisis in their communities was the strengthening of individual and group esteem as well as power. When groups learn the political techniques of organizing, they build a more positive sense of personal worth; this new identity led in these instances to the further development of skills for dealing with establishment powers.

The Lettuce Crisis

Several participants had discovered non-union lettuce in the hotel kitchen, despite a specific demand by the Workshop staff to the contrary. After hearing Mr. Munos speak about the farm workers and the lettuce boycott, several participants opened a long debate to consider how the Workshop should respond to the hotel's actions. Participant response ranged from disbanding the Workshop in protest, to selecting a fact-finding committee to settle the problem with the hotel.

The immediate issue was resolved through discussions with the hotel owner, who had his produce distributor remove the non-union lettuce the next day, and secured a committment to deliver only union lettuce in the future. However, Munos believed that the lettuce crisis in itself had been a useful learning experience for the participants. Project staff observed that:

1. The heated debate demonstrated the difficulty encountered when change-agents with diverse background, experiences and orientations toward change try to work together.

2. Professionals and non-professionals have much to learn from each other. Throughout the debate, participants appealed to Munos for a solution to the crisis. Munos refused to propose any course of action, for he wanted participants to face a live crisis requiring hard committment.

Intervention Roles

What is an intervenor? Are there different types of intervenors? What kinds of things does an intervenor do?

These questions had to be considered by Workshop participants before they discussed either strategies for bringing about social change or methods for encouraging cooperation among intervenors. The answers that evolved from the Workshop are the result of both participant involvement in Workshop sessions and the previous research and action experience of the CCI Project staff.

1. What is an Intervenor?

An intervenor is an outside person or organization who enters into a community conflict or crisis to help the disputing parties resolve their dispute.

An intervenor is an outside agent who acts between parties in dispute to further communication and to ultimately bring about greater power for self-determination for the minority or powerless group.

An intervenor is an individual or group of individuals who intercedes in a crisis situation as a third party to prevent suppression of the crisis and to assist systems and actors in crisis to mobilize their resources for social change.

2. Are there different types of intervenors?

Four basic categories of intervenors were identified by the Project staff – Activists, Advocates, Mediators, and Evaluators. Each intervenor type was represented at the Workshop. The roles, source of acceptability or legitimation with the parties, strengths, limitations and goals of each type of intervenor were thoroughly examined by Workshop participants.

Activists are individuals with intervention skills who are members of protest, minority, non-establishment or "out" groups. Since their lives may be directly affected by the outcomes of community disputes and crises, activists are often participants in the dispute as well as third party intervenors. Activists work directly with the non-establishment party, and are legitimated with the community by their personal involvement in the outcome; the establishment party may recognize activists as legitimate spokesmen for the "out" group because of their acceptability with that group.

Advocates, while not members of the conflicting groups in a community crisis, nevertheless support the goals of at least one of the parties. Community organizers, management consultants, city planners and lawyers may play an advocate role. Advocates achieve legitimation with one or more of several routes: (1) recognition of their technical abilities; (2) approval of their attitudes or orientation to the issues; (3) acceptability to and knowledge of the inner workings of an opposing party.

Mediators are third parties who assist conflicting parties in reaching a mutually acceptable settlement of their differences. Mediators are technically neutral, but may possess values and commitments which influence their work as conflict-resolvers. A mediator's neutrality and professional demeanor are his primary sources of legitimation.

Evaluators are researchers, social scientists or policy analysts who study social conflict and crisis. They may be involved in a demonstration or action project. Although an evaluator should maintain his professional objectivity, a crisis or conflict situation may affect his assessment of a situation or of possible courses of action. His recommendations in turn may determine the policy of one or more of the parties. As in the case of the mediators, an evaluator gains legitimation with the parties because of his professional credentials and objectivity.

3. What kinds of things does an intervenor do?

organizing	negotiation
strategizing	arbitration
planning	mediation
consulting	communication

brings in outside resources
advocates position of one party to another
helps parties determine their goals
devises trade-offs
writes proposals
develops criteria for assessing the outcome of crises

This list of intervention skills is by no means complete. New roles for intervenors are continually emerging; furthermore, additional activities will arise as each specific crisis demands.

Rather than enumerating specific intervention skills *per se*, Workshop participants focused on criteria for evaluating strategies and explored the relationship of the intervenor to client groups. *(Continued on page 3)*

The Rainbow Park Strategizing Session

In designing the Workshop program, the CCI staff wanted to promote an exchange and comparison of strategies and techniques in the participants' approaches to crisis. Accordingly, a composite case study drawing on elements from numerous actual crisis situations was prepared for use in the Workshop. It was called *The Rainbow Park Land Dispute.*

In the case, Rainbow Park is a racially mixed. low income, physically deteriorating neighborhood of approximately 30,000 residents in a city of 500,000. Three-fourths of the Rainbow Park residents are non-white; approximately 35 percent of the entire city's population is non-white. Although living conditions and delivery of municipal services have kept the residents in states of personal and family crises for years, the city-at-large does not take in serious notice of the problems of the area until a dispute arises over disposition of a three-block tract of cleared land bordering on Rainbow Park, nearby John Upright University, and the central business district.

Protest demonstrations arise from Rainbow Park residents and students when the University is awarded the land for expansion. There is picketing at City Hall, a take-over of the administration building at the University, mass organization in the neighborhoods, and the threat of a suit by businessmen against the city because they want the land for a new mall. The case is brought to this point of crisis for the Workshop.

Participants were divided into groups representing the four intervenor roles – Activists, Advocates, Mediators and Evaluators – and were asked to devise strategies for tackling the dispute consistent with their role assignments.

Since a major goal was getting participants to explore their own value systems regarding suitable goals and outcomes of crises, the Evaluators were asked to try define "positive social change" outcomes, and to evaluate each set of strategies against these criteria. The staff expected that the discussion of strategies would raise ideological questions: Should the intervenor be neutral? Should he subvert the system that may be paying his salary? If so, how cam this best be accomplished?

Evaluative Criteria

The evaluator group was asked *first*, to establish criteria for assessing the feasibility of outcomes that might emerge from the dispute and *second*, to develop criteria for determining feasible intervention strategies. Some interesting concepts emerged from their deliberations.

Outcome Feasibility Criteria–

1. Each settlement or resolution of a crisis must include the following elements to be both realistic and successful:

   (a) Each party gains something; no one totally "loses".
   (b) Each saves face.
   (c) Shifts in power must occur in the direction of greater self-determination for the community.

2. Any agreement should have mechanisms built in to insure that the terms are carried out, and to provide ongoing communication to prevent or to deal with crises that may arise.

3. If possible, each party should satisfy its highest priority needs – both short and long term.

Strategy Feasibility Criteria–

In putting together an intervention strategy the following conditions should be considered:

1. Practicality

Is the strategy realistic in terms of the social climate, relative power of the parties and possible involvement of additional interests?

2. Cost

3. Resources available

Possible outside resources and skills should be considered, as well as the assets of the parties themselves.

4. Sequence and Timing

There are a variety of alternative sequences of ho trade-offs might occur. The timing of events can determine the responses of the parties and hence the final outcome.

The Intervenor-Client Relationship

In the Thursday afternoon plenary session, participants presented the strategies they had devised for Rainbow Park. A critiquing session followed. The discussion that ensued focused on the role of the professional Advocate and Mediator.

The *Advocates*, members of a consulting firm, had been hired by the University to protect its interests in the land and to stave off a black student revolt in support of minority community claims for the land site. The Advocates had decided to impose a number of requirements on the University that indicated their support of the minority community before accepting the job offered.

Workshop participants critiqued the Advocates for proposing the pre-conditions to the University, since this would severely limit their chances of being hired. They suggested that the Advocates first try to gain legitimation with the University as its advocate, and then try to get the University to cooperate and communicate with the minority community. By obtaining an "inside advocate" position, they could better serve the community whose goals they supported; they would have ready access to University strategy circles and leadership.

Participants questioned the ability of the Advocates to gain legitimation with community. As a partial solution to this dilemma, it was suggested that black students be brought into the policy control board of the advocate consulting firm, but not as "community liaison finks". By making them a part of the board, it would be the students' role to communicate with the community, not the role of the professionals.

The *Mediators*, members of a national community dispute settlement firm, were hired by the city to mediate among the various factions vying for the land parcel.

In describing their strategy, the Mediators insisted that they were impartial in the dispute. Other participants asserted that neutrality was impossible; their timing of decisions for meeting with the parties and preparations for setting up communication among the parties reflected value judgments. The Activists insisted that the community would reject the Mediators if they were impartial, and that the Mediators had to indicate their support for empowering the grass roots community. Therefore, the Mediators should not have a hidden agenda, but should be explicit to all the parties about their value system. Many non-Activist participants agreed.

The allegiance of the intervenor to one or several bases in a community dispute was an issue that permeated the Workshop program. Although participants by no means resolved the problem, a great deal of progress was made indefining the inter-relationship of the intervenor, his clients and other parties in dispute.

Techniques of Community Crisis Intervention

The Workshop program had offered a series of eight workshops on Techniques of Community Crisis Intervention for Thursday afternoon and Friday morning, in which participants would be encouraged to share their experiences, needs, programs and plans for work in specific areas of the field. Topics ranged from law, justice and repression to strategies for change in education.

After the Thursday afternoon workshops were cancelled so participants could continue strategizing the Rainbow Park case, two topics attracted large numbers on Friday morning – "Intervention in Large-Scale Disorders" and "Teaching Intervention Skills: Is It Possible?" Both sessions are described in detail in the full report of the Workshop, available from the Project office at Washington University. Because of the breadth of participants in the teaching session – and because of the long-range implications of training for the field of CCI – the discussion on "Teaching Intervention Skills" is summarized here.

Participants in this session included most of the professional mediators at the National Workshop as well as persons representing funding sources and grass roots community activist groups. They were concerned with how to transfer intervention skills to both professionals and community folk. They were first asked to identify some of the problems they had encountered in attempting to transfer intervention techniques, both through formal teaching methods and other approaches. They noted the following problem areas:

- teaching intuition
- screening potential intervenors for sensitivity
- defining intervention roles
- defining the discipline
- identifying intervention skills
- imparting a value system
- expanding a training system from a smaller select group to a total system
- imparting commitment to a method

A problem emphasized by all the participants was the difficulty in getting professionals and non-professionals to learn from each other.

After providing this framework for discussion, participants were asked to describe their own projects and training programs. Since many of these programs are new or are still in the planning stages, a number of questions were left unanswered.

Mediator Training Programs

– Can a mediator be neutral? If we say yes, then we must ask if the inclination to be neutral is part of the sensitivity for which we screen trainees and which we try to impart.

– Our goal is to train mediators of community disputes but we are satisfied if a trainee leaves knowing more about mediation, negotiation, etc. and therefore becomes a better community advocate or activist.

– In addition to training mediators, it may be more important to train parties in the dispute to understand what the mediation process is.

Police Training Intervention Programs

– How can we train policemen to be

(Continued on page 6)

Where Do We Go From Here:

THE FUTURE OF COMMUNITY CRISIS INTERVENTION AND TASKS AHEAD FOR THE CCI PROJECT

The final portion of the program was designed to synthesize the ideas generated by the Workshop and to chart a course for the future directions to be taken by the CCI Project, Workshop participants, and other in the intervention network.

Although time did not permit as complete an assessment as anticipated, a number of significant concepts and suggestions were advanced. Several are summarized below:

Expanding the CCI Network

Investigate opportunities for increasing minority participation and influence in the community crisis intervention network (especially in mediation/arbitration projects). Locate apprenticeship programs. Encourage others in the networks to expand minority involvement and to accept and make referrals.

Use Project contacts and Workshop participant contacts to acquaint more intervenors and community groups with the CCI discipline. Encourage a pooling of knowledge of crisis concepts and intervention techniques.

Intervention Roles

The brokering role of the intervenor is crucial in a community crisis, especially in conveying and legitimating black and brown needs to white power groups.

Transferring intervention skills to a community group over the period of a crisis will help develop self-sufficiency for successfully meeting new crises.

Non-professional Intervenors

Convene workshops for non-professionals, blacks and browns to share knowledge and skills re crisis intervention.

Convene workshops for professionals and non-professionals to facilitate a reciprocal sharing of experiences and to compare and develop intervention strategies.

Initiate new programs and broaden existing ones for transferring intervention skills to non-professionals.

CRISIS AND CHANGE

A quarterly newsletter published with support from the Ford Foundation by the Community Crisis Intervention Project, Social Science Institute, Washington University, St. Louis, Missouri 63130.

Entered as third-class matter at Roxbury Crossing Station.

Project Director and Editor: Alana Cohen.

Prime Investigator and Editorial Consultant: James Laue.

Alana Cohen of the CCI Project staff was coordinator of arrangements for the Workshop, and drafted this edition of *Crisis and Change* from the complete Workshop report. Project director James Laue chaired the Workshop. They were assisted in planning and implementing the program by staff members Bill Lee and Heidi Mann, and student intern Patti Schultz.

intervenors in other than a forceful way? Neutrality is a serious problem for us. Up until now the police have not been neutral; they have upheld the law for the benefit of the rich, politically powerful segments of society. Is it possible to teach neutrality?

– How can we transfer skills from a unity of seven persons well-versed in a conflict management orientation and techniques, to a department of 400? How do we develop techniques for transfering these conflict management skills?

– Conflict management is in danger of being coopted. Police need to change their role to become advocates of the people, instead of advocates of the status quo.

– There is an overabundance of training for middle class persons, but few changes for community folk to receive training.

– Community people should be taught how to get access to the system, how to use the system, how to achieve power, how to use negotiation for change and when not to use it because it may lead to cooptation.

In concluding, participants indicated that the lack of information available on transferring intervention skills is startling. CCI can become an important discipline for promoting positive social change only if intervenors from diverse backgrounds can develop metho s to quickly transfer their approaches and skills to large groups of professionals and community folk who share their concern for eliciting change from crises rather than cooling, cooptation or repression.

CRISIS

Intervenor Roles I
The Mediators*

The last issue of **Crisis and Change**,"A Report on the National Workshop on Community Crisis Intervention," commented briefly upon the roles that third party intervenors can play in a conflict situation. These roles are **mediator, advocate** and **activist.** Because so few people are acquainted with these roles and since many of our readers have expressed the need for a clearer understanding of what these intervenors do, the CCI staff are devoting the next three issues of the newsletter to a detailed discussion of each role.

Each issue will cover a number of important questions about the intervenor: What kinds of tasks does the intervenor perform? What special skills does he need to have? What is his relationship to the parties in a dispute? And, how effective is the intervenor in bringing about change? In addition, the newsletter will include a case study that describes possible roles for an intervenor in a conflict situation. Finally, there will be a section of the newsletter introducing individual projects or agencies around the country that are serving as intervenors and helping communities achieve their goals for change.

Community Crisis Bibliography

*The CCI Project would like to credit the following individuals and projects upon whose research, observations and experiences this issue of the newsletter is based:

–W.E. Chalmers, University of Michigan, Ann Arbor, Michigan

–Preston Wilcox, Afram Associates, New York

–Center for Mediation and Conflict Resolution, New York

–National Center for Dispute Settlement, Washington, D.C.

Because of an overwhelming number of requests for the **Crisis, A Change, Power and Intervention Bibliography,** we have run out of copies from our first printing. Additional copies are currently being prepared, but we must now charge $1 to help cover costs. Requests should be addressed to the Project office.

This issue explores the role of the **mediator**; the second issue will deal with the **advocate**, and the third, the **activist** role.

What Is Mediation?

Mediation is the process by which a third party who is acceptable to all the conflicting parties in a dispute helps them in reaching a mutually satisfactory settlement of their differences.

What Community Conflicts or Crises Can Be Mediated?

Any community dispute can be mediated if there are identifiable parties with recognized leadership who can represent them and who agree to participate in face-to-face bargaining with the other party or parties. Both sides must be willing to reach a settlement which is less than a total victory for either party. The dispute may occur in an organization, an institution, a neighborhood, a city or a larger geographic or political area.

Examples of conflicts that are currently being mediated are disputes between

landlords and tenants
administrators and students
merchants and consumers
clients and agencies
management and labor
racial groups

These disputes arise when at least one party becomes dissatisfied with the existing allocation of resources or the current arrangement of power, and takes action outside "normal" channels. Students challenge teachers, administrators and boards about curriculum, conduct codes, grievance procedures and teaching methods – but not through the student council. Welfare recipients challenge agencies about benefits and procedures – but not via individual complaints to the case worker. Tenants challenge the public housing authority about rents and rats and control – but not through the tenant advisory council or a written complaint.

Mediation is an appropriate process for resolving

(continued on page 2)

(continued from page 1)

resolving a community conflict if both parties are seeking a middle range of goals – redistribution of resources, influence on decisions affecting the use of resources, grievance machinery or tension reduction. Mediation appears to be useful when one of the parties is interested in a redistribution of power, but it is not yet clear whether this applies in **all** situations. In some instances, mediation simply may assist an establishment group in coopting the challengers. The process clearly is inappropriate if the goal of the dominant group is repression or the goal of the subordinate group is revolution.

What Do Mediators Do?

The mediator is legitimizer. He is often called upon to convince the establishment party to recognize the protesting group. This is no minor accomplishment. The acceptance of a minority or community group as a legitimate bargaining agent is a major concession by an institution or administration that normally exercises its power without interference. The mediator must assure the establishment party that the protestors are reasonable and that they will abide by the agreement that is reached.

whether to intervene, and only then, **when** to intervene.

The mediator is a resource expander. During the course of negotiations, the mediator helps the disputants secure technical information that may be relevant to their agreement or he may contact outside experts to clarify important procedures or legal requirements. In addition, as a resource expander, the mediator might suggest ideas that add a new dimension to the negotiations or give one or the other party additional points to strengthen its bargaining position.

The mediator is a facilitator. In a community dispute, he often furnishes a meeting place and financial support for the negotiations, since neither party may have the necessary resources.

As an integral part of his mediating duties, the mediator aids the parties in formalizing the issues that will be discussed; sets the agenda and chairs the meetings. He also plays and indispensable role in shaping the final agreement. Although the specific demands are on the table, the mediator tries to determine the underlying problems behind the dispute and the motivations of each party in pursuing their goals. It is often what are

work, hence one that will not result in an immediate resumption of conflict.

The negotiation process itself determines the extent to which a mediator can favor one party over another. Obviously, the parties would not accept him initially if he had a reputation for unfairness. Moreover, if a party felt that a mediator was acting unfairly during negotiations, he could easily stop all discussions and withdraw from the session.

Why Should Grass Roots Groups in Conflict Agree to Mediate?

Negotiations convert power and potential power into a settlement that approximates the relative position of each party. Community groups choose to negotiate when they wish to solidify the gains they have made so far, when they want to buy some time to reorganize, develop new strategies or to further develop their power base. The mediated settlement is a middle range adjustment; whether or not it stands as the final outcome of a dispute depends on the goals of the community group. However, research on community conflicts has shown that a community group should not accept an agreement that takes away its reasons for continuing as an organization.

"If you have the power to get what you want on your own, then you don't need me. If not, then let's talk about how I can help you get what you want short of 100 percent."

On the other hand, the protesting group may be unwilling to negotiate with the establishment party. It may also feel that the establishment is unreasonable and is interested not in working out concessions and compromises, but in de-escalating the crisis and weakening the resolve of the protestors. The mediator in this case may try to convince the subordinate group that negotiations and mediation are preferable to a continuation of the conflict.

However, the mediator should not bring the conflicting parties to the table too soon, that is, before the subordinate party has acquired some bargaining skills, is sufficiently organized to choose legitimate representation and has achieved **enough power to have something to trade.** Similarly, the mediator should not wait until too late, after the subordinate party's power has peaked or when it is no longer advantageous to one party to bargain, Finally, a mediator should pay special attention to the existing mechanisms for conflict resolution, taking care not to undercut alternative machinery or strategies for getting successful (i.e., lasting and change-producing) settlement.

In summary, the mediator must decide

presented as the non-negotiable demands that may be the key to the dispute and thus to its resolution.

The mediator focuses the parties' attention on the realities of the situation; he should not raise expectations for achieving greater consessions than are likely given the needs of the individual parties and the conditions under which the agreement will be implemented.

The mediator facilitates agreement. He does not force his conclusions, but rather allows the disputants to make their own decisions. Again, this is essential if the agreement is to stick.

What Is the Relationship of the Mediator to the Conflicting Parties?

Is a mediator a neutral party in a dispute? The CCI Project and many persons who serve as mediators would argue, no. Merely by suggesting mediation as a way of dealing with a conflict the mediator is advocating change. Furthermore, his decision on when or whether to intervene is an important factor affecting the outcome of a dispute. However, the mediator must be an objective party. He does not encourage unrealistic demands and helps both parties recognize this danger. The mediator supports an agreement that will

Mediation is often the quickest route to getting concessions from the opposition, since it is a process that establishment powers are coming to recognize and accept. Community groups that can develop good negotiation skills and that understand how the mediation process can be advantageous to them will come out ahead. On the other hand, mediation at a particular time may be the only route to recognition by the establishment power and a way of setting up direct communication in a non-communicative or chaotic situation. A prison riot or work stoppage is a good example of where this may be true.

What can a mediator do for community groups? He can help them gain recognition, establish new contacts, cut through red tape, locate new resources, or use the ones they already have to the best advantage.

Mediation is not suited to all conflicts and disputes. A community group must carefully weigh all the pros and cons before pursuing this course of action.

Case Study

*Case Study in Mediation: the XYZ Housing Dispute**

Below is description of a community dispute that was submitted to mediation. The case study illustrates the kinds of demands that can be negotiated and the roles that can be played by an intervenor who serves as a mediator in a dispute. Both the advantages and disadvantages of negotiation as a strategy for community groups becomes apparent.

The Setting and the Crisis

The XYZ Housing Corporation owns and operates a 1400 unit apartment complex in New York City. Although the housing complex is located in an area with a substantial Black and Puerto Rican population, only seventy units are occupied by minority tenants.

In May, 1970, a Puerto Rican Association, with the support of several other community groups, staged a sit-in in XYZ offices. The demonstrators were protesting alleged racial discrimination practiced by XYZ in its rental policies and towards its employers. A representative of XYZ immediately contacted a staff member from the **Board of Mediation of Community Disputes (BMCD)** to help him deal with the protestors. The BMCD mediator met with both parties at the site of the sit-in, worked with them to clarify issues involved and convinced both sides to submit these issues to "meaningful mediation". The BMCD mediator was acceptable to the parties as an intervenor in the dispute, because of his professional reputation.

XYZ officials were particularly disturbed by the possibility of future demonstrations and unfavorable publicity. The owner of XYZ, whose son was running for political office, wanted the dispute settled before a racial incident developed that would hurt his son's chances of election. The Puerto Rican coalition intended to exploit the timing of the situation to win some concessions for the community and therefore agreed to negotiate. The parties agreed to consider the following issues:

1. That all vacant apartments be identified.
2. That an ethnic breakdown of present tenants be provided.
3. That first preference for future vacancies be given to Black and Puerto Rican applicants including employees, according to the date of application.
4. That discrimination against minority staff in the use of facilities be stopped.
5. That minority employees be given equal opportunity for promotions.

Although both rental and employee issues were presented, the discussions focused on the housing demands.

*This case study is based on the activities of the Board of Mediation of Community Disputes, Automation House, New York City. It is abstracted from a report written by Gerald Cormick, Research Director.

(continued on page 4)

Who Are the Mediators?

Organizations Involved in Training, Research and Action on the Uses of Mediation in Community Conflict Situations

The Racial Negotiations Project at the University of Michigan – Wayne State University has conducted the only major study on the uses of negotiation and mediation techniques in community and racial conflict (1968-71). Directed by W. Ellison Chalmers, the Project pruduced a book, several comprehensive research reports and a series of case studies, all available through the Institute of Labor and Industrial Relations, University of Michigan, Ann Arbor, 48103.

The Scholarship, Education and Defense Fund for Racial Equality (SEDFRE – 164 Madison Ave., New York 10016) has been training grass roots and minority groups since the mid-1960's in skills of mediation as well as negotiation, leadership and organizational development. The Director is Marvin Rich. SEDFRE publishes an excellent pamphlet entitled **Negotiation: A Tool for Change.**

The National Center for Dispute Settlement (1815 H Street N.W., Washington D.C. 20006) was established with Ford Foundation support in 1968 to apply mediation and other proven techniques of collective bargaining to the resolution of community, racial, campus and public employment disputes. A unit of the American Arbitration Association, the Center is directed by AAA Vice President Willoughby Abner. In addition to direct involvement in more than 400 disputes, the Center is concentrating on (a) building systems of conflict resolution to promote orderly change within institutions, and (b) training (particularly in negotiations skills). Training courses, educational materials, consultation and mediation have been offered to cities and organizations throughout the country. Local representatives and/or local centers have been operating in Philadelphia, Hartford, Detroit, Boston, San Francisco, Los Angeles and Jackson (Miss.), with more planned.

The Center for Mediation and Conflict Resolution was established at Automation House in New York City in January 1970 to train grass roots residents, agency personnel and mediators in negotiation and mediation skills applicable to resolving racial and community disputes. The Board of Mediation for Community Disputes was established at the same time as the action arm for direct intervention in disputes in the New York area, but as of January 1,1972, the entire operation was subsumed under the Center. Also funded by the Ford Foundation, the Automation House effort has been actively involved in training and systems building in the New York area, with direct intervention in near-by cities as well, including Philadelphia and Newark. Former New York State legislator Basil Paterson became director of the joint organization January 1. George Nicolau, who pioneered the training component during the last two years, is Vice President for Training, and Arthur Barnes joins the Center as Vice President for Services. The Center is located at 49 East 68th Street, New York 10021.

The Community Relations Service of the U. S. Department of Justice was established under the 1964 Civil Rights Act to promote voluntary compliance with the provisions of the Act, and to assist communities in resolving disputes related to racial discrimination. The Service has offices in approximately 50

Case Study . . .

(continued from page 3)

What was the Role of the BMCD Mediator?

During the first negotiations session, the BMCD mediator helped the parties work through the issues and develop trade offs.

The role of the mediator was crucial in convincing the parties to submit their differences to mediation and to continue negotiations despite the difficulties that arose. XYZ was originally hesitant to recognize the coalition as a legitimate spokesman for the community; the coalition questioned the value of negotiations. The mediator pointed out the advantages to both sides and offered his offices as a neutral setting for meetings.

Outcome of the Negotiations

In the second session, the mediator assisted the parties in setting down the terms of the final agreement. XYZ Housing agreed to take the following steps:

1. Notify persons who had been on the waiting list for more than two years to renew their application or be eliminated.
2. Give a receipt to new applicants, date the applications and number them in order of the dates.
3. Out of the next 100 vacancies which arise, one out of every two would be filled by a Negro or Spanish-speaking tenant. One out of every 3 subsequent vacancies would be filled by a fully qualified minority applicant on the waiting list.

An agreement was also reached regarding the reinstatement of an employee whose treatment by XYZ the coalition had protested.

Post Crisis

Because discrimination is such a fuzzy legal issue, he brought in outside experts from the State Housing Commission and Human Rights Commission to clarify what solutions would satisfy both sides and yet be within the limits of the law. The membership of the community coalition changed periodically and was progressively less unified. In addition, the new factions were extremely hostile to XYZ administrators. The mediator kept the negotiations open by encouraging the parties to focus on the real issues, advising them that accusations and defensive statements would not bring about a resolution of their differences. Since he was interested in developing an agreement that would stick, the mediator insisted that the outside experts check their rulings on housing discrimination very carefully. (There was some doubt about the legality of certain procedures for increasing minority occupancy.)

Immediately after the settlement had been reached, an XYZ Tenants Committee emerged to challenge the agreement, because they had been left out of the negotiations. The tenants opposed the two-list provision, one for white applicants and one for minorities that would be used in filling vacancies and hence would increase the number of minorities in the complex. In addition, the Housing Commission announced that the agreement was discriminatory, although its representative had originally given his approval.

The BMCD mediator met with all the interested parties – XYZ, the coalition, the tenants and the State Housing Commission. He presented the history of the events and explained the agreement that had been reached. He then recommended that the agreement be implemented. Despite his efforts at this meeting and subsequent meetings to reach a new accord, the case remains unsettled pending adjudication by the State Housing Commission. Meanwhile, the community coalition has lost its effectiveness as a bargaining group; the racial imbalance in the XYZ housing complex remains unchanged. Whereas originally the timing of the conflict made the situation conducive to mediation and a meaningful settlement possible, the crisis atmosphere necessary for negotiations no longer exists.

Organizations . . .

(continued from page 3)

cities throughout the country, and is currently developing a formal mediation service for race-related disputes as part of an agency-wide Crisis Response Program which will encompass 1/3 to 1/2 of the CRS's total program. Acting crisis coordinator is Martin Walsh, Community Relations Service, U.S. Department of Justice, Washington 20530.

The most experienced federal agency in the field of mediation is the Federal Mediation and Conciliation Service. The FMCS has developed extensive training materials related to labor-management and public sector disputes, many of which are applicable to broader dispute situations. Larry Schultz directs training and development of materials. Address: Federal Mediation and Conciliation Service, Washington 20427.

Youth Crisis Intervention Center Opens

Number Nine is an excellent example of the youth initiated, self-help, multiple service programs which have become a national trend in community mental health. It aims at making available appropriate assistance during periods of crisis and at providing easy access to supportive peers; or when indicated, by making referrals to other services.

Information is now available in booklet form at the price of $10.00 by writing:

Dennis T. Jaffe
The State Street Center
c/o Number Nine
266 State Street
New Haven, Conn. 06511

A paper called the **Development of Alternate Services** 40 pages, $1.00, is also available.

Community Crisis Intervention: Issues and Perspectives

by James H. Laue*

Summary of a Project

Under the direction of James Laue, an urban sociologist and former Federal community relations official, the Laboratory of Community Psychiatry, Department of Psychiatry of Harvard Medical School, is conducting a two-year project to attempt to establish a theory and practice of community crisis intervention. The major question toward which the project is directed is the following:

> Is there a definable discipline of community crisis intervention, with a discoverable body of techniques which can be systematized, taught, applied, evaluated and refined to help communities in crisis achieve positive social change through resolution of the crisis?

"Positive social change" is the criterion for successful outcome of any community crisis. It means:

-- rapid, orderly, visible movement of the systems in crisis toward justice -- toward (a) diffusion of power, (b) equalization of resources, (c) democratization of decision-making and, therefore, (d) greater self-determination of all constituent groups:

-- establishment of self-generating mechanisms for (a) ongoing stimulation of such social change and (b) resolving future conflicts in a positive direction without escalation to crisis.

* Prepared for Seminar on Recent Advances in Caregiving Practice for senior staff of Human Service Organizations, Laboratory of Community Psychiatry, Harvard Medical School, 1970-71.

We need desperately to discover how to intervene in community crisis to achieve such outcomes in the face of ever more sophisticated interventions whose essential aim is control rather than structural change (e.g., by law enforcement agencies, university administrations, urban consulting firms, etc.) Virtually every institution in American urban areas is coming to be faced with a continuous condition of confrontation from constituents, clients or petitioners for inclusion. We believe that one of the gravest dangers facing the nation is that establishment institutions increasingly will either repress or not respond at all to crises thus generated. Our aim is to see whether techniques can be developed to ensure that positive change-oriented responses will be forthcoming instead from institutions facing crisis.

The project is a conscious attempt to build linkages between theory and practice, between disciplines, and between activist projects. It emerges from the joint concerns of community psychiatrists and sociologist-activists about the crisis intervention process. The project draws on the accumulated and ongoing research at the Laboratory of Community Psychiatry, which has a history of research in crisis theory and urban problems, while adding a new dimension to the application of the work of the Laboratory in the community.

Psychiatrists have developed a considerable body of theory about intervention in personality and primary group crises, and have demonstrated some ability to intervene for specific desired outcomes. Sociologists and practitioners of social change have attempted numerous interventions in social system crises, with little measurable achievement and virtually no accepted systematization of theory and techniques. The Laboratory of Community Psychiatry is convinced that the effort must be made at this time to see whether community crisis intervention is a definable and fruitful field of endeavor.

Defining Community Crisis

Social analysts, the mass media and laymen all refer out-of-hand to the "crisis" in American cities. It is a word that has almost lost meaning because of its wide and undisciplined usage. A number of significant questions immediately arise:

-- What is a "crisis" in the social structure? In organizations and institutions? In neighborhoods? In whole communities?

-- Are the crises facing organizations, institutions and communities more severe today than in past eras?

-- In what ways do various role-occupants act differently from their "normal" behavior during social crisis?

-- What is the time configuration of a community crisis?

-- Are there sufficient similarities in crisis situations to make them amenable to intervention which can help produce specific positive outcomes?

There are many approaches to the problem of defining crisis in a way that makes the phenomenon approachable for study and possible intervention on the community level. A representative sampling of definitions includes the following:*

-- no set of circumstances, however unusual, is a crisis unless it is defined as such by persons involved in the system

-- a crisis may be a threat, a challenge, a strain on the attention, a call to new action

-- a crisis is a situation in which the affected individual(s) face the necessity of making appropriate choices of action to avoid or minimize severe punishment

* See especially Kent Miller, "The Concept of Crisis. Current Status and Mental Health Implications" (Human Organization 22, 3 [1963], pp. 195-201); Howard J. Parad (ed.), Crisis Intervention: Selected Readings (New York. Family Service Association of America, 1965); and Gerald Caplan, Principles of Preventive Psychiatry (New York: Basic Books, 1964).

-- a crisis occurs when a system's resources prove incapable of coping with, managing or solving a pressing problem

-- a crisis occurs when the internal balance of forces (or equilibrium) of a system is upset

Most of these and other attempts at defining crisis have been made in reference to individual personalities, families, small groups or other organizations. The problem of translation to the community level is difficult, but there are several fruitful approaches that need to be explored further. One is the list of five aspects of family crisis developed by Howard Parad and Gerald Caplan, which also appears instructive for analyzing crisis in larger systems: (1) The stressful event poses a problem which is by definition insoluble in the immediate future. (2) The problem overtaxes the psychological resources of the family, since it is beyond their traditional problem-solving methods. (3) The situation is perceived as a threat or danger to the life goals of the members. (4) The crisis period is characterized by tension which mounts to a peak then falls. (5) The crisis situation awakens unresolved key problems from both near and distant past. Reuben Hill's definition of crisis, also constructed from studies of families, is succinct and relevant at the community level: crisis is "any sharp or decisive change for which old patterns are inadequate. . .usual behavior patterns are found to be unrewarding and new ones are called for immediately."

Caplan

There is a pressing need to develop adequate, testable definitions of community crisis. Based on active participation in the civil rights movement, research and four years as a Federal community relations official, I operate from a framework which finds community crises existing when elites with the power to change community patterns which are being challenged define the situation as severe enough to demand immediate action and rapid resolution. They have changed their perception of their own self-interest and what it will take to maintain and expand it. Social change, it follows, is the process of continuous redistribution of community power and resources through various stages of competitive social interaction.

From the standpoint of intervention possibilities, the following attributes of community crises seem in need of most immediate exploration.

-- that communities are not "in crisis" until significant power figures define it as such

-- that crisis represents both danger and opportunity, but especially the potential as an important turning point in the life of the system

-- that individuals become more suggestible during crisis, and therefore more open to intervention for change in behavior (i.e., the question of timing)

-- that a mobilization of new resources occurs in personalities and the social system in crisis

By any measure, American communities are in crisis. The crisis is most often manifesting itself from community to community in rancorous conflict over scarce resources -- living space, jobs, tax revenues, other financial resources for public needs, educational facilities, personal and community control. Defining the "urban crisis" in terms of control of the processes for allocation of scarce resources focuses on the need to achieve a just quid pro quo between conflicting interests -- a process which is open to facilitation by third parties at many points.

Defining Crisis Intervention

There exists no systematic body of techniques for intervention in community crises to move the community and/or its consistent subsystems toward positive social change as defined in the opening summary statement. We need to know

-- In what system levels is crisis intervention possible? Secondary as well as primary groups? Total communities as well as individual personalities?

-- What are sound and specific criteria for desirable outcomes of community crisis intervention? (see "Outcomes of Community Crisis" below)

-- Are professionals the sole proprietors of crisis intervention as a technique -- or may it be more broadly defined to include the activities of politicians, civil rights groups, community and neighborhood organizations, clergy, etc.?

-- How does intervention during crisis differ in approach and effectiveness from intervention during non-crisis periods (again, the question of timing)?

-- Are the principles of labor-management, general bargaining, third-party consultations, medical-psychiatric and other models of intervention from adjacent disciplines applicable to the total institutional or community level?

-- Through what process is legitimation of various crisis intervention agencies and individuals accomplished in the community?

-- How can the effectiveness of various crisis intervention techniques be evaluated? Is it possible to achieve and measure a predicted pay-off from specific interventions?

Community crisis intervention may be defined as any active intercession by an outside or semi-outside organization, person, or force into a community crisis for the purpose of helping the component systems and actors mobilize resources to move toward a positive crisis-outcome.* The intervenor is an agent who enters at a particular phase

* As defined earlier in terms of diffusion of power, resources and decision-making prerogatives, and of the establishment of ongoing mechanisms for change-stimulation and conflict-resolution.

of the community power struggle both to prevent a repressive crisis response from the dominant power group and to guide the disputants to positive change.

Various forms of intervention have been practiced in communities, with or without specific ends consciously in mind. Among them have been power bargaining, mediation, arbitration, conciliation, client advocacy, colleague advocacy, legal proceedings, formal and informal educational techniques, community organizing, direct action, law enforcement, research, military repression, etc.

Nevertheless, efforts at systematization and evaluation of crisis intervention techniques at the community level have not progressed far. The oldest organizations devoted specifically to community intervention (crisis and non-crisis) for the general kinds of goals described in this proposal, are human relations commissions and, more recently, state commissions against discrimination. For whatever combination of reasons of ineffectiveness, lack of real community leverage or lack of funds for R and D, their experience has not produced an evaluated body of techniques. The Office of Economic Opportunity has funded evaluations on many of its community action programs, and the Department of Housing and Urban Development is sponsoring evaluations of many phases of Model Cities programs. Many of the results are not yet in; where they are, they have made no noticeable impact on community crisis intervention theory and practice. Intervention as a unit of study is growing in popularity in the social and psychological sciences, and in various projects and programs now operating and getting underway throughout the United States.

What is needed, in our judgment, is a systematic development of concepts and evaluation of techniques of (a) crisis intervention (b) pointing toward specific change goals (c) with a focus on the role of the intervenor rather than the nature of the process of conflict resolution.

Outcomes of Community Crisis

We have said in the attached summary statement that a "desirable" outcome of community crisis is one that produces positive

social change, which is defined by two types of criteria: substantive ("rapid, orderly, visible movement of the systems in crisis toward justice," which involves diffusion of power, equalization of resources, democratization of decision-making and progress toward self-determination) and process (establishment of mechanisms for continual stimulation of social change and positive conflict resolution). This definition addresses the problem only in the most general way, and a significant task ahead is the development of specific criteria for crisis-outcomes which apply to specific historical and systemic situations.

Criteria for successful outcomes are more precisely defined for crisis intervention in smaller systems -- namely, individual personalities and primary groups like the family. For the individual personality, goals of intervention may encompass enhanced sense of self, increased ability to cope with stress situations, openness, growth, maximum feasible need satisfaction, etc. For primary group intervention, most often practiced with families in crisis, goals include all of the above for each person in the system plus the development of a modus operandi for the group whereby future tensions and conflict which inevitably will arise may be dealt with and successfully resolved.

Certainly all the above goals would be desirable outcomes for community crises. But goals which it may be possible to achieve for individuals vis-à-vis themselves or others in small groups become extremely difficult both to define and to achieve in larger groups and whole communities. While the family may function as a pre-packaged solving unit, the community lacks both the organizational and ideological cohesiveness conducive to problem-solving.

The determination of specific goals in a community crisis situation is of course frustrated by the conflicting interests of the groups involved. The flux of power relations within the subordinate group during a crisis further hinders goal formulation.

The actual achievement of goals in community crises is similarly impeded by (a) the greater complexity and scarcity of resources for fulfillment in larger socio-political systems and (b) the fact that any outcome or settlement or resolution in a large organization or total community is essentially political instead of socio-psychological in character.

One important ramification of the political character of crisis resolutions at the institutional or community level is that it is extremely difficult to find and legitimate an intervening agent or agency which is sufficiently uninvolved in the political trades and slicing up of the pie that constitute the settlement process. This problem of legitimacy is one of many which need to be examined under the general category of properties of the intervenor.

Properties of the Crisis Intervenor

Success of the crisis intervention depends, among other things, on historical conditions leading to the present crisis, internal and external resources* available for application to the crisis, general orientation of the system toward change, and -- most importantly -- the properties of the intervenor. The two essential characteristics for success, we believe, are that the agent or agency (a) must possess appropriate technical skills and (b) must have legitimation with all parties to the crisis.

(a) Skills. A repertoire of basic technical skills of community crisis intervention does not now exist. Among skills commonly acknowledged to be important (albeit many of them reflect a negotiations or power-bargaining model) are:

-- information brokerage

-- initiating and keeping open contact between factions

-- interpreting positions, problems and options

-- mobilizing external resources for action in the situation

-- helping the parties avoid solidifying positions too soon, and thereby keeping options open

-- assisting parties in internal organizational problems

-- helping parties to anticipate the consequences of their own anticipated actions

* I.e., from both inside and outside the system(s) in crisis.

-- arranging pace, timing, packages, trade-offs, etc., in the negotiating process

-- training parties in crisis skills

-- aiding parties in formulating goals.*

In a recent summary of appropriate characteristics of the third-party intervenor in social conflict, Richard Walton lists five as crucial: high expertise; low power over the fate of the principles; high control over the setting of confrontation and the processes therein; moderate knowledge about issues, principles and background of the conflict; and neutrality and balance regarding the substantive outcome of the conflict, the personal relationships involved, and the choice of conflict-resolution methods.** Only two of those characteristics (expertise and knowledge of the situation) are purely a matter of technical skills and training. The other three border on problems of legitimation -- without which technical skills would never come into the arena of the conflict.

(b) Legitimation. Legitimation refers to the perceived right of the intervenor to be involved in the situation. He may enjoy this perception from none, one or all of the parties to a crisis. An additional -- and, from our standpoint, more important -- criterion for the achievement of legitimacy for an intervenor is the high predisposition on the part of the disputants (especially establishment institutions) to act on the intervenor's inputs.

One of the most important learnings to be drawn from the first four years' experience of the Community Relations Service*** is

* This list is adapted from W. Ellison Chalmers, "Racial Negotiations--A Project Statement" (University of Michigan, Wayne State University), and a confidential memorandum from James Laue to the National Council of Churches, July 19, 1969.

** Walton, Richard E., Interpersonal Peacemaking: Confrontations and Third Party Consultation, (Reading, Massachusetts: Addison-Wesley Publishing Company, 1970).

*** Of the U. S. Department of Justice -- established under the Civil Rights Act of 1964 to assist communities in resolving racial disputes.

that with sheer increase in size of the community which is the base of operations, the probability of effective crisis intervention drops dramatically. CRS Field Representatives made substantial, documented causal inputs in cities like Selma, Natchez and Bogalusa. But because of city size, complexity of issues and, most of all, the lack of a clearly legitimated base, measurement of impact in cities like Chicago, Los Angeles and Memphis was virtually impossible. In these and other urban cases, the stature and resources of the Federal government were not sufficient or appropriate to ensure the confidence and responsiveness of diverse factions.

A series of questions needs to be answered about the legitimation process underlying community crisis intervention. Such questions concern:

-- entry and sponsorship (dominant party or parties? subordinate party or parties? neither? both?)

-- the degree of intervenor participation in goal-definition

-- neutrality/advocacy mix of the intervenor

- bases of power, leverage and sanctions from which the intervenor can draw

In addition, there are a number of specific intervenor characteristics whose effects need to be assessed:

Professional or non-professional?
Individual or organization?
Establishment or non-establishment?
Male or female?
Age differences?
Race/ethnicity?

Development of Preliminary Models of Community Crisis Intervention

Examples of types of hypotheses about community crisis intervention that need to be developed more fully and built into models

include the following:

-- that building pre-crisis legitimation for the intervenor with all potential parties to a community dispute is the prerequisite to effective intervention when the change-enabling crisis-definition is made;

-- that, in many crisis situations, third-party intervention only speeds up the process leading to resolution (positive or not), with other dynamics accounting for the real causal factors of change;

-- that while rational consultation may be an effective form of intervention for establishment institutions (which possess the structural facilities to implement such input), it is not useful in generating change for grass roots and incipient community groups, whose need is for organization of power and resources;

-- that the intervenor's legitimation and power bases (i.e., what leverages and resources he can bring to bear on the crisis situation) are more important to his effectiveness than his technical skills (in communication, bargaining, etc.).

The Context of the Work: Action and Change

The approach outlined in previous sections is intended to move us beyond existing thinking concerning urban crisis and change in four important ways:

1. The focus is on crisis intervention in communities. It specifically looks for the relationships between crisis and positive social change. This provides a more narrowly-defined -- and, I think, more productive -- focus than simply general "intervention". It concentrates on the act of intervention for change -- as distinguished

from the process of conflict resolution, dispute settlement or negotiation per se,* as is characteristic of the projects in related areas of which we are aware.

2. This framework insists that the development and practice of community crisis intervention take place within a context of specific change goals for the outcome of the crisis, both substantive (power and resources diffusion) and processual (establishing ongoing mechanisms). Many projects and agencies in this field study or practice the processes of conflict and its resolution with with no specific goals for the resolution or, in our judgment the wrong goals (social control, personal adjustment, et..). Too many intervenors claim to be working in a value-free context as "simply technicians," not realizing or not caring that their inputs (often at the behest of or at least on the side of status quo institutions) do in every case work toward particular end-states of social control or social change. It is important to make those implications overt, and to see that the goals for intervention always go beyond simply the arrival at an agreement or problem-solution -- which, when taken apart from substantive considerations, always favors the status quo organization of power.

3. As a further refinement of (1) above, the focus is on the role of the intervenor per se as an independent variable -- what intervening persons or agencies do to attain specific results in particular situations. The legitimating properties of the intervenor with all factions may be more important than his technical skills in

* For example, in examining the Selma crisis of 1965, we would ask, "What did various individuals and organizations do that contributed to the enactment of the Voting Rights Act of 1965?", instead of "How was the crisis resolved and 'normal' community patterns restored?" Regarding the crisis over open housing in Chicago in 1966, we would similarly ask, "What did specific intervening agents do (e.g., the Community Relations Service, SCLC, Chicago Commission on Human Relations, Chicago Council of Churches, Illinois Bell Telephone Company, etc.) to achieve the formation of the Metropolitan Council for Open Cities, Jobs Now program and subsequent positive changes?"

achieving effective crisis outcomes.* The interface between legitimation and skills will be a major concern throughout the work of the Project.

4. The role of non-professionals in community crisis intervention is a fourth underlying concern. Is intervention the sole property of trained professionals? Can the activities of unpaid community organizers and grass roots leaders be called "intervention"? Community intervention (crisis and non-crisis) is now being practiced consciously almost exclusively by professionals with limited change goals, who often prepare community people to be willing recipients of aid rather than provide them with the impetus and skills to mobilize their own resources. Elites of many of the helping professions refer to community organization work by members of their disciplines as "client advocacy" when in fact they themselves practice "colleague advocacy" in consulting only with fellow professionals in determining how to "deal with" institutional and community problems involving grass roots citizens. Such a view reflects the limited perspective of many of the professions on the gravity of the crisis and a limited sense of the possibilities for legitimate, relevant action by professionals for social change. Professionals trained in community crisis intervention techniques must emphasize sharing their skills and power with community people (rather than safeguarding the discipline for fellow professionals) in order both to facilitate successful crisis problem solving and to extend the practice of CCI. Unless community crisis intervention can become legitimated as an appropriate endeavor for non-professionals as well as professionals, it too will go the way of other change techniques which have emerged in recent years -- co-opted, domesticated and therefore, often with the best of motivation, defused by establishment institutions.

* The preliminary report to the Ford Foundation on the Racial Negotiations Project (University of Michigan - Wayne State University, August 1969), on which I have been a consultant, says that its "strongest single hunch" about the role of third party intervenors "is that an intervenor is not likely to be effective [in race conflict negotiations] if he is simply a 'neutral.' It would appear that his effectiveness will be dependent on his commitment to social change that will provide greater black [or other subordinate group] involvement in decision-making and ensure equality of circumstances and opportunity."

ANTICIPATED OUTPUTS OF THE PROJECT

With the foregoing analysis as a starting point, the project staff is working toward the following outputs during the course of the next two years:

1. A conceptual synthesis of the field of community crisis intervention (CCI), including: an analysis of the setting for urban conflict as it has developed in the 1960's; an outline of definitions and types of community crises, intervention techniques, intervention agents and agencies, legitimation and outcomes; an annotated bibliography of the literature related to community crisis intervention.

2. Analysis of ongoing research and action projects in community crisis intervention -- extensive observation, consultation and co-participation in a number of existing projects, studies, methods, organizations and the work of individuals. A newsletter to be circulated among various projects, organizations and other interested parties.

3. Case Studies -- some initiated by the project staff on specific attempts at crisis intervention in neighborhood, institutional and total community settings. Analysis in the CCI framework of completed and ongoing case studies initiated by existing projects and organizations.

4. Models for community crisis intervention -- a body of intervention techniques developed from the work of activities 1-3. A model of community advocacy is considered of the highest importance here. A write-up of research activities and findings.

5. A series of seminars on the state of the field of CCI and its future possibilities and needs -- for projects and organizations currently developing and practicing intervention techniques as well as for other potentially interested groups: community representatives, government officials, business leaders, foundation executives and professional associations. Transcription of the proceedings to be prepared for publication.

Change Theory and Ethics of Intervention

It should be re-emphasized that the theory and practice of social change are the ground on which CCI explorations stand. Our concern is to better understand the relationship of crisis and social change, and to be able to capitalize on the telescoping of development that often takes place during crisis for positive social change.* The focus is on what happens in a community (and its constituent structures of institutions and neighborhoods) when a crisis occurs, and how that crisis can be utilized for democratizing rather than repressive outcomes. Community life is viewed as a series of spiraling cycles of (more-or-less) equilibrated periods and crisis periods. We shall be attempting to determine appropriate inputs for positive change in pre-, during and post-crisis situations, drawing here again on the work of community psychiatrists in such areas as "preventive intervention" and "aftercare".

The ethical problems of intervention are considerable in number and broad in scope. We may discover that intervention into community crises does not, in fact, assist the affected systems toward positive change the way intervention in personality crises demonstrably can do. We may discover that intervention by a semi-outsider only serves the needs of status quo interests and may, in fact, prevent the petitioning or protesting groups from raising the crisis to a level sufficient to achieve substantial good-faith bargaining from establishment institutions. Bargaining models (in which the parties "settle" by trading sanctions and resources, but very rarely trade real power) and medical models (with focus on the well-sick-well transition -- and crisis is "sick" or "abnormal"?) may simply be inappropriate to the demands for rapid social change and may even prevent needed change. Whether intervention techniques can be developed to get beyond the co-opting, stabilizing and settling that often take place when conflict-resolution is systematized, is a question that is constantly at the top of our ethical agenda.

* Here I draw heavily on Gerald Caplan's work on the telescoping of development during personality system crises (see Principles of Preventive Psychiatry), and on Laue's work on the short-circuiting of social change processes during crisis (evaluations and other documents prepared for the Community Relations Service, and "Power, Conflict and Social Change", pp. 85-96 in Louis H. Masotti and Don R. Bowen (ed.), Riots and Rebellion: Civil Violence in the Urban Community, Beverly Hills, Sage Publications, 1968).

SOUTHERN REGIONAL COUNCIL, INC.

M E M O R A N D U M

TO: E. Via

DATE: June 13, 1972

FROM: C. Wright

COPIES:

SUBJECT:

Xerox copy of letter is attached as requested. Please let Ms. Gatewood know what time you will be available to speak with Ms. Cohen on June 15. Preferably early in the morning.

Also, if Sam Williams turns out to be a good person for Ms. Cohen to consult with, could you schedule a meeting with him later in the morning or early afternoon and inform Ms. Gatewood of this also.

If the judge turns me loose, I will see you this afternoon.

CW/apg

THE SOCIAL SCIENCE INSTITUTE

WASHINGTON UNIVERSITY ST. LOUIS, MISSOURI 63130

June 1, 1972

Mr. Clarence Wright
Southern Regional Council
52 Fairlie Street
Atlanta, Georgia

Dear Butch:

This is to elaborate on our conversation this morning regarding SRC, community organizations in the South and police programs in Athens, Georgia.

First, I am working on a project for LEAA to study police-community relations programs and police practices and to recommend successful, innovative approaches and policies to police departments around the country. We are interested in information on community relations; police training; conflict resolution and crisis intervention by police in the areas of youth problems. school unrest and neighborhood disputes; police field procedures; and administrative procedures.

+ Atlanta + SRC

I would be interested in talking to the people you mentioned about the police program in Athens with regard to any of the above areas.

As for the main purpose of my visit, my project is planning to do two newsletter issues on the activist role and community organizations in the South. We will focus on organizations such as SRC, which provide assistance to grass roots groups as well as being directly involved in events, ~~as well~~ AND on groups that have or are currently involved in a struggle over schools, police, housing and the broader issues of discrimination and decent wages and living conditions.

We hope to accomplish some of the following:

- give publicity to groups and issues which are unknown in most parts of the country
- put grass roots groups in touch with one another and with people who can give them assistance- $$, ideas and manpower
- provide information on what strategies have been successful- why, why not

I would be interested in talking to you about what we should focus on in our limited time (1-1½ months), learning more about SRC and talking to people in Atlanta embroiled in something you think should be covered in the newsletter or which would provide useful information to other groups.

Thanks for your help. I look forward to seeing you again and will arrive in Atlanta on June 14.

Justice,

alana

Alana

Community Crisis Intervention Project
Social Science Institute
Box 1202
Washington University
St. Louis, MO 63130

Dear Community Leaders:

The staff of the Community Crisis Intervention Project has written a questionnaire to gather information on strategies for social change. We are sending this questionnaire to grass-roots and community groups throughout the country who have been involved in crisis or conflict situations around the issues of health, education, housing, police misconduct, and racial discrimination.

We are mainly interested in the kinds of tactics that your organization is using or has used to achieve your demands from the group or groups that oppose your goals, and to bring about changes in your community.

Using the answers we receive from the questionnaire, we will try to determine what strategies have been successful and which ones unsuccessful. We will then send out this information to you and other groups who are in the midst of crisis and can benefit from your experiences. The project staff feels that unless community organizations begin to share the ideas that they have developed and tested to achieve important changes, establishment groups will continue to have a monopoly on resources, decision-making, and power.

In addition, we would like to put organizations who have been involved in conflicts in touch with each other. We will publish a newsheet to inform readers of the successful efforts of groups in their own city and around the country. The newsheet will also supply a continuous flow of ideas about strategies for change as the information becomes available.

We need your permission to use your name in our newsheet or to refer other groups to you who may write or call. We will only do this with your OK. Please fill out the last section of the questionnaire that deals with the confidentiality of your answers.

Thank you for your help.

Peace and power,

Alana Cohen, Director
Community Crisis
Intervention Project

COMMUNITY CRISIS INTERVENTION PROJECT

INSTRUCTIONS FOR FILLING OUT THE
COMMUNITY CRISIS QUESTIONNAIRE

Please fill out this questionnaire as accurately as possible. We are interested in your answers to the multiple choice questions, but also would like you to fill out those sections that describe your particular experiences more specifically. Since every group is different, your responses to those questions will be most helpful.

If you have been involved in a number of crises, please describe the one that you think is most significant.

Finally, again, please fill out the final section on the confidentiality of your answers. We need to know what information we can send to other community groups.

A self-addressed envelope has been included for your convenience in returning the questionnaire.

I. Background

1. Name of Organization _____

2. Address of Organization _____

_____
(city) (state)

3. Your Position in Organization _____

4. Is your group's activity mainly in your own neighborhood, your entire city, your state, or is it national? (underline one)

5. What does or did your group hope to accomplish?

II. A Crisis

1. What is the most serious crisis in which your organization has been involved in the last 2 or 3 years? What specific things were you trying to achieve, and who opposed you?

2. What pressure did you use against your opposition? (Please underline all that apply)

A. control of funds
B. publicity
C. boycott
D. strike
E. pressuring administrators
F. filing a law suit
G. demonstrations
H. violence
I. other_____

_____

_____

3. Briefly explain what methods your group used to achieve its goals in the crisis, and how opposing forces responded.

4. What person(s) or group(s) have been most helpful to you and why?

5. Did you consider any other tactics? If so, please list them, and tell why you did not use them.

6. Can you list the 2 or 3 most important things your group gained as a result of the crisis?

7. What changes do you think are still necessary?

8. Do you think your opposition is cracking down on you more as a result of your challenge to them in this situation?

9. Do you think your group now has more power as a result of the crisis? If so, please describe.

III. Information on Your Organization

1. What are the main interests of your group? (Underline all that apply).

A. jobs
B. economic development
C. recreation
D. health

E. education
F. housing
G. crime and law enforcement
H. welfare rights
I. civil rights
J. other_____
_____

2. Approximate number of members_____.

3. About what number are
A. Black_____
B. Brown_____
C. White_____
D. Indian_____
E. Asian American_____
F. Other_____

4. What phrases below best describe your group? (Please underline all that apply).
A. city agency
B. community or neighborhood self-help group
C. community corporation
D. church group
E. economic development corporation
F. citizen advisory board
G. policy control board of an agency or program
H. task force
I. civil rights group
J. direct action protest group
K. other_____
_____

IV. The Role of the Consultants or Advisors to Your Group
(to be filled out by a member of the organization)

1. Did you have an outside consultant, advisor or person who was not a regular member of your group help you confront your opposition?
yes_____ no*_____
*if answer is no, skip to Section V.

2. Please describe this person or persons.
approximate age_____ race_____
sex_____ occupation_____
_____

3. How did your group get in contact with him or her?

4. Why was he or she acceptable to your group?

5. What services did he give your group? (Underline all that apply).

A. community organizing
B. technical assistance
C. personal contacts and friends
D. communicating with the opposition
E. providing or obtaining money
F. lobbying
G. drafting legislation
H. using legal skills
I. mediation
J. training of members
K. other_____

_____

6. What would you say is the most important thing the consultant(s) or advisor(s) did for your group?

7. How helpful was this advisor?

Very_____ Helpful_____ Not Helpful_____

Please explain.

Questions 8 through 13 should be filled out by consultant or advisor if possible.

8. How did you become affiliated with the organization you advised?

9. What were your goals for the group you worked with?

10. What best describes what you did for the group?

11. How successful were your efforts?

12. What might you have done differently?

13. May we give your name to other community groups in your community who may need similar help? _____yes _____no

V. CONFIDENTIALITY OF THIS QUESTIONNAIRE

1. Is there any information in this questionnaire you want kept confidential?

2. We would like to put groups similar to yours in touch with each other to share experiences and successes. May we refer your group to others in your city or elsewhere in the country? _____yes _____no
Comments:

3. May we mention your group in our newsletter that circulates to other community groups as one that is active or has been active in your field of interest? _____yes _____no

4. Would you like to get information on other groups by receiving our newsheet? _____yes _____no

5. Do you know other groups who could use this information? If so, please list their names and addresses, including zip codes.

1._____

_____

2._____

_____

3._____

_____

4._____

OLD AGE AND SURVIVORS INSURANCE

Norris Tibbetts, Instructor, School for Workers

Introduction

1. The individual's equity and his responsibilities.

2. The importance of OASI for union members and leaders.

   A. Virtually all members and their families are involved.

   B. The relationship to collective bargaining: pensions, supplementary unemployment benefits, group life insurance, sickness and disability insurance.

   C. Other reasons:

      1) Creating opportunities for younger people.
      2) Providing security for later years.
      3) The maintenance of purchasing power.
      4) Relationship to individual and union security.
      5) The changing nature of our population.

1. Government responsibility and wage loss.

A. The theory of "saving for a rainy day".

B. Social Security a business-like way to deal with wage loss.

   1) The nature of our economy: based on cash wages.

   2) Regular wages do in fact stop, for reasons usually beyond the the control of the worker or anyone else.

      a. Injury or illness
      b. Unemployment
      c. Disability
      d. Old age and retirement
      e. Death

   3) Admonitions about "saving" to meet such hazards do not take account of the facts.

   4) Income insurance and the preservation of individual values.

      a. Worth of the individual: self-respect, dignity, pride; benefits by right as against the humiliation of relief.
      b. Freedom of the individual to buy what he wants, live where he wants, on a known income, as against the restrictions of relief.
      c. Adequate safe-guards in the law to protect such values as initiative, enterprise and self-reliance.

5) Effect on our private enterprise mass production economy.

a. The maintenance of purchasing power.
b. Increasing opportunities for younger workers.
c. Maintaining a skilled work force during periods of low production and low employment.

2. The Social Security Law: protection against certain hazards.

A. Unemployment compensation.
B. Old age assistance.
C. Aid to the blind.
D. Aid to dependent children.
E. Aid to permanently and totally disabled.
F. Maternal and child health services.
G. Services to crippled children.
H. Child welfare services.
I. Old age and survivors insurance.

3. The principles on which Old Age and Survivors Insurance is based

A. Purpose

To insure covered workers and their dependents against wage loss due to old age, death or permanent totally disability through regular monthly payments to the insured and his family when the wage earner is 65 and retires (62 for women, with reduced benefits) or is permanently totally disabled after age 50, or to eligible survivors when he dies at any age.

B. Principles

1) A contributory insurance program.

2) Benefits are a matter of right rather than need.

3) Benefits are geared (within minimum and maximum limits) to contributions.

4) Benefits do not provide same income as when working.

4. The extent of coverage

A. 9/10 of our working people can look forward to retirement benefits.
B. 9/10 of our mothers and children are assured of monthly insurance benefits in case of the death of the family breadwinner.
C. At the beginning of 1955, 70 million workers were insured under the law, of which number 30 million were permanently insured.
D. There are more than 7½ million beneficiaries, 4¼ million of which are retired workers.
E. Over one half all aged persons with no income from employment or self-employment are receiving old age insurance benefits.
F. Over one half all children whose fathers have died are getting monthly survivors insurance benefits.

5. Size of benefits

A. Average benefits (based on earnings after 1950)

Retired worker	$ 76
Aged couple	$128
Widow	$ 65
Widow, 2 children	$180

B. Minimum benefits

Retired worker	$ 30
Aged couple	45
Widow	30
Widow, 2 children	50

C. Maximum benefits

Retired worker	$108.50
Aged couple	162.80
Widow	81.40
Widow, 2 children	200.00

6. Method of financing

A. Payroll tax on covered earnings up to $4200 per year.

	Employee	Employer	Self-employed
1956	2%	2%	3%
1957-59	2¼%	2¼%	3 3/8%
1960-64	2 3/4%	2 3/4%	4 1/8%
1965-69	3¼%	3¼%	4 7/8%
1970-74	3 3/4%	3 3/4%	5 5/8%
1975 and after	4¼%	4¼%	6 3/8%

B. Collected by Internal Revenue Service.

C. Put into Federal Trust Fund.

1) To pay benefits and administrative expenses and for no other purpose.

2) Portion not needed for current disbursement invested in interest bearing U. S. Government Securities.

3) Status of Trust Fund, 1955

21 billion dollars total.
5.5 billion contributed, 5 billion paid in benefits.
475 million collected in interest, 113 million operating expenses.

Eventually, the trust fund may run as high as 100 billion.

7. Becoming insured

A. Important incidentals

1) Get a social security card: you should have only one number.

2) Make sure employer is paying on your account, in the amount of 4.5% of the first $4200 in wages.

3) Check your account via a Social Security postcard form at least every 3 years (limit on most corrections is 3 years 2 months and 15 days exclusive of military service.

4) Paradoxes:

a. You may have paid in, and not be insured.
b. You may not be paying now, and yet be fully insured.

5) A little planning regarding future work may make a great differenc in your insured status and the size of your benefits.

B. "Quarter of coverage"

1) You get 1 quarter of coverage for each calendar quarter in which you are paid $50 or more in wages; quarters begin on Jan. 1, Apr. 1 July 1, and Oct. 1.

2) Self-employed workers whose net earnings are $400 or more per year get 4 quarters of coverage for that year; earnings of less than $400 in self-employment are not counted toward benefits.

3) Quarters of coverage may have been earned by working in covered employment at anytime after 1936, and in self-employment covered by the law after 1950.

4) Military service counts toward quarters of coverage

a. Active duty during period Sept. 15, 1940 thru July 24, 1947, or period July 25, 1947 thru Dec. 31, 1956 yields social security wage credits of $160 per month for each month of active duty, if discharge on release was under conditions other than dishonorable.

b. After 1956, base pay in military service will count toward social security protection.

(Note: Credits for military service prior to 1957 are not listed on your social security records. At the time of application for benefits, proof of service will be needed)

C. "Fully insured"

1) You will be fully insured when you reach retirement age, if you become disabled, or die, if at that time you have 1 quarter of coverage earned any time after 1936 for each quarter after 1950.

   a. At least 6 quarters of coverage are necessary in every case.

   b. When you have earned 40 quarters of coverage, you are insured for life.

   c. In counting the number of calendar quarters after 1950, omit quarters in which you were under 21, and quarters in which your earnings record was "frozen" because of disability.

2) Special fully insured provision, primarily for those just obtaining coverage under 1956 amendments.

   a. Must have at least 6 quarters of coverage after 1954.

   b. Must have quarters of coverage in all but 4 of the calendar quarters after 1954.

3) Quarters of coverage earned after age 65 count toward fully insured status as well as toward size of ultimate benefits.

D. "Currently insured"

1) You will be currently insured when you become eligible for retirement benefits, become disabled, or die, if you have at least 6 quarters of coverage within the preceding 3 years.

2) Not all kinds of benefits are payable when the worker is currently insured.

3) Benefit payments to dependent husband 65 or over, to dependent widower 65 or over, and to the disabled require BOTH fully and currently insured status.

8. Types of benefits and insurance status required for eligibility

A. Retirement payments.

Monthly payments to -	If you are -
You as retired worker	fully insured
And monthly payments to your -	
Wife 62 or over	fully insured
Dependent child under 18 or disabled . .	fully insured
Wife (regardless of age) if caring for child	fully insured
Dependent husband 65 or over	BOTH fully and currently insured

B. Survivors payments.

Monthly payments to your -	If you are at death -
Widow 62 or over	fully insured
Widow or dependent divorced wife (regardless of age) if caring for child	either fully or currently insured
Dependent child (under 18 or disabled) . .	either fully or currently insured
Dependent widower 65 or over	BOTH fully and currently insured
Dependent parent (mother 62 or father 65).	fully insured
Lump sum payment to your -	
Widow or widower, or to person who paid your burial expenses	either fully or currently insured

C. Disability payments, first payable in July 1957.

1) To be eligible:

a. Must be 50 years old or more.
b. Must be fully AND currently insured.
c. Must have 20 quarters of coverage in the 40 calendar quarters before the beginning date of your disability.
d. Disability must have lasted 6 months.
e. Must be unable to do any substantial work.
f. Disability expected to last indefinitely.
g. Must accept referral to and assistance from vocational rehabilitation agency in your state.

2) Dependents are not eligible for benefits until you are eligible for retirement benefits, but if you die, they may collect survivors benefits.

3) Amount of benefit is same as retirement benefit.

4) Make application by Dec. 1957 for retroactivity to July, 1957.

D. The "disability freeze", to protect the right to and amount of future benefits.

1) To be eligible.

a. Disabled within meaning of law and not yet 50 years old.
b. 20 quarters of coverage within last 40 calendar quarters.
c. 6 quarters of coverage within the last 13 calendar quarters.
d. Unable to do any substantial work.
e. Been disabled at least 6 months.
f. Disability expected to continue indefinitely.

2) Application should be made before July 1957 or "freeze" will be retroactive for only one year.

Special notes on disability restrictions:

Reasons: the disabled must have a genuine, substantial and recent connection with the labor market before disability.

This is an insurance system: an individual must have paid into the system before he is eligible for benefits.

Existence, beginning and end of disability are determined by state agencies in accordance with standards developed by the Secretary of Health, Education and Welfare; there may be review of decisions by the Secretary and the Courts.

E. Disabled child's benefits.

1) May receive child's benefits AFTER as well as before 18 years old.

2) To be eligible:

a. Disabled within meaning of the law.
b. Became disabled before reaching age 18 and has remained so ever since.
c. Is dependent upon a parent, step parent or adopting parent who is entitled to old age insurance benefits
or
was dependent upon a parent who died after 1939 and was insured at the time of death.
d. Is unmarried.
e. Accepts referral to and assistance from state vocational rehabilitation service.

9. The "primary insurance amount"

A. This is the key to your own benefits and those of your dependents and survivors.

B. Figuring the primary insurance amount, based on "average monthly wage".

1) May start with Jan. 1, 1937, or Jan. 1, 1951, or with year you became 22 if that was after 1950.

2) Most people benefit most by figuring earnings from Jan. 1, 1951. Here is the formula:

a. List annual earnings in work covered by Social Security for years 1951, 1952, 1953 and 1954 (if you were under 22 in 1951, start with year in which you had your 22nd birthday).

b. Don't count more $3600 for any one of these years.

c. If you had no earnings in one or more of these years, put down year anyway with a zero after it.

d. List your annual earnings, or expected annual earnings, in work covered by social security for each year beginning with 1955 up to but not including the year in which you expect to retire; don't count more than $4200 for any one year.

e. Strike out the 5 lowest years.*

f. Add up the earnings of all years, omitting earnings for the years you dropped out.

g. Divide this total by the number of months in all years on your sheet, omitting the months for the years you dropped out. (If there are fewer than 18 months left, you must divide by 18 anyway)

h. This gives you your average monthly earnings for Social Security purposes.

3) Earnings in the year you apply for benefits are not usually counted in the computation; if they would increase your benefits, you may ask at the end of the year to have your benefit refigured to include them.

4) When the Social Security Administration receives an application for payments, the amount is figured in each way and you or your survivors receive the largest possible payment.

C. The primary insurance amount payable to an insured worker at retirement or for disability at age 50 or over is 55% of the first $110 of the average monthly earnings, plus 20% of the next $240 of average monthly earnings; minimum, $30; maximum, $108.50.

* You may also drop out any time during which your earning record was frozen because you were disabled within the meaning of the law.

10. The amount of the benefits to dependents and survivors

The monthly payment to your -	Is this part of your monthly amount -
Wife (see below re: age).	.One-half
Child (when you have retired. . . .	.One-Half
Dependent husband.	.One-half
Widow.	.Three-fourths
Each child (after your death). . .	.One-half, plus an additional one-fourth divided equally among all children
Dependent widower.	.Three-fourths
Dependent parent	.Three-fourths
Lump sum death payment	.Three times primary amount, with $255 maximum.

Note: benefits may bot be less than $30, nor more than $200. They may not exceed 80% of the average monthly wage exc ept when this rule would bring benefits below 1½ times the primary amount for a single person, or $50 if that is higher.

11. The new retirement age for women

A. The working woman may retire on reaching age 62; benefits will be permanently reduced. Retirement at age 62 yields 80% of primary insurance amount; at 63, 86 2/3%; at 64, 93 1/3%. Benefits to dependents are not reduced. Retirement at 62 puts you ahead of the game for 15 years.

B. The wife of a man receiving retirement payments may retire on reaching age 62; benefits are permanently reduced. Retirement at age 62 yields 75% of one-half of husbands primary amount; at age 63, 83 1/3%; at age 64, 91 2/3%.

1) A wife retiring at 62 is ahead of the game for 12 years.

2) Reduction is not permanent if husband goes back to work before wife reaches 65 and as a result she loses benefits for at least 3 months. At 65, her benefits will be refigured to give her credit for the months during which she received no benefits.

3) In the event of husband's death, wife's benefit would be changed to full widow's benefit.

C. If husband dies, full benefits are payable to widow at age 62.

D. Mother of insured worker who dies leaving no eligible widow, widower or child, and who received at least one-half her support from the insured worker, is entitled to full benefits at age 62.

12. Claiming benefits

A. Benefits are matter of right, but claim must be filed.

B. Claim is filed with District Office of Social Security Administration not more than 3 months before and not more than 12 months after the first month in which claimant becomes entitled to benefits.

1) 12 month limit on retroactivity.
2) 2 year limit on filing for lump sum death payment.
3) If you have trouble with proofs supporting application (see below) file claim any way and get proffs in later.

C. Proofs may be needed in support of application, such as proof of age, death, marriage, parent-child relationship, support, payment of burial expense.

D. Decisions of the Social Security Administration may be appealed, eventually to the Courts.

13. Earnings after benefits start

A. The $1200 rule.

1) Any beneficiary (retired worker, dependent, survivor) can earn up to $1200 a year with no reduction in benefits. If he earns more, 1 month's benefit is deducted for each $80 of earnings or fraction thereof. After age 72, you may earn any amount without reduction.

a. Reduction applies to dependents of beneficiary even when they earn nothing.
b. When dependents earn over $1200, their checks are cancelled but not those of the beneficiary of the primary amount.

Exception: no matter how much you earn in a year, you can get monthly payments for any month in which you neither earned wages of more than $80 nor rendered substantial services in self-employment. The burden of proof is on you.

c. All gross earnings, in covered employment or not, should be reported before March 15 of the following year. Special arrangements can be made upon application to your District Office when you anticipate earnings in excess of the maximum.

d. Do not count income from rent, interest, dividends, business profits to owner who performs no services, gifts from other than the employer, workmen's compensation, insurance, company or union pensions, private insurance.

B. Recomputation of earnings after retirement.

Persons who have once been entitled to retirement benefits and who have been credited with more than $1200 in a calendar year may, under certain conditions, have their benefits recomputed to take into account the additional earnings.

14. How benefits may be lost

A. Death (ends primary benefit, changes dependents to survivors)
B. Marriage (of anyone receiving benefits as dependent or survivor)
C. Divorce (except of wife who has child of husband in her care)
D. Adoption (except by step-parent, grandparent, aunt or uncle)
E. Entitlement in own right

15. Relation of OASI to other types of income insurance

A. Unemployment compensation; 13 states reduce UC benefits to anyone drawing social security. Can draw both in other states if worker can meet tests of both systems.

B. Workmens Compensation; reduces disability benefit under OASI. Otherwise, can draw both, except in Minnesota when OASI benefits are deducted from payments for total permanent disability after latter has reached $18,000.

C. Employer and union pension and group life plans: can draw both.

D. Private insurance; can draw both.

E. Railroad Retirement Act (includes retirement, UC, sickness and disability)
1) 120 months needed to qualify under this law.
2) Worker with less than 120 months has records transferred to Social Security and figured into his OASI benefits, together with all other wages.
3) If RR benefit is less than Social Security, gets Social Security.
4) If eligible for both RR and OASI, gets both.

16. Some current controversies

A. Element of partial redistribution - OASI not true insurance.

B. Double taxation argument.

C. Blanketing-in

D. Freezing contribution rate; the Trust Fund.

E. Pay-as-you go plan.

F. Effect of continued earnings after 65.

G. Duplication and coordination.

17. Some union proposals for liberalizing the program.

A. Broaden coverage

B. Increase wage base beyond $4200.

C. Adopt benefit formula permitting higher benefits for higher income workers.

D. Immediate benefits to disabled worker.

E. Restoration of annual increment.

F. Reduce eligibility age of wives of beneficiaries.

G. Do something about sickness and the related loss of wages.

Research Council for Economic Security

The
RESEARCH COUNCIL FOR ECONOMIC SECURITY
111 West Jackson Boulevard Chicago 4, Illinois

A privately-financed research and educational organization, engaged in preparing, publishing, and distributing on behalf of the public interest, factual analyses on all phases of social and economic security.

Foreword

Of all the social security services administered by government, unemployment compensation has, perhaps, the closest relationship to the national economy. The public assistance programs are designed to meet the needs of what is, fortunately, a small segment of the population. Old Age and Survivors Insurance is designed to meet the needs of a growing, but restricted, portion of the population. The unemployment compensation programs, however, are prepared to service most of the employed population in the event that a worker becomes involuntarily unemployed.

The close relationship between the national economy and unemployment compensation is manifested in two major ways. There is a fiscal effect: if the economy prospers, tax receipts and therefore the reserve fund, go up while the number of beneficiaries and the amount of benefit payments go down, and vice versa. No less important, there is the long range effect of economic trends on basic provisions. For example, average weekly wages of covered workers rose from about $26 in 1939 to more than $71 in 1953, and average weekly benefits rose from about $10 in 1939 to more than $23 in 1953.

Because of its close relationship to the national economy, the experience of the unemployment compensation programs during the past 15 years should be given close study so that we may be able to evaluate present and future trends with some degree of accuracy.

The present study was prepared at a time when many changes in the state programs were being requested: liberalization of benefits and durations, an idealized program for states to emulate, and changes to allow industry to supplement the benefits. This study is being published 20 years after the Social Security Act went into operation, and 15 years after all the states and territories had started benefit payments.

This study is a graphic presentation of the experience of the unemployment compensation programs during the period 1939-1953 against the broad background of economic change. The charts, the tables, and the interpretation attempt to relate the experience under the state laws to general economic trends. It does not pretend to be intensive or exhaustive, but does provide a statistical base for further investigation.

Preface

Renewed interest in a thorough evaluation of the unemployment compensation program has been stimulated by a number of recent developments:

> Guaranteed annual wage plans have, perhaps, provided the greatest impetus -
>
> A 1954 amendment to the Federal Act added some four million persons to those already covered under the state laws -
>
> Under-Secretary of Labor, Arthur Larson, in outlining an idealized program for the states to try to develop, recommended universal coverage of all wage earners -
>
> President Eisenhower recommended that the states increase minimum benefits to at least one-half of the average weekly wage of covered workers, and increase the duration of benefits to a minimum of 26 weeks.

The implications of extended coverage and liberalized benefits are obvious, but the possible effects of the guaranteed annual wage may not be as evident. The Ford and General Motors plans provide for employer supplementation of state unemployment benefits. The demand for such supplementation will give impetus to the liberalization of the state laws. Guaranteed annual wage plans of this type could become one of the strongest influences in bringing about legislative and administrative changes in the state unemployment compensation programs.

These developments are the most recent manifestations of the economic pressures that have brought about changes in the legislative provisions and administration of the programs throughout the years since the Unemployment Insurance Acts were first introduced in the various state legislatures. These changes invariably have been piecemeal, with little regard to the overall purpose of the programs in respect to fulfilling the needs of the national economy. An objective study of the entire unemployment compensation program is sorely needed.

In any case, the operation and experience of our various government programs need to be reviewed from time to time. The year 1954 marked the fifteenth year in which unemployment benefits were paid by all states and the territories of Alaska and Hawaii, and thus suggests such a review.

The following study presents the national totals of the operating experience of the unemployment compensation systems during these fifteen years. It provides a statistical and analytical basis preliminary to any detailed evaluation of the program. Groups who want to learn more about the unemployment compensation program and plan to discuss it in greater detail, will find key points in this material for the development of such discussions. The Research Council will be glad to receive inquiries, and to the extent possible, will try to assist such groups in identifying additional sources of information.

We want to express our appreciation to members of the staff of the Bureau of Employment Security of the U. S. Department of Labor and the Division of Unemployment Compensation of the Illinois Department of Labor for supplying additional data, reviewing the manuscript, and making pertinent and most helpful suggestions.

Introduction

Unemployment compensation has become accepted as an integral part of the nation's economic program. However, its acceptance has not engendered universal agreement as to the role it should play in the economy. What unemployment compensation is expected to do--what is wanted--affects the concept of the "proper" level of benefits, duration of benefits, and extent of coverage.

The Social Security Act of 1935 directly stimulated the passage of state unemployment compensation laws in 47 states and two territories during 1936 and 1937. Wisconsin already had such a program.

The Social Security Act did not set up a national system of unemployment compensation. The Act levied an excise tax of 1 percent of payrolls in 1936, 2 percent in 1937, and 3 percent thereafter, on firms employing eight or more persons in at least 20 weeks of the year. This tax did not apply to all activities. The self-employed, agricultural labor, government employees, domestic servants in private homes and college clubs, sailors on the navigable waters of the United States, and employees of most non-profit organizations were among those excluded. A later amendment excluded railroad workers who were then afforded unemployment compensation under the Railroad Retirement Act.

For those establishments covered, the Act provided that an employer contributing under an approved state unemployment compensation plan would be credited with up to 90 percent of his liability under the federal law. The full 90 percent would be allowed even if the employer contribution were reduced by the state through a system of experience rating based on the record of labor turnover, or benefit payments to former employees. Thus any tax advantage to employers in a state without an unemployment compensation law was eliminated. The Act further provided that the federal government would pay the administrative costs of all approved state programs.

By the middle of 1937, the 48 states, the District of Columbia, and Alaska and Hawaii had passed approved unemployment compensation legislation, and by 1939, all were paying benefits. Although no two state laws were the same in all respects, it was felt that such a nation-wide program would function to stabilize employment and provide temporary cash benefits to members of the regular work force who were involuntarily unemployed but seeking employment or waiting to be called back to their old jobs.

This program was to complement the other provisions of the Social Security Act. Although enacted during the depression, the Old Age Benefits (which became the

Old Age and Survivors Insurance under the 1939 amendments) and the unemployment compensation provisions were intended to alleviate future dependency. Stabilization of employment was to be encouraged and purchasing power maintained for those temporarily unemployed; some income was to be provided to older workers upon retirement.

To assist the states in meeting the immediate emergency of the needy aged, dependent children, and the needy blind, the Act set up a system of grants-in-aid. These public assistance programs also were to care for any needy person among those who, due to limitations of coverage or other exclusions, would not be able to qualify for benefits under the OASI or UC programs.

Originally, a good deal of emphasis was placed on the role of unemployment compensation in stimulating stabilization of employment. Employers were to be rewarded for a low rate of labor turnover by reduction of their contribution rate through experience rating. The cash benefits to former workers were to tide them over temporary spells of unemployment such as those resulting from temporarily reduced activity in an industry or from retooling. The employer could then count on the preservation of a trained labor supply since the worker would be able to remain in the locality until the temporary downturn was reversed. It was also felt that the benefits would permit a more orderly relocation of workers who became unemployed due to their jobs being eliminated by such conditions as technological change, the deterioration of an industry, or the cessation of the employing establishment.

In recent years more emphasis has been placed on the role of unemployment compensation in maintaining consumer purchasing power. It is contended that providing the unemployed with spendable income serves to resist a general recession or depression. The maintenance of demand for goods and services tends to inhibit the spiraling that led us into other serious depressions. This concept gives rise to proposals for higher benefits, longer duration of benefits, and extended coverage, especially as the cost of living rises.

There have been many changes in the state unemployment compensation laws since they were first passed. In general, these changes have (1) broadened coverage by including firms employing fewer than eight persons and by including some of the activities excluded under the federal law, (2) increased the weekly benefit amount and the duration of benefits, (3) raised the earnings required in the base period to qualify for benefits, (4) redefined the conditions under which claimants may qualify or be disqualified for benefits, and (5) extended experience rating to all states and territories.

The extent of these changes may be seen through the following comparisons:

In 1937, 29 states covered firms employing eight or more persons; 10 covering firms employing one or more.
In 1954, 17 states provided coverage for one or more.

In 1939, 42 states provided a maximum weekly benefit of $15, five had a $16 maximum, and four had a maximum of $18.
In 1954, the states provided for maximum weekly benefits ranging from a low of $20 to a high of $35, not including allowances for dependents.

In 1940, 29 states provided benefits for a maximum of 16 weeks. The maximum durations in other states ranged from 12 to 20 weeks.
In 1954, five states provided maximum durations of 16 to 18 weeks, 16 provided a maximum of 20 weeks, six provided maximums of between 22 and 24 weeks, and 24 provided for a maximum of 26 weeks or longer.

In 1937, 35 states had no effective minimum earnings requirement to qualify for benefits, two states required less than $100 to be earned in the base period, one required between $100 and $149; five required between $150 and $199, and in eight states a person could qualify for benefits on the basis of length of employment rather than total earnings.
In 1954, all states but one had an effective minimum earnings requirement. Earnings requirements ranged from $100 to over $350 in the base period, with 40 states requiring earnings of between $150 and $349. In only one state could a person qualify for benefits on the basis of length of employment alone.

Federal legislation in 1954 extended coverage under unemployment compensation to almost four million additional workers. The new law makes employers of four or more persons liable to the Federal Unemployment Tax Act, bringing in some 1.2 million new workers; it extends coverage to substantially all federal civilian workers, adding about 2.3 million; and allows the states to reduce the employer's payroll taxes under experience rating after one year of coverage instead of the previous limit of three years.

Many questions have been raised concerning the unemployment compensation programs since their inception. This publication is concerned solely with presenting statistical measures of the national experience. For a more complete evaluation of the program, we should have: (1) statistical measures of each state's experience to compare with the national experience, and (2) a detailed analysis of the changes in the economy, in the size and composition of the labor force, and of the changes in the state laws.

CHARTS 1 AND 2

This story of unemployment compensation begins with the number of workers covered under the state programs. It is a rough measure of the number of people who could receive benefits if they became unemployed. For a better understanding of their importance, the number of workers in covered employment is presented against the broad background of the total population, the civilian labor force, and the civilian employed.

The total United States population increased by more than 28 million persons from 1939 to 1953, or by 21.5 percent. The civilian labor force, i.e., all who either had a job or were looking for work, increased by 14.8 percent during this period, an increase of almost 8 million. There are many reasons why the civilian labor force may not keep pace with population changes. Perhaps, the primary factor in the early 1940's was the number of workers and potential workers taken into the Armed Services. From 1939 to 1943, the population increased by 4.5 percent, while the civilian labor force increased by only 0.6 percent. From 1943 to 1948, however, the labor force increased to a greater degree than the population, as millions of men and women entered the labor force after discharge from the Armed Services.

From 1948 to 1953, population rose 8.5 percent and the labor force increased by 3.2 percent. Three major factors influenced this trend. Because of the low birthrates of the early 1930's, the number of persons coming of working age was reduced so that there were relatively fewer entering the labor force. The emphasis on higher education coupled with the G. I. Bill delayed the entrance into the labor force of many persons of working age. The high marriage and birth rates in the post-war period not only increased that proportion of the population which was too young to work, but also eliminated many women from the labor force. In addition, the development of private pension plans in industry coupled with increasing benefits under Old Age and Survivors Insurance may have influenced some older persons to retire from the labor force earlier than otherwise.

Within the labor force, from 1939 to 1953, the number employed rose 35.3 percent, an increase of more than 16 million. The major share of this increase, 19.1 percent, occurred during the pre-war and first years of World War II, 1939 to 1943, when production of war materials for lend-lease and our own war effort went into high gear. The number of workers in employment covered under state unemployment compensation programs rose 71.2 percent from 1939 to 1953, an increase of more than 15 million. More than half of this increase occurred from 1939 to 1943 also. In general, the rise in employment and covered employment during the period 1939 to 1953 is one manifestation of the generally good economic conditions the United States has enjoyed since shortly before Pearl Harbor.

Of the many reasons why covered employment rose at a higher rate than all civilian employed, the most obvious are the broadened coverage under the changing state laws and the decrease in agricultural workers, most of whom are not covered. Chart 2 shows that in 1937, 29 states covered firms employing eight or more persons, and 10 states covered firms employing one or more. In 1953, 22 states covered firms employing eight or more and 17 covered firms employing one or more. Other changes extended coverage to activities not formerly covered. In addition, 49 of the systems permitted voluntary coverage by establishments having less than the statutory number of employees and 39 of the laws provided for voluntary coverage of activities not automatically covered by the statutes. In the face of a growing population, labor force, and rising employment during the years 1940 to 1953, the number of agricultural workers decreased by more than three million, or by 31.7 percent. In 1940, there were 9,540,000 agricultural workers, and in 1953 there were 6,528,000. Put another way, agricultural workers comprised 20.1 percent of the employed in 1940, and only 10.5 percent in 1953.

CHART 3

Since the covered workers under the unemployment compensation laws (shown in Charts 1 and 2) do not include all workers in all establishments, "unemployed workers", and "covered unemployed workers" are obviously not synonymous figures. It is necessary, therefore, to measure not only the proportion of covered workers--those who could receive benefits--who benefited from the programs, but also (1) the proportion of unemployed who were covered and could receive benefits and (2) the proportion of unemployed who did receive benefits.

Unemployment, of course, varies with changing economic conditions. Thus, using the Gross National Product as an indication of economic change, we find that the average yearly unemployment drops off as the Gross National Product rises, and that unemployment rises when the Gross National Product declines. This relationship seems to hold more steadily when the Gross National Product is adjusted to constant 1947-1949 dollars than with current dollars.

Average yearly unemployment is evidently not solely determined by the national product. If it were, unemployment would be lowest in 1953, the year in which the national product was highest. Manpower needs for the Armed Services in wartime, and increased efficiency also have their effect. The more than 10 million men and women who served in the Armed Services contributed in keeping civilian unemployment from 1943 through 1945 the lowest in history.

The national product can increase without additional manpower when more efficient machines and production methods are used. In this situation, with an increasing labor force, there could be an increase in average unemployment along with an increase in production.

Persons entering the labor force also have some effect on the number of unemployed. The number of young people entering the labor force for the first time in any one year is determined largely by the number who have reached working age or who have completed their education rather than by economic conditions. Economic conditions, however, determine how long they will remain job seekers.

CHART 3

Source: Appendix Table VII

CHART 4

Chart 3 has demonstrated, as was expected, that the pattern of unemployment is related to economic changes. It has also shown that economic changes are not solely responsible for the variations in average unemployment.

Since the people who receive unemployment benefits are part of the total unemployed, it could be presumed that as average unemployment increased, the number of beneficiaries would increase, and as unemployment decreased, the number of beneficiaries would decrease. In general, this appears to be the case, except for the years 1939 through 1942. After 1942, the lines depicting the variations in average unemployment and average number of beneficiaries do not run parallel, indicating that factors other than unemployment are also having an effect on the average number of beneficiaries.

The federal and state laws excluded from coverage many industries and occupations, as well as firms employing less than eight workers. Many unemployed could not, therefore, claim benefits. During the early years of the program comparatively few received benefits because the program was immature. In 1939, when the states began to pay benefits, the United States was just climbing out of the "Great Depression" and unemployment was high. Most of the unemployed, however, had not yet worked in covered employment or had not earned sufficient wage credits to qualify for benefits. Less than 10 percent of the average number of unemployed received unemployment compensation in 1939.

In the succeeding years, as employment increased, more and more workers were able to qualify for benefits, and in 1946 more than half of the average number of unemployed received benefits.

Although the state laws have been amended through the years to extend coverage to firms employing less than eight persons and to occupations and industries previously excluded, there has not been an increase in the relative number of unemployed receiving benefits in each successive year. The yearly fluctuations, as shown in Chart 8, are caused by a number of factors. Among these are: (1) changes in the proportion of unemployed from covered and uncovered industries; (2) persons seeking work for the first time are listed as unemployed until they find work; (3) some persons who had worked in covered employment may not have earned sufficient wage credits to qualify for benefits; (4) others may have exhausted their benefits and were still not employed; (5) and a substantial number who had been counted as unemployed returned to work before they had received their first benefit check. All of these factors would tend to reduce the proportion of unemployed who received benefits. Because these and other influences vary from year to year and month to month, the relationship between the average number of unemployed and the average number of beneficiaries does not run parallel.

AVERAGE UNEMPLOYMENT AND AVERAGE NUMBER OF U.C. BENEFICIARIES 1939 – 1953

CHART 4

Source: Appendix Table VII

CHARTS 5, 6, and 7

Chart 4 has shown that all unemployed do not receive unemployment compensation, and the discussion indicated that all who claim benefits do not necessarily receive them. Chart 5 shows the difference between the total number of persons claiming and receiving unemployment compensation from 1943 through 1953.

Before discussing these differences, it should be explained that figures in this chart are not comparable with the figures on the previous charts. The number of claims and number of beneficiaries in Chart 5 are the totals of the different claims and different beneficiaries throughout the year. The average number of beneficiaries, unemployed, employed, in covered employment, etc. shown in previous charts are averages computed from monthly figures and do not express the total number of different people throughout the year.

The rise and fall of the number of claims generally reflects changes in the economy as a whole. During the war years when unemployment was low, there were relatively few claimants. Beginning with reconversion, the number of claimants increased sharply, and numbered almost seven million in 1946. The recession of 1949 resulted in a rise of more than four million different claimants as compared with 1948. From 1951 through 1953, there were between 6.5 and 6.9 million different people filing claims per year.

The proportion of claimants who receive benefits is not constant from year to year, as Chart 6 clearly demonstrates. There are a number of reasons why benefits are not paid to claimants. Some persons file claims although their job was not covered. Others may not have sufficient wage credits to qualify for benefits. Some claims are not allowed because the claimants did not become unemployed involuntarily; workers on strike fall into this category in most states. Then there are the large numbers of people who file claims but find work before the waiting period is ended and therefore receive no benefits. There are also some claimants who are judged not to be available for work and are denied benefits.

Since the number of claimants disqualified would vary from year to year because of employment opportunities, increased awareness of whether or not one is covered and has sufficient wage credits, the number of strikes, and many other conditions, there is no constant relationship between the number of claimants and the number receiving benefits.

Chart 6 shows that since 1943 there has been a general increase of 9.1 percent in the proportion of claimants receiving benefits. And there has been a decrease

of 4.2 percent in the proportion of claimants who did not have insured status, that is, they were not employed in covered jobs or had not earned sufficient wage credits. These overall changes took place during a period in which the states were tightening up their administrative practices, requiring higher base period earnings for qualification, and reducing the waiting period. For example, in 1937, 35 states had no effective minimum earnings requirement to qualify for benefits, in eight states qualification was based on length of employment, and in the eight states which required minimum earnings the range was from less than $100 to $199. In 1952, all states had some effective minimum; 31 required earnings of $200 or more, and five of these required earnings of $350 or more (Chart 7).

The decrease in the proportion of claims disallowed because of not meeting insured status may be explained by the fact that since the inception of the program more and more covered workers have been able to earn sufficient wage credits through steady work. This is pointed up by the decrease in such disqualifications during and directly after World War II. The higher proportion of claimants receiving benefits is due, in part, to the fact that more people had insured status, and in part, to a better understanding of the program. Fewer workers may be filing claims when they have insufficient wage credits or had not worked in covered employment.

CHART 8

Chart 1 has shown that, in general, the average number of workers in employment covered under the state unemployment compensation laws increased at a higher rate than the average of all employment during the years 1939 through 1953. The proportion of average employment covered under unemployment compensation programs rose 12.4 percent during this period. Many factors worked to bring about this increase.

The movement from farm to city reduced farm employment by more than three million from 1940 to 1953. This was brought about, in part, by the lure of high wages in the city and by the increased use of labor-saving farm machinery. Since most farming occupations are not covered by the state laws, and since a good proportion of the three million probably did obtain work in covered employment, there was thus a rise in the proportion of workers in covered employment. Another obvious factor is the extension of coverage by the states during this period. The original federal law did not cover a firm that employed less than eight persons, nor did it include many activities, such as the self-employed and farming, and most states kept these limitations. Difficulties of administration and tax collection for these groups seemed to necessitate their exclusion. In succeeding years, public opinion and more mature administrative procedures allowed for extended coverage. Some state laws extended coverage to activities previously excluded, and seven additional states extended coverage to firms employing less than eight persons (Chart 2).

Chart 4 shows how many unemployed persons (averaged over a year) actually receive unemployment benefits. In this chart, yearly fluctuations and general increase in the proportion of unemployed receiving benefits is portrayed more clearly.

The proportion of the average yearly unemployed receiving benefits rose from less than 10 percent in 1939 to over 50 percent in 1953. It should be remembered that the state programs do not cover all workers, and, as the discussion of Chart 5 brought out, there are many reasons why persons who claim benefits may not receive them. During the early years of the program there was considerable unemployment and short term employment. Therefore, many of the persons unemployed in 1939 had never worked in covered employment or did not have sufficient wage credits to qualify for benefits.

During the pre-war and war years, many more workers became eligible for benefits. The low percentage of beneficiaries during the war period, however, may have been because many were able to return to work before they became eligible

for their first benefit check, many may have left their jobs voluntarily, and others may have been disqualified because they would not take suitable work. There were also a group of people who entered the labor force for the first time during this period, and, of course, were not covered under the programs. The sharp rise in the proportion of the average of the unemployed receiving benefits during the reconversion period points up the fact that many had become eligible during the war years.

The yearly fluctuations result, in part, from the varying numbers of new entrants into the labor force each year, the number of people still unemployed after exhausting their benefits, and the varying number of claimants disqualified each year.

CHARTS 9, 10, and 11

Charts 1 through 8 have depicted the long term trends and yearly fluctuations in the number of persons receiving unemployment compensation from 1939 through 1953. Charts 9 through 15 will indicate the average duration and average weekly benefit amount received by beneficiaries during this period.

It is readily observed that there is quite a difference between the average potential duration of benefits and the average actual duration. The average potential duration is the average maximum duration the beneficiaries during a year would be entitled to before exhausting their benefits; while the average actual duration is the average number of weeks in which they actually drew benefits. The difference is due to the fact that most beneficiaries returned to work before exhausting their benefits. During conditions of rising prosperity, such as have been enjoyed since 1939, it would be expected that reemployment would be comparatively swifter for most unemployed.

The average potential duration shows a gradual rise from almost 20 weeks in 1946 to slightly over 22 weeks in 1953. This is a reflection of (1) higher wages which enable more and more covered workers to qualify for the maximum or near maximum duration, and (2) of the increasing minimum and maximum duration legislated by the states over the years. In 1940, nine states provided for a minimum duration of less than three weeks; in 23 states, minimum durations ranged from three to less than nine weeks; in the other 19 states the range was from a minimum of nine to less than 17 weeks. In 1951, only 16 states provided for a minimum duration of eight weeks or less; 20 states provided for minimum durations from nine through 16 weeks; and 13 provided for minimums ranging from 18 to 26 weeks (Chart 10). Maximum duration of benefits ranged from 12 to 20 weeks in 1940, with 29 states providing for a maximum duration of 16 weeks. In 1951, only five states provided for maximum durations of 16 weeks or less, 28 provided for between 17 and 25 weeks, and 18 states provided for a maximum duration of 26 weeks or more (Chart 11).

The average actual duration of benefits has remained relatively unchanged throughout the period during which benefits have been paid when the range of economic conditions during this period is considered.

This is due, in part, to the fact that the early years of the program when maximum durations were low coincided with relatively poor economic conditions, and upward revision of the maximums coincided with better economic conditions.

During the war years the average actual duration was low since maximum durations were low and the beneficiaries in this period of short labor supply were able to get new jobs more quickly. The rise in average actual duration during the reconversion period and the recession of 1949 indicates that more of the beneficiaries were able to qualify for the more liberal maximums enacted by the states. However, the peaks in average actual duration were less than 14 weeks, six weeks less than the average potential duration in 1946, and seven weeks less than in 1949. This would indicate that economic conditions were such as to allow most of these beneficiaries to become reemployed before exhausting their benefits.

CHARTS 12 and 13

It has been stated in discussing Chart 9 that the number of beneficiaries who exhaust their benefits influence the actual average duration of benefits received. Charts 12 and 13 take a closer look at the number and proportions of beneficiaries exhausting benefits during the period 1940-1953.

The number of persons exhausting unemployment compensation benefits in any year is related to the prevailing economic conditions as well as to the minimum and maximum durations provided for under the state laws. As Chart 12 points out, economic conditions during the years 1940-1953, as measured by average yearly unemployment, bears a strong relationship to the number of persons who received unemployment compensation and to the number who exhausted these benefits. In general, economic set-backs such as the pre-war period, post-war reconversion, and the recession of 1949 have not only been associated with a rise in unemployment, but also with extended durations of unemployment. Under such conditions, even the unemployed person who has had enough work experience to qualify for unemployment compensation finds it more difficult to obtain a new job before his benefits run out.

The proportion of beneficiaries exhausting unemployment benefits has, in general, declined since 1940, as Chart 13 shows. Here again, the responsibility rests with the broad economic changes and the changing durations under the state laws. The Gross National Product, as pictured in Chart 3, indicates generally increasing prosperity since 1939. Charts 8 and 9 show that both the minimum and maximum duration of benefits have increased substantially since 1940. Under these conditions, covered workers were not only eligible for a longer period of compensation when unemployed, but also found new jobs more quickly, thus reducing the proportion of beneficiaries who exhausted benefits.

1940 — 1953

CHART 13

Source: Appendix Table VII

CHARTS 14-18

The weekly benefit a beneficiary receives under unemployment compensation is of paramount importance (to him). This amount will, of course, vary in accordance with a person's earnings which will entitle him to a certain proportion of the maximum benefit, and with the maximum amount provided for in the state in which he has worked. This series of charts presents the average weekly benefit paid to all beneficiaries in each year from 1939 through 1953, relates this payment to the rise in weekly wages among all workers covered under unemployment compensation laws, and to the Consumer Price Index, and shows the changes in minimum and maximum amounts provided for from 1939 to 1952.

As a percent of 1947-1949 dollars, both the average weekly wages and average weekly benefits rose higher than the C.P.I. from 1939 through 1953.

The average weekly wage for persons in employment covered by unemployment compensation has increased substantially since 1939. Actual dollar wages have increased almost three-fold, and this has been a "real dollar" increase of almost $20.00 in 1947-1949 dollars. The increase in wages and the rising Consumer Price Index reflects the increased prosperity the United States has enjoyed since 1939.

The average weekly unemployment benefits paid for total unemployment rose from $10.66 in 1939 to $23.58 in 1953. When the benefits are adjusted to the Consumer Price Index using 1947-1949 as 100, the increase is less than $3.00.

Average weekly wages are usually determined by the prevailing economic conditions. When business is good, wages generally increase. The average weekly benefit is determined by two factors: (1) the amount of money the beneficiary has earned, which is related to economic conditions, and determines what percentage of the maximum allowable benefit he will receive, and (2) the minimum and maximum benefit provided under the state law (see Charts 17 and 18). An example of how this works can be seen from the experience during 1944 through 1946. During this period the average weekly benefit rose sharply in actual amount and also increased as a percentage of average weekly wages. This was due to the following facts: wages in past years had been rising so that more workers became eligible for maximum benefits; during this three-year period average weekly wages rose very little; and the states increased the minimum and maximum amounts provided for under their unemployment compensation laws.

The differences between average weekly wages of covered employees and average weekly benefits from 1939 through 1953 are, perhaps, shown more clearly in Chart 15. This chart indicates that average weekly benefits were a smaller percentage of average weekly wages of covered workers in 1953 than in 1939. Average weekly benefits were 40.8 percent of average weekly wages in 1939 and 32.3 percent in 1953.

One of the main reasons why the ratio of average weekly benefit to average weekly wages has decreased from 1939 to 1953 is that the maximum weekly benefits provided by state laws have not kept pace with the increase in wages. There is some disagreement as to whether or not weekly benefits should be raised higher than they now are. It is argued that since the original intent of the program was to compensate a covered worker to approximately 50 percent of his average previous weekly wage while he is unemployed temporarily, the weekly benefits should be at least that amount, and preferably higher.

On the other hand, it is held that compensation in the amount of 50 percent or more of average weekly wages might deprive a beneficiary of sufficient incentive actively to seek a new job during the time he is receiving benefits. The argument runs that because the benefit is not taxable and because the beneficiary has reduced expenses for transportation, lunches, and other items, his spendable income from unemployment compensation is actually a higher percentage of his average weekly wage than it appears. The persons holding this view also state that the decrease in the proportion of average weekly wages compensated for is offset, somewhat, by the increase in taxes since 1939. They suggest the comparison not be made to gross wages but rather to the take-home pay, that is, after the deduction of OASI, Income Tax, and such other deductions as disability insurance, contributory employee benefit plans, etc.

CHARTS 19 and 20

In the previous charts, covered employment, claimants, beneficiaries, and duration and amount of benefits under unemployment compensation have been shown and discussed. To complete the story we need at least a brief reference to the financing of the programs. Charts 19 and 20 indicate the amount of contributions to the fund, benefits paid out, the amount in reserve from 1939 through 1953. The amount of contributions and reserves shown here do not include the 0.3 percent of payrolls transmitted to the federal government.

Contributions to the fund have been made primarily by employers. In 1939, seven states required employee contributions; by 1946 they were required in only four states. Subsequently, California and Rhode Island diverted the entire employee contribution and New Jersey diverted three-fourths of the employee contribution to benefits for temporary disability.

Contributions of 2.7 percent of total payrolls were imposed by most states before 1939. Michigan and the District of Columbia imposed a 3 percent tax. In 1939, the law was amended to provide that only the first $3000 paid to a covered worker was taxable. In addition, because of the experience rating provisions in the state laws, all employers did not have to contribute the 2.7 percent of taxable payrolls throughout the period 1939-1953. As of 1939, 35 states provided for experience rating, and since 1948, all states have provided for experience rating. These provisions have brought about a reduction in the average employer contribution rate, in 1953, to 1.30 percent of taxable payroll--the first $3000 paid to a covered worker (Chart 20).

In the face of this reduction in employer contribution rate, actual contributions rose from about 825 million dollars in 1939 to about 1.3 billion in 1953 (Chart 19). The increased contributions are another reflection of the prosperity enjoyed during this period with larger payrolls, higher employment and higher wages. Another contributing factor was the extension of coverage to occupations previously excluded and firms employing fewer than eight persons.

The total amount of benefits paid out under the program in any one year has been larger than contributions in only three instances: 1946, 1949, and 1950. In most years, benefits have been substantially less than contributions, thus the reserve fund has increased sharply since 1939, from $1.5 billion to almost $9 billion in 1953.

There are a variety of views as to what the relationship between contributions and the reserve fund should be. Insurance actuaries point out that the program

cannot be termed "insurance" since the reserve fund is not large enough to take care of a serious emergency. They point out that in a serious economic setback contributions would fall off sharply and the amount paid out in benefits would rise sharply for an extended period of time. For example, in a recession year, 1949, there were a little over 7 million beneficiaries. If this figure were trebled, for two years there would be some 40 million beneficiaries. Average weekly benefits of $22.50 for 10 weeks to these 40 million would total 9 billion dollars, equivalent to the present reserve. The program has therefore been characterized as a pay-as-you-go plan with a contingency reserve.

Others feel that it should be a pay-as-you-go plan and that the reserves should not be too high. They argue that experience rating, which tends to keep reserves low in comparison to a flat contribution rate, is the employer's incentive to stabilize his employment, and a flat rate would eliminate the basic aim of the program. This argument goes on to state that a larger reserve would increase pressure for higher benefits when, in fact, higher benefits may not be necessary.

SOURCES: Comparison of State Unemployment Insurance Laws, U. S. Department of Labor, and Significant Provisions of State Unemployment Insurance Laws, U. S. Department of Labor.

[1] In many states there is a variable minimum because the formula allows shorter durations and higher benefits when wages are concentrated in one quarter or longer minimums for claimants with minimum qualifying wages and minimum weekly benefit. This table lists the lowest duration allowable under the laws. Because these formula changes have been introduced, it appears that there have been decreasing minimum durations since 1952.

[2] During these years Missouri is omitted since it had no specified minimum.

TABLE VI. Number of State Laws Providing Specified Maximum Duration of Benefits

Year	Maximum Duration (in weeks) 12	13	14	15	16	17	18	19	20	21	22	23	24	25	26-26-1/2	None Specified

Selected Reading References

"Twenty Years of Unemployment Insurance in the U.S.A., 1935-1955," Employment Security Review, XXII, (August, 1955).

Bureau of Employment Security, U. S. Department of Labor, Government Printing Office, Washington 25, D. C.

This, together with the Research Council's "Graphic Review", would make an excellent and almost complete study packet for any group planning to discuss the development of the program. It supplements the Research Council's charts on the developments in coverage, benefits, financing, and some of the other aspects, with helpful, somewhat more detailed, narrative accounts.

The entire August issue of the Review is devoted to a brief history of the Unemployment Insurance Program, written by the staff of the Bureau's Unemployment Insurance Service.

Readings for General Background

BURNS, EVELINE M. The American Social Security System. Boston: Houghton Mifflin Company, 1949.

A text-book description of the social security system. Part One, pp. 3-62, covers background and general purposes of the programs; Part Two, Chapters 6 and 7, pp. 125-184, are devoted to Unemployment Insurance.

EPSTEIN, ABRAHAM. Insecurity: A Challenge to America. New York: Random House, 1938.

An economic analysis by one of the leading early advocates of social insurance. The advanced student will find it useful in understanding the background and origin of the present programs.

GAGLIARDO, DOMENICO. American Social Insurance. New York: Harper and Brothers, 1949.

Also a text-book on social insurance. In addition to the introductory chapter, pp. 3-23, Part Three, Chapters 9-12, pp. 209-314, describes the unemployment compensation programs in some detail.

Readings on Special Problems

Benefits:

ALTMAN, RALPH. Availability for Work. Cambridge: Harvard University Press, 1950.
A study of the administrative and judicial decisions that have been made to interpret the requirement in all of the state acts that unemployed workers may not draw benefits unless they are able to work and available for work.

BECKER, JOSEPH M. The Problem of Abuse in Unemployment Benefits: A Study in Limits. New York: Columbia University Press, 1953.
An attempt to determine whether the accusation that "too many are getting unemployment benefits when they are not entitled to them" is justified.

Research Council for Economic Security: Inducement of Benefits under Social Insurance. (Publication No. 48) Chicago: The Council, 1948.

----------: Measuring the Effect of Unemployment Benefits on the Economy. (Publication No. 102) Chicago: The Council, 1954.

Financing:

Series of studies have been conducted by most of the State Unemployment Compensation administrative agencies on the problem of "establishing and maintaining a firm financial basis for an unemployment insurance program which is responsive to the changing demands of our industrial society under various foreseeable economic conditions." Most of the studies were done in cooperation with some university research group. Reports have been published by the following states and may be obtained from the respective Unemployment Compensation administrative agencies:

Alabama, Arizona, Arkansas, California, Colorado, Florida, Georgia, Idaho, Illinois, Kansas, Louisiana, Maryland, Massachusetts, Michigan, Minnesota, Missouri, Montana, Nebraska, Nevada, New Hampshire, New Mexico, North Carolina, North Dakota, Oklahoma, Oregon, Pennsylvania, Rhode Island, South Carolina, Utah, Virginia, Washington, West Virginia, Wyoming.

A complete listing of these reports, entitled "State Studies in Unemployment Insurance Financing," has been prepared by the Division of Actuarial and Financial Services, Bureau of Employment Security, U. S. Department of Labor.

Administration:

U. S. Department of Labor: Study of Administrative Costs of Changes in State Employment Security Laws, Fiscal Years 1948-1952. Washington: Bureau of Employment Security, 1953.

"The Unemployment Insurance Tax Function," Employment Security Review, XX (November, 1953).

The entire issue is devoted to descriptions of the functions and problems of administering the collection of employer contributions.

Relation to Guaranteed Annual Wage:

Research Council for Economic Security: Guaranteed Wages: A Selected Bibliography. (Publication No. 106) Chicago: The Council, 1955.

Lists a number of discussions of the relationship between unemployment compensation and employer supplementation plans and other forms of the guaranteed annual wage.

STATEMENT OF GEORGE MEANY, PRESIDENT
AMERICAN FEDERATION OF LABOR AND CONGRESS OF INDUSTRIAL ORGANIZATIONS
BEFORE COMMITTEE ON WAYS AND MEANS
U. S. HOUSE OF REPRESENTATIVES
IN SUPPORT OF H.R. 3547
(FEDERAL UNEMPLOYMENT COMPENSATION STANDARDS BILL)
APRIL 10, 1959

First, I wish to express on behalf of the American Federation of Labor and Congress of Industrial Organizations our appreciation for the opportunity to be heard on vitally important legislation which this Committee has under consideration. The outcome of your current hearings will effect the well-being and the economic security not only of the 13 1/2 million members of unions affiliated with our Federation, but of every man and woman in this country who works for wages. Because their economic welfare is the very foundation of our national economic life, the improvements in the Federal-State unemployment insurance system contemplated in the measures before you which have been introduced by Congressmen Karsten and Machrowicz and six other members of this Committee, along with some 120 of your colleagues in the House, can make a significant contribution to the continued strength and stability of our country. Nothing can be more important in this time of world-wide unrest than maintaining this nation's leadership capabilities. The whole free world looks to this country.

We are here to review the needs of our system of unemployment insurance. It is not necessary for me to say that, while we consider this program an important part of our economic structure, we do not rely on it wholly as a means of preventing unemployment, nor, for the individual wage earner is it a satisfactory substitute for a steady job at good wages. Improvement in our unemployment insurance system is but a part, although a very important part, of the broad program for recovery and for maintenance of a high-level economy which the AFL-CIO is seeking to have enacted during this session of the Congress.

Your consideration of the needed improvements in unemployment protection is most timely.

This is true, first, because despite the series of glowing predictions of the imminent end of this "recession", unemployment as a pressing problem of major urgency is still with us. It has failed to heed admonitions just to disappear quietly from the scene. It cannot be brushed aside. The stark, hard statistics of its extent belie the efforts of the economic soothsayers. And to the individuals behind the statistics, it remains the crushing reality of hunger and despair.

According to the latest figure, there are 4 million, 360 thousand totally unemployed. In addition, nearly 2 and one-half (2.4) million are compelled to work part-time schedules. This represents an equivalent of 1.1 million more totally unemployed. Furthermore, there is a hidden unemployment of some 300,000 young people who would normally have entered the active labor market but who are now discouraged from looking for jobs because there are no jobs for them.

True unemployment therefore is now about 5.8 million or the equivalent of 7.6% of the labor force.

There is substantial unemployment in 74 of the nation's 149 major industrial areas and in 193 smaller industrial communities.

About 20% of the nation's productive capacity -- plants and machines -- is idle.

These hearings are timely not only because of the present emergency situation, but because they afford us an opportunity to review our experiences with this program in the light of twenty years of experience. I remember vividly the difficulties facing all of us when unemployment compensation was established in the 1930's. The defects in the program which we had to accept at that time in order to make a beginning, have come back to haunt us with an increasing persistency.

These Committee hearings provide us now with an opportunity not available 25 years ago. We now have long experience on which to base careful judgments. The last ten years have been a period for reviewing the performance of the system, for weighing alternative ideas, and for deciding what new underpinning is necessary.

The Congress has carefully studied the workings of unemployment compensation. In 1946, your Committee had prepared a staff report on "Issues in Social Security." In 1949, the U.S. Advisory Council on Social Security to the Senate Committee on Finance was established. In 1951, in 1954, and again last year, your Committee probed deeply into this same subject. Careful studies of the unemployment insurance system have been made by the Federal Advisory Council on Employment Security, on which labor representatives have been privileged to sit, by the Bureau of Employment Security of the U.S. Department of Labor, by private organizations such as the Rockefeller Brothers Study Commission, and by leading students of the American social security system. From all of these deliberations has come a wide area of agreement on the criteria for benefit adequacy and the steps necessary for permanent improvements in unemployment insurance.

The wide area of agreement achieved in studies of unemployment insurance found expression in 1954 when President Eisenhower first urged the states to improve their benefits so that the great majority of covered workers would receive at least half of their lost wage when unemployed and for at least 26 weeks when they are unable to find suitable employment in that length of time. This recommendation to the states signalled agreement in both political parties on the dimensions of unemployment insurance. The labor movement has been working year after year for an unemployment insurance program of at least similar proportions. When the fundamentals are so generally accepted, when the sights of so many are fixed on the same target, why is it that year after year we continue to fall short of the mark?

Just how far we still are from the goal has been brought home to everyone during the last two years. The first glaring inadequacy appears with respect to the number of unemployed who are denied protection under the system. About thirteen million persons from a fifth of all American families were unemployed at one time or another last year. Only eight million of these are able to establish eligibility for unemployment insurance.

The second measure of the inadequacy of our present unemployment insurance is in its failure to recover a sufficient portion of the wage loss -- in short, the low benefits.

When the head of a family receives a layoff slip, he tells his wife they must cut down on their spending. But the fact is that the unemployed can defer very little of their expenditures -- some clothing and entertainment costs, for example. They have to make some token payments at least if they are buying anything on time, or they face big losses. When you are making only three, or four, or five thousand dollars a year, you find very little cushion in your family budget. You can't put off paying for medical care, or housing, or food or the transportation necessary to look for employment. Even the telephone is a necessity if you want to stay on tap for job opportunities.

It hasn't always been this way, and here is the real tragedy in the downgrading of unemployment compensation over the years. In 1939, a worker making the average weekly wage in his state could be certain of getting half of his wage as a jobless benefit in every state in the United States. Today this same typical worker can get half his wage in only five states. Everywhere else he receives less than that proportion. In Texas and Oklahoma the maximum benefit amounts are $28 or only 36% of the average worker's wage in each of these states.

At times it is difficult to be patient with those who have never experienced unemployment and yet want to make a big point of the fact that half of gross wages is more than half of take-home pay today. They forget that a laid-off worker loses more than his pay check -- he loses paid holidays, vacation pay, pension credits. At the end of the first month, he loses his group medical and life insurance, or he picks up the premium himself at a higher individual rate. A benefit of half of one's wage is in fact less than half of his remuneration as an employee.

Benefit amounts last year did not even come close to paying those bills that couldn't be postponed. For the eight million unemployed last year who were fortunate enough to meet the requirements for drawing benefits, the average was $31 a week, or only about a third of their lost earnings.

We are asking for benefits of one-half of lost earnings, not one-third. For the typical union member making $90 a week, this is the difference between $30 and $45. I don't think we are asking for much but I want to say with all the conviction that I have that this is the difference between a compensation system that is doing the job and one that is a mere detour on the road to relief. Last year a laid-off steelworker in Pennsylvania got a benefit of 32% of his wage. An aircraft worker in Georgia got 30%. A bricklayer in Minnesota got 24% of his wage.

At every session of each state legislature, our AFL-CIO affiliates work to raise the dollar ceiling or maximum benefit amount. But in altogether too many state legislatures, unemployment insurance has come to be called a $2 law. We are able to obtain an increase of $2 or $4 in the maximum sometimes in two and more generally every four years, usually at the price of higher eligibility requirements and stiffer disqualification penalties. This failure to raise the ceilings with the rise in wages has completely changed the character of unemployment insurance and more and more laid-off workers are limited by the state maximum to less than half of their wage. In the typical state in 1939, the maximum benefit amount was 65% of the state's average weekly wage and today it is only 44%. For the majority of the insured unemployed, their benefits now are fixed by the maximums at a flat benefit level more like public assistance and relief than like the wage replacement insurance originally intended.

A third inadequacy of the present system is in the early termination of benefit rights for those still unemployed -- short duration.

There are some who will appear before your Committee to argue that there is no need for any action at this time. They will dramatize the gains in unemployment insurance by pointing, for example, to the fact that the maximum number of weeks now allowed is substantially greater than it once was. This, of course, is true in the absolute sense. But we will not be confused. We know and I am sure that this Committee knows that not all or even the larger number of workers establish their rights to 26 weeks in state laws which have variable duration.

Only the higher paid workers draw these so-called maximum durations. Here too there has been a subversion from the original intent of the founders of our unemployment insurance system. State laws once insured all beneficiaries for up to 16 weeks on the theory that both low and high wage earners all were entitled to the same outside or potential time period in which to find re-employment. But today 33 states allow many unemployed workers less than 16 weeks on the theory that they don't deserve any longer because their past earnings don't justify it. Variable duration, as this is called, undermines the insurance principle by focusing attention on one's wage record rather than on the contingency of unemployment, somewhat like reducing a man's life insurance benefit because he died before his premiums added up to the face value of the policy. In only eight states today do all claimants qualify for a minimum potential duration of 26 weeks, the standard recommended by the Social Security Administration for many years and by the President since 1954.

Again the question arises -- why are we falling short of the mark?

Back of all these questions of the amount of the benefits to be paid and for how long they should be paid lies the basic question which only the Congress can decide. That is the question of where federal responsibility starts and where it ends in order that this nation can stop the long downhill slide that has characterized our unemployment compensation system through most of the past 20 years. As a nation we are paying too great a price for the absence of standards in unemployment insurance. We have continually postponed the hard decision-making.

Let me summarize briefly the effect of the successive rejections of benefit standards on wages and salary earners this last year.

First, as is indicated above, a third of the thirteen million people in the country unemployed at one time or another did not receive unemployment compensation benefits. Almost three million, or two out of every five eligible to draw benefits, exhausted the number of weeks of their entitlement before finding a job. Less than one-fourth of total wages lost were replaced by compensation benefits. One-fifth of the families affected lost at least $2,000 in income. Public assistance rolls have skyrocketed: In Michigan, 30,000 families last year went on relief specifically because of the shortcomings in unemployment compensation benefits; Minnesota had the largest relief case load since 1942; New Jersey relief rolls were up 50% over a year ago; and in Kentucky, county general assistance funds ran out leaving thousands of families destitute.

If the proposed coverage and benefit provisions had been in effect last year, then another $1.5 to $2 billion would have been paid to the unemployed. When this was spent and spent again by the grocer and the landlord, and again and again, it would have added during the year several billion dollars more in effective demand for goods and services which would have helped to produce a much faster recovery from this recession.

The enactment of the Temporary Unemployment Compensation Act last year, and its partial extension for another three months this year were themselves, of course, a recognition on the part of the Congress of a degree of federal responsibility in this area. We do not underestimate the value to the unemployed of the benefits paid out under this program, though we were distressed that only twenty-two states saw fit to extend their duration in response to the impetus it provided.

Without dwelling here on the basic limitations of temporary, emergency action of this kind, we should like to bring to your attention certain inherent dangers to the system that can result from sole reliance on it.

First, there is the danger that the states will take it as an indication that there is no real need for them to take action, as the federal government stands ready to bail them out of any difficulties occasioned by the inadequacies of their state unemployment insurance laws which may arise in any future recession.

Secondly, reliance on emergency action by the federal government can obviate one of the main advantages of an unemployment insurance system, namely, its ability to get benefit payments into the hands of the unemployed quickly at the very onset of a downward move of the economy. It is in the nature of things that special

Congressional action supplementing state unemployment compensation benefits in a national emergency does not come quickly enough in the downswing of the business slump. An adequate unemployment insurance system on the other hand will adjust itself immediately and automatically, at the earliest stages of the downswing, to the needs of laid-off workers.

While Congress recognized a federal responsibility in unemployment compensation last year, it did not enact a federal standards bill to give leadership and support needed by the states for a progressive evolution of their laws. From the experience of our state AFL-CIO affiliates, which year after year have worked for better unemployment compensation, we are convinced that the states need help. There are three basic reasons why they cannot do the job unaided and why a responsibility rests with Congress.

First of all, we are forcibly impressed by the fact that the state benefit provisions are geared to insufficient financing arrangements instead of financed to provide an adequate level of benefits. That is, the contingency is adjusted to meet the cost instead of adjusting the cost to meet the contingency. Second, separate state programs financed entirely apart from one another leave the whole system vulnerable to the unequal incidence of unemployment. This raises the specter of insolvency and discourages in each state the liberalization of benefits. Third, competition among the states for industry leaves them susceptible to employer threats that higher benefits and higher tax rates will jeopardize the state's industrial future.

If the employer tax contributions to unemployment insurance had been fixed at a flat 3%, the income would have financed a program far broader than even the one now proposed. We do not believe a level rate nearly as high as 3% as set forth in the original act would be necessary to finance an adequate system. The relatively low amount of unemployment in the war and post war years would have enabled the system to acquire substantial reserve funds at a lower rate. However, because of the lack of any floor under the contribution rate, encouragement was given to those whose sole objective was to drive down their tax rate at whatever cost in terms of the basic objectives of the program. The result of this effort has been to drive the average tax rate from 2.7% of the taxable payroll in 1938 to .9% of present day payrolls.

Translated in terms of cents per hour worked, unemployment compensation taxes have declined from 4¢ per employee hour worked in 1939, to 1.3¢ per hour worked in 1958. In many industries, unemployment insurance costs less than Christmas bonuses and suggestions awards.

The proposed bill will not eliminate employer experience rating and we do not want at this time to fight the old battles that surround this subject. While some states have developed experience rating plans that do not goad employers into contesting every employee claim, the "employer-fault" idea in experience rating is still as false as the day it was born, but we do not wish to dwell on this point as it is not relevant to the proposals now before this Committee. We are more interested in seeing that the states have the latitude that they need to develop sound financing methods; the proposed bill does not eliminate "experience rating;" it simply does not make it compulsory.

A problem more fundamental even than experience rating is the fact that the present system of financing unemployment insurance has contributed to making it much less effective in serving a broad public interest. The drive for lower tax rates brings about pressure for legislative enactments that use every conceivable and capricious device to avoid payment of benefits. This undermines the fundamental purpose of the law as declared by the Supreme Court in the Carmichael case to be "the public purpose of relieving unemployment."

Let me illustrate the kind of situations that these legislative pressures combined with employer policing of claims have brought about. One worker complained about his employer in a drug store; when the word got back, he lost his job and was then disqualified from benefits as "discharged for misconduct." In all but two or three states, a man looking for work who breaks his arm is disqualified as "unavailable for work" even though there is no work for him to turn down. A number of states disqualify for the entire duration of unemployment, which in effect is punishment for economic circumstances rather than for the disqualifying act. In Michigan, a woman confided to her employer that she was pregnant, but assured him she would be around for five or six months. That afternoon, she was discharged and then disqualified from compensation benefits on the grounds that pregnancy caused her unemployment.

In one state, Ohio, employers have specially organized the business of challenging the workers' rights to benefits. Employers hire outside "service" firms to contest all claims. These firms charge a fee based on their success in defeating employee appeals.

While it is true that situations like these have transformed some unemployment compensation laws into little labor relations acts dealing with standards of conduct applicable to the worker in his relations to his employer, and while it is true that experience rating provides the incentive for this, I want to reiterate again that the problem is greater than just which method of financing is superior. The basic problem is that so long as the standards of benefits are not specified, the benefit amount and duration and all the criteria of eligibility and disqualification are tailored to fit insufficient financing. Low cost financing has become the over-riding objective.

The proposed Federal Unemployment Compensation Standards Bill will put a brake on the tax incentives that are encouraging employers to carve up state laws. First, by establishing benefit standards, the Bill gives each state a definite objective for its financial decisions. Tax rates can be adjusted to the cost of benefits, instead of the other way around. No longer will we have to listen to the arguments that drone on with different words always to the same tune: in good times, employers argue that improvements aren't necessary and in bad times, they argue that they cost too much. The long run costs of these benefit standards have been estimated by the technicians of the Bureau of Employment Security as 50% more than the cost of the present program, which means that for 2¢ per employee hour worked -- only half the original cost -- we could have a decent system of unemployment insurance.

In the second place, the Bill would aid the states toward better financing by allowing them to choose, if they wish, an alternative to experience rating. They would have an option -- either experience rating or flat rate reduction for all employers. We hope those employers who feel so ardently about "states rights" will support this proposal to give states more latitude in their decision making than is permitted them under the rigid requirements of the present act.

When unemployment compensation taxes begin to reach the disappearing point, other states become concerned about competition for new industry. They become easy prey for those who argue that it is time to put unemployment compensation on the sacrificial altar. For years we have seen these representatives of national corporations and employer groups whipsaw the states one against the other with the result that ultimately threatens the very existence of this potentially beneficent system for protecting the unemployed.

Let me cite you a few examples of how some employer representatives have used the interstate competition argument to oppose improvements. First, from the Manufacturers' Association of Connecticut: "Our state is competing today for more plants and new industries. To hike the cost of doing business in Connecticut is not the road to more jobs, but to less jobs." In Kentucky, the General Electric Company wrote all state legislators last year in this vein: "No other southern states -- except Arkansas and Alabama -- have seen fit to extend benefits. These southern states represent our major competition for the new jobs of expanding business and industry."

In Ohio in 1958, Mr. Herschel C. Atkinson, Executive Vice President of the Ohio Chamber of Commerce, wrote what he called "A Political Primer for Businessmen" following labor's fight to improve unemployment compensation. He says that it "could have been foretold that a central issue would be whether the proposal would put Ohio at a competitive disadvantage with other industrial states," and he describes how business organized to tell this story "in a hundred different forms, until the idea was thoroughly saturated in the minds of Ohioans no matter what their station. ... Newspapers and legislators are thoroughly alert to the argument."

No state, big or small, has been spared this treatment when unemployment compensation was the issue, even the District of Columbia. I note, for example, that Mr. Frank A. Gunther speaking for the Washington Board of Trade, argued before the Senate District of Columbia Committee last year that "The comparability of the laws in the District of Columbia, Maryland and Virginia has been increasingly important and will become more so now that more of the people of greater Washington live in contiguous areas of these adjoining states and now that many employing enterprises are moving out of the District of Columbia as costs and conditions become more palatable outside the Federal City."

It is not difficult to evaluate the political effectiveness of these arguments. It is somewhat more difficult to evaluate whether variations in unemployment compensation tax rates as between states are an important factor in the location of industry. We suspect, however, that in most cases the specter of interstate competition for industrial development is raised for the political purpose of preventing benefits and cost increases in unemployment compensation, whether or not these cost charges would, in fact, affect the location or relocation of industry. Whether it is a real threat or an "imaginary horrible," the interstate competition argument has been cited by the Governors of several states as a major obstacle to raising benefits, and along with us, they are urging federal standards to place the states, in the words of the Supreme Court, "on a level of equal competitive advantage."

A federal floor to benefits will not, of course, remove all the cost differential that now exists between the state programs. It will remove that part due to the difference in benefit levels. That this is substantial can be seen by contrasting the extremes. On the one hand are some states with maximum basic weekly benefit amounts over $40 and on the other, are those with benefits under $30; there are states that

entitle every claimant to a potential duration of 26 or even 30 weeks, and there are others that cut some claimants off after five or six weeks. In some states, the average employer tax rate is only one-seventh of that in other states. Minimum benefit standards would eliminate that part of the differential due to the wide variation in benefits, and to that extent would remove the existing interstate tax incentives for low benefits and short duration.

The rest of the differential in cost is due to the fact that the incidence of business slumps is unequal in its effect on employment. Recession is caused by nationwide economic forces, but each state is now asked to finance fully all payments to its own unemployed. State reserves are isolated from one another with no pooling of risk, leaving each state's fund unsupported during a slump in its major economic activities, except for limited provisions for borrowing. Last year, six of the state systems almost went broke (two had to borrow from the federal loan fund and two others now want to) while the others ended 1958 with combined reserves of $7 billion.

This completely independent state-by-state financing requires higher reserves and lower benefit amounts than would otherwise be necessary. This, in turn, produces one of the major resistances to liberalization of benefits, the fear of insolvency. It also magnifies the cost differential as between states even though in no sense can employers in a given state with a high rate of benefit claims be called responsible for its unemployment.

The Federal Unemployment Compensation Bill would remedy this situation by providing a system of re-insurance which would backstop any states faced by an emergency of continuous heavy payments. This alleviates the dangers of separate state financing, removes the financial objection to higher benefit amounts, and further diminishes the cost differential between states.

One misconception about this re-insurance system should be clarified. It is a misconception which is being used by the opponents of this bill in an attempt to discredit it. They argue that it will cause the better financed states to take on the burden of those states that are broke. This is not the case at all, because the fund from which the re-insurance grants would be paid is to be built up from that part of the unemployment compensation tax that accrues to the federal government, the .3% against which there is no state offset. A part of that federal money now goes to pay the administrative costs and the re-insurance fund, like the Federal Loan Fund now in operation, would accumulate from the difference between the income of this tax and the administrative costs. There would be no drain on the accumulated reserves of any state unemployment compensation fund. Furthermore, to be eligible for a re-insurance grant, a state would have to have a certain specified minimum adequate financing, as well as a high rate of benefit payments.

Beneath all the apparent complexity of the problem confronting the Congress in this area, there emerge certain clear propositions which I should like to present by way of summary:

1. There is general agreement that states should meet certain defined goals of adequacy. The differences arise with respect to how they are to meet them. It is our view that it is not feasible for them to attempt to meet the agreed goals by independent action, and we submit that the record of failure to date supports that conclusion.

2. Exhortations to the states, even from the highest levels of government are of no avail. The President has recently stated his hopes that the states this year will achieve the desired objectives, but is this not again a pious sentiment supported neither by past experience nor by the record of legislative enactment to date? Twelve states have enacted improvements so far this year but not a single one attains the two benefit objectives, and in each instance small benefit gains are accompanied by greater restrictions in other parts of the laws. Four state legislatures have finished their 1959 session with no improvements, including one state where the Governor vetoed small increases. This is no time for rhetoric. It is a time for appraisal and decision.

3. While we have what is known as a Federal-State system of unemployment insurance, the present law is not clear as to the areas of responsibility between the federal government and the states. This lends itself to playing one center of responsibility against another by those who oppose improvements and who are more concerned with tax rates than with the social and economic objectives of an unemployment insurance system.

Here are two examples of how this is done:

Last year, a representative of one of our major manufacturing companies told the Senate Finance Committee that Congress did not need to take action because the states, "can, should, and would do something," and he further stated that his company was in favor of doing something. A few weeks later, another representative of this same company wrote all members of the state legislature in Kentucky that they should not hold a special session on unemployment compensation benefits and that his company was opposed to any extension of duration.

The second example occurred just a year ago when the members of your Committee were treated to an analysis of the local character of unemployment by Mr. Norris W. Ford, Executive Vice President of the Manufacturers' Association of Connecticut. According to Mr. Ford, "The problem of unemployment is essentially a matter which must be handled on a local basis. The economies of no two states are alike. ... We feel confident that Connecticut is well able to finance any unemployment or any welfare that is needed in the State of Connecticut." Mr. Ford, while testifying here, probably forgot that a few weeks earlier he had argued against legislative action in Connecticut because of the national character of unemployment. These are his words to the Connecticut Development Commission, "The present period of business readjustment is not confined to Connecticut. It is nationwide. ... State governments should not be expected to enact special legislation every time the national economy fluctuates. ... There is no emergency that would be remedied by a special session of the General Assembly at this time."

4. Within the Federal-State system now in effect there is a rigid federal standard, imposing on the states a system of financing which moves state taxes for unemployment compensation into the competitive area. This system operates in a manner to provide substantial financial rewards to taxed employers within a state having low benefits, short duration and provisions excluding unemployed workers from the protection of the program. In the absence of standards which set a floor under benefits, the operation of the financing standard provides the driving force to reduce benefits and shorten duration. In short, much of the present difficulty arises from this basic inconsistency in the present law -- a rigid standard on method of financing; complete lack of standards on the benefit side.

5. Because of the requirement that each state separately and independently finance its own unemployment benefits, and because the impact of national recession falls unevenly, the burden of the national problem of unemployment is distributed unevenly and unfairly, and sometimes disastrously among the states.

The proposed Federal Unemployment Compensation Standards Bill would in large part meet these essential problems. We submit, therefore, that its enactment is imperative to the preservation of the Federal-State structure of our unemployment compensation system. We therefore urge your favorable action on the measure and its adoption by the Congress during this session.

Mr. Chairman, I would like permission to supplement this statement with some tables and other technical material in support of our position prepared by our AFL-CIO Department of Social Security.

THE CASE FOR THE FEDERAL UNEMPLOYMENT COMPENSATION STANDARDS BILL

(S. 791 -- H.R. 3547)

NOTE ON STATISTICAL DATA

Unless otherwise indicated, the data in this study is accurate as of January 1, 1959. Changes in State legislation since January 1, usually scheduled to go into effect July 1 or later, are not taken into account in the text, unless the change would affect the conclusion drawn.

However, all amendments to State U.C. law enacted this year up to April 8, are noted on page 18.

SUMMARY OF PROVISIONS

The bill recognizes that in order to achieve the goals of employment stabilization and security against unemployment and in order to strengthen the economy and the welfare of the nation, certain improvements in the unemployment compensation program are necessary. It extends to certain new categories of workers the benefit of the unemployment compensation program and prescribes certain uniform minimum standards with respect to weekly unemployment compensation benefits and the period of time for which such benefits will be payable. It also provides for the establishment of a fund composed of present federal unemployment tax collections from which the administrative costs of the program will be paid and from which reinsurance grants will be made to States which suffer excessively high rates of unemployment.

Section 2 of the bill establishes the additional standards which a State law must meet in order to be certified by the Secretary of Labor for the purpose of permitting credit against the federal tax for employer contributions under the State law. The additional standards cover the following areas: (1) The maximum and minimum weekly benefit amounts provided by the State law; and (2) the duration for which benefits are payable under the State law.

1. Weekly Benefit Amount. Section 2 requires that the maximum benefit under the State law be not less than an amount equal to 2/3rds of the average weekly wage within such State. It also requires that subject to this maximum every individual receive a benefit equal to at least 1/2 of the individual's average weekly wage. In no case would an individual receive a benefit in excess of the State maximum.

Thus, if the average weekly wage in covered employment in State X is $60.00, the State law must provide a maximum weekly benefit of at least $40.00. An individual whose average weekly wage is less than $60.00 would be required to receive a weekly benefit of at least 50% of his own wage. The individual who earns $50.00 a week would only receive a weekly benefit of $25.00 a week. The individual who earns $60.00 a week would receive only $30.00 a week. In no case, however, would State X be required to pay anyone more than $40.00 weekly. Individuals who receive $80.00 a week would be entitled to the $40.00 but no individual who earns more would be paid a greater benefit.

2. Benefit Duration. Section 2 of the bill would require that all eligible individuals be entitled to benefits for at least 39 weeks of unemployment. This does not mean that every individual will automatically receive 39 weeks of benefits in a year. State laws all require that the individual be unemployed and that he be able and available for work during each week of unemployment.

3. Supplemental Unemployment Benefits. The only standard with respect to disqualification provisions of State laws applies to benefits paid under privately established supplemental benefit plans. Section 2 would specifically preclude the denial or reduction of State benefits because of the receipt of private supplemental unemployment benefits. Only 2 States now reduce benefits because of the receipt of SUB. Forty-two (42) States, the District of Columbia and Hawaii hold that the payment of supplemental unemployment benefits does not affect an individual's right to State unemployment compensation benefits.

Subsection (a) of Section 3 of the bill extends the coverage of the Federal Unemployment Tax Act to employers of one or more individuals.

Subsection (c) of Section 3 adds definitions of "benefit year," "base period," "high quarter wages" and "average weekly wage" to the present definitions. These definitions are necessary in order to avoid contravention by a State of the amendments proposed in subsection (a).

Section 4 would give additional freedom to the State in determining the methods of reducing employer's taxes under the State law below 2.7%. Under present law, if a State wishes to impose a tax lower than 2.7% on employers, it may only do so by

instituting a system which rates individual employers on the basis of their own experience. A State which desires to levy a uniform rate of less than 2.7% on all employers is now unable to do so.

This amendment would permit a State to levy a uniform contribution rate of less than 2.7%. It would also permit a State which desires to continue a system of individual employer experience rates to continue to do so. In short, it imposes no new Federal requirement; it relaxes the existing requirements.

Section 5 amends those provisions of the Social Security Act relating to grants to States for administration of State unemployment compensation laws by providing that all collections under the Federal Unemployment Tax Act are earmarked in the Federal Unemployment Account in the unemployment trust fund. This account was established by Congress in 1947.

Section 5 provides that all funds for administration of State laws, including contingency amounts which are to be expended only in the event of unforeseen changes in economic conditions, shall be charged against the Federal Unemployment Account. Unemployment compensation administrative expenditures of the Department of Labor shall also be charged to the Federal Unemployment Account.

Section 6 repeals provisions of the present law inconsistent with the changes made in this bill.

Section 7 provides that a State whose accumulated funds for unemployment compensation has reached a precariously low condition will be entitled to a re-insurance grant from the Federal Unemployment Account. The amount of such grant will be limited to 3/4ths of the excess by which compensation payable under such State law exceeds 2% of the State taxable payroll. In other words, only where unemployment benefits cannot be financed through a 2% contribution rate will the State receive any Federal grant. To the extent that its costs exceed 2%, it will still be required to finance 1/4th of the costs out of State funds.

In order, however, to avoid the possibility of a State permitting its fund to reach a precariously low condition in order to receive a Federal grant, the bill requires that as one of the conditions of eligibility that whenever a State's fund drops below 6%, it impose a minimum rate of contribution of at least 1.2%.

Section 7 changes Title IX of the Social Security Act and makes certain technical changes in Section 904 in order to achieve consistency with the substantive amendments proposed by the bill.

Section 8 of the bill provides that the above provisions extending coverage and establishing benefit standards which must be met by State laws shall be effective as of July 1, 1960. This would give to the States sufficient time to make the necessary statutory changes in their State unemployment compensation laws before the standards become effective.

NEED FOR BENEFIT STANDARDS

INDIVIDUAL BENEFIT OF HALF LOST WAGES

The weekly benefit amount standard proposed in H.R. 3547 consists of two related parts:

It would require an individual benefit amount of 50% of the claimant's average weekly wage subject to a maximum of 2/3rds of the State's average weekly wage. This maximum would allow individual benefits of half the lost wage for about 3/4ths of all workers covered by the law in each state. Only the highest 1/4th of wage earners would then receive benefits less than half their individual lost wage.

A benefit of half the individual's weekly wage is a minimum floor. This principle was built into the early unemployment compensation laws as a compromise. It was then argued that benefits should pay no more than a fraction of the wage so as to prevent malingering. However, what impels the unemployed worker to seek employment is not merely a matter of the level of benefits. The "incentive to work" is affected by his seniority rights which have become a part of the employment relationship in most industries since the inauguration of unemployment insurance. Millions of workers now have a regular attachment to a payroll and their job and job rights depend on their reporting for the work if the plant is operating.

The purpose of unemployment insurance is not to secure the speediest possible re-employment of workers at whatever wages and at whatever skills they can find jobs, but to give workers a short-run carrying power so that they may be able to preserve, to the best of their ability, those skills and their earning power.

A benefit of half of lost wages was more adequate twenty years ago than it is today. Lay-off then meant only loss of the weekly wage. Today the wage earner loses his pay check, then by the end of the month, he usually loses his medical insurance and in a few more months, he may lose his group life insurance -- or at least he will have to pick up the bill himself at a substantially higher premium. During lay-off he does not now accumulate pension credits, he no longer gets holiday pay under most contracts, he loses every day of lay-off some of his future vaction pay; he may also lose some of his government old age pension because the lay-off cuts down the average wage used to compute his OASI benefit.

Withholding taxes, since 1943, are a consideration in the other direction. There are many agreements between management and labor that a weekly benefit of 65% of net wages does not adversely affect the incentive to seek employment. There are thousands of labor contracts providing temporary weekly disability benefits of this amount; SUB agreements also recognize this principle. The proportion of wage loss compensation in the temporary disability formulas of most State workmen's compensation laws is at 65% of wages net of taxes withheld.

Because withholding taxes affect workers differently according to their number of dependents, the AFL-CIO is willing to accept weekly benefits under unemployment insurance at 50% of lost wages. We believe that the increase in non-wage compensation about offsets the affect of withholding taxes and a weekly benefit of 50% of gross wages roughly approximates a benefit of 65% of net wages.

Originally, unemployment compensation laws established benefits at 50% of the worker's full time weekly wage. Almost all State laws have now departed from this and now average the worker's earnings over a period of time, either over a quarter (13 weeks) of his base year in which he made the most wages or over his entire base year, before figuring 50% of average weekly earnings. Obviously, the longer the period over which the earnings are averaged, the greater the reduction in benefit amount relative to full time earnings. The benefit is, in effect, reduced because of lost time due to no fault of the worker, such as illness, lay-off, etc.

Among the States that use a high quarter formula, three have already departed even from the principle that benefits should be half of averaged weekly wages. (Arkansas, California and Massachusetts.) Two States that use an average weekly wage formula

have also departed from the one-half of weekly wage principle. (Michigan and New Jersey.) And all of the annual wage formula States, by averaging earnings over too long a period, have in effect departed from the principle. (Alaska, Kentucky, Maine, Minnesota, New Hampshire, North Carolina, Oregon, Washington and West Virginia.) These States average earnings over a year and provide a benefit considerably less than one half normal full time weekly earnings. The proposed standards would require that benefits be 50% of weekly wages averaged over the highest quarter or averaged over weeks of employment, but not when averaged over the entire base year.

The trend in State laws since 1952 is very definitely in the direction of restricting the weekly benefit amount to a smaller proportion of wages. Of 33 States which have altered the weekly benefit formula, 23 now provide a benefit that is a smaller fraction of the weekly wage than they did in 1952. Only ten have liberalized the benefit amount to a larger proportion of the weekly wage. (See Table I).

The importance of providing a benefit of at least half of gross weekly wages or about 65% of take-home pay can be seen in recent studies of the inelasticity of family budgets. Judging from the City Worker's Family Budget compiled by the Department of Labor, which is necessary to provide a "modest but adequate" standard of living, the non-deferable expenditures for housing, food, utilities and medical expenses make up about 2/3rds of the total. Beneficiaries' studies conducted by the State employment security agencies and the Bureau of Employment Security of the Department of Labor show that four-person households must continue to spend about 3/5ths to 2/3rds of their normal cash outlay for food, shelter, utilities and medical care when the head of the household is laid off. The unemployed can defer few of their expenses -- some clothing, entertainment, transportation and personal care costs. The prevalence of buying on time can mean big losses if they fail to keep up at least token payments. Family budgets just are not very elastic, especially for lower income workers. Furthermore, the longer the period of time a worker is unemployed, some items that were deferable for a few weeks become less deferable as his unemployment drags on.

The opinion is widely held that unemployment insurance as a wage-loss system, i.e. that benefits should be paid as a fixed proportion of wage loss, is now a generally accepted principle. This is not the case as one may see by examining recent employer statements, such as have recently issued from Unemployment Benefit Advisors, Inc., and the U.S. Chamber of Commerce. For example, the Chamber of Commerce argues that the buying power of the average U.C. benefit today is substantially greater than in 1939, the average weekly payment then being $10.66 as against $30.45 in October 1958. Living costs, according to the Chamber, increased 108% during that period, "so that today it would take $22.17 to buy what $10.66 would in 1939. But today's $30.45 U.C. payment is 30% above $22.17."

Even relief programs which adjust benefits according to need do not choose some out-dated standard of living as the criterion for need. Unemployment insurance benefits are not intended to be a nose dive to mere subsistence. Prices and wages have risen since 1939 and there is no reason to tie benefit increases only to the price rise.

Man-hour productivity has risen 175% from 1939 to 1958. If we adjust the average benefit for both price and productivity increases during that time, benefits today would be about $38. This is approximately what the average benefit would be if the 50%-of-lost-wages principle were realized for the great majority of U.C. beneficiaries.

Benefits today should buy more goods and services than they did in 1939. A standard of living appropriate to a jobless worker 20 years ago is not appropriate today; medical care, housing and transportation that were once luxuries are now necessities. Getting a lay-off slip should not mean a transfer to the 1930's. The principle of unemployment insurance is to tie the benefit to the wage which over the years provides the laid off worker with the recognition that he too through greater productivity has contributed to making this a wealthier country.

MAXIMUM BENEFIT AT 2/3 STATE'S AVERAGE WEEKLY WAGE

It is absolutely necessary to nail down through a federal standard the principle that benefits must be at least half of regular earnings, and it is equally important to raise maximums so that the half-of-wages principle will operate for the great majority of covered workers.

In 1939, an average manufacturing worker making $23 a week received a benefit of half his wage in all states. But in 1958 that same average manufacturing worker, now making a wage of $90 a week, gets a benefit of half his wage in two states only, New York and Wyoming. In all other states, he is held down by the maximum to less than that proportion of his wage. In four states (Oklahoma, Vermont, Texas and Virginia) his benefit is limited to the $28 maximum which is only 31% of his wage, and in Arkansas and South Carolina, the maximum of $26 is only 29% of his wage. For a state-by-state analysis of how workers at varying wages receive less than half of their weekly wage, due to the low state maximums, see Table II.

Maximum benefits relative to average weekly wages have declined in every state since 1939. (See Table III). Whereas the median state used to have a maximum at 65% of average weekly wages, the median is now 44%.

The maximum benefit as per cent of each state's average weekly wage	Number of states and territories 1939	1958
70 & over	18	0
60-69%	17	0
50-59%	15	7
40-49%	1	31
30-39%	0	13

In 1939, even if a state had a maximum at 70 or 80 or 90% of average weekly wages, no individual received that proportion of his own wage as a benefit. A high maximum relative to average weekly wages simply means that a larger number of the eligible workers will receive a benefit of half of their individual wage.

It has been estimated by the U.S. Department of Labor that "... if the majority of covered workers is to be eligible for benefits equal to at least half their regular earnings, the maximum would need to be from 3/5ths to 2/3rds of the average wage of all covered workers."

It will be recalled that the President has recommended that the maximum be high enough so that the great majority of covered workers can be eligible for at least one-half of their wages. He has reiterated this recommendation each year since 1954, but at the present time no state has a maximum at even 60% of average weekly wages, and only six states have a basic maximum at least 50% of state average weekly wages. These six states account for only 4% of the covered workers in unemployment. At the other extreme, the maximum represents less than 40% of average wages in 13 states with 34% of the covered workers. (See Table IV).

Nor has there been much improvement since the President began recommending in 1954 that benefits be improved. At that time, three states with 3% of the covered workers had maximums

representing 50% or more of average covered wages, and 19 with 37.3% of the covered workers had maximums representing less than 40%. (See Table IV).

The present Administration policy of asserting that states in 1959 will enact legislation approximating the recommended standards is based purely on wishful thinking. The year 1955 was a relatively good year for unemployment compensation but no state even came close to the recommendations. If we look at the record for the major legislative years, 1951 through 1957, we see that 25 states actually slipped backwards in their maximum benefit amount relative to wage levels. (See Table V).

The failure of the states to raise maximums proportionately with the rise in wages has gradually converted the unemployment insurance program from a wage-related benefit system to a flat benefit amount program for about 1/2 of the unemployment compensation beneficiaries. In three states (Illinois, Lousiana, and Ohio) the proportion at the maximum was 80% or more during 1958. Almost all of those who received the maximum amount prescribed by the state laws are getting less than 1/2 of their weekly wages in benefits. Certainly when 80% of claimants receive identical benefits, i.e. the maximum allowed, the wage-related benefit system has practically ceased to exist, and the state has, in effect, a flat benefit program. (For the proportion of new insured claimants receiving the maximum basic weekly benefit and therefore limited to less than half of their own individual weekly wage, state-by-state, see Table VI).

Significant changes would have to be made in many state laws to have maximum benefits constitute either 3/5ths or 2/3rds of the average weekly wage. As of September 1958, only five states could attain these standards by increasing their maximum by $10 or less. Six states would have to increase their maximum by $20 or more. (See Table VII).

Analysis can also be made of average weekly benefits relative to wages but average weekly benefit paid to U.C. beneficiaries is a function of the wage level of the beneficiaries at any particular time as well as the maximum amount and the benefit formula in the state statutes. This detracts from its value as a criterion or measure of adequacy. A recession in the heavy industries such as we have had in 1958 when higher wage workers are unemployed will show a higher average weekly wage for beneficiaries than will the average weekly benefit paid during a slump in soft goods industries, such as we had in 1949 and 1954. Furthermore, over a period of time as wages rise, the average weekly benefit paid will rise also even though the state statutory maximum benefits and the weekly benefit formulas were to remain the same. According to the Department of Labor, "there is considerable uncertainty over the relationship between the average wage of claimants and the average wage in covered jobs. Again, largely because of variations in economic conditions, this relationship varies from state to state and over time, thereby limiting the usefulness of the ratio of average benefits to average wage in covered jobs." (Source: "Adequacy of Benefits under Unemployment Insurance," Staff Report, U.S. Department of Labor, October 1958, p. 16.)

The best criterion for level of maximum benefit amounts is the proportion of covered workers that will receive 50% of their individual wage. H.R. 3547 proposes that the maximum be set at 2/3rds of average weekly wages in each state in order for the great majority to receive at least half their regular earnings. This is corroborated by a composite of sample studies in the states of Michigan, New Jersey, New York and Wisconsin, which show that if the maximum were set at 67% of the statewide average, from 6 to 29% of the beneficiaries in these states would still receive less than one half their former earnings. The average for all states studies was 17%.

The Department of Labor has developed this approach further by estimating what maximum weekly benefit amount in each state would result in only the top 25% of high wage claimants receiving the maximum benefit and all others receiving a benefit of half their wage. These maximum benefit amounts appear to group around 2/3rds of each state's average weekly wage. (See Table VIII).

It is necessary to reiterate that the maximum benefit amounts proposed will be the actual benefit paid only to those whose wage is at least two times the maximum benefit. Some employer organizations are intentionally misleading the public on this score by implying that the new maximums are "weekly benefit amounts" (See for example Unemployment Benefit Advisors, Inc. letter of February 5, 1959). Too many people already confuse the maximum weekly benefit amount with the average weekly benefit or with the individual benefit of 50% of wages that unemployment compensation is intended to reimburse.

The proposed bill establishes maximums at 2/3rds of average weekly wages rather than specifying a dollar amount in order to prevent the lag in benefit amount relative to wages that has characterized the unemployment insurance program from the beginning. No social security type program should have a built in susceptibility to erosion of adequacy. We, therefore, believe that benefit maximums should automatically increase or decrease with increases or decreases in the prevailing wage levels. Two states, Utah and Wyoming, have already written this principle into their laws, as has Colorado this year, and other states are giving serious consideration to this new approach. AFL-CIO state bodies in their efforts to keep benefit levels up with the times have continually had to sacrifice other substantive features -- usually new and tricky disqualifications.

In no sense do extra allowances for dependents above the individual entitlement argue for a smaller benefit than the 50% wage replacement formula or for a maximum lower than 2/3rds the state's average weekly wage. Twelve states now provide additional allowance for dependents, which vary from $1 to $5 per dependent, usually with a limitation on the number of dependents for whom additional benefits shall be paid. During the first nine months of 1958, the number of beneficiaries in these states who had compensable dependents ranged from 10% to 63% of all beneficiaries in the state. Dependents' allowance increased the benefit of those who received it about 20% on the average. Dependents' allowances are not proposed as a federal standard because this is an area in which states are still experimenting. The very limited elasticity in family budgets might well argue for dependents' allowances in addition to the basic benefit amount. On the other hand, variable benefits conditional on dependent status may not be appropriate in a wage-related program because of the prevailing American practice of paying uniform wages regardless of dependent status. Nothing in the proposed bill would prevent a state from continuing to experiment with extra dependents' allowances.

Enactment of this proposed standard on benefit amount will (1) restore unemployment compensation benefits to their role as wage replacement, related in amount to lost earnings; (2) allow at least three out of four U.C. claimants a benefit of at least half of their own lost wage; (3) establish different dollar maximums according to the wage levels in each state; (4) provide for the automatic adjustment of the maximum benefit amount with future changes in each state's average weekly wage.

DURATION OF BENEFITS

H.R. 3547 proposes as a duration standard that each state law provide benefits up to 39 weeks for all claimants able and available to work if they are unable to find employment within that time.

When unemployment insurance was initiated, all but six states limited benefits to a maximum of 16 weeks or less. The original duration provisions were admittedly inadequate (3 million people exhausted their benefits in 1939) but were limited because of the uncertainty as to what could be provided with a 2.7% payroll tax.

Experience in the war and post war periods clearly indicates that this was unnecessary conservatism. As a cost of doing business, unemployment insurance taxes have declined considerably to one-third their original rate despite increases in the duration of benefits. Given the increasing length of unemployment due in part to technological change and the planned obsolescence of employees, it is necessary to take a fresh look at the role unemployment insurance should play.

The clearest indication that the duration of benefits is inadequate under modern conditions is that, during 1958, 2.8 million individuals were still out of work after they exhausted their regular unemployment insurance benefits. Even more significant, in the years 1956 and 1957, both of which were characterized by relatively low unemployment (except in the latter part of 1957), the number of exhaustions exceeded a million. The average duration of benefits for those who exhausted in these years was about 20 weeks. All these workers were willing and able to work but suitable work was not available to them. (See Table IX).

Not only are the absolute numbers of workers exhausting benefits significant but also the proportion exhausting. About 1/4th of those who drew any benefits in 1956 and 1957 exhausted this entitlement. This ratio is for the United States as a whole; there was a much higher ratio for some states. For example, in 1956, when exhaustions were lowest, 17 states had ratios of exhaustions exceeding 30%, ranging up to a peak of over 40% in Louisiana and in Florida. The exhaustion rate in 1958 was, of course, higher, but it is not necessary to argue even the conditions of a recession year to see the inadequacy of benefit duration.

The major reason for the high rates of exhaustions is the limitation on the duration of benefits. For example, in New York and New Hampshire both with a uniform potential duration of 26 weeks, the ratio of exhaustions in 1956 was 11.2% and 12.8%, respectively. Only five other states have a uniform potential duration of 26 weeks or more. Twenty-four states have variable durations with a maximum of 26 weeks and two have slightly higher. The other states have variable duration of less than 26 weeks, ranging down to the maximum of 16 weeks in Florida. (See Table X).

The average potential duration of benefits of all claimants was 23.4 weeks in 1957, slightly higher than for persons exhausting benefits. In individual states in 1957, the average potential duration ranged from 14.3 weeks in Florida to 30 weeks in Pennsylvania. Average potential duration for the country as a whole has improved by only 1.4 weeks between 1952 and 1957. Since the President first recommended uniform potential duration of 26 weeks, there has been a net gain of only three states that meet this goal.

In the light of experience, the President's recommendation of a uniform 26 weeks duration appears short sighted. While representing a substantial improvement over the present provisions, it would be too low to permit unemployment compensation to obtain its objective for a sizeable number of workers. In New York State, for example, which provides 26 weeks of uniform duration, a study of exhaustees shows that 27% of those who had exhausted benefits were still unemployed four months later.

Experience with temporary extensions during 1958 clearly shows the need for longer duration. In those 22 states with such a temporary extension of duration, almost 1.5 million in 1958 alone filed for additional weeks after they had exhausted regular state benefits. Generally, the older the worker, the longer he was unemployed.

Judging by the effects of the 1958 recession, long term unemployment is becoming a more serious problem for the American economy. In the Fall of 1958, about one half of the unemployed had been out of work over 26 weeks in the preceding year (See University of Michigan "Survey of Unemployment," October 1958); one fifth during their last and current spell of unemployment. This latter group numbered almost a million workers as late as August of 1958. Even during the relatively prosperous years of 1956 and 1957, close to 10% of the unemployed were without work for half a year or more, with the number of people in these desperate straits hovering around the quarter of a million mark.

In terms of the number of people unemployed for as long as half a year, twice as many were unemployed in the recession in 1958 as in the 1954 recession. As a percentage of total unemployed, the 1958 peak was substantially higher than the peak reached in 1954, 21.6% as against 16.4%.

During the more prosperous year of 1956 and 1957, the long term unemployed, both in terms of absolute numbers and as a percent of total unemployed, was a more serious problem than the comparable situation in earlier years.

If the analysis is broadened to cover these unemployed 15 weeks and over, the same conclusion stands out. Thus, at the present time, well over a third of the work force unemployed could be characterized as long term unemployed. (See Table XI for a comparison of long term unemployment year-by-year since 1954).

The longer duration in unemployment we are experiencing in recent years may be a product of the increasing rate of technological change and the impact this has on the economy generally and in the labor market especially. The incidence of technological change is a contributing factor to the dragging out of this recession, which all adds up to putting more of the burden of our changing economy on the men and women who work for wages. A survey of exhaustees in Oregon in August of last year showed that 70% of the men in 1958 as compared with 45% in 1956 still were looking for jobs two months after exhausting unemployment insurance, and 76% of the women in 1958 compared with 64% in 1956 were still jobless.

The appropriate number of weeks which should be available to all otherwise eligible workers must reflect prevailing employment and unemployment patterns. If experience showed that it was only exceptionally that workers were unemployed for more than, say 20 weeks, there would be a strong case for selecting this figure as the minimum duration standard. Actually, available data indicates that the normal worker is likely to suffer unemployment of longer duration than this at some time or other. In the years 1954-1956, when over a million workers exhausted benefits annually, the average duration of those exhausting was slightly more than 20 weeks. Studies in 16 states of persons who exhausted their benefits in these years show that from 23 to 57% of the exhaustees were still unemployed four months after exhaustion of benefits. (See Table XII).

Adding the unemployment before and after exhaustion, many of these had undoubtedly been unemployed 37 weeks or more.

It has been proposed by some that the duration of unemployment insurance should be increased only in times of severe unemployment, such as when national unemployment reaches 6% or when the unemployment in a state is 6% or over. But all the above evidence suggests that long duration of unemployment may strike a worker even in times when over-all economic conditions are good. Can we deny a potential 39 weeks of benefits to a textile worker in a milltown whose only plant has closed down on the grounds that the statewide level of unemployment is less than 6%? Can we discriminate against the older worker who has a harder time becoming re-employed at any time because industry has branded him as an "aged obsolescent?" The post-exhaustion studies referred to above show not only that exhaustees as a group tend to be older but the rate of re-employment after exhaustion for the older group is less.

The long-run cost of raising the average potential duration to 39 weeks is small compared to the social purpose served. Unemployment insurance as a cost

of doing business is today only one third of that originally intended. It has been estimated by technicians of the Department of Labor that the cost of increasing potential duration to 39 weeks adds only 11% to the cost of the present program. The reason for this small increase in cost is that raising the potential duration has only a minor effect on the average actual duration. (Compare Table XIII "Average Potential Duration, State-by-State, 1952-1957" with Table XIV, "Average Actual Duration, State-by-State, 1952-1957")

It is argued by some that the duration of benefits should be proportional to earnings in some previous period such as the base year. This is the principle in those states that provide variable duration. But uniform duration, for all claimants, as recommended in H.R. 3547, better serves the purpose of unemployment compensation by recognizing that the contingency insured is the likelihood of re-employment. A worker's weekly benefits are already adjusted to the amount of his past earnings. There is no reason for also adjusting the duration of benefits to those earnings. Some employer spokesmen look with horror at the idea of paying benefits over a period of time so that the total benefits paid in the aggregate equal more than base year earnings. This, however, is consistent with the principle of social insurance and is no more inequitable than the case of a life insurance claimant who drops into the mail only one or two premiums and then dies leaving his survivors to collect the face amount of the policy -- many times in dollar amount the premiums paid. Should his widow collect a benefit proportional to the premiums paid? The fact is that the prospects of a man being employed vary with economic circumstances and not with whether he is a high or low paid worker or whether he worked many or a few weeks in some given past period. It is a perversion of the insurance principle to limit total potential benefits payable to a proportion of base year earnings. It is for this reason that the President has repeatedly recommended a uniform duration for all claimants.

The effect of the two benefit provisions proposed in this bill -- that on benefit amount and duration of benefits -- and their impact on each state are shown in Table XV.

WAGE QUALIFYING REQUIREMENTS FOR ELIGIBILITY

Unemployment insurance should provide protection for all bona fide members of the labor force -- those who want employment and who would work steadily if suitable work were available to them on a regular basis. The central requirement here is the test of availability for work. But in addition wage-qualifying requirements are established in every state law which more or less arbitrarily define who is in the labor force by the amount of their earnings and duration of their employment in their base year.

There is need for further study of attachment to the labor force and a standard proposed in H. R. 3547 simply sets outside limits on the restrictions. The standard proposed would allow no wage qualifying requirement to be more restrictive than requiring 20 weeks of employment in the base period, a total base year earnings of one and a half times the amount of high quarter wages, or total base year earnings of more than 30 times the amount of the unemployment compensation weekly benefit.

When benefits were first payable in 1938, the test of insured status was generally a nominal one. Workers in most states could qualify on eight or fewer weeks of work a year. Later when the formulas for determining the weekly benefit amount were revised, the wage qualifying requirements were also changed. It is appropriate that wage qualifying requirements should increase as wage levels rise, but in a great many states the proportion of claimants ruled ineligible because of insufficient base year earnings or an improper distribution of employment has increased.

Today most states use one or more of several approaches. A state may specify the requirement of a flat amount of earnings in the base year; or may specify that the total earnings should be some multiple of the weekly benefit amount; or it may specify the number of weeks that must be worked in the base year; or it may require employment in one or more base year quarters; or it may specify in which quarters of the base year the employment must have been; or it may limit qualification to those who establish eligibility for the minimum benefit amount; or it may require a combination of these formulas.

The more serious development is the use of several of these requirements in combination. A worker may be able to establish eligibility according to a specified flat benefit amount of earnings in the base year but his distribution of earnings may disqualify him. A requirement of distribution of earnings over more than one calendar quarter may increase the number of non-insured by 33% to 100% over the number who fail to meet the minimum earnings test. In Texas, for example, a combination of six wage qualifying requirements in three alternative tests whipsaws the claimants and establishes a high percentage of ineligibles. In some states as many as 25% of unemployment compensation claimants were declared ineligible because of failure to meet the wage qualifying requirements.

There is at the present time insufficient data on the effect of wage qualifying limitations. The studies that have been made indicate that while a certain percentage of claimants are ineligible because of the wage qualifying requirement a much larger proportion of the covered workers would be ineligible. For example, in Oregon, 15% of the new claims filed during the benefit year were disallowed because of failure to meet the wage qualifying requirement. However, an analysis of the wage records of 15,584 covered workers in Oregon during the base period (1956) indicated that 33% of them could not meet these wage qualifying tests.

Since there is need for more study on what constitutes attachment to the labor force, the proposed standard on wage qualifying requirements is admittedly general in character and would not require amendment in many of the 51 jurisdictions.

Since there is a drive in some quarters to limit unemployment compensation only to those employees with a long record of attachment and because this would change the social insurance character of the unemployment compensation program,

it is necessary to establish some outside limits on wage qualifying requirements. The idea is all too prevalent that the length of duration should be tied directly to the base year earnings of the U. C. beneficiary. The higher benefit and duration standards in H. R. 3547 would, unless limits were put on wage qualifying requirements, lead to a strong concerted effort to decrease the proportion of workers who could qualify.

The proposed standard on wage qualifying requirements would put some perspective to the movement in a number of states to restrict higher and more adequate weekly benefit amounts to a relative minority of workers with regular employment at high wages.

The so-called marginal claimants, that is those who barely qualify under existing wage qualifying requirements, contain too large a proportion of primary wage earners, family supporters, long term wage earners with irregular employment in their base year, and who generally, in a depth investigation, would be classified as firmly attached to the labor force.

COSTS AND FINANCING

Under the present system, the federal government imposes a 3% payroll tax on annual earnings up to $3,000. The tax is paid by employers. Against this federal tax, employers are allowed a credit or offset -- up to a maximum of 2.7% -- of any amounts which they pay under state unemployment compensation law, provided that the state law meets certain federal requirements or "federal standards."

A federal U.C. law was enacted because only one state had dared step out front with its own law. The federal law was designed as an inducement to other states. They needed this inducement because the individual states were afraid that enactment of an unemployment compensation program and a payroll tax would hinder their industrial development.

From 1938 to the present, the average tax rates as a percentage of total payroll have been reduced under the incentives of experience rating from 2.7% to .9%, or one-third of that originally intended. (See Table XVI.) Expressed as a percentage of taxable payroll, this is a reduction from 2.7% to 1.4%. State by state the average employer tax varies from .4% in Virginia to 2.7% in Rhode Island, Washington and Alaska. (See Table XVII.) Within the states, tax rates can vary greatly, in some states from .0% to 4.5%. (See Table XVIII).

As a cost of doing business, the proper measure of the tax is as a percentage of total payroll. The reduction from 2.7% to .9% has been accomplished by lowering tax rates under the incentive of experience rating and by holding to a rigid tax base of the first $3,000 of employee earnings. Translated into cents per hour, this is a decline from 4¢ per employee hour worked to 1.3¢.

This decline in cost has been accomplished by a decline in average benefits relative to wages and in maximum benefit amounts relative to wages, as described earlier.

Experience rating is a system of allowing each employer's tax rate to vary with the volume of U. C. claims allowed from his employees. It operates in every state, except Alaska. It is supposed to be an incentive to stabilize employment; in practice, it encourages low rates, low benefits, and "unfair" disqualifications.

The myth of experience rating as a stabilization incentive was exploded again by the recent recession. In the three years 1955-57, employers have been rebated or tax excused, a total of 4.5 billions of dollars under experience rating. Instead of stabilization, we got the worst recession in 20 years.

Employers like experience rating when it produces a lower tax; but they will interfere with experience rating in order to lower taxes still more. In Pennsylvania today the fund is at a dangerously low level because employers persuaded the legislature in 1951 to roll back the tax rates and in 1955 to set up a system of advances for avoiding higher rates.

Proponents of experience rating say it provides more efficient administration of the law. But in practice, it substitutes policing by employers for impartial administration by the state agency. In Ohio, employers hire outside "service" firms to contest all claims. These firms charge a fee based on their success in defeating employee appeals.

The Federal Standards Bill would remedy the problem in two ways:

(1) By setting benefit standards, the Bill gives each state a definite objective for its financial decisions. Tax rates can be adjusted to the cost of benefits, instead of the other way around. For less than 2¢ per employee-hour worked -- only half the original intended cost -- we could have an adequate system of unemployment insurance.

(2) By allowing an alternative to experience rating, the Bill would aid the states toward sounder financing. At present, federal law permits a reduction in the 2.7% tax only through experience rating (a federal standard employers like!). The Bill would give the states an option -- either experience rating or equal reductions for all employers, when unemployment is low and reserves are high.

Change is long overdue. Clinton Spivey, Professor of Management at Ohio University, summed up his recent thorough study of experience rating: "... experience rating is unsound in principle and almost impossible of equitable administration." (Clinton Spivey, "Experience Rating under Unemployment Insurance," University of Illinois Bulletin, 1958).

How much would the higher benefit amounts specified in this bill cost on the average? It has been estimated from data supplied by actuaries of the Bureau of Employment Security of the U. S. Department of Labor that establishing maximum weekly benefit amounts at 2/3rds of the state's average weekly wage would cost 22-23% more than the cost of present benefit levels. The cost of uniform duration of 39 weeks would add 22% to the cost of present duration provisions. Adding both the maximum weekly benefit standard and the duration standard would add 49-50% to the cost of present programs. These additional costs, since they are expressed here as percentages, hold true over the business cycle. Obviously, when claims are high, the dollar amount of this cost increment is greater, but as a percentage it remains nearly the same.

This means that the total cost of the proposed bill would be between 1.3-1.4% of total payroll, or 2.0% of taxable payroll, or expressed as cents per hour worked, 2¢ per employee hour worked. In other words, the total cost rate after enactment of this bill would be only half of the original cost rate of unemployment insurance.

No state yet meets the benefit standards recommended repeatedly by President Eisenhower since 1954.

Two major obstacles have prevented the states from making substantial improvements:

(1) Separate State Financing: No pooling of risk -- State reserves are isolated from one another, leaving each state fund unsupported during a slump in its major economic activities. Last year, six of the state systems almost went broke (two had to borrow from the federal loan fund), while the others ended 1958 with combined reserves of $7 billion.

Independent state-by-state financing requires higher reserves and lower benefit amounts than would otherwise be necessary. Fear of U. C. fund insolvency has contributed to keeping benefits down.

(2) Competition among States for Industry -- Employers argue for lower benefits and lower taxes by threatening the state with loss of industry.

Here is the typical employer argument:

Manufacturers Association of Connecticut: "Our state is competing today for more plants and new industries. To hike the cost of doing business in Connecticut is not the road to more jobs, but to less jobs."

Ohio Chamber of Commerce: "Before the CIO campaign (for better unemployment compensation) it could have been foretold that a central issue would be whether the proposal would put Ohio at a competitive disadvantage with other industrial states. ..."

General Electric in Kentucky: "No other southern state -- except Arkansas and Alabama -- have seen fit to extend benefits. These southern states represent our major competition for the new jobs of expanding business and industry."

The unequal incidence of unemployment on states, and employer pressures to keep down benefits causes great extremes in costs: In 1958, the average

tax rate in Rhode Island was seven times that in Virginia. In Michigan, one-fourth of the employers paid a rate over 2.7% to the fund; nine-tenths of the employers in Colorado paid a .0% rate.

The Federal Standards Bill would remove cost differences in two ways:

(1) A system of re-insurance would backstop any states faced by an emergency of continuous heavy payments. This alleviates the dangers of separate state financing, removes the financial objection to higher benefit amounts, and to some extent shares the cost of concentrated unemployment.

In such disasters as droughts and floods, the entire nation provides assistance to the stricken area. Re-insurance grants would provide the same kind of joint security against our economic storms.

(2) Federal benefit standards would remove differences due to extreme variations in benefit amount and duration. In the words of Governor Meyner of New Jersey, "The federal government having initiated the program on a basis calling for state administration has wholly failed to prevent some of the states from adopting programs so inadequate as to be almost meaningless. ... A single state by itself is powerless to legislate in any effective way to cure this condition."

The Federal Standard Bill on unemployment compensation will bring substantial improvement in every state law and yet it does not change the present federal-state U. C. system.

When a state law does not meet the federal requirements or standards, it is "out of compliance," and employers do not receive the offset. There are now according to the Secretary of Labor, thirty-four standards a state law must meet and most of these have been in the federal law from the beginning.

But there were no benefit standards in the original federal act. The wide state-by-state disparity in benefit levels and U. C. costs that has developed was not anticipated. Inflation has required higher benefit levels, but many states have held back.

The Federal Standards Bill would add two benefit standards and two eligibility standards, and amend an existing financial standard. There would be no change in the present federal-state relationship. Interstate differences in benefits and costs would be diminished.

If the bill passes this session, a state would have until July 1, 1960, to bring its own law into compliance.

There would be no change in the amount of the federal tax. The federal offset of 2.7% is about twice the long run cost of unemployment benefits, and more than enough with even the new benefit standards.

No appropriation from general federal revenues is necessary to implement the proposed bill.

STATE ACTION ON U. C. IN 1959 AS OF APRIL 8

The nation's jobless, told by President Eisenhower to look to their state legislatures for improvements in unemployment compensation, have been given scant hope for optimism by the legislatures, themselves.

With 46 of the 49 state legislatures meeting this year, only 12 have enacted any change in either the amount or duration of jobless pay.

The improvements that have been voted thus far, however, fall far short of even the minimum levels urged by the President in his repeated exhortation of the states to take action.

In most of the 12 states, the gains chalked up in the form of higher benefits or longer periods for receiving jobless aid have been offset, to some extent, by enactment of more rigid qualification requirements.

Four other state legislatures have wound up their 1959 sessions either with no action at all on long-overdue improvements, or with defeat of measures to provide some liberalization of existing programs.

Here is a state-by-state breakdown of the action taken in legislatures thus far:

ARKANSAS -- Raised minimum benefits from $7 to $10, and the maximum from $26 to $30; increased the maximum benefit period to 26 weeks.

COLORADO -- Boosted maximum benefits from $35 to $42 a week; extended maximum benefit period from 26 to 32.5 weeks.

GEORGIA -- Legislature adjourned without action.

IDAHO -- Enacted Temporary Employment Benefit program providing a formula for extending benefit period 50 percent when joblessness hits certain levels. No benefit improvements.

INDIANA -- Raised maximum benefits from $33 to $36; extended maximum benefit period from 20 to 26 weeks.

KANSAS -- Boosted minimum from $5 to $10, and maximum from $34 to $40; extended maximum benefit period from 20 to 26 weeks.

MONTANA -- Bill passed by legislature to liberalize benefits vetoed by Governor J. Hugo Aronson (R).

NORTH DAKOTA -- Raised maximum from $26 to $32, but eliminated dependents' allowances; extended period to flat 24 weeks.

SOUTH DAKOTA -- Raised benefits from $28 to $33; extended period from 20 to 24 weeks.

TENNESSEE -- Increased the amount of wages on which benefits are computed, which will result in slight rises in aid.

UTAH -- Maximum duration extended from 26 to 36 weeks.

VERMONT -- Maximum benefits raised from $28 to $36, and at 50% of average weekly wages after 1960; additional benefits for dependents up to $10.

WASHINGTON -- Raised maximum from $35 to $42; extended maximum period from 26 to 30 weeks.

NEW MEXICO -- Maximum benefits raised to $36, duration extended to 30 weeks.

WEST VIRGINIA - Senate Finance Committee bottled up House-passed measure calling for higher benefits, longer periods. Legislature adjourned without a vote in Senate.

WYOMING - - Legislature adjourned without action.

After ten weeks of legislative sessions, measures to improve jobless aid are still pending in Connecticut, Illinois, Nebraska, New Jersey, North Carolina, Ohio and Wisconsin.

The following states have further extended temporary duration:

Ohio to December 31, 1959; Illinois to June 30, 1959, or until state unemployment declines below 4.375%, whichever is later; Maryland to July 1, 1959.

TABLE I

Since 1952, 23 States Have Restricted the Weekly Benefit Amount Formula (under the Maximum) to a Smaller Proportion of Wages. Only 10 Have Liberalized it to a Larger Proportion.

States that have amended formula: *States that have acted to restrict formula	September 1952	September 1958
States now using high quarter formula:		
*Arizona	1/25 + dependents' allowance	1/25
*Arkansas	1/20 - 1/26	1/21 - 1/27
*California	1/19 - 1/23	1/17 - 1/28
District of Columbia	1/25 + d.a.	1/23 + d.a.
*Florida	1/18 - 1/26	1/22 - 1/26
Idaho	1/19 - 1/25	1/22 - 1/26
Illinois	1/20	1/20 + d.a.
Kentucky	2.3 - .85% annual wage	1/25
Maryland	1/26 + d.a.	1/24 + d.a.
*Massachusetts	1/20 + d.a.	1/19 - 1/30 + d.a.
Montana	1/22	1/18 - 1/22
*Nebraska	1/20 - 1/23	1/21 - 1/23
*Nevada	1/24 + d.a.	1/25 + d.a.
*Ohio	1/17 - 1/24 + d.a.	1/17 - 1/25 + d.a.
Oregon	3.75 - 1.37% annual wage	1/26
Pennsylvania	1/25	1/25 or 50% weekly wage, if greater
*South Carolina	1/20	1/22 - 1/26
*South Dakota	1/20 - 1/23	1/22 - 1/24
*Tennessee	1/21 - 1/26	1/24 - 1/26
*Utah	1/20	1/26
*Vermont	1/18 - 1/26	1/22 - 1/26
*Wyoming	1/20 + d.a.	1/25 + d.a.
States now using an annual wage formula:		
*Alaska	1/20 + d.a.	1.8 - 1.1% annual wage
Maine	2.3 - 0.85%	2.2 - 1.1%
Minnesota	3.3 - 0.91%	2.0 - 1.3%
*New Hampshire	2.3 - 1.27%	2.0 - 1.2%
*North Carolina	2.8 - 1.0%	2.0 - 1.1%
*West Virginia	2.7 - 1.0%	1.8 - 1.o%
States now using an average weekly wage formula:		
*Michigan	67 - 53% + d.a.	63 - 41% + d.a.
*New Jersey	1/23	2/3 up to $45; 2/5 above $45
*New York	67 - 52%	67 - 50%
*Wisconsin	68 - 51%	63 - 51%

1/ In States that base benefits on earnings in the quarter of highest earnings, the benefit was computed on the assumption of 13 weeks of employment in the quarter at the average weekly wage.
2/ Where 2 amounts are shown, the higher includes dependents' allowance. In Massachusetts, weekly benefit including dependents allowance may not exceed average weekly wage (1/26 of claimant's 2 highest quarters' wages or 1/13 of high-quarter wages if claimant has wages in only 2 quarters).
3/ In Colorado, claimants who received no benefits and had specified employment and earnings over a 5-year period are eligible for a 25-percent increase in the weekly benefit amount shown.
4/ In the District of Columbia, same maximum with or without dependents.

1/ Classified by type of plan in effect at end of 1957.
2/ All rated and unrated accounts; excludes accounts newly subject after State cut-off dates for preparation of reports.
3/ National totals and totals for pay-roll variation plan exclude data for Rhode Island, which did not assign employers any reduced rates for 1957 rate year. National totals also exclude data for Alaska, which repealed experience rating provision as of January 1, 1955.
4/ For Alabama, Arizona, Florida, Georgia, South Carolina, and Texas, data exclude newly qualified employers assigned reduced rates after computation date.
5/ Includes effects of voluntary contributions made toward credit for 1957 rates.
6/ Less than 0.05 percent.
7/ When reduced rates are assigned in Washington, the rate variations are achieved through the use of tax credit offsets. Employer accounts in this State are classified by rate for current rate year on the assumption that each employer's taxable payroll would remain the same as in the preceding year.

RESOLUTION NO. 149

UNEMPLOYMENT INSURANCE AND THE EMPLOYMENT SERVICE

Unanimously adopted by the Third Constitutional Convention, AFL-CIO
San Francisco, California, September 17 - 23, 1959

The legislative response to demonstrated weaknesses in unemployment compensation during our greatest post-war recession has been disappointing. The states acting individually and separately have failed to improve their laws commensurate with the needs of the unemployed. The Congress recognized the need for federal action but limited its leadership to an insufficient optional loan program for temporary extensions which was rejected by most states. Therefore, be it

RESOLVED, That the AFL-CIO support a comprehensive overhauling and improvement of the unemployment insurance system under a single federal system. Pending such a reorganization, we support federal legislation providing uniform minimum standards for benefits, duration, eligibility, disqualifications, and genuine tripartite representation on advisory committees, commissions, and appeals boards. Federal legislation should also provide reinsurance as a source of grants-in-aid to states and permit states to make flat-rate reduction in taxes.

We affirm the application of the following principles for determining benefit level improvements through both state and federal legislation:

1. The weekly benefit amount should replace some specified proportion of the individual claimant's full time weekly wage, preferably not less than 65% (or 1/20 of "high quarter" earnings). This wage-replacement principle should be observed for all but those few with highest earnings and those with very low earnings for whom a minimum benefit or a benefit based on a weighted formula is necessary. Individual benefits of at least 65% of weekly earnings loss are needed in most cases to cover non-deferrable living expenses, relieve hardships, and preserve some semblance of normal living standards. In no case should any claimant qualifying for less than the state-wide basic maximum be compensated by less than 50% of his individual earnings.

2. The base for computing benefit amount should be full-time gross weekly earnings during those weeks of the base year when earnings were highest. Weekly wages should not be averaged over any period (other than the base year quarter of highest earnings) unless lost time is excluded from the computation. Minimum benefit does not exclude loss time

3. Dependent allowances may supplement an adequate basic benefit schedule as described above, but they should be provided only as a specified flat increment per dependent, entirely separate from and supplemental to the benefit schedule.

4. The basic maximum weekly benefit amount must be established at about two-thirds of the states' average weekly wages in covered employment in order to allow the wage replacement principle to operate for most covered employees. In nearly all states the maximum payment allowable was once high enough relative to wage levels to accomplish this, but these ceilings have not been raised commensurately with changes in wage levels. The result is that most claimants draw the maximum rather than a specified proportion of their own wage loss, and unemployment insurance for the majority thus becomes a flat benefit system. In most states the distribution of earnings in covered employment is such that by setting the maximum at two-thirds of average weekly wages, the individual benefit formula or the benefit-earnings schedule would be extended to 80-90% of covered employees. This allows most employees a benefit proportionate to their wage when they become unemployed, leaving only the highest wage earners limited by the maximum amount to a severe contraction in their income.

5. To prevent economic erosion in the value of the benefits, the maximum benefit allowable should be written in the law as a percentage (e.g., 67%) of the average weekly wage in covered employment rather than being stated as a dollar amount. The maximum amount then can be set each year by the state unemployment insurance agency in accordance with changing wage levels (a procedure now followed in six states) without need of further legislative action.

6. All claimants who establish their attachment to the labor force and maintain eligibility should be entitled to 39 weeks of benefits if they cannot find employment in that line. This entitlement should not be limited to certain claimants with steadier employment or higher earnings (the "variable" duration in many states) because the contingency to be insured -- the difficulties of re-employment -- is a function of the labor market situation rather than one's past employment record. Nor should a 39 weeks' entitlement be limited to the special circumstance of state-wide unemployment reaching a predetermined level, since such a provision disregards the fact that in normal times the re-employment possibilities vary greatly according to community, type of job, and age of the claimant. It is unsound to insist on insufficient duration of benefits in a community with a severe unemployment problem just because the state as a whole is not in the same condition. Past experience demonstrates that proper administration of the "able and available for work" and "accept suitable work" requirements for maintaining eligibility usually result in short benefit periods for most of the unemployed. Over the unemployment "cycle" the average for all claims is only a fraction of the allowable number of weeks though there are always some for whom there are no suitable jobs for much longer periods. A uniform 39 weeks potential duration for each claimant will raise only slightly above present figures the average of actual duration of claim (and therefore the long run cost).

Efforts should also continue to be made at both state and federal levels to improve unemployment compensation in the following respects: to abolish the waiting week; eliminate harsh, restrictive and arbitrary provisions in regard to eligibility and disqualifications; extend benefits to all wage and salary employees; and to improve the financing of benefit costs.

We favor an amendment that will prohibit the garnishment or attachment of unemployment benefits for any purpose by any person or government agency including the Internal Revenue Service.

We support a coordinated national approach by the employment service and the continuation and improvement of its services.

We support the appropriation of adequate funds for the administration of the unemployment insurance and employment service programs at both federal and state levels. We favor improved procedures by the federal government for securing such appropriations.

We oppose any change in federal law which would remove the requirement for the quarterly wage reporting for OASI and unemployment insurance purposes.

We favor federal funds to extend the duration of benefits for claimants in defined depressed areas and for workers in the labor market unable to find employment because of age. We urge our affiliates to explore the feasibility of retraining and relocation allowances as an extension of the unemployment insurance program.

1959–1961 TEXT of WISCONSIN'S UNEMPLOYMENT COMPENSATION LAW

Wisconsin's Unemployment Compensation Law, passed in January 1932, is now Chapter 108 of the Statutes.

Contributions have been paid by covered employers since July 1934. Unemployment benefits have been paid to eligible workers since August 1936.

The law now covers about 32,000 employers (of 4 or more persons), and over 850,000 workers.

Through June 1959 the state "unemployment reserve fund" had paid nearly $327 million in benefits, including over $89 million paid after 1957,—and had a net balance of $218 million left (after 25 years of contributions and 23 years of benefits).

This "1959–1961 TEXT of WISCONSIN'S UNEMPLOYMENT COMPENSATION LAW" includes certain 1958 changes, and all 1959 amendments (namely Chapters 12, 61, 177 and 572, Laws of 1959).

CHAPTER 108

UNEMPLOYMENT RESERVES AND COMPENSATION

108.01 PUBLIC POLICY DECLARATION. Without intending that this section shall supersede, alter or modify the specific provisions hereinafter contained in this chapter, the public policy of this state is declared as follows:

(1) Unemployment in Wisconsin is recognized as an urgent public problem, gravely affecting the health, morals and welfare of the people of this state. The burdens resulting from irregular employment and reduced annual earnings fall directly on the unemployed worker and his family. The decreased and irregular purchasing power of wage earners in turn vitally affects the livelihood of farmers, merchants and manufacturers, results in a decreased demand for their products, and thus tends partially to paralyze the economic life of the entire state. In good times and in bad times unemployment is a heavy social cost, directly affecting many thousands of wage earners. Each employing unit in Wisconsin should pay at least a part of this social cost, connected with its own irregular operations, by financing compensation for its own unemployed workers. Each employer's contribution rate should vary in accordance with his own unemployment costs, as shown by experience under this chapter. Whether or not a given employing unit can provide steadier work and wages for its own employes, it can reasonably be required to build up a limited reserve for unemployment, out of which benefits shall be paid to its eligible unemployed workers, as a matter of right, based on their respective wages and lengths of service.

(2) The economic burdens resulting from unemployment should not only be shared more fairly, but should also be decreased and prevented as far as possible. A sound system of unemployment reserves, contributions and benefits should induce and reward steady operations by each employer, since he is in a better position than any other agency to share in and to reduce the social costs of his own irregular employment. Employers and employes throughout the state should co-operate, in advisory committees under government supervision, to promote and encourage the steadiest possible employment. A more adequate system of free public employment offices should be provided, at the expense of employers, to place workers more efficiently and to shorten the periods between jobs. Education and retraining of workers during their unemployment should be encouraged. Governmental construction providing emergency relief through work and wages should be stimulated.

(3) A gradual and constructive solution of the unemployment problem along these lines has become an imperative public need.

108.02 DEFINITIONS. As used in this chapter:

(1) **"Benefits"** means the money allowance payable to an employe as compensation for his wage losses due to unemployment as provided in this chapter.

(2) **"Commission"** means the industrial commission.

(3) Employe. (a) "Employe" means any individual who is or has been performing services for an employing unit, in an employment, whether or not he is paid directly by such employing unit; except as provided in par. (b). If a contractor performing services for an employing unit is an employe under this subsection and not an employer subject to the contribution provisions of this chapter, a person employed by the contractor in fulfilment of his contract with the employing unit shall be considered the employe of the employing unit.

(b) Paragraph (a) shall not apply to an individual performing services for an employing unit if the employing unit satisfies the commission as to both the following conditions:

1. That such individual has been and will continue to be free from the employing unit's control or direction over the performance of his services both under his contract and in fact; and

2. That such services have been performed in an independently established trade, business or profession in which the individual is customarily engaged.

(c) This subsection shall be used in determining an employing unit's liability under the contribution provisions of this chapter, and shall likewise be used in determining the status of claimants under the benefit provisions of this chapter.

(d) Any individual who is, under this subsection, an "employe" of a given employing unit shall be deemed "employed" by that employing unit for the purposes of this chapter.

(4) Employer. (a) "Employer", except where the term by its context may apply to any unit employing one or more individuals, means any person, partnership, association, corporation, whether domestic or foreign, (or legal representative or trustee in bankruptcy or receiver or trustee of a person, partnership, association or corporation, or legal representative of a deceased person), including this state and any city of the first class (but excluding any other political

subdivision) and any fraternal benefit society as defined in s. 208.01, who is subject to this chapter under the statutes of 1955, or who has had employment in Wisconsin and becomes subject to this chapter under the provisions of this subsection.

(b) Any other employer who is subject to the federal unemployment tax act for any calendar year shall become an "employer" subject hereto as of the beginning of such calendar year.

(c) Any other employer shall become an "employer" subject hereto in case the wages paid or payable by him for employment occurring in any calendar quarter exceed $10,000 (counting for this purpose not more than $1,000 of such wages per individual employed), as of the beginning of that calendar year in which such quarter occurs.

(d) Any other employer, who has employed as many as 4 individuals in "employment" on each of some 20 days during the taxable year, each day being in a different calendar week, counting the total number of individuals who were employed by him in employment for some portion of the day (whether or not at the same moment of time), effective after December 31, 1955, shall become an "employer" subject hereto as of the start of that calendar year in which such employment occurred. If an employer's records for a given calendar year do not permit accurate determination of his status on the foregoing basis, and the aggregate "wages" paid or payable for "employment" by him equalled or exceeded $6,000 for such year, he shall become an "employer" subject hereto as of the start of such year.

(e) Any other employer, who succeeds to the business of any "employer" hereunder, shall thereby become an "employer" subject to this chapter, as provided in s. 108.16 (8).

(f) Any employer, including any political subdivision of the state, not otherwise subject to this chapter, who files with the commission his written election to become an "employer" subject hereto for not less than 3 calendar years, shall, with the written approval of such election by the commission, become an "employer" fully subject to this chapter, as of the date and under the conditions stated in such ap-

proved election. Any political subdivision may limit its election to one or more of its operating units.

1. The commission may refuse to approve any such election, in the interests of the proper administration of this chapter. Any election approved by the commission shall be void, in case the electing party was himself "employed" in the same enterprise as the individuals to whom such election applied. The commission may at any time by written notice to the employer terminate any election in the interests of proper administration of this chapter.

2. An electing employer may, after 3 such years, terminate his election and thereby cease to be an "employer" subject hereto, despite par. (g), at the close of any week which ends after the month in which he has filed a written notice to that effect with the commission, provided he is not then subject to this chapter under par. (b), (c), (d), or (e).

(g) An employer shall cease to be subject to this chapter only upon commission action terminating his coverage. The commission may terminate an employer's coverage, on its own motion or on application by the employer, by mailing a notice of termination to the employer's last known address. If a termination of coverage is based on an employer's application, it shall be effective as of the close of the calendar month in which the application was filed. Otherwise, it shall be effective as of the close of the calendar month in which the notice of termination is mailed, subject to appeal by the employer under s. 108.10 by the close of the following month. The commission shall terminate an employer's coverage only if the employer would not otherwise be subject under sub. (4) (b), and only if the employer:

1. Has ceased to exist; or

2. Has transferred his entire business to another person or persons; or

3. Has been covered by this chapter throughout each of the 2 most recently completed calendar years, but has, in each such year, had less than 20 weeks (lying wholly within that year) within which he employed 3 or more employes.

(5) **Employment.** (a) "Employment", subject to the other provisions of this subsection, means any service, including service in interstate commerce, performed by an individual for pay.

108.02 (5)

(b) The term "employment" shall include an individual's entire service (performed within, or partly within and partly outside, Wisconsin), if such service is "localized" in Wisconsin; and shall also include such service, if it is not "localized" in any state but is performed partly within Wisconsin, and if:

1. The base of operations, or, if there is no base of operations, then the place from which such service is directed or controlled, is in Wisconsin; or

2. The base of operations or place from which such service is directed or controlled is not in any state in which some part of such service is performed, but the individual's residence is in Wisconsin.

(c) An individual's entire service for an employer, whether performed partly within or entirely outside Wisconsin, shall be deemed "employment" subject to this chapter, provided both the following conditions exist:

1. Such service is deemed "employment" covered by this chapter pursuant to a reciprocal arrangement between the commission and each agency administering the unemployment compensation law of a jurisdiction in which part of such service is performed; or no contributions are required with respect to any of such service under any other unemployment compensation law; and

2. The employer so elects with the commission's approval and with written notice to the individual.

(d) An individual's entire service shall be deemed "localized" within a state, if such service is performed entirely within such state, or if such service is performed partly within and partly outside such state but the service performed outside such state is incidental to the individual's services within such state (for example, is temporary or transitory in nature or consists of isolated transactions).

(e) In determining whether an individual's entire services shall be deemed "employment" subject to this chapter, under pars. (b), (c) and (d) the commission may determine and redetermine the individual's status hereunder for such reasonable periods as it deems advisable, and may refund (as paid by mistake) any contributions which have been paid hereunder with respect to services duly covered under any other unemployment compensation law.

(f) The term **"employment"**, as applied to work for a governmental unit, except as such unit duly elects otherwise with the commission's approval, **shall not include:**

1. Employment as an elected or appointed public officer.

2. Employment, of a professional or consulting nature, paid on a per diem or retainer basis.

3. Employment by a govenmental unit on an unemployment work relief project, recognized as such by the commission.

4. Employment, by an educational institution supported wholly or substantially from public funds, of any student enrolled in such institution and carrying at least half its full-time schedule in the most recent school term, or of any person as a teacher in such institution.

5. Employment directly by the state fair during its active duration (including the week before and the week after the fair); or employment by the Wisconsin National Guard directly and solely

in connection with its summer training camps or for emergencies; or employment directly by the conservation commission for emergency fire fighting.

6. Employment by a governmental unit in a given week, for the removal of snow or ice or for work connected with floods, of an individual who has worked for such governmental unit in 6 or less of the 52 weeks preceding the given week.

7. Service solely as a school crossing guard.

8. Part-time or occasional service in recreational activities.

9. Past service in a regular annual school-year position (other than teaching) by an individual who still (when claiming benefits) has status therein as a school-year employe.

11. Part-time or occasional service or work by visually handicapped persons performed in the workshop for the blind.

12. Employment by the state legislature except on transfer from another state agency.

(g) The term **"employment"**, except as a given employer elects otherwise with the commission's approval, **shall not include:**

1. Employment in agricultural labor.

2. Domestic service in the employ of an individual in his private home, or domestic service in the employ of a local college club or of a local chapter of a college fraternity or sorority.

3. Employment as a caddy on a golf course.

4. Employment as a newsboy, selling or distributing newspapers or magazines on the street or from house to house.

5. Service performed after June 30, 1939, with respect to which unemployment compensation is payable under the railroad unemployment insurance act (52 Stat. 1094).

6. Any type of maritime service specifically excluded from the coverage of the federal unemployment tax act.

7. Employment of any person by a corporation, community chest, fund, or foundation, organized and operated exclusively for religious, charitable, scientific, literary, or educational purposes, or for the prevention of cruelty to children or animals, no part of the net earnings of which inures to the benefit of any private shareholder or individual, and no substantial part of the activities of which is carrying on propaganda, or otherwise attempting to influence legislation.

9. Service in the employ of any fraternal beneficiary society, order or association (exempt from federal in-

come tax under s. 501 (a) of the internal revenue code), if such service is in connection with its collection of dues or premiums and is performed away from its home office, or is ritualistic service.

10. Service in the employ of an agricultural or horticultural organization exempt from federal income tax under s. 501 (a) of the internal revenue code.

11. Service as an unpaid officer of a corporation or association.

12. Employment as an athlete by an employer who has submitted written evidence satisfying the commission that the enterprise in question was not subject to the federal unemployment tax act in the preceding calendar year.

13. Service covered by any other unemployment compensation law pursuant to a reciprocal arrangement made by the commission under s. 108.14 (8m).

14. Service for an employer who would otherwise be subject to this chapter solely because of sub. (4) (b), if and while the employer, with written notice to and approval by the commission, duly covers, under the unemployment compensation law of another jurisdiction, all services for him which would otherwise be covered under this chapter.

15. Service performed in any calendar quarter as an officer or representative of any organization exempt from federal income tax under ss. 501 (a) or 521 of the internal revenue code, if the remuneration for such service does not exceed $50.

16. Service performed by an individual in the employ of his son, daughter, or spouse, and service performed by a child under the age of 21 in the employ of his father or mother.

(h) If the federal unemployment tax act is so amended after 1944 as to make subject thereto remuneration paid for any employment excluded under par. (g), such exclusion under this chapter shall cease as of the date when said federal act first applies to such remuneration, except as provided in s. 108.14 (8m) (b).

(6) Wages. "Wages" means every form of remuneration payable for a given period (or paid within such period, if this basis is permitted or prescribed by the commission) to an individual for personal services, including salaries, commissions, vacation pay, dismissal wages, bonuses and the reasonable (actual or estimated average) value of board, rent, housing, lodging, payments in kind, and any other similar advantage received from the individual's employing unit or directly with respect to work for it; but there shall not be treated as "wages" the actual (or reasonably estimated average) amount of any required or necessary expenses incurred by an individual on his job. Tips shall be counted as "wages" solely for benefit purposes.

(7) Average weekly wage. (a) An employe's "average weekly wage" with respect to a given employer means the average weekly amount determined by dividing the employe's total wage (paid or payable with respect to his services performed for the employer in the calendar year, or other one-year period prescribed by the commission, which precedes a given determination date) by the total number of those weeks (completed in such year) within which the employe performed some wage-earning services for the employer or for which he received from the employer vacation pay or dismissal wages at least equal to his weekly benefit rate (or, in case no such rate applied, equal to $15).

(b) In lieu of the foregoing standard procedure for determining an employe's average weekly wage, the commission may by general rule prescribe reasonable substitute procedure to apply to those employes (or to some class of those employes) for whom such total wages were less than $100, or for whom the total number of such weeks was less than 10, or who had no such wages or weeks in such year; provided, moreover, that the commission may, on application of an employe or his employer or on its own motion, prescribe reasonable substitute procedure for determining or redetermining the average weekly wage of any employe if it finds, after consulting the employe and the given employer, that application of the standard procedure would be inequitable in such case.

108.02 (7)

(c) The commission may also apply par. (b) to any employe who would have no weekly benefit rate under par. (a).

(d) On recommendation by the advisory committee on this chapter the commission may by rule prescribe, in lieu of the standard procedure specified by par. (a), that each employe's average weekly wage with respect to a given employer and benefit determination shall be based on his gross wages for the weeks of employment, completed within the period specified by s. 108.06 (1) (a), reported for possible use in that determination.

(8) (a) An employer's **"payroll"** shall include all wages paid within a given period to the employer's employes for their "employment" by him.

(b) But an employer's "payroll" for any calendar year shall not include more than the first $3,000 of wages paid by him during such year to an individual with respect to "employment" (including any employment covered by the unemployment compensation law of any other state).

(c) If the federal unemployment tax is amended to apply to a higher amount than the first $3,000 of wages (paid to an individual during a calendar year), then such higher amount shall likewise apply under par. (b), as a substitute for the $3,000 there specified, starting with the same period to which such federal amendment first applies.

(d) If a higher amount is applied pursuant to par. (c), the employer contribution rates (on payroll) determined under s. 108.18 for the second calendar year to which that higher amount applies shall be modified as follows. As to each employer to whom an experience rate then applies under s. 108.18, the contribution rate determined for him under s. 108.18 for that second calendar year shall be reduced by one-tenth of one per cent (on his payroll for that year), except where said rate is zero per cent.

(9) "Fund" means the unemployment reserve fund established in s. 108.16.

(10) "Employer's account" means a separate account in the fund, reflecting the employer's experience with respect to contribution credits and benefit charges under this chapter.

(11) "Reserve percentage" shall for contribution purposes refer to the status of an employer's account, as determined finally by the commission as of the close of the most recent December 31 "computation date". In calculating an employer's net reserve as of any computation date, his account shall be charged with benefits for weeks ending

on or before said date, if paid by the close of the month which follows said date, and shall be credited with contributions, on his payroll through said date, if paid by the close of said month, consistently with s. 108.16. The employer's "reserve percentage" means his account's net reserve as of the computation date, stated as a percentage of the higher one of the following amounts: (a) his "payroll" for the year ending on such date, or (b) 20 per cent of his payroll for the next preceding year.

(11m) "Computation date" means that date as of the close of which the commission computes reserve percentages and determines contribution rates for the next calendar year; and the "year" preceding the computation date means the period of 12 consecutive calendar months ending on that date. The computation date shall be December 31, except as the commission may by general rule prescribe any other date (occurring at least once in each calendar year and within 27 weeks prior to the effective date of new rates of contributions) as of which such rates shall be computed.

(12) "Week" means calendar week, starting Sunday and ending Saturday; but, where an employe starts a working shift on a given Saturday, all his hours and pay for that shift shall be counted in the calendar week which includes that Saturday.

(12m) "52 weeks" means 52 consecutive weeks, for the purposes of any benefit determination issued under this chapter.

(13) An employe's **"weeks of employment"** by an employer means all those weeks within each of which the employe has performed any wage-earning services for the employer in employment subject to this chapter.

(14) "Credit week" means a week of employment (of an employe by an employer) counted in computing benefits under s. 108.06.

(15) Weekly benefit rate. An employe's "weekly benefit rate" from a given employer means the amount determined in accordance with s. 108.05 or 108.061.

108.02 (16)

(16) Partial unemployment. An employe is "partially unemployed" in any week for which he receives some wages but less than his weekly benefit rate.

(17) Total unemployment. An employe shall be deemed "totally unemployed" in any week for which he receives no wages.

(18) Eligibility. An employe shall be deemed "eligible" for benefits for any given week of his unemployment unless he is disqualified by a specific provision of this chapter from receiving benefits for such week of unemployment, and shall be deemed "ineligible" for any week to which such a disqualification applies.

(19) An employe's **"waiting period"** means any period of time (for which no benefits are payable) required of the employe pursuant to s. 108.04 (3), as a condition precedent to his receipt of benefits.

(20) "Administration fund" means the fund established in s. 108.20.

(21) Undefined Terms. Any word or phrase used in this chapter and not specifically defined herein shall be interpreted in accordance with the common and approved usage thereof and in accordance with other accepted rules of statutory construction. No legislative enactment shall control the meaning or interpretation of any such word or phrase, unless such enactment specifically refers to this chapter or is specifically referred to in this chapter.

(22) Self-Employment. An individual shall be deemed to be "self-employed" if he is engaged (not in the employ of another) in a business or enterprise which he has undertaken for the purpose of producing a substantial part of his gross income.

(23) Agricultural Labor. "Agricultural labor" means service performed:

(a) On a farm, in connection with cultivating the soil, or in connection with raising or harvesting any agricultural or horticultural commodity, including the raising, shearing, feeding, caring for, training and management of live stock, bees, poultry, and fur-bearing animals and wildlife.

(b) In the employ of the owner or tenant or other operator of a farm, in connection with the operation, management, conservation, improvement, or maintenance of such farm and its tools and equipment, or in salvaging timber or clearing land of brush and other debris left by a hurricane, if the major part of such service is performed on a farm.

(c) In connection with the production or harvesting of maple sirup or maple sugar or any commodity defined as an agricultural commodity in section 15 (g) of the federal agricultural marketing act, as amended, or in connection with the raising or harvesting of mushrooms, or in connection with the hatching of poultry, or in connection with the ginning of cotton, or in connection with the operation or maintenance of ditches, canals, reservoirs, or waterways used exclusively for supplying and storing water for farming purposes.

(d) In handling, planting, drying, packing, packaging, processing, freezing, grading, storing, or delivering to storage or to market or to a carrier for transportation to market, any agricultural or horticultural commodity; but only if such service is performed as an incident to ordinary farming operations or, in the case of fruits and vegetables, as an incident to the preparation of such fruits or vegetables for market. The provisions of this paragraph shall not be deemed to be applicable with respect to service performed in connection with commercial canning or commercial freezing or in connection with any agricultural or horticultural commodity after its delivery to a terminal market for distribution for consumption.

(e) As used in this subsection, the term "farm" includes stock, dairy, poultry, fruit, fur-bearing animal, and truck farms, plantations, ranches, nurseries, ranges, greenhouses or other similar structures used primarily for the raising of agricultural or horticultural commodities, and orchards.

108.03 PAYMENT OF BENEFITS. (1) Benefits shall be paid to each unemployed and eligible employe from his employer's account, under the conditions and in the amounts stated in (or approved by the commission pursuant to) this chapter, and at such times, at such places, and in such manner as the commission may from time to time approve or prescribe.

(2) (a) The benefit liability of each employer's account shall begin to accrue under s. 108.06 in the first week completed on or after the first day of that calendar year within which his contributions first began to accrue under this chapter.

(b) Benefits shall become payable from each employer's account beginning with the first week completed 6 months after the first day of that calendar year within which his contributions first began to accrue under this chapter.

(3) When an employer, after due notice of a benefit claim against his account, has conceded liability thereunder or has failed to file the required report thereon or has failed to raise any eligibility issue thereunder, any benefits allowed under any resulting benefit determination shall be promptly paid; and any issue thereafter raised by the employer shall not affect benefits already paid.

108.04 ELIGIBILITY FOR BENEFITS.

(1) AVAILABILITY FOR WORK. (a) An employe shall be ineligible for benefits for any week in which he is with due notice called on by his current employing unit to report for work actually available within such week and is unavailable for work or physically unable to do his work.

(b) An employe shall be ineligible for benefits from an employer's account for any given week if his employment with such employer was suspended by the employe or by the employer or was terminated by such employer because the employe was unavailable for work, or on a voluntary leave of absence granted for a definite period, or physically unable to work, in case such unavailability or inability continues during the week in question, or if such week occurs during the definite period of such leave and before the employe has returned to work.

(c) A pregnant woman shall be deemed unavailable for work and ineligible for benefits for the period which begins 10 weeks before the week which includes the expected date of childbirth and which ends 4 weeks after the week which includes the date of childbirth. The commission may require any such claimant to submit a doctor's certificate to establish such dates.

(2) REGISTRATION FOR WORK. (a) An employe shall be deemed eligible, for waiting period or benefit purposes, as to any given week for which he receives no wages, only if he has within such week registered for work in such manner as may then be prescribed by commission rules; provided that, if the commission finds that there are conditions under which an employe cannot reasonably be required to comply with the foregoing registration requirement, the commission may by general rule waive this requirement under such stated conditions. Each employer shall inform his employes of the foregoing registration requirement, in such reasonable manner as the commission may from time to time prescribe.

(b) Any claimant, thus registered, may also be required at any time to make such other efforts to secure work as the commission may reasonably direct under the circumstances,

and to supply proper evidence thereof; and shall, if he fails without good cause to do so, be ineligible for each week such failure continues.

(3) WAITING PERIOD. (a) Only those weeks of an employe's unemployment for which he would otherwise be eligible to receive benefits shall be counted as waiting period weeks.

(b) An employe shall become eligible to receive benefits for his weeks of unemployment ending within a given calendar year only after he has had one waiting period week, ending within such year, except as hereinafter provided.

(c) Not more than one of the weeks ending between October 31 and the following March 1 shall be required of an employe as waiting period.

(d) No week shall be required of an employe as a waiting period week if benefits were payable to him for the immediately preceding week.

(4) QUALIFYING CONDITIONS. (a) An employe shall not be eligible to receive benefits for any given week of unemployment unleess he has had a total of **18 or more "weeks of employment"** from one or more employers within the 52 weeks preceding the close of his most recent week of employment.

(af) There shall be counted toward the "weeks of employment" required by par. (a) any federal service, within the relevant period, which is assigned to Wisconsin under an agreement pursuant to title XV of the social security act.

(b) An employe shall be ineligible for benefits, based on his past employment by a given employer, while his applicable **"average weekly wage"** as to such employer is under **$16,** unless s. 108.07 (2) is applied to that employment.

(c) An employe shall not be eligible to receive benefits from the account of an employer who is engaged in the canning of fresh perishable fruits or vegetables, based on his weeks of employment by such employer ending within a given calendar year, if during such year he has been employed by such employer within fewer than 18 weeks and solely within the active canning season or seasons (as de-

termined by the commission) of the establishment in which he has been employed by such employer, unless he had earned wages (for services performed for one or more other covered employers, and submits adequate evidence of such wages) of $200 or more during the 52 weeks preceding his first week of employment by such canning employer ending within such year.

(d) An employe shall not be eligible for benefits from a given employer's account for any given week, if he is customarily **self-employed,** and there have been not more than 20 weeks in which he worked as much as 15 hours per week for such employer, and he has worked at his self-employment 30 or more weeks, out of the 52 weeks preceding termination of his employment by such employer, and can at such termination reasonably return to his customary (or other similar) self-employment.

(e) In no case shall any employe employed by any bowling alley as a **pin boy** be eligible to receive any benefits, based on such employment, for unemployment during May, June, July, or August.

(f) An employe shall not be eligible for benefits from a given employer's account for any given week, nor shall such week be counted as a credit week for benefit purposes, if such employe is or was a **student** (regularly attending an established educational institution in the most recent school term) and his employment in such week occurred:

1. Solely within the customary vacation days or periods of schools, colleges and universities.

2. Outside of school hours for not more than 4 hours on any full school day.

3. By such educational institution.

4. By a separate employer as a formal and accredited part of the regular curriculum of such educational institution.

5. Outside of his school class hours for not more than 24 hours in the given week, if in such weeks he is carrying at least a half-time schedule of courses in such school.

(5) DISCHARGE FOR MISCONDUCT. An employe's eligibility, for benefits based on those credit weeks then accrued with respect to an employing unit, shall be barred for any week of unemployment completed after he has been **discharged** by the employing unit for **misconduct** connected with his employment; provided, moreover, that such employe shall be deemed ineligible for benefits (from other previous employer accounts) for the week in which such discharge occurred and for the 3 next following weeks.

(6) DISCIPLINARY SUSPENSION. As to an employe's weeks of unemployment by reason of a **disciplinary suspension** by a given employer, the employe shall be ineligible for benefits from such employer's account as follows:

(a) If the suspension was for misconduct connected with his employment, he shall be ineligible for each such week.

(b) If the suspension was for other good cause connected with his employment, he shall be ineligible for the first 3 such weeks ending within any calendar year.

(7) VOLUNTARY TERMINATION OF EMPLOYMENT. (a) If an employe **terminates his employment** with an employing unit, he shall be ineligible for any benefits based on such employment, and ineligible for benefits based on other previous employment for the week of termination and the 4 next following weeks, except as hereinafter provided.

(b) Paragraph (a) shall not apply if the commission determines that the employe terminated his employment with good cause attributable to the employing unit.

(c) Paragraph (a) shall not apply if the commission determines that the employe terminated his employment for compelling personal reason; provided that, if the commission determines that he is physically unable to work or substantially unavailable for work, he shall be ineligible while such inability or unavailability continues.

(d) Paragraph (a) shall not apply if the commission determines that the employe terminated his employment to take another job; provided, that he shall be ineligible, for

benefits based on the employment terminated, until he has been employed within at least 7 subsequent weeks.

(e) Any benefits paid pursuant to pars. (c) or (d) based on the employment terminated shall be charged against the fund's balancing account; but the employer shall continue to be recognized as an interested party in any such case.

(8) SUITABLE WORK. (a) If an employe fails either to apply for work when notified by a public employment office or to accept work when offered to him, and such failure was without good cause as determined by the commission, he shall be ineligible for the week in which such failure occurs and thereafter until he has again been employed within at least 4 weeks and has earned wages equalling at least 4 times his weekly benefit rate.

(af) If an employe fails to return to work with a former employer who has duly recalled him, and such failure was without good causes as determined by the commission, he shall be ineligible for benefits from that employer's account for the week in which such failure occurs and thereafter until he has again been employed within at least 4 weeks and has earned wages equalling at least 4 times his weekly benefit rate.

(b) If the commission determines that such a failure has occurred with good cause, but that the employe is physically unable to work or substantially unavailable for work, he shall be ineligible for the week in which such failure occurred and while such inability or unavailability continues.

(c) When a claimant accepts new work which he could have refused with good cause, and then terminates such employment with the same good cause and within the first 10 weeks after starting work, his eligibility for benefits based on other previous employment shall not be suspended, under sub. (7), by reason of such termination.

(d) An employe shall be deemed to have good cause under par. (a) if the commission determines that his failure related to new work for a new employing unit at a lower grade of skill or significantly lower rate of pay than applied to him on one or more recent jobs, and that he had not yet had a

reasonable opportunity (in view of labor market conditions and his degree of skill, but not to exceed 6 weeks after he became unemployed) to seek a new job substantially in line with his job skill and prior rate of pay.

(9) PROTECTION OF LABOR STANDARDS. Benefits shall not be denied under this chapter to any otherwise eligible individual for refusing to accept new work under any of the following conditions:

(a) If the position offered is vacant due directly to a strike, lockout, or other labor dispute.

(b) If the wages, hours or other conditions of the work offered are substantially less favorable to the individual than those prevailing for similar work in the locality.

(c) If as a condition of being employed the individual would be required to join a company union or to resign from or refrain from joining any bona fide labor organization.

(10) LABOR DISPUTE. An employe who has left (or partially or totally lost) his employment with an employing unit because of a strike or other bona fide labor dispute shall not be eligible for benefits from such (or any previous) employer's account for any week in which such strike or other bona fide labor dispute is in active progress in the establishment in which he is or was employed.

(11) FRAUDULENT CLAIMS. In addition to any other provision, including penalties, which may apply under this chapter:

(a) If a claimant, in filing his claim for any week, conceals any part of his wages earned in or paid for that week, or conceals his refusal (within that week) of a job offer, so much of any benefit payment as was paid because of such concealment shall be recovered as an overpayment.

(b) Any such claimant may also, by a determination issued under s. 108.09, be required, as to each such act of concealment, to forfeit such benefits as would otherwise become payable to him for not more than 3 weeks of compensable unemployment completed not later than 2 years fol-

lowing the date of such determination. The benefits thus forfeited by a claimant shall be duly charged against his benefit credits and against the proper employer's account and shall be credited to the fund's balancing account.

(12) PREVENTION OF DUPLICATE PAYMENTS. (a) Any individual who is entitled to federal readjustment allowances under the servicemen's readjustment act of 1944 may nevertheless claim benefits based on his available credit weeks under this chapter, and may receive such benefits if otherwise eligible; but any individual who receives a federal readjustment allowance for a given week shall be ineligible for benefits paid or payable for that same week under this chapter.

(b) Similarly, any individual who receives, through the commission, any other type of unemployment benefit or allowance for a given week shall be ineligible for benefits paid or payable for that same week under this chapter.

(c) Any individual who receives unemployment compensation for a given week under any federal law through any federal agency shall be ineligible for benefits paid or payable for that same week under this chapter.

(d) Any individual who receives unemployment compensation for a given week under the law of any other state (with no use of benefit credits earned under this chapter) shall be ineligible for benefits paid or payable for that same week under this chapter.

(e) Any individual who receives a temporary total disability payment under ch. 102 for a given week shall be ineligible for benefits paid or payable for that same week under this chapter.

(13) NOTIFICATION AS TO INELIGIBILITY. (a) The commission may take administrative notice of any fact indicating an employe's ineligibility, whether or not the employing unit has reported such fact or asserted the employe's ineligibility under this chapter.

(b) Unless an employer has duly notified the commission (in such manner and within such time limit as the commission's rules and regulations may prescribe) that he believes a designated provision of this section or of the "em-

ployment" definition of s. 108.02 should operate to deny benefits from his account to the given employe for the week or weeks in question, or unless the commission applies the provisions of par. (a), no provision of this section or of such definition shall operate to deny such benefits to such employe; provided, however, that this subsection shall not affect the application of subs. (2), (3), (4) (a) and (b), (8) and (11), even though the commission has not been thus notified; and provided, further, that said sub. (2) shall not apply to a case for which the employer in question expressly waives its application by written notice to and with the approval of the commission.

(c) In case an employer, after a request therefor has been duly mailed to him, fails to file the required report on the eligibility, weekly benefit rate and credit weeks of an employe who has claimed benefits from the employer's account, or if such report is received more than 7 days after such mailing and also after the employe has completed claim as to a week for which benefits are apparently payable:

1. The commission may determine and proceed to pay the benefits thus claimed, based on the claimant's statements.

2. If benefits are thus determined, the employer shall be liable for a tardy filing fee of $5, to be paid to the commission and credited to the administration fund, except where the employer later files the required report and satisfies the commission that it was tardy because of circumstances beyond his control.

(d) As to any benefits paid from one employer's account by reason of another employer's failure to file duly a report requested from him by the commission, the first week's benefits thus paid shall not be recovered from the employe but shall be credited to the one employer's account and charged to the other employer's account.

(e) Whenever an individual claims benefits based on his employment by a government unit, it shall, if it believes that sub. (15) as to retirement payments may apply, so notify the commission. In any such case the Wisconsin retirement fund and the state teachers retirement system

108.04 (13)

shall, on request from the commission, report to it the relevant facts, and the commission shall apply sub. (15) accordingly.

(14) If the commission finds that the official war-time manpower policies of the United States are or may be materially hampered, in any clearly definable class of cases, by any application of subs. (7) or (8), so as to interfere with the effective war-time use of civilian manpower in Wisconsin, the commission may by general rule, after public hearing, modify or suspend such application accordingly.

(15) RETIREMENT PAYMENTS. If an employe claims benefits based on his past work for a covered employer, but such employer duly notifies the commission pursuant to sub. (13), and the commission determines, that the employe is receiving or has claimed and will receive retirement payments, as to any week covered by his benefit claim, under a group retirement system to whose financing any employing unit has substantially contributed or under a government retirement (or old-age insurance) system or under both, then the benefits thus claimed:

(a) Shall be denied for any such week, from the account of such employer, if the employe left his employment with that employer to retire before he reached the compulsory retirement age used by that employer.

(b) Shall not be denied for any such week, from the account of such employer, if the employe is otherwise eligible and left or lost his employment with that (or any other) employing unit because he had reached the compulsory retirement age used by the employing unit in question.

(c) Shall, if payable, be determined for any such week by treating all but $5 of the employe's weekly rate of such retirement payments as if it were "wages".

108.05 AMOUNT OF BENEFITS.

(1) WEEKLY BENEFIT RATE, FOR TOTAL UNEMPLOYMENT. Each eligible employe shall be paid benefits from his employer's account for each week of his total unemployment at the weekly benefit rate, based on the employe's "average weekly wage" from the given employer, shown by the following schedule:

SCHEDULE

Line	Average Weekly Wage Class			Weekly Benefit Rate
1.		Under	$16.00	$ None
2.	$16.00	to	$19.00	11
3.	19.01	to	22.00	12
4.	22.01	to	24.50	13
5.	24.51	to	27.00	14
6.	27.01	to	29.50	15
7.	29.51	to	32.00	16
8.	32.01	to	34.00	17
9.	34.01	to	36.00	18
10.	36.01	to	38.00	19
11.	38.01	to	40.00	20
12.	40.01	to	42.00	21
13.	42.01	to	44.00	22
14.	44.01	to	46.00	23
15.	46.01	to	48.00	24
16.	48.01	to	50.00	25
17.	50.01	to	52.00	26
18.	52.01	to	54.00	27
19.	54.01	to	56.00	28
20.	56.01	to	58.00	29
21.	58.01	to	60.00	30
22.	60.01	to	62.00	31
23.	62.01	to	64.00	32
24.	64.01	to	66.00	33
25.	66.01	to	68.00	34
26.	68.01	to	70.00	35
27.	70.01	to	72.00	36
28.	72.01	to	74.00	37
29.	74.01	to	76.00	38
30.	76.01	to	78.00	39
31.	78.01	to	80.00	40
32.	80.01	to	82.00	41
33.	82.01	to	84.00	42*
34.	84.01	to	86.00	43*
35.	86.01	to	88.00	44*
36.	88.01	to	90.00	45*
37.	90.01	to	92.00	46*
38.	92.01		or more	47*

*Rates above $41 will apply to determinations issued after Jan. 1, 1960, under (2), below.

52 1/2% of avg. weekly wage

108.05 (1m)

(1m) FINAL PAYMENTS IN CERTAIN CASES. Whenever an employe's benefit credits under a given determination are nearly exhausted, so that paying the benefits normally due him for a given week of unemployment would reduce such credits below his applicable weekly benefit rate, his actual benefits for such week shall equal all benefit credits remaining under said determination.

(2) SEMIANNUAL ADJUSTMENT OF MAXIMUM BENEFIT RATE. (a) This chapter's maximum weekly benefit rate, as to benefit determinations whose first benefit check is issued in a given half year (starting January 1 or July 1), shall be based on the "average wages per average week" of the preceding "base year" (ended 6 months before the starting date of the given half year) pursuant to this subsection.

(b) The commission shall determine semiannually, by December 1 and by June 1, for the last completed "base year" (ended June 30 or December 31), from reports to the commission (including corrections thereof) filed within 3 months after the close of that year by employers (except government units) covered by this chapter as to their employes in employment covered by this chapter:

1. The gross wages thus reported by all such employers as paid in that year for such employment; and

2. The average of the 12 mid-month totals of all such employes in employment thus reported for that year; and

3. The quotient obtained by dividing said gross wages by said average; and

4. The amount (herein called "average wages per average week") obtained by dividing said quotient by 52.

(c) Based on the amount of "average wages per average week" thus determined, this chapter's maximum weekly benefit rate, as to benefit determinations whose first benefit check is issued in the ensuing half year (starting January 1 or July 1), shall equal the result obtained by rounding 52.5 per cent of said "average wages per average week" to the nearest multiple of one dollar,

(d) Whenever said result is higher or lower than the current half year's maximum weekly benefit rate, under the schedule which currently applies under this section, the commission shall change the closing lines of that schedule, for benefit determinations whose first benefit check is issued in the next half year, so that each such line will show an "average weekly wage class" two dollars higher and a "weekly benefit rate" one dollar higher than the preceding line, except that the new last line, showing the new maximum weekly benefit rate determined under par. (c), shall specify that "average weekly wage class" which ranges upward without limit and starts one cent above the higher wage figure of the next preceding line.

(e) The commission shall promptly record in its minutes, and shall have officially published within 10 days, the "average wages per average week" and the corresponding maximum weekly benefit rate thus determined by it, and the resulting schedule of average weekly wage classes and weekly benefit rates, which shall then apply to all benefit determinations whose first benefit check is issued in the ensuing half year.

(f) The commission shall certify such schedule to the revisor of statutes, who shall when publishing the statutes include the latest such schedule then available.

(g) The commission's first determination under par. (b) shall be made by December 1, 1959, for the "base year" ended June 30, 1959, and the resulting schedule shall apply to the half year beginning on January 1, 1960.

(3) BENEFITS FOR PARTIAL UNEMPLOYMENT. (a) If an eligible employe's total wages for a given week are less than his applicable weekly benefit rate, but are at least one-half of said rate, he shall be paid one-half of his weekly benefit rate for such week.

(b) If an eligible employe's total wages for a given week are less than one-half of his applicable weekly benefit rate, he shall be paid his full weekly benefit rate for such week.

(4) HOLIDAY OR VACATION PAY. (a) An employe's holiday pay for a given week shall, for benefit purposes, be treated as wages for that week only if it has become defi-

nitely payable to the employe within 4 days after the close of that week.

(b) An employe's vacation pay shall, for benefit purposes, be treated as wages for a given week only if it has by the close of that week become definitely allocated and payable to the employe for that week and he has had due notice of such allocation; provided that, in any case where an employe's vacation pay has not been thus allocated to a given week, his employer may:

1. Allocate it to a future week of the employe's unemployment, with due notice to him and to the commission; or

2. Deduct from such pay, without penalty under s. 108.24, such benefits paid for a past week as the employe would not have received if such pay had been currently allocated to such week, in which event the employer shall promptly transmit the amount thus deducted to the commission for his account in the fund and the commission shall correct the employe's benefit credits accordingly.

108.06 BENEFIT LIABILITY OF EMPLOYER'S ACCOUNT.

(1) BENEFIT CREDIT WEEKS. (a) Except as this section or s. 108.04 provides otherwise, there shall be counted as a credit week for benefit purposes each week of employment, of a given employe by a given employer, which is or has been completed:

1. After the benefit liability of the employer's account has begun to accrue; and

2. Within the 52 weeks preceding the close of the employe's most recent week of employment by the employer; or within any 53 such weeks which include the fifty-third week ending within a single calendar year.

(b) In case an employe has had more than 45 weeks of employment by an employer within the period specified in par. (a) 2, only 45 of such weeks shall be counted and available as "credit weeks" with respect to such employer under any one benefit determination.

(2) DURATION OF BENEFITS, BASED ON CREDIT WEEKS. (a) Each benefit determination issued under s. 108.09 shall allow benefits to an employe, if otherwise eligible, based on the number of his credit weeks then available with respect to an employer.

(b) As to the first 20 credit weeks thus available, each such week shall, in determining the employe's total benefit credits, be valued at seven-tenths of his weekly benefit rate.

(c) As to additional credit weeks (over 20) thus available, each such week shall, in determining the employe's total benefit credits, be valued at eight -tenths of his weekly benefit rate.

(d) The total benefit credits thus resulting under any benefit determination, based on its credit weeks and weekly benefit rate, shall be adjusted to the nearest multiple of one-half of said weekly benefit rate.

(e) No such determination shall allow benefits totaling more than 34 times its weekly benefit rate.

Note: Under the above provisions, benefit weeks are figured from one employer at a time, based on the number of work-weeks available from that one employer, as follows:

what's basis for listing anything before 16 weeks.

Work-Weeks	Benefit Weeks	Work-Weeks	Benefit Weeks	Work-Weeks	Benefit Weeks
1	½	16	11	31	23
2	1½	17	12	32	23½
3	2	18	12½	33	24½
4	3	19	13½	34	25
5	3½	20	14	35	26
6	4	21	15	36	27
7	5	22	15½	37	27½
8	5½	23	16½	38	28½
9	6½	24	17	39	29
10	7	25	18	40	30
11	7½	26	19	41	31
12	8½	27	19½	42	31½
13	9	28	20½	43	32½
14	10	29	21	44	33
15	10½	30	22	45 or more	34

108.06 (3)

(3) DURATION OF LIABILITY. (a) In no case shall the fund remain or be liable to pay benefits to an employe, based on his employment by a given employer, for any unemployment occurring more than 52 weeks after the close of the employe's most recent week of employment by such employer.

(b) Once a determination has been made under s. 108.09 as to the amount of benefits potentially payable to an employe based on his available credit weeks with respect to a given employer, all benefits thereafter payable to the employe based on credit weeks from that employer shall be paid in accordance with that determination, until it ceases to apply.

(c) A given determination shall cease to apply only when all benefit credits available thereunder have been charged or canceled, or as to unemployment occurring more than 52 weeks after the close of the employe's most recent credit week included in such determination.

(d) Credit weeks included in a given benefit determination shall not be available for use in any subsequent benefit determination.

(e) To determine qualifying employment under s. 108.04 (4) (a), and any other subsequently determined benefit rights, the commission shall count all weeks of employment covered by an employer's report and all credit weeks included in any benefit determination as if they had all occurred consecutively during the most recent part of the period covered by the given report or determination.

108.061 BENEFIT ADJUSTMENTS FOR CERTAIN VETERANS.

(1) The commission may take any administrative action it deems necessary or desirable to co-operate fully under title IV, unemployment compensation for veterans (of service on or after June 27, 1950), of the federal veterans' readjustment assistance act of 1952 (P. L. 550; 66 Stat. 663), including any amendment of said title IV.

(2) As to any veteran qualified under said title IV, who qualifies for benefits under this chapter, if his benefit determination hereunder would, but for this section, specify a weekly benefit rate of less than $26 (or less than such higher weekly amount as may then apply under said title IV), his benefit rights under said determination shall be adjusted as follows:

(a) His maximum benefit credits, as they would be determined under s. 108.06 (2) without applying this section, shall, if not an

exact multiple of one-half of $26 (or of one-half of such higher weekly amount as may then apply under said title IV), be adjusted to the next higher such multiple; and

(b) His weekly benefit rate shall be $26, or such higher weekly amount as may then apply under said title IV.

(3) As to any such qualified veteran, whose weekly benefit rate is less than $26 (or less than such higher weekly amount as may then apply under said title IV) under a benefit determination applicable when this section (or any higher weekly amount which may later apply under said title IV) takes effect, his benefit credits then remaining under said determination shall, by a substitute determination, be similarly adjusted, as specified in sub. (2) (a), and a weekly benefit rate of $26 (or such higher weekly amount as may then apply under said title IV) shall apply to all further payments thereunder.

108.07 LIABILITY OF SEVERAL EMPLOYERS.

(1) (a) In case an employe is unemployed and eligible as to 2 or more employers in the same week, and has claimed benefits, he shall, for the purposes of this subsection and s. 108.04 (13), be deemed to have claimed benefits from the account of each employer; but his benefits for such unemployment in such week shall be paid only from the account of that one of such employers by whom he was most recently employed, except as provided in this section.

(b) After an employe has become eligible for a benefit check under a given benefit determination, he shall, while it remains valid under s. 108.06 (3), be eligible for benefits solely under that determination, except while it is suspended under s. 108.04.

(2) In case an employe has usually performed services in the same week for 2 or more employers, under an arrangement between such employers, the commission may combine his wages and his employment from such employers to determine his benefit rights under s. 108.05 and 108.06 as if such wages and employment had been from a single employer, and may pay benefits accordingly, and may prorate the resulting benefit charges between the accounts of such employers, by such methods as it deems fair and reasonable. The commission may temporarily charge such benefit payments to the fund's balancing account, pending their pro rata allocation to the accounts of such employers.

(3) In case an employe, to whom no benefit determination then applies, becomes unemployed and eligible as to 2 or

more employers, the commission may, if it finds that applying sub. (1) (a) would be grossly inequitable to the employe, determine and use first his most fairly representative benefit rights.

(4) Once a benefit determination has been issued to an employe based on his work for a former employer, benefit payments and charges thereunder shall not be affected by any later determination that a subsequent employing unit was also a covered employer.

108.08 NOTIFICATION. (1) To receive benefits for any given week of his unemployment an employe shall give notice to the commission with respect to such week of unemployment, through a public employment office, within such time limit and in such manner as the commission may by rule prescribe.

(2) The commission may require from any or each employer notification of the partial or total unemployment of his employes, within such time, in such form, and in accordance with such rules as the commission may prescribe.

108.09 SETTLEMENT OF BENEFIT CLAIMS

(1) FILING. Claims for benefits shall be filed pursuant to general commission rules, either at the public employment office for the district or as the commission's rules may otherwise direct; provided that the commission may waive the filing of a claim directly by the employe himself, for benefits from a given employer's account, where due notice of the employe's unemployment is given the employer by the commission or is given the commission by the employer, which notice shall in either of such cases serve as a claim for benefits. The employer from whose account benefits are claimed (whether directly by the employe or through the commission) shall promptly inform the commission in writing of his acceptance or rejection of such claim, together with his reasons therefor.

(2) INITIAL DETERMINATION. A deputy designated by the commission shall promptly determine whether or not the claim is valid and the amount of benefits apparently payable thereunder, and shall also determine whenever necessary whether or not the employe's eligibility for benefits has been suspended or terminated; provided however, that the

deputy may set aside or amend a determination at any time on the basis of subsequent information or to correct a clerical mistake. A copy of each determination shall be mailed to the last known address of each of the parties. Either party to the determination may request a hearing as to any matter therein, by filing such request within 10 days after such mailing and in accordance with procedure prescribed by the commission; except that the employer may not request a hearing with respect to benefits already paid in accordance with his concession of liability.

(2m) In any case in which an employe has filed a claim for benefits from an employer's account, the employe's statement may be taken as to his eligibility, weekly benefit rate, and credit weeks. In any such case a commission deputy may issue a determination as to the employe's benefit rights, based on the employe's statement and on any other information then available. In accordance with sub. (2), such determination shall be mailed to the last known address of each of the parties, and either party to the determination may request a hearing as to any matter therein, by filing such request within 10 days after such mailing and in accordance with procedure prescribed by the commission; but the employer's request shall be valid only if his report (as to the eligibility, weekly benefit rate, and credit weeks of the employe) is included in (or, if filed earlier, incorporated by specific reference in) such request.

(2r) The employe's copy of any benefit determination may be given to him, instead of being mailed to him; and he may in that event request a hearing as to any matter therein by duly filing such request within 10 days after such delivery.

(3) APPEALS. Unless such request for a hearing is withdrawn, each of the parties shall be afforded reasonable opportunity to be heard, and the claim thus disputed shall be promptly decided by such appeal tribunal as the commission may designate or establish for this purpose, or by the commission as provided in sub. (6). If the party requesting a hearing fails to appear at the hearing, a commission examiner designated for this purpose may dismiss the appeal, provided that due notice of the hearing was mailed to the party's last known address and good cause for his failure to

appear has not been shown said examiner within 10 days after the hearing date. If the other party fails to appear at the hearing, the appeal tribunal shall proceed with the hearing, provided that due notice of the hearing was mailed to said party's last known address, and may issue its decision without further hearing, provided that good cause for his failure to appear has not been shown said examiner within 10 days after the hearing date.

(3m) REPORTS BY EXPERTS. The contents of verified reports by qualified experts shall be received in evidence in any proceeding under this section, in the same manner and subject to the same conditions as would apply to such reports under s. 102.17 (1) (as).

(4) APPEAL TRIBUNALS. To hear and decide a disputed claim, the commission shall establish an appeal tribunal. Any such tribunal may consist of 1 or 3 full-time salaried examiners; or it may consist of an appeal board composed of 1 full-time salaried examiner who shall serve as chairman, and of 2 other members appointed by the commission, namely an employer or representative of employers and an employe or representative of employes, who shall each be paid a fee of not more than $10 per day of active service on such tribunal (plus necessary expenses). No person shall hear any case in which he is a directly interested party. The chairman of such an appeal board shall act for it at any session in the absence of one or both other members, provided they have had due notice of such session.

(5) PROCEDURE. (a) The manner in which claims shall be presented, the reports thereon required from the employe and from employers, and the conduct of hearings and appeals shall be governed by general commission rules (whether or not they conform to common law or statutory rules of evidence and other technical rules of procedure) for determining the rights of the parties.

(b) All testimony at any hearing under this section shall be taken down by a stenographer, or by a recording machine, but need not be transcribed unless either of the parties requests a transcript prior to expiration of his right to further appeal hereunder and pays to the commission in advance a fee of $5 therefor, plus 25 cents for each page by which the transcript exceeds 20 pages. When a transcript is thus furnished one of the parties at his request, a copy of

the transcript shall be furnished the other party free of charge. The transcript fee thus collected shall be paid to the administration fund.

(6) COMMISSION REVIEW. (a) At any time before a deputy's determination or an appeal tribunal's decision on a claim is mailed to the parties, the commission may transfer the proceedings on the claim from such deputy or appeal tribunal to itself.

(b) Either party may petition the commission for review of an appeal tribunal decision, pursuant to general commission rules, within 10 days after it was mailed to his last known address. Promptly after the filing of such a petition, the commission may either dismiss it as not timely at any level or may affirm, reverse, change, or set aside such decision, on the basis of the evidence previously submitted in such case, or direct the taking of additional testimony.

(c) Within 10 days after expiration of the right of the parties to request a hearing by an appeal tribunal or to petition for review by the commission, or within 30 days after a decision of the commission was mailed to the parties, the commission may on its own motion reverse, change, or set aside the determination or decision, on the basis of evidence previously submitted in such case, or direct the taking of additional testimony.

(d) After an employe's eligibility for benefits has been established by a commission decision or affirmance of the appeal tribunal decision, benefits then due the employe shall be payable to him on the eleventh day after such commission decision or affirmance, unless the commission finds, by resolution duly entered in its minutes, that the case involves an issue of precedenting importance or a labor dispute issue or the actual or potential eligibility of a substantial number or percentage of the employer's employes, in which event such benefits shall become payable only if judicial review has not been duly commenced under sub. (7) or has finally allowed benefits. In case final adjudication determines that benefits paid under this subsection were improperly charged

against the employer's account, s. 108.16 (2m) shall apply to the charging and recovery of such payments.

(7) JUDICIAL REVIEW. Either party may commence judicial action for the review of a decision of the commission hereunder, provided said party (after exhausting the remedies provided hereunder) has commenced such judicial action within 30 days after a decision of the commission was mailed to his last known address (or within 30 days after the appeal tribunal decision has been affirmed by the commission through its failure to act). Any judicial review hereunder shall be confined to questions of law, and the other provisions of ch. 102 with respect to judicial review of orders and awards shall likewise apply to any decision of the commission reviewed under this section. Any such judicial action may be defended, in behalf of the commission, by any qualified attorney who is a regular salaried employe of the commission and has been designated by it for this purpose, or at the commission's request by the attorney-general.

(8) LIMITATION OF FEES. No employe shall be charged fees of any kind by the commission or its representatives, in any proceeding under this chapter. Any employe claiming benefits in any commission proceeding may be represented by counsel or other duly authorized agent; but no such counsel or agents shall together charge or receive from the employe for such services more than 10 per cent of the maximum benefits at issue in such proceedings, unless the commission has first approved a specified higher fee.

108.10 SETTLEMENT OF ISSUES OTHER THAN BENEFIT CLAIMS.

(1) In connection with any issue arising under this chapter as to any liability, of an employer of one or more persons in Wisconsin, for which no review is provided under s. 108.09 and with respect to which no penalty is provided in s. 108.24, the following procedure shall apply:

(2) A deputy designated by the commission for the purpose shall investigate the existence and extent of any such liability, and may issue an initial determination accordingly; provided, however, that such a deputy may set aside or amend any such determination at any time on the basis of

subsequent information or to correct a clerical mistake. A copy of each determination shall be mailed to the last known address of the employer affected thereby. The employer may request a hearing as to any matter therein, by filing such request with the deputy within 20 days after such mailing and in accordance with such procedure as the commission may by rule prescribe.

(3) Any hearing duly requested shall be held before an appeal tribunal established in the manner provided by s. 108.09(4), and s. 108.09(5) shall be applicable to the proceedings before such tribunal. Within 20 days after the appeal tribunal's decision has been mailed to the employer's last known address, he may petition the commission for review thereof pursuant to general commission rules, or the commission on recommendation of counsel may on its own motion transfer the proceedings to itself and reverse, change, or set aside the decision of the appeal tribunal on the basis of evidence previously submitted in such case, or direct the taking of additional testimony.

(4) The commission's authority to take action as to any issue or proceeding under this section shall be the same as that specified in s. 108.09 (6) (a), (b), and (c).

(5) The employer may commence action for the judicial review of a commission decision hereunder, provided said employer, after exhausting the remedies provided hereunder, has commenced such action within 30 days after such decision was mailed to his last known address or within 30 days after the appeal tribunal decision has been affirmed by the commission through its failure to act. The scope of judicial review, and the manner thereof insofar as applicable, shall be the same as that provided in s. 108.09 (7).

(6) The mailing of determinations and decisions provided in subs. (2), (3), (4), and (5) shall be first class, and may include the use of services performed by the postal department requiring the payment of extra fees.

(7) Any determination by a deputy or any decision by an appeal tribunal or by the commission shall become conclusive with respect to the employer unless he has acted to secure a hearing or review as hereinbefore provided, but shall be binding on the commission only in so far as the

relevant facts were included in the record which was before the deputy, appeal tribunal, or commission at the time the determination or decision was issued.

108.11 AGREEMENT TO CONTRIBUTE BY EMPLOYES VOID. (1) No agreement by an employe or by employes to pay any portion of the contributions required under this chapter from employers shall be valid. No employer shall make a deduction for such purpose from wages. Any employe claiming a violation of this provision may, to recover wage deductions wrongfully made, have recourse to the method set up in s. 108.09 for settling disputed benefit claims.

(2) But nothing in this chapter shall affect the validity of voluntary arrangements whereby employes freely agree to make contributions to a fund for the purpose of securing unemployment compensation additional to the benefits provided in this chapter.

108.12 WAIVER OF BENEFIT VOID. No agreement by an employe to waive his right to benefits or any other rights under this chapter shall be valid. No employe shall, in any proceeding involving benefits under this chapter, be prevented from asserting all facts relevant to his eligibility, regardless of any prior erroneous representation with respect to such facts.

108.13 ASSIGNMENT. (1) No claim for benefit under this chapter nor any interest in any unemployment benefit fund or reserve maintained under this chapter shall be assignable before payment, but this provision shall not affect the survival thereof; nor shall any claim for benefit awarded, adjudged, or paid, nor any interest in any such unemployment benefit fund or reserve, be subject to be taken for the debts of the party entitled thereto.

(2) In case an employe dies after the close of a week of unemployment in which he was eligible and for which benefits are payable under this chapter, the commission may designate any person who might in its judgment properly receive such benefits, and a receipt or an endorsement from the person so designated shall fully discharge the fund from liability for such benefits.

108.14 ADMINISTRATION. (1) This chapter shall be administered by the industrial commission.

(2) The commission shall have power and authority to adopt and enforce all rules and regulations which it finds necessary or suitable to carry out the provisions of this chapter. A copy of such rules and regulations shall be delivered to every person making application therefor. The commission may require from employers, whether subject to this chapter or not, any reports on employment, wages, hours and related matters which it deems necessary to carry out the provisions of this chapter.

(2m) In the discharge of their duties under this chapter any member of an appeal tribunal, and any deputy, examiner, commissioner, or other duly authorized representative of the commission shall have power to administer oaths to persons appearing before them, take depositions, certify to official acts, and by subpoenas (served in the manner in which circuit court subpoenas are served) to compel attendance of witnesses and the production of books, papers, documents, and records necessary or convenient to be used by them in connection with any investigation, hearing, or other proceeding under this chapter. Provided, that in any investigation, hearing or other proceeding involving the administration of oaths or the use of subpoenas under this subsection due notice shall be given to any interested party involved, who shall be given an opportunity to appear and be heard at any such proceeding and to examine witnesses and otherwise participate therein. Witness fees and other expenses involved in proceedings under this chapter, including a party's travelling expenses, may be allowed by the appeal tribunal or representative of the commission at rates specified by general commission rules, and shall be paid from the unemployment administration fund.

(3) The commission may appoint, employ and pay as many persons as it deems necessary to administer and to carry out the purposes of this chapter, and may make all other expenditures of any kind and take any other action consistent herewith which it deems necessary or suitable to this end.

108.14 (3m)

(3m) In any court action to enforce the provisions of this chapter the commission and the state may be represented by any qualified attorney who is a regular salaried employe of the commission and is designated by it for this purpose, and/or at the commission's request by the attorney-general. In case the governor designates special counsel to defend, in behalf of the state, the validity of this chapter or of any provision of title IX of the federal social security act, the expenses and compensation of such special counsel and of any experts employed by the commission in connection with such proceeding may be charged to the administration fund.

(4) The commission may create as many employment districts and district appeal boards and may establish and maintain as many free public employment offices as it deems necessary to carry out the provisions of this chapter. The commission shall have power to finance either partly or completely such public employment offices as it deems necessary under this chapter, from the funds appropriated to the commission for its expenses under this chapter, whether or not the political subdivision in which such office is located agrees to pay or does pay any part of the expenses of such office.

(5) The commission shall appoint a state advisory committee on this chapter, and may appoint additional committees for industries or local districts. Each such committee shall consist of a salaried commission employe, who shall serve as chairman, and of one or more representatives of employers, and an equal number of representatives of employes, who shall receive for each day of active service such reasonable compensation as the commission may determine and reimbursement of necessary expenses, and shall assist the commission in administering and carrying out the purposes of this chapter.

(5m) The state advisory committee appointed by the commission under sub. (5) shall submit its recommendations with respect to amendments of this chapter to each regular session of the legislature, and shall report its views on any pending bill relating to this chapter to the proper legislative committee.

(6) It shall be one of the purposes of this chapter to promote the regularization of employment in enterprises, localities, industries and the state. The commission, with the advice and aid of its advisory employment committees, shall take all appropriate steps within its means to reduce and prevent unemployment. To this end the commission

may employ experts, and may carry on and publish the results of any investigations and research which it deems relevant, whether or not directly related to the other purposes and specific provisions of this chapter. At least once a year the commission shall compile and publish a summary report stating the experience of employer accounts (without naming any employer) and covering such other material as it deems significant in connection with the operations and purposes of this chapter.

(7) The reports, records, files, accounts, papers and memoranda, of any nature whatsoever, received or made or maintained by the commission in connection with the administration of this chapter shall be open to public inspection only when and to the extent that the commission may allow such inspection as it deems advisable in the interests of effective administration. The commission may provide for the printing and distribution of such number of copies of any forms, records, decisions, regulations, rules, pamphlets or reports, related to the operation of this chapter, as it deems advisable for the effective operation thereof.

(8) (a) The commission may enter into administrative arrangements with any agency similarly charged with the administration of any other unemployment compensation law, for the purpose of assisting the commission and such agencies in paying benefits under the several laws to employes while outside their territorial jurisdictions. Such arrangements may provide that the respective agencies shall, for and on behalf of each other, act as agents in effecting registration for work, notices of unemployment, and any other certifications or statements relating to an employe's claim for benefits, in making investigations, taking depositions, holding hearings, or otherwise securing information relating to coverage or contribution liability or benefit eligibility and payments; and in such other matters as the commission may consider suitable in effecting the purpose of these administrative arrangements.

(b) The eligibility of an employe with respect to a benefit claim (based on past credit weeks under this chapter) may be established through arrangements authorized in this subsection, and he shall then be paid the benefits due him under this chapter.

(c) Any person who wilfully makes a false statement or misrepresentation regarding a benefit claim, to the commission (or its representative) acting under any administrative arrangement authorized herein, shall on conviction be deemed guilty of a misdemeanor and be punished in the manner provided in s. 108.24.

108.14 (8m)

(8m) (a) The commission may enter into reciprocal arrangements, with any agency administering another unemployment compensation law, whereby all the services performed by an individual for a single employing unit, which services are customarily performed in more than one state or jurisdiction, shall be deemed to be employment covered by the law of a specified state or jurisdiction (a) in which a part of such services are performed, or (b) in which such individual has his residence, or (c) in which such employing unit maintains a place of business; provided there is in effect, as to such services, an election by such employing unit, approved by the agency administering the specified law, pursuant to which all the services performed by such individual for such employing unit are deemed to be employment covered by such law.

(b) If the federal unemployment tax act is so amended as to make subject thereto remuneration paid for any maritime employment excluded under s. 108.02 (5) (g) 6, such exclusion under this chapter shall cease if the commission enters into a reciprocal arrangement with respect to such employment pursuant to this paragraph, as of the effective date of such arrangement. The commission may enter into reciprocal arrangements with the appropriate agencies of other states with respect to such maritime services, whereby all such services by an individual for a single employer, wherever performed, shall be deemed performed wholly within this state or within any such other state. Any such services thus deemed performed in Wisconsin shall also be deemed "employment" covered by this chapter, and the election requirement of s. 108.02 (5) (c) 2 shall not apply.

(8n) (a) The commission may enter into reciprocal arrangements, with any agency administering an unemployment compensation law, to provide more equitable benefit coverage for individuals whose recent work has been covered by the unemployment compensation laws of two or more jurisdictions.

(b) Such arrangements may provide, as to any individual whose employment has been covered by this chapter and by the unemployment compensation law of one or more other participating jurisdictions, for transfer by the commission to another agency of relevant records or information, and the acceptance and use thereof (in combination with similar data from other jurisdictions) by such other agency, as a basis for determining and paying benefits under the law administered by such other agency. Reciprocally, such arrangements may provide for similar acceptance, combination and use by the commission of data received from other jurisdictions to determine and pay benefits under this chapter.

(c) Such arrangements shall provide for mutual acceptance by the participating agencies of data thus supplied, including reasonable estimates of relevant data not otherwise available in the transferring agency.

(d) Such arrangements shall specify an equitable basis for reimbursing the unemployment fund of each participating jurisdiction

for any benefits paid therefrom on the basis of covered employment in (and data supplied by the agency of) another such jurisdiction, out of the unemployment fund of such other jurisdiction.

(e) Any reimbursement under this subsection shall if paid from the fund be charged to its balancing account and if paid to the fund be credited to that account. Benefits paid under this subsection directly from the fund shall also be charged to its balancing account, except that any benefits thus paid shall be charged to the proper employer account to the extent that they would be paid and thus charged if this subsection were not being applied.

(f) To facilitate the application of such arrangements to this chapter, the commission may make reasonable estimates to convert into weekly benefit rates and credit weeks the data received by it under such arrangements, and may determine and pay benefits accordingly.

(8s) If the agency administering another unemployment compensation law has overpaid benefits to an individual located in Wisconsin, and certifies to the commission the facts involved and that the individual is liable, under such law, to repay such benefits, and requests the commission to recover such overpayment, and agrees to reimburse the commission for any court costs incurred by it in such recovery efforts, the commission may in its own name, but acting as agent for such other agency, collect such overpayment by civil action, and shall pay the net amount recovered to such other agency. If benefits are currently payable under this chapter to such individual, the commission may, with notice to the individual, pay as much of such benefits to such agency as are necessary to satisfy the individual's indebtedness to such agency.

(9) The commission may make its records relating to the administration of this chapter available to the railroad retirement board, and may furnish the railroad retirement board, at the expense of said board, such copies thereof as said board deems necessary for its purposes. The commission may afford reasonable co-operation with every agency of the United States charged with the administration of any unemployment compensation law. The commission may make arrangements or agreements with the railroad retirement board, or any other agency of the United States charged with the administration of an unemployment compensation law, with respect to the establishment, maintenance and use of free employment service facilities, the taking and certifying of claims, the making of investigations, and the supplying of other information or services related to unemployment compensation. But the commission shall not make or renew any such arrangement or agreement unless it finds that its resulting administrative costs are approximately covered or offset by the facilities, services and payments to be made available thereunder by such federal agency. Any moneys received by the commission under this subsection shall be paid into the administration fund under s. 108.20.

108.14 (9m)

(9m) The commission may afford reasonable co-operation with any government agency charged with war-effort or post-war planning responsibilities or with the administration of any system of unemployment allowances or unemployment assistance or of any other program designed to prevent or relieve unemployment.

(10) For the purposes of s. 108.15 the commission's functions financed from the unemployment administration fund shall be treated as a separate budget subdivision, and any election made by the commission pursuant to s. 108.02 (5) (f) may be limited to individuals engaged in such functions.

(11) The commission may require any employer of one or more individuals in Wisconsin to make such arrangements as will reasonably assure the commssion that the employer will keep such records, make such reports, and pay such contributions as are required under this chapter. Any employer whom the commission has notified, through notice served on him or sent by registered mail to his last known address or served on him through the secretary of state pursuant to s. 180.825 (2), that he is required to make such arrangements, if he fails to do so within 20 days after such notification, may, through proceedings instituted by the commission in the circuit court of Dane county, be restrained from doing business in Wisconsin until he has made such arrangements.

(12) (a) Consistently with the provisions of pars. (8) and (9) of s. 303 (a) of title III of the federal social security act, all moneys received in the administration fund from any federal agency under said title III shall be expended solely for the purposes and in the amounts found necessary by said agency for the proper and efficient administration of this chapter.

(b) Consistently with said provisions of said title III, any such moneys, received prior to July 1, 1941, and remaining unencumbered on said date or received on or after said date, which, because of any action or contingency, have been lost or have been expended for purposes other than, or in amounts in excess of, those found necessary by said agency for the proper administration of this chapter, shall be replaced within a reasonable time. This paragraph is the declared policy of this state, as enunciated by the 1941 legislature, and shall be implemented as further provided in this subsection.

(c) If it is believed that any amount of money thus received has been thus lost or improperly expended, the commission on its own motion or on notice from said agency shall promptly investigate and determine the matter and shall, depending on the nature of its determination, take such steps as it may deem necessary to protect the interests of the state.

(d) If it be finally determined that moneys thus received have been thus lost or improperly expended, then the commission shall either make the necessary replacement from those administration

fund moneys specified in s. 20.440 (74) or shall submit, at the next budget hearings conducted by the governor and at the budget hearings conducted by the next legislature convened in regular session, a request that the necessary replacement be made by an appropriation from the general fund.

(e) This subsection shall not be construed to relieve this state of any obligation existing prior to its enactment with respect to moneys received prior to July 1, 1941, pursuant to said title III.

(13) The commission may, with the advice of its state advisory committee on this chapter, by general rule modify or suspend any provision of this chapter if and to the extent necessary to permit continued certification of this chapter under title III of the federal social security act and under ss. 3303 and 3304 of the federal unemployment tax act.

(14) The commission shall fully co-operate with the agencies of other states, and shall make every proper effort within its means, to oppose and prevent any further action which would in its judgment tend to effect complete or substantial federalization of state unemployment compensation funds or state employment security programs.

(15) The commission may make, and may co-operate with other appropriate agencies in making, studies as to the practicality and probable cost of possible new state-administered social security programs, and the relative desirability of state (rather than national) action in any such field.

(16) The commission shall have duplicated or printed, and shall distribute without charge, such employment security reports, studies and other materials (including the text of this chapter and instructional or explanatory pamphlets for employers or workers) as it deems necessary for public information or for the proper administration of this chapter; but the commission may collect a reasonable charge, which shall be credited to the unemployment administration fund, for any such item the cost of which is not fully covered by federal administrative grants.

(17) To help provide suitable quarters for the administration of this chapter at the lowest practicable long-run cost, the commission may, with the governor's approval and subject to all relevant statutory requirements, use part of the moneys available for such administration under s. 20.440 (73) and (74) to buy suitable real property, or to help construct suitable quarters on any state-owned land, or for the long-term rental or rental-purchase of suitable land and quarters. In each such case full and proper use shall be made of any federal grants available for the administration of this chapter.

108.15 FINANCING BENEFITS FOR PUBLIC EMPLOYES.

(1) BENEFIT PAYMENTS. (a) Benefits shall be payable to any public employe, if unemployed and otherwise eligible, based on his "employment" by any government unit which is an "employer" covered by this chapter. Section 108.03 (2) shall not apply.

(ah) Section 108.02 (5) (g) 7 shall not apply to any government unit covered by this section.

(b) The fund including its balancing account is hereby made available to finance such benefits, on a revolving basis, pending reimbursement thereof pursuant to this section.

(2) EXEMPTION OF GOVERNMENT UNITS FROM ADVANCE CONTRIBUTIONS. Government units are hereby exempted from the contribution requirements of s. 108.17 and 108.18.

(3) SUBSTITUTE REQUIREMENTS. In lieu of such contributions, each government unit shall reimburse the fund for benefits duly charged to its account, at such times and by such due dates as the commission shall by rule prescribe.

(4) EMPLOYER ACCOUNTS FOR GOVERNMENT UNITS. (a) For each government unit covered by this chapter, the fund's treasurer shall maintain an "employer account", as a subaccount of the fund's balancing account.

(b) Each government unit's account shall be duly charged with any benefits based on work for such unit, and shall be duly credited with any reimbursement paid by or for it to the fund.

(c) Any government unit other than a state agency may at any time make payments into its account in the fund pursuant to s. 108.18 (7).

(d) Whenever a government unit's account has a positive net balance no reimbursement of the benefits charged thereto shall be required hereunder.

(e) Whenever a government unit's account has a negative balance, any benefits chargeable to such account shall be duly paid and charged thereto; and reimbursements covering the total negative balance thus resulting shall become due pursuant to this section.

(f) The write-off provisions of s. 108.16 (7) (c) shall not apply to the account of any government unit. In lieu thereof, any such unit may, if the benefits charged to its account hereunder in any calendar year exceed 2 per cent of its "payroll" for that year, request the write-off of such excess at any time within the following calendar year. The fund's treasurer shall in that event determine and write off the amount of such excess, and no reimbursement thereof shall be required hereunder.

(fm) As applied to any government unit which has limited its election by excluding one or more of its operating units, the "2 per cent" limit of par. (f) shall be figured on the "payroll" of all its operating units, as if all were covered by its election.

(g) If any government unit covered by this chapter requests the commission to maintain separate accounts for parts of such unit which are separately operated or financed, the commission may do so for such periods and under such conditions as it may from time to time determine.

(5) REIMBURSEMENTS. (a) Each government unit which is an "employer" shall include in its budget for each budgetary period an estimated amount for payment of the reimbursements required by this section, including in each case any reimbursement remaining unpaid for the current or any prior period.

(b) The fund's treasurer shall, pursuant to commission rules, bill each such government unit for the reimbursements required under this section, and any reimbursement thus billed shall be promptly paid by such government unit.

(c) Reimbursements due hereunder from budget subdivisions of the state shall be paid pursuant to sub. (7).

(d) Reimbursements due hereunder from other government units shall, if they remain unpaid after their due date, be collected pursuant to sub. (6) or pursuant to any other applicable provision of law.

(6) DELINQUENT PAYMENTS. (a) Any reimbursement, duly billed hereunder, which remains unpaid after its applicable due date is a "delinquent payment" under s. 108.22 (1).

(b) Whenever a government unit's "delinquent payments" (including interest and penalties thereon) total more than the benefits duly charged to such unit's account for the 6 most recent months, a commission deputy shall so determine under s. 108.10.

(c) If such delinquency is finally established pursuant to s. 108.10, the fund's treasurer shall promptly notify such government unit accordingly, and shall also, in case such unit receives a share of any state tax or any type of state aid, certify to the state treasurer the existence and amount of such delinquency.

(d) Upon receipt of such certification, the state treasurer shall withold, from each sum of any such tax or aid thereafter payable to the government unit, until the delinquency is satisfied, the lesser of the following amounts:

1. The delinquent amount thus certified; or
2. One-half the sum otherwise payable to such government unit.

(e) Any amount withheld by the state treasurer under par. (d) shall be paid by him to the fund's treasurer, who shall duly credit such payment toward satisfying the delinquency.

(7) STATE COMPLIANCE AND APPROPRIATIONS. (a) Each of the state's budget subdivisions is a "government unit" under this section, and shall be and remain a covered "employer" with a separate employer account for all purposes under this chapter.

(b) Each such subdivision's reimbursements payable under this section shall be duly paid to the fund, upon filing by the fund's treasurer, through such subdivision, of a certificate to the department of administration specifying the amount of reimbursement due and the appropriation apparently chargeable.

(c) Each such subdivision shall have each such reimbursement amount charged to and deducted from its proper fund or appropriation, unless the commissioner of administration certifies that a stated amount thereof cannot be thus charged, in which event that amount shall be charged to the general fund under such certification.

(8) REPORTING. (a) Each government unit which is an "employer" shall give such suitable benefit notices to its employes as the commission may direct, and shall make benefit reports to the commission under the same conditions as apply to other employers.

(b) Each government unit shall designate one or more officers or employes who shall be responsible for filing the required benefit reports, and shall inform the commission as to the name and address of each person so designated. If it designates more than one such person, it shall specify for what groups or classes of employes each will report. Section 108.24 (2) applies to each person so designated.

(9) TERMINATION. (a) Any government unit which is subject to this chapter solely by its own election may terminate such coverage and election by written notice to the commission, pursuant to s. 108.02 (4) (f).

(b) In that event, any benefits payable to the employes of such government unit for any week of unemployment completed before the termination date shall be paid; but no other benefits shall become payable to such employes, based on their previous covered work, after any positive net balance then remaining in such unit's account has been used up by a benefit check which equals or exceeds such balance.

(10) ALLOCATING SALARY. In case a government unit, under its salary system, continues and pays a public employe's salary for any day on which he does no work for such unit, the amount of salary he thus receives for any such day shall be considered in determining whether he is unemployed for benefit purposes.

108.16 UNEMPLOYMENT RESERVE FUND.

(1) For the purpose of carrying out the provisions of this chapter there is established a fund to be known as the "Unemployment Reserve Fund," to be administered by the commission without liability on the part of the state beyond the amount of the fund. This fund shall consist of all contributions and moneys paid into and received by the fund pursuant to this chapter and of properties and securities acquired by and through the use of moneys belonging to the fund.

(2) (a) A separate employer's account shall be maintained by the commission as to each employer contributing to said fund.

(b) Each employer's account shall be credited with all his contributions paid into the fund, and shall be charged with all benefits duly paid from the fund to his employes based on their past employment by him, except as otherwise specified in this chapter.

(c) Any reference in this chapter to eligibility for, or to payment of, benefits "from an employer's account", or any similar reference, shall mean benefits payable or paid from the fund based on past employment by the employer in question.

(d) The fund shall be mingled and undivided, and nothing in this chapter shall be construed to grant to any employer or employe any prior claim or right to any part of the fund.

(e) Benefits to be "charged" against a given employer's account shall be so charged as of the date shown by the check covering such benefits; and such check shall be promptly mailed and shall, in determining the experience or status of such account for contribution purposes, be deemed "paid" on said date.

(f) The commission shall promptly advise the employer as to each benefit check thus charged to his account.

(2m) If a commission deputy finds that any benefits charged to an employer's account have been erroneously paid to an individual without fault by the employer, such individual and such employer and the fund's treasurer shall be notified as to such erroneous payment. In case benefits are currently payable to such individual from such employer's account, the deputy may correct the error by adjusting such benefits accordingly. To correct any error not thus adjusted, the fund's treasurer shall correct the fund's records by restoring the proper amount to the employer's account and by charging such amount to the fund's balancing account, and may at any time thereafter reimburse the balancing account by crediting to it benefits which would otherwise be payable to the individual in question or cash recovered from such individual.

(3) (a) As to any benefit overpayment still outstanding more than 6 years after the claimant's liability to reimburse the fund was duly established under s. 108.22 (8), the fund's treasurer shall write off and waive recovery of such overpayment, upon receipt of a certification by a commission deputy that reasonable efforts have been made to recover such overpayment.

(b) Any such waiver shall be recorded as satisfying any warrant then outstanding under s. 108.22 (8) as to such overpayment.

(4) Consistently with sub. (5), all contributions payable to the unemployment reserve fund shall be paid to the industrial commission, and shall promptly be deposited by the commission to the credit of the unemployment reserve fund, with such custodians as the commission may from time to time select, who shall hold, release and transfer the fund's cash in a manner approved by the commission. Payments from said fund shall be made upon vouchers or drafts authorized by the industrial commission, in such manner as the commission may from time to time approve or prescribe. Any procedure thus approved or prescribed shall be deemed to satisfy (and shall be in lieu of) any and all statutory requirements (for specific appropriation or other formal release by state officers of state moneys prior to their expenditure) which might otherwise be applicable to withdrawals from the fund. The commission shall designate a treasurer of the unemployment reserve fund, who shall be either a regular salaried employe of the commission or the state treasurer and shall serve as treasurer of the fund until a successor designated by the commission has assumed the duties of this office. He shall give a separate bond conditioned upon his faithful performance of these duties pursuant to s. 19.01 (2), which bond shall be deemed likewise conditioned upon the faithful performance by his subordinates of their duties, in such amount as may be fixed by the industrial commission. All premiums upon the bond required pursuant to this section when furnished by an authorized surety company or by a duly constituted governmental bonding fund shall (except as otherwise provided in this section) be paid from the interest earnings of the unemployment reserve fund, but shall not exceed one-fourth of one per cent, per annum, of the amount of said bond.

(5) (a) All money received for the fund shall promptly upon such receipt be deposited to its credit in the "Unemployment Trust Fund" of the United States, in such manner as the secretary of the treasury of the United States (or other authorized custodian of said trust fund) may approve, so long as said trust fund exists and maintains for this state a separate book account (for the purposes of this chapter) from which no other state or agency can make withdrawals, any other statutory provision to the contrary notwithstanding.

(b) The commission shall requisition from this state's account in the "Unemployment Trust Fund" necessary amounts from time to time, shall hold such amounts consistently with any applicable federal regulations, and shall make withdrawals therefrom solely for benefits and for such other unemployment compensation payments or employment security expenditures as are expressly authorized by this chapter and consistent with any relevant federal requirements.

(c) While the state has an account in the "Unemployment Trust Fund," public deposit insurance charges on the fund's balances held in Wisconsin banks, the premiums on surety bonds required of the

fund's treasurer under this section, and any other expense of administration otherwise payable from the fund's interest earnings, shall be paid from the administration fund.

(6) The commission shall maintain within the fund a **"balancing account,"** to which shall be credited:

(a) All interest earnings, on moneys belonging to the fund, received by (or duly apportioned to) the fund, as of the close of the calendar quarter in which such interest accrued.

(b) Any reimbursement made pursuant to sub. (2m).

(c) Any balance credited to an employer's account, if and when he ceases to be subject to this chapter, except as provided in sub. (8).

(d) All amounts transferred from employer accounts pursuant to sub. (11).

(e) The amount of any benefit check duly issued and delivered or mailed to an employe, if such check has not been presented for payment within one year after its date of issue; provided that a substitute check may be issued and charged to the balancing account, at any time within the next following year.

(f) Any amount available for such crediting under s. 108.04 (11) or 108.07 (2) or 108.14 (8n) (e).

(g) Any payment received for the balancing account under s. 108.15.

(h) Any amount transferred to the balancing account pursuant to s. 108.161.

(i) Any federal reimbursement of benefits paid under any federal unemployment benefit program administered by the commission.

(6m) There shall be charged against the fund's balancing account:

(a) The benefits thus chargeable under (and pursuant to) s. 108.04 (7) (e); 108.07 (2); 108.14 (8n) (e); 108.15 (1) (b); or subs. (2m), (6) (e), (7) (a) and (b).

(b) Any benefits paid under any federal unemployment benefit program administered by the commission, pending their reimbursement.

(c) The overdraft write-offs thus chargeable under (and pursuant to) s. 108.15 (4) (f) or sub. (7) (c).

(d) Any negative balance of a closed employer account, except as provided in sub. (8).

(7) (a) All benefits shall be paid from the fund. All benefits duly chargeable to an employer's account shall be so charged, whether or not such account is overdrawn. All other benefits shall be charged to the fund's balancing account.

(b) Benefit payments made with respect to an employer's account shall be charged directly against the fund's balancing account only

when such payments cannot under this chapter be or remain charged against the account of any employer.

(c) Whenever, as of any computation date, the net overdrafts then charged against an employer's account would, even if reduced by any contributions known or subsequently discovered to be then payable but unpaid to such account, exceed 2 per cent of his annual payroll (namely, the payroll amount used in determining his reserve percentage as of that computation date), the fund's treasurer shall, solely for the purpose of computing future reserve percentages, write off (by charging directly to the fund's balancing account) the amount by which such overdrafts would (if thus reduced) exceed 2 per cent of said payroll; provided, however, that any employer whose account is affected thereby may at any time elect to cancel such write-off, by reimbursing the balancing account in such manner as the commission may prescribe.

(8) (a) **If the business of any "employer" is transferred** in whole or in part, the transferee shall be deemed a successor for the purposes of this chapter. An employing unit shall not be deemed a successor, however, if the commission finds that there were less than 20 weeks lying wholly within the calendar year in which the transfer occurred (and also less than 20 weeks lying wholly within the preceding calendar year) within which the transferring "employer" employed as many as 3 persons in employment subject to this chapter in connection with the business or portion thereof transferred. In case of the transfer of any of the assets of a covered employer's business by any means whatever, otherwise than in the ordinary course of trade, such transfer shall be deemed a transfer of business and shall constitute the transferee a successor hereunder, unless the commission, on its own motion or on application of an interested party, finds that all the following conditions exist:

1. The transferee has not continued or resumed the business of the transferor, either in the same establishment or elsewhere; and

2. The transferee has not employed substantially the same employes as those the transferor had employed in connection with the assets transferred.

(b) The successor, if not already subject to this chapter, shall become an "employer" subject hereto on the date of such transfer, and shall accordingly become liable for contributions hereunder from and after said date.

(c) The successor shall take over and continue the employer's account, including its plus or minus balance and all other aspects of its experience under this chapter, in proportion to the payroll or employes assignable to the transferred business as determined for the purposes of this chapter by the commission. The successor shall be secondarily liable for any amounts owed by the employer to the fund (and to the administration fund) at the time of such transfer; but such liability shall be proportioned to the extent of the transfer of business and shall not exceed the value of the assets transferred.

(d) The benefit liability of a successor's account under s. 108.06, if it has not accrued before the transfer date, shall begin to accrue on the transfer date, in case the transferor's benefit liability was then accruing; or shall begin to accrue on the date otherwise applicable to the successor, or on the date otherwise applicable to the transferor, whichever is earlier, in case the transferor's benefit liability was not accruing on the transfer date. Similarly, benefits from a successor's account, if not payable before the transfer date, shall become payable on the transfer date, in case the transferor was then liable for benefit payments; or shall become payable on the date otherwise applicable to the successor, or on the date otherwise applicable to the transferor, whichever is earlier, in case the transferor was not liable for benefit payments on the transfer date.

(e) The account taken over by the successor employer shall remain liable with respect to accrued benefit and related rights based on employment in the transferred business, and all such employment shall be deemed employment performed for such employer.

(f) The contribution rates applicable with respect to the accounts of the successor employer and the transferring employer shall be respectively determined or redetermined as of the next preceding December 31 computation date, to apply from the date of transfer of business until the close of the current calendar year, and shall thereafter be redetermined whenever required by s. 108.18, as follows: For the purposes of s. 108.18, the commission shall determine the "experience under this chapter" of the successor em-

ployer's account and of the transferring employer's account by allocating to the successor employer's account for each period in question the respective proportions of the transferring employer's payroll and benefits which the commission determines to be properly assignable to the business transferred.

(9) (a) Consistently with s. 3305 of the federal internal revenue code, relating to federal instrumentalities which are neither wholly owned by the United States nor otherwise exempt from the tax imposed by s. 3301 of said code:

1. Any contributions required and paid under this chapter for 1939 or any subsequent year by any such instrumentality, including any national bank, shall be refunded to such instrumentality in case this chapter is not certified with respect to such year under s. 3304 of said code.

2. No national banking association which is subject to this chapter shall be required to comply with any of its provisions or requirements to the extent that such compliance would be contrary to s. 3305 of said code.

(10) All money withdrawn from the fund shall be used solely in the payment of benefits, exclusive of expenses of administration, and for refunds of sums erroneously paid into the fund and for refunds payable under sub. (9), and for expenditures made pursuant to s. 108.161 and consistently with the federal limitations applicable thereto.

(11) If and when the fund's balancing account, as of the close of any month, has a net balance (after deducting the debit balances of any employer accounts then overdrawn and any positive balances of covered government units, and after crediting any benefit payments reimbursable by covered government units or by the federal government) of less than $10,000,000, the fund's treasurer shall promptly make a finding to that effect, which shall be published forthwith in the official state paper. As of the start of the first business day (hereinafter called "transfer date") which follows the close-of-month to which such a finding applies, the fund's treasurer shall transfer from employer accounts to the fund's balancing account such amounts as he determines pursuant to this subsection. The fund's treasurer shall compute a "transfer percentage", namely the lowest multiple of one-tenth of one per cent which would, if applied to the fund's entire net balance as of the start of the transfer date, produce a result of at least $5,000,000, and shall apply such transfer percentage to the net balance (as of the start of the transfer date) of each employer's account (other than government unit accounts) whose net balance is then positive, and shall transfer the amount resulting in each such

case from the given employer's account to the fund's balancing account, as of the start of the transfer date, and shall promptly notify each such employer accordingly.

(13) (a) As of the close of each fiscal year, ending June 30, the fund's treasurer shall determine the total of:

1. The fund's interest earnings, accrued in that year.

2. Any amount carried over from the preceding fiscal year pursuant to par. (d).

(b) He shall also determine the sum of:

1. The overdrafts written off within that year pursuant to sub. (7) (c) and s. 108.15 (4) (f).

2. The benefits charged against the fund's balancing account, within that year, pursuant to s. 108.04 (7) (e).

(c) He shall then determine the amount, if any, by which the total under par. (a) exceeds the sum under par. (b).

(d) If that excess amount is less than $1,500,000, it shall be carried over to the next fiscal year.

(e) If that excess amount is $1,500,000 or more, the fund's treasurer shall credit, by transfers from the fund's balancing account, at least 60 per cent of that excess amount to those employer accounts (including government unit accounts) which had positive balances at the close of the fiscal year, pursuant to this subsection.

(f) He shall first compute a "crediting percentage", namely the lowest multiple of one-tenth of one per cent which would, when applied to the total of all such positive balances, yield an amount at least equal to the said 60 per cent.

(g) The fund's treasurer shall then credit each such employer's account with the amount determined by applying that "crediting percentage" to the account's positive balance at the close of the fiscal year.

(h) Such crediting shall be completed, and each such employer shall be notified of the amount thus credited to his account, within 24 weeks after said close of year.

(i) If such crediting is done as to a fiscal year, the balance of that year's excess amount shall remain in the fund's balancing account and shall not be carried over under par. (a) 2.

108.161 ADMINISTRATIVE FINANCING ACCOUNT. (1) The fund's treasurer shall maintain within the fund an employment security "Administrative Financing Account", and shall credit thereto all amounts credited to the fund pursuant to the federal employment security administrative financing act (of 1954) and section 903 of the federal social security act, as amended.

(2) The requirements of said section 903 shall control any appropriation, withdrawal and use of any moneys in said account.

(3) Consistently with this chapter and said section 903, such moneys shall be used solely for benefits or employment security administration, including unemployment compensation, employment service and related statistical operations.

(4) Such moneys shall be encumbered and spent for employment security administrative purposes only pursuant to (and after the effective date of) a specific legislative appropriation enactment:

(a) Stating for which such purposes and in what amounts the appropriation is being made to the administration fund created by s. 108.20.

(b) Directing the fund's treasurer to transfer the appropriated amounts to the administration fund only as and to the extent that they are currently needed for such expenditures, and directing that there shall be restored to the account created by sub. (1) any amount thus transferred which has ceased to be needed or available for such expenditures.

(c) Specifying that the appropriated amounts are available for obligation solely within the 2 years beginning on the appropriation law's date of enactment.

(d) Limiting the total amount which may be so used during any fiscal year to the aggregate of all amounts credited under sub. (1) within that year and the 4 preceding fiscal years, reduced by the sum of any moneys used and charged against any of the amounts thus credited within those 5 years.

(5) The total of the amounts thus appropriated for use in any fiscal year shall in no event exceed the moneys available for such use hereunder, considering the timing of credits hereunder and the sums already spent or appropriated or transferred or otherwise encumbered hereunder.

(6) The fund's treasurer shall keep a record of all such times and amounts; shall charge each such sum against the earliest credits duly available therefor; shall include any sum thus appropriated but not yet spent hereunder in computing the fund's net balance as of the close of any month, in line with the federal requirement that any such sum shall (until spent) be deemed part of the fund; and shall certify the relevant facts whenever necessary hereunder.

(7) If any moneys appropriated hereunder are used to buy and hold suitable land, with a view to the future construction of an employment security building thereon, and if such land is later sold or transferred to other use, the proceeds of such sale (or the value of such land when transferred) shall be credited to the account created by sub. (1).

(8) If any sums are appropriated and spent hereunder to buy land and to build a suitable employment security building thereon, then any federal moneys thereafter credited to the fund or paid to the commission by way of gradual reimbursement of such employment security capital expenditures, or in lieu of the estimated periodic amounts which would otherwise (in the absence of such expenditures) be federally granted for the rental of substantially equivalent quarters, shall be credited to the account created by sub. (1), consistently with any federal requirements applicable to the handling and crediting of such moneys.

(8m) To the extent that employment security moneys finance the capital cost of acquiring office quarters, either in a separate employment security building project or in a larger state building, no rental for the quarters thus financed (or for equivalent substitute quarters) shall be charged the commission or its employment security functions at any time. The commission shall so certify, in applying for the federal moneys specified in sub. (8).

(9) Any land and building or office quarters acquired hereunder shall continue to be used for employment security purposes. Such realty or quarters shall not be sold or transferred to other use without the governor's approval. If thus sold or transferred, the proceeds of such sale, or the value of such realty or quarters when transferred, shall, except as federally approved equivalent substitute rent-free quarters are provided, be allocated and credited to the account created by sub. (1) and/or to the fund created by s. 108.20, in accordance with any then applicable federal requirements; and shall, to the extent said requirements permit, be used to finance employment security quarters.

(10) Any realty acquired hereunder shall be excluded from the 2 per cent building fund computation specified in s. 13.351 (3).

(11) If any money in the account created by sub. (1) ceases, by lapse of time, to be available for appropriation and administrative use pursuant hereto, the fund's treasurer shall transfer the amount thus unavailable to the fund's balancing account.

(12) As of the close of any month when the fund's treasurer would otherwise be required to make the finding and the transfers from employer accounts specified in s. 108.16 (11), he shall first transfer to the fund's balancing account any moneys then in the account created by sub. (1) which are unencumbered by appropriations hereunder.

108.17 PAYMENT OF CONTRIBUTIONS. (1) Contributions shall accrue and become payable by each employer then subject to this chapter on the first day of July, 1934, and shall be paid thenceforth in accordance with this chapter. Thereafter contributions shall accrue and become payable by any employer on and after the date on which he becomes newly subject to this chapter.

(1m) In the case of an employer who becomes, as of the beginning of 1937 or of any subsequent calendar year, newly subject to this chapter based on his employment during the given year, his contributions based on payrolls prior to the date on which his employment made him subject hereto shall not be considered as payable for the purposes of s. 108.22 until such subsequent date (ocurring within 60 days) as the commission may determine.

(2) All contributions required under this chapter from employers shall be paid to the industrial commission, at such times and in such manner as the commission may prescribe.

(2m) When a written statement of account is issued to an employer by the commission's unemployment compensation department, showing as duly credited a specified amount received from him under this chapter, no other form of state receipt therefor shall be required.

(3) If an employer (of any person) makes application to the commission to adjust an alleged overpayment by him of contributions or interest under this chapter, and files such application within 3 years after the close of the calendar year in which such payment was made, a commission deputy shall make a determination under s. 108.10 as to the existence and extent of any such overpayment, and the provisions of said section shall apply to such determination. As to any amount determined under said section to have been erroneously paid by the employer, the commission shall allow him a corresponding credit, without interest, against his future contribution payments; or, if the commission finds it impracticable to allow the given employer such a credit, it shall refund such overpayment to him, without interest, from the fund or the administration fund, as the case may be.

(4) However, in case an employer's contribution rate for any year has been incorrectly determined, it shall be corrected (and contributions shall be adjusted or become payable accordingly) only if due notice of such error is given during, or within 6 months after the close of, the calendar year to which such rate applies.

108.18 CONTRIBUTIONS TO THE FUND.

(1) STANDARD RATE. Each employer shall pay contributions to the fund at the "standard rate" of 2.7 per cent on his payroll for each calendar year, except as the commission duly assigns the employer a different rate (based on his experience under this chapter) pursuant to this section.

(2) INITIAL RATES. An employer's contribution rate shall be 2.7 per cent on his payroll for each of the first 3 calendar years with respect to which contributions are credited to his account, and shall not exceed 3 per cent for the fourth such year.

(3) REQUIREMENTS FOR REDUCED RATE. As to any calendar year, an employer shall be permitted to pay contributions to the fund at a rate lower than the standard rate only when, as of the applicable computation date:

(a) Benefits have been chargeable to the employer's account during the 2 consecutive years preceding such date; and

(b) Such lower rate applies under subs. (4) or (5); and

(c) Permitting him to pay such lower rate is consistent with the relevant conditions then applicable to additional credit allowance for such year under s. 3303(a) of the federal unemployment tax act, any other provision to the contrary notwithstanding.

(4) EXPERIENCE RATES. Except as otherwise specified in this section, an employer's contribution rate on his payroll for a given calendar year shall be based on the reserve percentage of his account as of the applicable computation date, as follows:

108.18 (4)

(a) If such reserve percentage is less than zero (because his account is overdrawn), such rate shall be 4 per cent.

(b) If such reserve percentage is zero or more, but less than 2 per cent, such rate shall be 3.5 per cent.

(c) If such reserve percentage is 2 per cent or more, but less than 4 per cent, such rate shall be 3 per cent.

(d) If such reserve percentage is 4 per cent or more, but less than 6 per cent, such rate shall be 2.5 per cent.

(e) If such reserve percentage is 6 per cent or more, but less than 7 per cent, such rate shall be 2 per cent.

(f) If such reserve percentage is 7 per cent or more, but less than 8 per cent, such rate shall be 1.5 per cent.

(g) If such reserve percentage is 8 per cent or more, but less than 9 per cent, such rate shall be one per cent.

(h) If such reserve percentage is 9 per cent or more, but less than 10 per cent, such rate shall be one-half of one per cent.

(i) If such reserve percentage is 10 per cent or more, such rate shall be zero per cent.

(5) LIMITATION. To prevent unduly sharp increases in contribution rates during bad years, an employer's contribution rate for any calendar year shall in no case exceed by more than one per cent (on payroll) the rate which applied to him at the close of the preceding calendar year. If the rate otherwise applicable to an employer under sub. (4) exceeds this limitation, his rate for the given calendar year shall be reduced to the next lower multiple of one-half of one per cent which is within this limitation.

(6) COMPUTATION IN SPECIAL CASES. If during the 2 years preceding a computation date an employer has been liable for contributions but has had no payroll, his reserve percentage as of that date shall be computed on the basis of his most recent year of some payroll; but his contribution rate for the year following the computation date shall in no case be less than one per cent.

(7) VOLUNTARY CONTRIBUTIONS. Any employer may at any time make payments to the fund, in excess of

the other requirements of this section. Each such payment shall be credited to the employer's account as of the date when paid, except that any such payment made during January shall be credited thereto as of the immediately preceding computation date; and each such payment shall be treated as a contribution required and irrevocably paid under this chapter with respect to payrolls preceding the date as of which it is thus credited.

(8) ADJUSTMENT OF RATES, IN BAD YEARS. (a) An adjusted schedule of experience rates shall apply for a given calendar year, to employers determined by the commission to be eligible therefor, under the conditions specified in this subsection, provided the fund's balancing account, as of the close of October 31 (namely 2 months before the start of such year), had a "net balance" determined as specified in s. 108.16 (11) of $25,000,000 or more.

(b) The commission shall determine, annually, by November 20, the gross wages paid in the most recent one-year period ended on June 30 by employers (except government units) covered by this chapter for their employment covered by this chapter, based on reports to the commission (including corrections thereof) filed by such employers within 3 months after said June 30, and shall record such determination in its minutes.

(c) 1. The commission shall compare the gross wages thus determined for said one-year period with the gross wages similarly determined, by the preceding November 20, for the preceding one-year period ended June 30. If such gross wages for the most recent of those one-year periods were lower than such gross wages for the preceding one-year period, the commission shall compute and determine and record in its minutes the percentage of decrease.

2. The commission shall add, to the percentage of decrease thus computed, so much of any percentage of decrease similarly computed in the preceding year (or then determined under this subdivision) as was not then fully used in applying pars. (d) through (h); and shall treat the resulting sum as the percentage of decrease applicable hereunder.

108.18 (8)

(d) If such percentage of decrease was 5 per cent or more, and if the close-of-October "net balance" of the fund's balancing account was $25,000,000 or more, the commission shall record in its minutes and have officially published, by December 15, the adjusted schedule of experience rates which applies hereunder for the ensuing calendar year.

(e) Before applying any such adjusted schedule, the commission shall compute, for each employer eligible for an experience rate for such calendar year, the "normal" rate (percentage) which would apply on his payroll for such year under subs. (1) through (7). The commission shall then use the applicable adjusted schedule, by applying to that payroll, in lieu of the relevant "normal" rate shown on line 1 thereof, the corresponding "adjusted" rate (percentage) shown on line 2 thereof directly below said "normal" rate.

(f) If the percentage of decrease determined under par. (c) was 5 per cent or more but less than 10 per cent, the adjusted rates on payroll shown on line 2 shall apply, in lieu of the normal rates on payroll shown on line 1, as follows:

	Percentage on Payroll								
Line 1. Normal:	0	0.5	1.0	1.5	2.0	2.5	3.0	3.5	4.0
Line 2. Adjusted:	0	0.5	0.9	1.3	1.8	2.2	2.6	3.1	3.6

(g) If the percentage of decrease determined under par. (c) was 10 per cent or more but less than 15 per cent, the adjusted rates on payroll shown on line 2 shall apply, in lieu of the normal rates on payroll shown on line 1, as follows:

	Percentage on Payroll								
Line 1. Normal:	0	0.5	1.0	1.5	2.0	2.5	3.0	3.5	4.0
Line 2. Adjusted:	0	0.4	0.8	1.2	1.6	2.0	2.4	2.8	3.2

(h) If the percentage of decrease determined under par. (c) was over 15 per cent, the adjusted rates on payroll shown on line 2 shall apply, in lieu of the normal rates on payroll shown on line 1, as follows:

	Percentage on Payroll								
Line 1. Normal:	0	0.5	1.0	1.5	2.0	2.5	3.0	3.5	4.0
Line 2. Adjusted:	0	0.3	0.7	1.1	1.4	1.7	2.1	2.5	2.9

(i) As to any employer newly covered by this chapter, whose liability for contributions hereunder first begins to accrue on wages paid in 1955 or thereafter, his gross wages paid for employment covered by this chapter shall be included in the determinations and computations made by the commission under pars. (b) and (c) when, and only when, he has been liable for contributions hereunder throughout both of the 2 most recent one-year periods covered by such determinations and computations; and any determination previously made for the earlier of those one-year periods shall be corrected accordingly in making the next computation required under par. (c).

(j) The fund's treasurer shall determine annually, by November 21:

1. The net total of all benefits paid by the fund (excluding benefits financed by the federal government) in the most recent one-year period ended on October 31; and

2. One percent of the gross wages total most recently determined and recorded under par. (b); and

3. The amount, if any, by which that benefit total exceeds that one percent.

(k) Subject to pars. (a) and (e), if the excess amount thus determined under par. (j) 3 is:

1. More than $10,000,000 but not over $20,000,000, the adjusted schedule of experience rates specified by par. (f) shall apply for the ensuing calendar year.

2. More than $20,000,000 but not over $30,000,000, the adjusted schedule of experience rates specified by par. (g) shall apply for the ensuing calendar year.

3. More than $30,000,000, the adjusted schedule of experience rates specified by par. (h) shall apply for the ensuing calendar year.

(l) In November 1958 and in November 1959 the fund's treasurer shall, in determining under par. (j) the net total of all benefits paid by the fund within the relevant period, include the benefits paid pursuant to s. 108.162.

108.19 CONTRIBUTIONS TO THE ADMINISTRATION FUND. (1) Each employer subject to this chapter shall regularly contribute to the unemployment administration fund created in s. 108.20 at the rate of two-tenths of one per cent per annum on his payroll as defined in s. 108.02. But the commission may prescribe at the close of any fiscal year such lower rates of contribution under this section, to apply to classes of employers throughout the ensuing fiscal year, as will in the commission's judgment adequately finance the administration of this chapter, and as will in the commission's judgment fairly represent the relative cost of the services rendered by the commission to each such class.

(2) If the commission finds, at any time within a fiscal year for which it has prescribed lower contribution rates to the administration fund than the maximum rate permitted hereunder, that such lower rates will not adequately finance the administration of this chapter or are excessive for that purpose, the commission may by general rule prescribe a new schedule of rates (in no case exceeding the specified maximum) to apply under this section for the balance of the fiscal year.

(3) If the federal unemployment tax act is amended to permit a maximum rate of credit against said federal tax higher than the 90 per cent maximum rate of credit now permitted under s. 3302 (c) (1) of the internal revenue code, to an employer with respect to any state unemployment compensation law whose standard contribution rate on payroll under said law is more than 2.7 per cent, in that event the standard contribution rate as to all employers under this chapter shall, by a commission rule to be issued with the governor's approval, be increased from 2.7 per cent on payroll to that percentage on payroll which corresponds to the higher maximum rate of credit thus permitted against the federal unemployment tax; and such increase shall become effective on the same date as such higher maximum rate of credit becomes permissable under such federal amendment.

(4) If s. 303 (a) (5) of title III of the social security act and s. 3304 (a) (4) of the internal revenue code are amended to permit a state agency to use, in financing administrative expenditures incurred in carrying out its employment security functions, some part of the moneys collected or to be collected under the state unemployment compensation law, in partial or complete substitution for grants under said title III, in that event this chapter shall, by a commission rule to be issued with the governor's approval, be modified in the manner and to the extent and within the limits necessary to permit such use by the commission under this chapter; and such modifications shall become effective on the same date as such use becomes permissable under such federal amendments.

108.20 UNEMPLOYMENT ADMINISTRATION FUND AND APPROPRIATION. (1) To finance the administration of this chapter and to carry out its provisions and purposes there is established the "Unemployment Administration Fund". This fund shall consist of all contributions and moneys paid to or transferred by the industrial commission for the administration fund as provided in s. 108.19, and of all moneys received for this fund by the state or by the commission from any source, including all federal moneys allotted or apportioned to the state or the commission for the Wisconsin state employment service or for administration of this chapter, or for services, facilities or records supplied to any federal agency; and the commission is hereby directed to make to federal agencies such reports as are necessary in connection with or because of such federal aid.

(2) All amounts received by the commission for such fund shall be paid over to the state treasurer and credited to the unemployment administration fund, and, as provided in s. 20.440 (73) and (74), are appropriated to the commission for the administration of this chapter and the Wisconsin state employment service.

(3) There shall be included in the moneys governed by s. 20.440 (74) any amounts collected by the commission under s. 108.19 (1) or (2), or under s. 108.04 (13) (c) or 108.22 (1) as tardy filing fees or as interest on delinquent payments.

(4) Any moneys transferred to the unemployment administration fund from the administrative financing account pursuant to s. 108.161 shall be expended (or restored to that account) in accordance with that section.

(5) If and to the extent that moneys transferred under sub. (4) are unavailable to finance some or all of the capital costs involved in any employment security building project or in constructing office space for use by the commission in connection with its employment security operations, the moneys available under s. 20.440 (74) may be used for such financing.

108.21 RECORD AND AUDIT OF PAYROLLS. (1) Every employer of one or more persons in Wisconsin shall keep such a true and accurate employment record for each individual employed by him, including full name, address and social security number, as will permit determination of the weekly wages earned by each such individual from him, and shall furnish to the commission upon demand a sworn statement of the same. Such record and any other records which may show any wages paid by the employer shall be opened to inspection by any authorized commission representative at any reasonable time.

(2) The findings of any such authorized representative of the commission, based on examination of the records of any such employer and embodied in an audit report mailed to the employer, shall constitute a determination within the meaning of s. 108.10 and the provisions of said section shall apply accordingly.

(3) In the event that any such employer fails to keep adequate employment and payroll records under this section or fails to file such reports as the commission may require under this chapter, the employer's contribution liability with respect to the period for which such records are lacking or deficient or for which such reports have not been filed may be estimated by a commission deputy in a determination made pursuant to s. 108.10, and the provisions of said section shall apply to any such determination.

108.22 DELINQUENT PAYMENTS. (1) If any employer is delinquent in making by the assigned due-date any contribution report or payment to the commission required of him under this chapter, he shall be liable for a tardy filing fee of $1 for each such delinquency and shall become additionally liable for interest on such delinquent payment at the rate of one-half per cent per month (or fraction thereof) from the date such payment became due, except that said fee shall apply in lieu of such interest in any case where such interest (accrued up to the date on which such delinquent contribution and said fee are paid) is less than $1. Such tardy filing fees and interest shall be paid to the commission and credited to the unemployment administration fund.

(2) If any employer fails to pay to the commission any amount found to be due it in proceedings pursuant to s. 108.10, provided that no appeal or review permitted by said section is pending and that the time for taking an appeal or review has expired, the commission or any duly authorized representative may issue a warrant directed to the sheriff of any county of the state, commanding him to levy upon and sell sufficient of the real and personal property which may be found within his county of the employer who has defaulted in the payment of any amount thus found to be due to pay such amount, together with interest and costs and other fees, and to proceed upon the same in all respects and in the same manner as upon an execution against property issued out of a court of record, and to return such warrant to the commission and pay to it the money collected by virtue thereof within 60 days after the receipt of such warrant. The sheriff shall, within 5 days after the receipt of the warrant, file with the clerk of the circuit court of his county a copy thereof, unless the employer shall make satisfactory arrangements for the payment thereof with the commission, in which case the sheriff shall at the direction of the commission return such warrant to it. The clerk shall enter in the judgment docket the name of the employer mentioned in the warrant and the amount of the contributions, interest, costs and other fees for which the warrant is issued and the date when such copy is filed. Thereupon the warrant so docketed shall be considered in all respects as a final judgment creating a perfected lien upon the employer's right, title and interest in all of his real and personal property located in the county wherein the warrant is docketed.

(3) In the discretion of the commission, a warrant of like terms, force and effect may be issued and directed to any employe or agent of the commission duly authorized by it as a deputy, who may file a copy of such warrant with the clerk of circuit court of any county

in the state, and thereupon such clerk shall docket the same and it shall become a lien in the same manner, and with the same force and effect as hereinbefore provided with respect to a warrant issued and directed to and filed by a sheriff. In the execution thereof such employe or agent shall have all the powers conferred by law upon a sheriff, but shall not be entitled to collect from the employer any fee or charge for the execution of such warrant in excess of the actual expenses paid in the performance of his duty.

(4) If a warrant be returned not satisfied in full, the commission shall have the same remedies to enforce the amount due for contributions, interest, and costs and other fees as if the commission had recovered judgment against the employer for the same and an execution returned wholly or partially not satisfied.

(5) When the contributions set forth in a warrant together with interest and other fees to date of payment and all costs due the commission have been paid to it, the commission shall issue a satisfaction of the warrant and deliver or mail it to the employer, and the warrant shall be satisfied of record by the clerk upon presentation to him of such satisfaction and payment by the employer of the fees due such clerk.

(6) The commission, if it finds that the interests of the state will not thereby be jeopardized, and upon such conditions as it may exact, may issue a release of any warrant with respect to any real property upon which said warrant is a lien or cloud upon title, and such release shall be entered of record by the clerk upon presentation to him and payment of the fee for filing said release and the same shall be held conclusive that the lien or cloud upon the title of the property covered by the release is extinguished.

(7) As an alternative to any other remedy provided in this section the commission may in its own name collect any delinquent payments due it, together with interest and costs and other fees. A statement of the amount of such delinquent payments certified by the commission shall be prima facie evidence of the employer's liability for such amount. At any time before judgment in an action for the collection of such delinquent payments, the commission may commence and maintain a garnishee action as provided by ch. 267 for actions founded on contract, or may use the remedy of attachment as provided by ch. 266 for actions founded on contract. The place of trial of an action for the collection of such delinquent payments shall not be changed from the county in which such action is commenced, except upon consent of the parties.

(8) (a) In case benefits have been overpaid or improperly paid to an individual, an initial determination may be issued setting forth the individual's liability to reimburse the fund for such overpayment. In that event the individual may appeal therefrom, within 10 days after a copy thereof was

mailed to his last known address; and the procedures and limitations prescribed in s. 108.09 shall apply to any such appeal.

(b) To recover any overpayment for which liability has been thus established, the commission may file a warrant against the liable individual in the same manner as is provided in this section for collecting delinquent payments from employers.

108.23 PREFERENCE OF REQUIRED PAYMENTS. In the event of an employer's dissolution, reorganization, bankruptcy, receivership, assignment for benefit of creditors, judicially confirmed extension proposal or composition, or any analogous situation including the administration of estates in courts of probate, the payments required of the employer under this chapter shall have preference over all claims of general creditors and shall be paid next after the payment of preferred claims for wages. Provided, however, that if the employer is indebted to the federal government for taxes due under the federal unemployment tax act and a claim for such taxes has been duly filed, the amount of contributions which should be paid to allow the employer the maximum offset against such taxes shall have preference over preferred claims for wages and shall be on a par with debts due the United States, if by establishing such preference the offset against the federal tax can be secured under s. 3302 (a) (3) of the federal unemployment tax act.

108.24 PENALTIES. (1) Any person who knowingly makes a false statement or representation to obtain any benefit payment under this chapter, either for himself or for any other person, shall upon conviction be deemed guilty of a misdemeanor and be punished by a fine of not less than $25 nor more than $100, or by imprisonment in the county jail not longer than 30 days, or by both such fine and imprisonment; and each such false statement or representation shall constitute a separate and distinct offense. The commission may by civil action recover any benefits obtained by means of any statement or representation which is untrue.

(2) Any person who knowingly makes a false statement or representation in connection with any report or as to any information duly required by the commission hereunder, or who knowingly refuses or fails to keep any records or to furnish any reports or information duly required by the commission hereunder, shall upon conviction be deemed guilty of a misdemeanor and be punished by a fine of not less than $25 nor more than $100, or by imprisonment in the county jail not longer than 30 days, or by both such fine and imprisonment; and each such false statement or representation and every day of such refusal or failure shall constitute a separate and distinct offense.

(3) Any person who makes any deduction from the wages of any employe because of liability for contributions hereunder or because of the employe's potential right to benefits, or who knowingly refuses or fails to furnish to an employe any notice, report or information duly required hereunder by the commission to be furnished to such employe, or who, directly or indirectly by promise of reemployment or by threat not to employ or not to reemploy or by any other means, attempts to induce any employe to refrain from claiming or accepting benefits or to waive any other right hereunder, or whose rehiring policy has discriminated against former employes by reason of their having claimed benefits, shall upon conviction be deemed guilty of a misdemeanor and be punished by a fine of not less than $25 nor more than $100, or by imprisonment in the county jail not longer than 30 days, or by both such fine and imprisonment; and each such deduction from wages, and every day of such refusal or failure, and each such attempt to induce shall constitute a separate and distinct offense.

108.26 SAVING CLAUSE. The legislature reserves the right to amend or repeal all or any part of this chapter at any time; and there shall be no vested private right of any kind against such amendment or repeal. All the rights, privileges, or immunities conferred by this chapter or by acts done pursuant thereto shall exist subject to the power of the legislature to amend or repeal this chapter at any time.

OTHER STATUTORY PROVISIONS

(Supplementing Chapter 108, above)

relating to unemployment compensation

101.37 ACCEPTANCE OF FEDERAL ACT RELATING TO PUBLIC EMPLOYMENT OFFICES.

(1) The legislature hereby accepts the provisions of an act of congress, approved June 6, 1933, entitled "An act to provide for the establishment of a national employment system and for co-operation with the states in the promotion of such system, and for other purposes."

(2) The industrial commission of Wisconsin is hereby authorized and directed to co-operate with the United States employment service in the administration of said act and in carrying out all agreements made thereunder.

(3) All funds made available to this state under said act shall, upon receipt thereof, be paid into the unemployment administration fund under s. 20.440 (73) and (74), and are appropriated therefrom to the industrial commission to be expended as required by the act of congress making such funds available and the rules and regulations issued thereunder.

20.440 UNEMPLOYMENT ADMINISTRATION FUND.

(73) All federal moneys paid to the industrial commission or the state for the Wisconsin state employment service pursuant to s. 101.37 or for the administration of unemployment compensation under ch. 108, and any moneys paid to the industrial commission and deposited by it with the state treasurer pursuant to s. 108.20, and all moneys duly transferred to the unemployment administration fund pursuant to s. 20.440 are appropriated to the industrial commission for the performance of the functions of the commission under ch. 108, and for its conduct of public employment offices consistently with s. 101.37, and for its other efforts to regularize employment; to pay the compensation and expenses of appeal boards and of advisory committees; and to pay allowances stimulating education during unemployment. Any balance remaining in this fund at the close of any fiscal year shall not lapse but shall remain available for the purposes herein specified.

(74) All vouchers covering expenditures under ch. 108, if duly drawn and approved in accordance with the provisions of the Wisconsin statutes applicable to the disbursement of state funds, shall be paid from the administration fund by the state treasurer, without regard to the sources from which this fund is derived. The treasurer of the unemployment reserve fund, however, shall maintain a separate record of all moneys received for the administration fund as

interest on delinquent payments under ch. 108, and of all moneys (other than the contributions paid by certain "exempted" employers for January 1936) received for the administration fund as contributions for months ending prior to February 1936, namely the month in which federal grants were first authorized for the administration of ch. 108, and of all expenditures made from said moneys. He shall charge against said moneys such expenditures and transfers heretofore made by the industrial commission as the commission may by resolution decide were not properly and validly chargeable against federal grants (or other funds) received for the administration fund in or after February 1936. Said moneys shall not be expended or available for expenditure in any manner which would permit their substitution for (or a corresponding reduction in) federal funds which would in the absence of said moneys be available to finance expenditures for the administration of ch. 108. But nothing in this section shall prevent said moneys from being used as a revolving fund, to cover expenditures (necessary and proper under ch. 108) for which federal funds have been duly requested but not yet received, subject to the charging of such expenditures against such funds when received. The industrial commission may also, by resolution duly entered in its minutes, authorize to be charged against said moneys any expenditures which it deems proper and desirable under ch. 108, provided the commission in such resolution finds that no other funds are available or can properly be used to finance such expenditures. So much of the moneys specified in this subsection as the industrial commission may from time to time direct shall be invested in United States bonds, and the interest received thereon and the proceeds therefrom shall be included in said moneys.

(75) Any amount appropriated for employment security administration pursuant to s. 108.161 shall be available for expenditure accordingly, and shall not lapse; but any unexpended remainder thereof shall be restored pursuant to that section.

(76) Relates to appropriations pursuant to s. 108.161, for employment security buildings.

OTHER STATUTORY PROVISIONS (Cont.)

Deduction of Contributions (Wisconsin Income Tax)

71.04 (6) Amounts contributed for the given period to the unemployment reserve fund established in s. 108.16 of the statutes, but not the amounts paid out of said fund.

71.05 (7) Amounts contributed for the given period to the unemployment reserve fund established in s. 108.16 of the statutes, but not the amounts paid out of said fund.

So each worker who receives any U. C. benefits must include them, as a part of his income, for Wisconsin income tax purposes.

Savings and Loan Associations

S. 215.45 (2) of the statutes excludes from Ch. 108 of the statutes certain officers and directors of savings and loan associations, but permits coverage by election.

Hospital Service Corporations

S. 182.032 (8) of the statutes excludes from Ch. 108 the employes of non-profit hospital service corporations.

Lien on Public Improvement Contracts

Ss. 289.16 and 289.53 (1) of the statutes now provide a lien, for the unemployment compensation contributions required by Ch. 108, as to contractors on public improvement projects.

HISTORICAL NOTE

Chapter 20, Laws of Special Session 1931-1932, became law on January 29, 1932. But only Sections 1, 3 and 4 of that chapter, relating to voluntary plans, took immediate effect. (Sections 2 and 5 of that chapter, which included Chapter 108 of the permanent statutes, took legal effect on June 27, 1934.)

SUMMARY LISTING (section-by-section) of

1958 & 1959 CHANGES in Wisconsin's U. C. Law

108.02 (5) (f) 12	Created, to exclude legislative employes.
(g) 8	Repealed, to cover "logging" work after 1959.
(7) (d)	Created, as to a possible rule-change to use the same base period for figuring an employe's benefit rate as is used for determining his work-weeks and benefit duration.
108.04 (1) (c)	Amended, to deny benefits in pregnancy cases for 10 weeks (instead of 8 weeks) before the expected week of childbirth.
(4) (a)	**QUALIFYING WORK.** Changed to require 18, instead of 14, weeks of covered employment (from all employers combined) to qualify for any benefits at all.
(c)	Amended, as to qualifying for benefits based on canning work. A seasonal cannery worker will qualify for benefits, based on 18 weeks of canning season work. If he's had less than 18 work-weeks with the canning factory, the other (previous) wages he needs to qualify must have been earned from *covered* Wisconsin employers.
(8) (af)	Created, to disqualify a claimant for benefits if he's duly recalled to work, and fails to return without good cause.

? what was previous provision

108.05 (1) **BENEFIT SCHEDULE.** Changed, by adding new top weekly benefit rates.

A top rate of $41 applies under new benefit determinations issued after July 19, 1959 and before January 1, 1960.

(2) **Semi-Annual Adjustment of TOP BENEFIT RATE.**

Starting in 1960, the law's top weekly benefit rate will be set, each January 1 and July 1, at 52½ per cent of the gross state-wide average weekly wage—of Wisconsin's covered employes—for the 12 month period ended 6 months earlier.

As noted by Wisconsin's Joint U. C. Advisory Committee:—

> "Those changes will keep the law's benefit ceiling up to date. The required computation is clearly outlined, and non-discretionary . . . (It uses) comprehensive wage and employment data regularly gathered and available under Wisconsin's U. C. law . . . But each individual worker's benefit rate will continue to be about 50% of his OWN average weekly gross wage."

108.06 (1) (b) **Amended, to base the law's TOP benefit duration on 45 "credit weeks", instead of on 38.**

(2) **BENEFIT WEEKS, based on WORK-WEEKS.** Changed, as to determinations issued after June 7, 1959, to increase benefit duration where the employe has more than 20 "credit weeks".

Credit weeks (over 20) will be worth eight-tenths (instead of seven-tenths) of the employe's weekly benefit rate. The new maximum duration is 34 benefit weeks, based on 45 credit weeks.

Note the table printed after 108.06 (2).

108.09 (6) (b)		Amended, to simplify the handling of commission appeals.
108.14 (16)		Created, to continue free distribution of U. C. instructional pamphlets, etc.
108.15 (3m)		Repealed, to close out various old accounts of noncovered governmental units.
108.16 (13) (j)		Repealed, as obsolete.
108.161 (4) (c)	Amended	To meet revised federal requirements as to the use of certain special moneys.
(8m)	Created	
(9)	Amended	
108.18 (8) (a)		Amended, to specify a needed cross reference.
(8) (j) (k) (l)		Created, as to employer contribution rates. A year of heavy U. C. benefit payments may trigger a reduction of experience rates for the next year. (Such a reduction applied to 1959 experience rates).
108.20 (5)		Created, to clarify the relations between certain state and federal administrative moneys.

NOTE—This TEXT reflects the current numbering of the relevant state and federal statutes, plus various changes effected by "revision" and other bills, through August 1959.

IMPROVED UNEMPLOYMENT INSURANCE

Why Do We Need Federal Action?

State laws have been eroded by inflation and riddled with restrictions. Competition between states for industry makes them reluctant to raise benefits. More attention is concentrated on keeping the employer's tax contribution low than on benefit adequacy.

Weekly benefits today insure a much smaller portion of lost wages than they did in 1939.

As a percentage of payroll, unemployment compensation taxes are one-third what they were twenty years ago.

The longer duration of unemployment due to technological change and more severe recessions finds the duration of benefits completely inadequate.

These weaknesses help explain why one-fifth of the families affected by unemployment in 1958 lost over $2,000 income each.

They also explain why federal benefit standards are needed, both for the worker, and for his grocer, landlord, and the entire community that depends on his spending.

The Federal Unemployment Compensation Standards Bill:

To meet these problems, this bill was introduced early last year by Congressmen Karsten, Machrowicz and 130 others in the House, (H.R. 3547) and by Senators Kennedy, Case, McCarthy and 30 others in the Senate, (S. 791). This is what it does:

1. *Higher Benefits*—A weekly benefit of at least half the individual's wages, subject to a statewide maximum benefit of ⅔ of the state's average weekly wage.

2. *39 Weeks Duration* for those unemployed who are eligible and qualified, who are able and available for work but cannot obtain suitable employment.

3. *Limited Eligibility Restrictions.* Some states have severe restrictions on who is qualified. This bill would place limits on those restrictions. Furthermore, state benefits could not be denied or reduced for those receiving negotiated supplementary unemployment benefits.

4. *More Coverage.* All employees in small companies would be covered. This would add an additional 2 million workers now excluded.

5. *Better Financing.* A state would be able to choose either experience rating (now the only choice allowed) or uniform tax rate reductions for all employers. This would open the door to better ways of financing Unemployment Compensation.

6. *Reinsurance Grants* to those states which are in financial difficulty because of high rates of unemployment. This would relieve fear of insolvency which has kept benefits down.

How Much Would It Cost?

The total long run cost of these benefits would still be only one-half of the original and *intended* cost of Unemployment Compensation. The average employer tax would rise only 7/10ths of one cent per employee-hour worked.

This would require no appropriations by Congress. It would be financed, as at present, within the federal-state unemployment compensation payroll tax.

Is This An Encroachment of Federal Power Over the States?

No. The basic unemployment compensation law is a federal one. The tax is a federal tax. There are already 36 standards in the federal law with which a state law must comply in order to get the funds from the federal government.

This bill would add three benefit and eligibility standards, and amend an existing financial standard. There would be no change in the basic federal-state relationship. The states would continue to administer their own programs.

What Are Its Prospects?

Unemployment compensation is a revenue measure and must be enacted first in the House of Representatives.

It has been bottled up in the House Ways and Means Committee all during 1959. The closest vote in the Committee was 13 to 12 on April 22. This vote was on a proposal by Congressman Wilbur Mills, the Committee Chairman, to require that state maximum benefit amounts be set at 60% of average weekly wages in each state.

Action Needed:

1. Urge your Representative to call upon the Ways and Means Committee for immediate action on a Federal Standards bill, and to support such a measure when it reaches the floor.

2. Urge your Senators to support such a bill when it comes to the Senate. Ask them to urge swift Finance Committee consideration.

WILL CONGRESS IMPROVE UNEMPLOYMENT INSURANCE?

State laws have been eroded by inflation and riddled with restrictions. Competition between states for industry makes them reluctant to raise benefits. More attention is concentrated on keeping the employer's tax contribution low than on benefit adequacy.

Weekly benefits today insure a much smaller portion of lost wages than they did in 1939.

As a percentage of payroll, unemployment compensation taxes are one-third what they were twenty years ago.

The longer duration of unemployment due to technological change and more severe recessions finds the duration of benefits completely inadequate.

These weaknesses help explain why one-fifth of the families affected by unemployment in 1958 lost over $2,000 income each.

They also explain why federal benefit standards are needed, both for the worker, and for his grocer, landlord, and the entire community that depends on his spending.

The Federal Unemployment Compensation Standards Bill:

To meet these problems, this bill was introduced early last year by Congressmen Karsten, Machrowicz and 130 others in the House, (H.R. 3547) and by Senators Kennedy, Case, McCarthy and 30 others in the Senate, (S. 791). This is what it does:

1. *Higher Benefits*—A weekly benefit of at least half the individual's wages, subject to a state-wide maximum benefit of 2/3 of the state's average weekly wage.

2. *39 Weeks Duration* for those unemployed who are eligible and qualified, who are able and available for work but cannot obtain suitable employment.

3. *Limited Eligibility Restrictions.* Some states have severe restrictions on who is qualified. This bill would place limits on those restrictions. Furthermore, state benefits could not be denied or reduced for those receiving negotiated supplementary unemployment benefits.

4. *More Coverage.* All employees in small companies would be covered. This would add an additional 2 million workers now excluded.

5. *Better Financing.* A state would be able to choose either experience rating (now the only choice allowed) or uniform tax rate reductions for all employers. This would open the door to better ways of financing Unemployment Compensation.

6. *Reinsurance Grants* to those states which are in financial difficulty because of high rates of unemployment. This would relieve fear of insolvency which has kept benefits down.

How Much Would it Cost?

Employers pay unemployment compensation taxes, and in three states employees contribute also. Originally the tax was 3% of payroll, but there has been a decline in rates and in most states no change in the tax base. Today the average employer pays only 1% of payroll.

It is estimated that the benefits in this bill would cost about 1.6% of payroll, which is still only half the original rate. This is an increase of only three-fourths of a cent per employee-hour.

What Are Its Prospects?

Unemployment compensation is a revenue measure and must be enacted first in the House of Representatives. It has been bottled up in the House Ways and Means Committee since the Spring of 1959. Urge your Representative and Senators not to forget benefit standards for unemployment insurance. The last recession was lesson enough; action should be taken now before another slump is upon us.

AFL-CIO Social Security Department, June 1960

HOW CONGRESS CAN HELP THE UNEMPLOYED BY PASSING THE FEDERAL U. C. STANDARDS BILL

*Does not include dependent allowances. Nothing in the proposed Federal Standards Bill would prevent a state from continuing dependent allowances in addition to the basic maximum

Wis St Jl 9/22/60

JOBLESS CLAIMS DROP

Unemployment compensation claims in Wisconsin have declined for the third week in a row. The Industrial Commission said claims totaled 30,523 for the week ended Sept. 17, compared with 37,380 claims for the week ended Aug. 27. On Sept. 19, 1959, the state had only 15,768 jobless claims.

For State Affiliates:

NEW PROBLEMS IN UNEMPLOYMENT INSURANCE, 1961*

In the states and in Washington certain questions about unemployment insurance are going to be fairly persistent this coming year. In the following remarks, I shall touch on a few of the major ones.

1. Should wage qualifying requirements be changed?

To this old problem we have only what may be in some states a new approach for solving it. To any proposed change in wage qualifying requirements, we recommend that you ask for the answers to these questions:

> How many of the unemployed are now ineligible under the present provision? How many more will be ineligible under the proposed change? What are these same figures broken down by major industries? What are the justifications for the proposed change? Are there any workers whose exclusion is not desired but who will be excluded under the proposal? How many?

The office equipment in employment security agencies is geared to easy sampling of the records in order to answer these questions. Any wage qualifying requirement is an arbitrary test of attachment to the labor force, and hence abstract discussion about who are really workers can be misleading unless the answers to these questions are in hand.

On this same note of caution, remember that the wage qualifying requirement, weekly benefit schedule, and duration provisions are interdependent and any proposed change must always be traced through for its full applications.

2. Should the duration of benefits be extended in 1961?

Some of you are trying to decide whether to make this a high priority item in your legislative program; we in the national office can only suggest some of the considerations.

While 8 states in the last three years (other than Pennsylvania) have broken through the 26 weeks "sound barrier," there are 23 states where we have not been able to improve the duration provisions even in the political climate created by recession conditions.

---

* Excerpts from remarks of Raymond Munts, AFL-CIO Social Security Department, December 14, 1960, at National Conference of Officers of State Central Bodies, AFL-CIO, Washington, D. C.

In only 11 states can 85% or more of the eligible unemployed qualify for at least 26 weeks if they need it.[1/] At the other extreme, there are about 20 states where substantial numbers of the unemployed cannot qualify for more than 15 weeks.[2/]

If you are weighing whether to make a major push on duration, it is advisable to consider the average potential duration for which new eligible unemployed are qualifying.[3/] This is a good measure of your law, and should be considered along with the exhaustion rate.

Even in those states that amended their duration provisions recently, it is advisable to check the actual extent to which a higher maximum really moved the average potential duration. For example, Oklahoma moved its maximum from 26 weeks to 39 weeks (this is regular duration and not triggered) but the average potential duration increased from 21 weeks to only 26 weeks. Whenever you find a big discrepancy between the maximum allowed and the average potential duration, your law sounds a lot better than it actually is. In these cases the duration formula should be re-examined. Our goal is to get average potential durations to 39 weeks, preferably on a uniform basis.

In the appendix to these notes, there is a table with average potential duration for each state. You can use this to find the actual performance of your duration provision, including the performance of recent amendments. Only 13 states have an average potential duration of 26 weeks or more, and Pennsylvania still leads with 30.

States with a high number of weeks that few can qualify for are offering a cheap program in deceptively handsome packages. The only justification for supporting such a plan can be a tactical one; and the only test of such a judgment is whether you can

---

1/ Hawaii, New Mexico, Ohio, Alaska, Maine, Maryland, New Hampshire, New York, North Carolina, Pennsylvania, Vermont.

2/ States where more than 10% of the eligible claimants are entitled to less than 15 weeks are:

Ariz. - 14%	Fla. - 34%	Kansas - 11%	Nevada - 15%
Ark.. - 12%	Idaho - 26%	La. - 11%	S.D. - 26%
Conn. - 15%	Ill. - 13%	Mass. - 14%	Texas - 22%
Del. - 23%	Ind. - 30%	Mich. - 14%	Utah - 17%
D.C. - 19%	Iowa. - 18%	Neb. - 20%	Va. - 30%
			Wyo. - 13%

3/ A similar measure is the average duration of those exhausting benefits; this would be the same as average potential duration only if exhaustees had the same base year earnings and work distribution as initial claimants.

subsequently liberalize the operation of the duration formula to allow more people to become eligible for the longer periods. I think there may be some hope in this approach -- first breaking through the 26 weeks sound barrier and then later filling in the substance.

3. What about temporarily extended duration?

Temporarily extended benefits is the new look in unemployment insurance; it has a certain political glitter, but all that glitters is not gold.

In the last two years, this country has experimented with two kinds of temporarily extended duration. Twenty-two states extended duration when the governor or the legislature decided the situation got bad enough and authorized longer duration for a limited length of time. Then there is the method for making temporary extensions conditional on predetermined unemployment levels, to be triggered into existence and out again automatically. Triggered extensions are now provided in 6 states.

Both the temporary extensions through legislative action and the temporary extensions by automatic triggers will be up for consideration in a number of states and possibly in Congress. The Ohio legislature has already just met in special session on this subject, but adjourned without making any decision.

How should we evaluate temporary extensions? The Ohio experience might suggest that an automatic trigger would be better than hoping the legislature will always act in emergencies. On the other hand, the 6 states with triggers have had some pretty rough unemployment but only California triggered in and out, although Illinois will probably trigger soon in the new year. If the trigger point is set conservatively high it becomes a way for the legislature to duck future concern with unemployment.

Where the trigger point should be set is not, however, the heart of the issue that is involved. To see the real nature of the problem, we have to look at the characteristics of the long-term unemployed, those with over 6 months unemployment a year.

Here we come face to face with a startling fact: most of the long-term unemployment is not caused by recession circumstances. Long-term unemployment has become a prominent and persistent feature of our creeping, slow growth economy. In a number of states, studies of exhaustees have given some clues to the reasons for long-term unemployment. These studies by the Bureau of Employment Security and other studies show us who the long-term unemployed are: people whom personnel offices have branded

as too old to work (and that can be anybody over 40); people whose skin, we are told, isn't the right shade to ever deserve more than casual employment; people whose training or skills are obsolete or whose customary work has been automated out of existence; people who live in areas that seem to have no economic future. These people are predominant in the long-term unemployed even when there is no general recession. Even when business is humming we can expect from past experience that at any given time there will be about 400,000 long-term unemployed; in recession periods this will go up to 600,000. Long-term unemployment due to recession -- the problem met by triggered extensions in duration -- is at best only a third of the problem of long-term unemployment.

It is for these reasons that an increase of five or six weeks in the average potential duration of the regular benefits meets more of the problem of long-term unemployment than any number of weeks triggered by recession conditions.

The more sophisticated employers like the triggered programs because they are a kind of low-cost solution that sets terminal limits; and they sound good --"up to 39 weeks of benefits when you really need it."

Triggered extensions are a political reaction to the demands to do something yet without improving the basic program. There is some danger that they become a low-cost pacifier for unemployed constituents. In asking for longer potential duration in the basic program we have a golden opportunity to argue our basic concerns with age and color discrimination in hiring, with technological unemployment, with that new kind of worker -- the "obsolescent" -- for whom progress and automation is a cruel hoax.

We are concerned about long-term recessional unemployment, but we also want to draw attention to the two-thirds of the long-term unemployment problem that, like the iceberg, lies dangerously below the surface of public awareness.

Earlier I argued that the high maximum number of weeks combined with a thin variable duration formula while not good on its merits could be accepted on a tactical basis. Can triggered programs be justified in tactical terms? Or, once the trigger is accepted as a principle may it not have strong staying power and substantially impede our efforts to improve the basic duration provisions?

4. <u>What is new in weekly benefit amounts</u>?

There is nothing new in the fact that maximums continue to lag. Average weekly wages last year rose by $2 to $6 in each state for a national average of about $4.

Even if you adjusted your maximum in the last year or two its worth has slipped somewhat since then.

What is new is the handsome way the flexible maximums -- maximums stated as a percentage of average weekly wages -- are working in Kansas, Utah, Vermont, Wisconsin, and Wyoming. Each has had at least one automatic increase, and Wisconsin has had two.

The merits of this approach are without question; the only danger is in accepting too low a percentage because a flexible maximum once set may be hard to move.

5. What are employers up to?

There are three areas in which employers appear especially active.

First, there is a drive on for multiple maximum benefit systems such as those in Michigan, Illinois, and Iowa. Employers call these "variable maximums" in part to confuse them with "flexible maximums." The so-called "variable maximums" are being pushed in Minnesota, Texas, Wisconsin and undoubtedly elsewhere. They are a dangerous form of dependency allowance, for reasons I shall develop below.

Second, the success of employers in New York this year in going the limit on disqualification penalties will encourage similar efforts in other states. Maryland, for example, is in a defensive battle following the usual plan of newspaper scare stories, alleged chislers, then a special legislative investigation, etc.

Last, employers in many states are screaming the blues about low reserves, high tax rates, mounting liabilities, etc., in part designed to scare us into dormancy. The low rate employers are also trying to shift a larger portion of the load on high rate employers through a wider range of rates, as in Michigan. Later I will discuss the financial picture in some detail.

Each of these subjects deserves some special comment.

6. What is wrong with "variable maximum" formulas?

Pushing "variable maximums" is the special hobby of General Motors and the John Deere Company and they have enlisted a number of business groups. Not all employers like it -- for example, General Electric and Standard Oil of New Jersey don't like any kind of dependents benefits.

Our objection in the AFL-CIO is not that "variable maximums" include dependents in the benefit formula but that it is a special kind that both obscures the wage insurance principle and also creates an illusion of a liberality, a false image of generosity.

For example, in Michigan the highest maximum is $55 and in Illinois $50. But these are only the maximums for those with several dependents and fewer than 2% of claimants can get this amount. Each different family size has a different maximum, down to $30 and $32 maximums for single persons.

The usual dependents formula allows a few dollars per dependent to be paid on top of the basic wage insurance -- on top of the fifty percent or more replacement of one's lost weekly wage. This is not the way "variable maximums" work. They give large families half of their lost wages, and then proceed to cut down the proportion of replacement for those who don't have dependents. The wage insurance principle is stood on its head and its meaning and intent whittled away until the single person receives only a small fraction of his wage loss.

With good sounding "maximum maximums" of $55 and $50, average benefits in Michigan and Illinois are only $36 and $34 respectively, quite low for high wage states. The Iowa "variable maximum" is a cheaper version of the Illinois plan. Again this is a case of good wrappings on a cheap program.

Our future success in improving unemployment insurance depends on our ability to fasten attention on the wage insurance principle and the need to extend it to workers over a wide range of different earnings; at least three out of four covered workers should get a benefit of half their wage loss.

When the wage insurance formula disappears as it has in Illinois, Michigan, and Iowa, the basis for reform has evaporated. Employers are well aware of this. Beware imports from the Mid-West entitled "variable maximums."

7. <u>What is the "agency doctrine" in disqualifications</u>?

I have referred to an employer drive on disqualifications that has hit in New York, Washington, Maryland and elsewhere. There is not much new about this or about our position on the issues.

A series of court decisions beginning in 1958 raises a threat from a new quarter. We as trade unionists emphasize the role of the union as a representative organization for workers. Several state courts have used the same reasoning to justify disqualifying workers who have been terminated because of clauses in the labor contract -- such as compulsory retirement, seniority bumping, pregnancy lay-offs, etc. The court's argument is that these are voluntary quits, because the union as the agent of the worker voluntarily agreed to the provisions.

This agency theory applied in unemployment insurance has been rejected by the Supreme Court in Pennsylvania for the very good reason that a labor agreement is a compromise, not a voluntary act of the union, and further that the individual worker when forced to retire is obviously not having any choice about it -- the Pennsylvania Court emphasizes the "matrix of facts" surrounding the termination rather than the agency doctrine.

I mention the agency doctrine because if your state is afflicted with it, you obviously need legislative action. California and Massachusetts have enacted provisions preventing its application in cases of compulsory retirement. The agency doctrine can be pervasive, however, and may apply to all forms of termination under the agreement; a broadly applicable provision may be needed to keep it out of the law altogether.

8. Is there a financial problem and how serious is it?

When we entered this recession reserves were substantially less in several states than they were at the beginning of the 1958 recession. There were a dozen states which would have foundered in a 1960-61 recession. Most of them have enacted some increase in their tax contribution yield. We do not know how deep the recession will go or how long it will be with us, but even for some of the states that have amended their finances since 1958 continued solvency is somewhat problematical. In this group I would put Illinois, California, Maryland, Pennsylvania, and Alaska. Some states with a serious financial picture have not yet done anything about it. These are Michigan, Delaware, West Virginia, and Ohio.

The situation is difficult because the federal loan fund is nearly broke, has only $5.6 million. Congress has raised the maximum size of the fund to $550 million and the federal portion of the unemployment insurance rate from .3% to .4% to build up that fund. But this tax rate does not go into effect until January 1, 1961 and the revenue is not produced until the end of next year; then the fund will not actually be credited until July 1, 1962. The only sources of income for the fund until July 1, 1962 is interest -- about $6 million a year, and repayments from loans. Given the financial condition of states that have borrowed, return of the loans in time to rebuild the loan fund for 1961 is not anticipated.

In passing I should note that P.L. 778, the Social Security Act of 1960, will not allow a state to borrow until it cannot pay its next month's claims, and then it can borrow enough only to meet the deficit for that month. In short, the funds

will hereafter be tightly rationed. Further, the repayment rate will be faster.

At the beginning of this year, the Secretary of Labor asked the Federal Advisory Council on Employment Security to look into the solvency question. The employers would not agree with the labor and public members that a federal solvency standard should be required of the states. The employer-representatives and Stanley Rector of Unemployment Benefit Advisors, Inc., took the position that no problem existed. Apparently the White House also took that position because no solvency standard was ever proposed by the Administration.

I do not know what will happen if a state goes broke and no federal funds are available. I suspect that when the fact comes home to the public that even the existing limited benefits have been underfinanced for years, the state-by-state method of financing unemployment insurance is going to get the first big shock of its lifetime. The federal government will have to decide whether giving funds from a federal tax to the states to administer unemployment insurance has been justified by the system's performance. Meanwhile, to avoid this unpleasant question, there will be patch-up proposals, such as that Congress should appropriate money into the federal loan fund, but I hope we can get some serious consideration for our plan of re-insurance, the only thing that would make sense in a state-administered system. There are signs that some state administrators agree with this, but their organization, the Interstate Conference of Employment Security Agencies, has been studying financing and solvency for a year and still has no proposal.

9. <u>What should be done about the financial problem?</u>

All states have been underfinancing their program since 1945. This is alright so long as there are reserves to make up the difference every year between income and outgo. Experience rating has been allowed to work primarily in a downward direction at the encouragement and to the satisfaction of employers. Some state agencies have allowed this as part of an industrial development program. The problem is that when the end is reached, nobody seems willing or able to institute principles of sound financing.

The soundest principle of all would be to abolish experience rating, particularly when it is based on benefit payments, or at least allow uniform statewide rate reductions. There is no doubt that this is the root of the problem and the major reason unemployment insurance still costs only a third of what it did originally.

I would like to suggest some general principles that would greatly improve financing even where you cannot abolish experience rating. Admittedly these are the second ditch defense, but may help in forming a judgment of proposals you will encounter. I should emphasize that although these have been reviewed by the AFL-CIO Social Security Committee they have not found their way into our formal policy and they may not in this form. But in the hope that they are better than no guidance at all, we offer them in the hopes they will be suggestive rather than controlling:

a. Taxable wage base should be raised, preferably to total wages; or to the annual equivalent of average weekly wages in covered employment; or to the same level as the wage base for OASI. (Taxable wage base was total wages in state laws until 1939 when it was decreased to $3,000 to bring it in line with OASI tax base; the latter has since been increased to $4,800.)

b. The basic tax schedules should be set to yield an amount equal to the average over-the-business-cycle cost of benefit expenditures; including any recommended increases in benefit levels. In most states, this should include establishing higher minimum rates.

c. Additions to the basic tax rates should be established for the purpose of paying benefits not charged to individual employer accounts; these added taxes should be credited to a balancing account and not to the individual employer reserve.

d. When reserves fall to less than 1½ times benefit payments in the highest cost 12-month period in the last ten years, no contribution rate should be less than 2.7%.[4]

4/ A trigger at 1½ times should use the total wage base, regardless of how the tax base is defined. Experience rating should cut off when dollar reserves relative to total wages are less than 1½ times the high cost year expenditures relative to total wages. "Total wages" is necessary to wash out increased liabilities in dollar terms due to growing number of covered workers and higher wage levels.

e. Other trigger points for lower tax schedules should also be stated as ratios to total wages or as multiples of the "1½ times" peril point in (d). They should be designed to maintain a reserve fund between 1½ and 3 times the high cost year expenditures relative to total wages.

f. Emergency surtaxes should be established where necessary for the purpose of building up the reserves for anticipated costs in 1961 and 1962.

Some of these approaches may be alternatives for the emergency. However, all but the last are sound for long-range solvency.

If you are uncertain what we should do about finances, there is no uncertainty what we should do about benefits. I have examined employer claims in state after state where they argue that payments are higher than they have ever been, that taxes are exhorbitant, etc. Even allowing for my biases, I always come away very unconvinced. In this connection the Social Security Department can provide you or your staff with the principles of "total wage" analysis with which to cut through some of the employer figures and charts thrown your way. The essence of it is that you can't compare benefit payments or tax contributions for different years unless you first convert the dollar amounts to a percentage of total wages. The reason for this is that you have to wash out the effects of larger numbers of workers and employers in the program, and also wash out the rise in wage levels, in order to have a basis for comparison. This method is recommended by the U.S. Department of Labor, if that is any evidence of respectability, and I wholly concur in it.

When all the homework is done, you will usually find that a state's financing problems did not begin with benefit payments in the recession of 1958-59; that underfinancing has been going on a long time; that there has been a fairly continuous decline in tax contribution rates for a long time; and that cost rates -- the benefits paid out each year relative to payrolls -- are only very slightly if at all above those of pre-war times. We are in a position to provide data and analysis of this sort for any state wishing it.

APPENDIX ON EXPERIENCE WITH DURATION

	Statutory Limits (weeks)	Average Potential Duration (April-June 1960) (weeks)	Average Duration for Exhaustees (April-June 1960) (weeks)	Percentage of Claimants Who Have Exhausted Benefits July '59 - July '60

PLEASE SAVE & USE THESE **UC-201 INSTRUCTIONS** as to

BENEFIT NOTICES AND REPORTS

required of employers under

Wisconsin's U. C. Law

(as amended through 1957)

To assure proper and effective administration of benefits under Wisconsin's Unemployment Compensation Law:

I. Give Required NOTICES to Employes.

A. Put up (and keep up) "Notice-Posters"—Form UC–7.

B. Give a U. C. lay-off notice—Form UC–15—to each employe whose employment is being terminated or suspended for any reason for 1 calendar week or more.

II. Send Required REPORTS to the Commission.

A. Benefit Liability Report—UC–203. File it on request.

B. Benefit Eligibility Report—UC–23. File it on request.

III. Use the Standard "ELIGIBILITY PHRASES" on your UC–203 and UC–23 reports.

IV. Help Apply the Law's "WORK-TEST".

TABLE OF CONTENTS

I. **REQUIRED NOTICES**—to Employes 4

A. **Notice "Posters"** (Form UC–7) 4

B. **U. C. Notice at Lay-Off** (Form UC–15) 4

C. **Notice** as to certain **"Low-Earning"** Weeks 5

II. **BENEFIT REPORTS**—to the Commission 6

A. **BENEFIT LIABILITY REPORT** (Form UC–203) 7
(1) File it PROMPTLY, on request 7
(2) What to Show on Form UC–203 7
(3) What you Authorize by Signing a UC–203 12

B. **BENEFIT ELIGIBILITY REPORT** (Form UC–23) 13
(1) File it PROMPTLY, on request 13
(2) What to Show on the UC–23 Report 13

III. **Standard "ELIGIBILITY PHRASES"** 15

A. **Phrases which may SUSPEND BENEFITS** 17
(1) "Work Available" 17
(2) "Continued Unavailability" 17
(3) "Pregnancy" 18
(4) "Workmen's Compensation" 18
(5) "Discipline" 19
(6) "Quit" 20
(7) "Refused Work" 21
(8) "Labor Dispute" 22

B. **"Misconduct" (may BAR BENEFITS)** 23

C. Phrases as to "WAGES" for Specified Weeks 24
(1) "Holiday Pay" 24
(2) "Vacation Pay" 25
(3) "Dismissal Wage" 26
(4) "Other Wages" or "Other Work" 26

D. Phrases as to QUALIFICATION for BENEFITS 27
(1) "——— Canning Season" 27
(2) "Self-Employed" 27
(3) "Pin Boy" 28
(4) "Student in ——— of those weeks" 28
(5) "Not covered in ——— other work-weeks" 29

E. Phrases as to RETIREMENT 30
(1) "Quit to retire" (bars benefits) 30
(2) "Retirement pay" (specify) 31

IV. APPLYING the LAW'S "WORK-TEST" 32

V. OTHER U. C. POINTERS 33

For benefit (and reporting) purposes,—"week" means CALENDAR WEEK (ending Saturday at midnight). Compare 108.02 (12)

We NUMBER each Calendar Week, as shown on each UC–203 and UC–23, and on page 35.

Part I. REQUIRED BENEFIT NOTICES to Employes as to their Rights under the Law

A. Notice "Posters" (Form UC–7)

Every employer who is covered by the law must put up (and keep posted at all times) notice "posters" supplied by the commission.

These posters (Form UC–7) should be placed in each work-place you maintain,—on bulletin boards, near time-clocks, etc.,—so that each employe will see a poster.

Keep them posted. Replace them if they become torn, defaced or dirty. Otherwise it may cost extra dollars in benefits charged to your account.

B. U. C. Notice at Lay-off (Form UC–15)

When you lay off a worker, he needs to receive Form UC–15—from YOU—to help him claim benefits.

So you are required to give him a UC–15. When?

Whenever you are discharging or laying off an employe —or his employment is being terminated or suspended for any other reason—for one week or more, ***give him Form UC–15, on (or just before) his last work-day.***

Keep a reasonable supply of Form UC–15 on hand for anticipated lay-offs or other separations.

Order what you need from "Mailing Room, U. C. Dept., 137 E. Wilson St., Madison 1, Wis." (In an emergency, you can get a limited supply of these forms from your District Unemployment Compensation Office.)

Before giving Form UC–15 to an employe:—Enter on the back (near the bottom):

(1) your FIRM-NAME, and
(2) your Wisconsin U. C. "FILE NO.", and
(3) the ADDRESS where your pay records are kept.

C. Notice as to certain "Low-Earning" Weeks

In any case where an employe cannot readily determine his own wages for each separate CALENDAR WEEK, in view of the pay-basis and pay-periods which apply to him, notify him as to his exact WAGES for each *"Low-Earning" Calendar Week.*

A worker must file claim for partial unemployment benefits,—giving the exact amount of his wages for each "low-earning" calendar week. (The *calendar week* is the law's basic time unit for measuring unemployment.)

Accordingly, each employer is required to promptly notify each worker **(in those cases where the worker could not otherwise be sure)** of the amount of wages he earned in each of his "low-earning" calendar weeks,—namely, those calendar weeks for which his wages were (a) less than the law's maximum benefit rate; and (b) less than ¾ of his average weekly wage from the employer.

You may use any form of notice which shows the employe his wages for each "low-earning" calendar week.

However, such wage information need *not* be given an employe for any calendar week in which his "low-earnings" were due to his illness or absence (rather than lack of work).

No special notice as to "low-earnings" need be given:—

(a) to employes whose *pay-period* is the *calendar week,*—so that they always know how much wages they earn for each separate calendar week; *or*

(b) to employes paid on a fixed (or minimum) *salary basis,*—such that their pay for every calendar week is more than their benefit rate; *or*

(c) to employes paid solely on a *flat daily (or hourly) rate,*—so that they can readily figure their weekly pay, by keeping track of the days (or hours) worked in each calendar week; *or*

(d) to employes paid solely on a *fixed rate* per piece (or per sale),—without any other variation in pay,—so that they can readily figure their weekly pay, by keeping track of the pieces (or sales) completed in each calendar week; *or*

(e) to those employes whose *average weekly wage* is under $16, —since they are not eligible for unemployment benefits, under the law.

Part II. BENEFIT REPORTS—to the Commission

When an unemployed worker claims benefits, his employer must furnish certain information so that the commission can determine the employe's claim.

So, when an employe claims benefits, we ask the employer for a benefit report,—by entering the employe's name (etc.) on the proper report-form, and sending it to the employer.

To aid prompt payment of benefits, employers must *file* their *benefit reports promptly.*

There are 4 basic questions to be answered in determining an employe's benefit claim, as follows.

(1) Is the employe "qualified"—that is, has he worked long enough for all covered employers, combined?

(2) If so, how much benefit "credits" does he have? That is, how much is his "weekly benefit rate", and for how many weeks may he be paid?

(3) Is he unemployed?

(4) Is he eligible for his current period of unemployment?

In some cases, all 4 questions must be answered; so the employer must file a "Benefit Liability Report" (Form UC–203).

However, after an employe's "benefit credits" have been determined as to any employer, they need not be redetermined until they are used up or expire. When such an employe has a new period of unemployment, only questions (3) and (4) need be answered to determine his claim. In such cases, the employer is sent a simpler "Benefit Eligibility Report" (Form UC–23).

In brief, the commission will ask for Form UC–203 only when it has to determine (a) whether the employe is "qualified" for benefits, or (b) how much benefit credit is available to the employe. In other cases, it will request Form UC–23.

WARNING. Return a benefit report, uncompleted, to the requesting U. C. Office,—and explain the facts,—where the individual:—

1. Did not work for you at all; or
2. Worked only for an affiliated outfit (not you); or
3. Did work for you, if such work was covered under a different state's U. C. law.

A. The BENEFIT LIABILITY REPORT—Form UC–203

(1) File it, on request:—Within 5 Days

If a UC–203 report is required for an employe, the commission will enter the employe's name, your name, and related information on a Form UC–203, and send it to you.

Whenever you receive a UC–203 for an employe, you should complete and file it *completely and promptly*,—even if you believe the employe is ineligible.

Form UC–203 is due at the district office within 5 days after the request-date entered on the form.

If an employer's UC–203 report is tardy or incomplete, and delays benefits, the law instructs the commission to take the following steps:—

1. **Take the employe's statement as to his wages and work weeks for that employer.**
2. **Determine the employe's benefit rights based on his statement, and pay him without further delay.**
3. **Charge the employer $5 as a tardy filing fee. This must be paid by the employer, unless he files the required report and shows that the delay was due to circumstances beyond his control.**
4. **Apply any late UC–203 only to benefits not yet paid.**

FILE ALL SUCH REPORTS PROMPTLY.

(2) What to Show on Form UC–203.

The next page shows about how a Form UC–203 might look when it reaches you.

ITEMS under HEADING:—"1. BENEFIT RATE"

ALWAYS fill out A or B, as follows:

Item A. If the employe's average weekly wage from you is more than the amount specified in this item,—so that the law's maximum benefit rate clearly applies,—save time by checking the "box". (You can then ignore Item B.)

UC-203

Form UC—203
Wis. 6-57

1958 BENEFIT LIABILITY REPORT

by the Employer named below, under Wisconsin's Unemployment Compensation Law

1. BENEFIT RATE

→ *(Fill in:—A; or B)*

A. This Employe's "Average Weekly Wage" has been over $74: so his Benefit Rate is $38 . . . ☐

B. His 1958 Benefit Rate should be based on:-

(1) Total "wages" from us in 1957 $ _____

(2) Paid him for how many weeks? ☐ *

* *If over 9 weeks, omit (3) and (4)*

(3) Total "wages" from us in 1958 $ _____

(4) Paid him for how many weeks? ☐

2. CREDIT WEEKS

A. HOW MANY calendar weeks were there within which the Employe worked for you, at all, in covered employment:

From 195 7 Wk. No. 41

through 1958 Wk. No. 40

B. Enter that number of "credit weeks" in the red box. CREDIT WEEKS

3. LAST WORK or WAGES *The Employe Says:-*

A. He last worked for you in 1958 Wk. No. 40, on 10/3

If wrong, correct here:- Wk. No. _____, on _____

B. He was partially UNEMPLOYED in weeks No. _____

for which his WAGES from you were $ _____ $ _____ $ _____

If wrong, CORRECT WAGES were $ _____ $ _____ $ _____

4. ELIGIBILITY (Leave BLANK unless the law & facts support a denial.)

We deny benefits under the law (and "Instructions" UC-201) because this "eligibility PHRASE" applies:-

EVEN IF YOU BELIEVE BENEFITS ARE NOT DUE, FILL IN HEADINGS 1 and 2

List supporting FACTS on back.

JOHN Q PUBLIC
1234 W WATER ST
ANYTOWN WIS

XYZ MFG CO

Date

To the EMPLOYER: OCT 10

Complete and mail within 5 days after the above date to the above "Unemployment Comp. Office."

LA CROSSE

The Employer concedes that benefits may be paid, based on this report,—except as shown above or reported later.

SIGNED, for the Employer, BY **SPECIMEN**

Date

A tardy or incomplete report may cost you $5, under 108.04 (13) (c).

If you do not check Item A, complete Item B under "1. BENEFIT RATE".

Item B. The information you enter in Item B will in that case be used by the U. C. department in determining the employe's weekly benefit rate,—pursuant to the table printed in section 108.05 (1) of the law.

Complete your entries under Item B as follows:—

(1) Enter all the employe's WAGES from you, PAID IN the completed calendar year specified on line (1). Enter his GROSS wages, before deductions. (Include all kinds of "wages"—even for non-covered work.)

(2) Enter the number of PAY-WEEKS covered by those total wages.

If the employe had 10 or more pay-weeks with you during that year, his "average weekly wage" and corresponding benefit rate from you will be based solely on your figures for that year. *In that case you need not complete lines (3) and (4).*

If the employe's number of pay-weeks from you as shown in line (2) is 9 or less, fill out also lines (3) and (4), as follows:—

(3) Enter his gross WAGES from you, down to date in the calendar year specified on line (3).

(4) Enter the number of PAY-WEEKS covered by those wages.

The employe's benefit rate will then be based on the 2 years combined, namely on lines (1), (2), (3), (4).

Note: You may find it convenient to enter on each employe's employment record his total gross wages from you for each year,—when you prepare the U. S. withholding tax "Form W–2" or the state Department of Taxation's "Form 9" for the employe for that year.

ITEMS under HEADING:—"2. CREDIT WEEKS"

Note: How many "credit weeks" an employe has had determines how long he can draw benefits if he remains unemployed and eligible.

Enter that number of "credit weeks," even if you are denying his eligibility.

Before the District Office sends you a Form UC–203, it will fill in Item 2 A,—to show within what period you should count how many benefit "credit weeks" the employe has with you.

For instance, the form may ask you:—"How many calendar weeks were there *within* which the employe worked for you, *at all,* in covered employment, from 1957 Wk. No. 41 through 1958 Wk. No. 40?"

Such a question means that 1958 Wk. No. 40 was his most recent work-week for you,—and asks you how many "credit weeks" he has from you within the year before that.

A calendar of unemployment "week-numbers" is printed on the back of each UC–203 report-set. Refer to this calendar for the dates corresponding to the week numbers entered on Form UC–203.

Within that period, count *every* week in which the employe did *any work at all* for you, *in "employment" covered by the law.* (Don't count weeks in which the employe's only work was at an employment not covered by the law.)

Enter that figure under Item 2 B, in the red box.

That entry should include every work-week as a "student". (Then, if you believe those weeks shouldn't count as "credit weeks", use the "Eligibility" space to state your views. See Part III, D (4) below.)

ITEMS under:—"3. LAST WORK OR WAGES"

When the District Office sends you a Form UC–203, it will fill in, under Heading 3—"Last Work or Wages",—Item 3 A (last work-week) or Item 3 B (partial unemployment), or both, depending on the employe's claim.

If the employe's statement, as shown by these District Office entries, is wrong, give correct information.

ENTRIES under HEADING:—"4. ELIGIBILITY"

If you believe there's a legal reason why the employe is "ineligible", enter that reason under "ELIGIBILITY".

Such a reason will usually apply only to the current period for which the employe has filed a claim; but certain reasons do apply to past work-weeks (where you deny that they are "credit weeks"). See Part III of these Instructions.

Before you make any entry under Heading 4, consult the standard *"Eligibility Phrases"* (Part III of these Instructions), to see which phrase—if any—applies under the law. If one of these phrases *does apply* to the employe, enter that phrase under Heading 4, *and* file the supporting evidence required for that phrase.

If no "phrase" applies, leave Heading 4 blank,—thereby conceding the employe's eligibility.

If no "phrase" is entered under Heading 4 of your Benefit Liability Report,—the employe may be regarded as "eligible", with any benefits due under the law paid accordingly. (However, as set forth below, the commission will enforce certain requirements and limits in every case.)

THE BACK of FORM UC-203 (Top Copy)

Every "Eligibility Phrase" you use under Heading 4 *requires a supporting statement,*—to be entered on the back of the top copy of the Benefit Liability Report (or firmly stapled to it).

Merely entering such a phrase will not contest (or even delay) benefits, if you fail to submit supporting evidence on (or stapled to) your UC-203 report. **If the required evidence is missing when we receive the report, your unsupported contesting entry may be ignored.** Such a case may be treated as a "conceded" case,—authorizing payment.

If you believe several phrases might apply, enter under Heading 4 the phrase on which you prefer to rely;— but also explain, on the back, what other phrases you believe apply, and why. In that way your other legal reasons can be considered if the commission (based on the facts you submit) finds your preferred "phrase" inapplicable.

(3) What You Authorize By Signing a UC–203 Report

Your signature at the bottom of Form UC–203 concedes (or contests) benefit liability,—in accordance with your "ELIGIBILITY" entries and supporting evidence.

If you contest liability, and submit the required supporting evidence,—the commission will consider the reason you give (on Form UC–203), and may further investigate the facts of the case. If it then decides that benefits are payable under the law, you will be notified (and given a chance to request a hearing) before any payment can be made.

In case you make *no contesting entry* (on Form UC–203) or if you contest without submitting the supporting evidence required,—the commission will pay benefits accordingly, subject to the limitations set forth on the back of Form UC–203.

> Wisconsin employers have conceded liability as to more than 90% of all benefits paid to date. Disputes between the Employer and the Employe have been confined to a relatively small percentage of cases.

In brief, your signature authorizes the payment of benefits,—subject to your contesting entries and evidence,—*within the limits prescribed by law.*

The commission will enforce certain requirements and limits in every case. Therefore you need not and should not enter a phrase, as to:—"waiting period"; "failed to register"; "not enough qualifying work"; "failed to apply for work (of which he was notified by the employment office)"; "average weekly wage under $16"; "more than 52 weeks after last work-week".

Each week you will receive copies of any benefit checks charged to your account. From them you can spot any charging errors. We also ask, each time we send you a worker's check-copy:—"Is he working elsewhere? Could you re-employ him?"

B. The BENEFIT ELIGIBILITY REPORT—Form UC–23

(1) File it, on request:—Within 5 Days

The commission's District Office, at which the employe claims benefits, will enter his name (etc.) on Form UC–23 and send it to you, when that report is needed.

Complete it, and mail it to the requesting district office within 5 days after the specified request-date.

If your UC–23 report is not received *within 7 days* after the request-date, benefit payments will proceed without awaiting your report. A late report will apply only to benefits not yet paid.

If benefits are paid improperly, from another employer's account,—because you fail to file a requested UC–23 report or to raise a denial issue,—it may cost your account some benefits, under section 108.04 (13) (d).

(2) What to Show on the UC–23 Report

The illustration on the next page shows about how a Form UC–23 might look when it reaches you from the commission's District Office.

The form has 2 sections. Both may apply. If one section applies, the District Office will check only that one. Report the correct facts, for each section thus checked.

Your answer to 1 A should tell us whether he worked on each of the week's regular work-days on which you had work for him. If not, explain the facts on the back of the report.

If wages reported in 1 B are wrong, enter the correct GROSS wages earned in the calendar week.

If you check 2 B 2, the above page 11 applies. If you answer 2 C, section III-C (below) will apply.

Form UC-23
Wis. 3-57

ELIGIBILITY REPORT

under Wisconsin's Unemployment Compensation Law

UC-23

Report on CALENDAR Weeks

EXPLANATION: This Employe is claiming unemployment benefits.

We need to know about his work for you to determine whether payment is due.

Please report the facts for each section checked [✓].

If this report is not received within 7 days of the date below, we will pay without it.

Your prompt reply may prevent an incorrect payment.

PLEASE NOTE BACK SIDE

Date

To the EMPLOYER: AUGUST 21

Complete and mail within 5 days after the above date to the above "Unemployment Comp. Office."

KENOSHA

1. [✓] In Wk. No. 33 ending 8/16

A. Did he work whenever you had work for him? ..... Yes or No

B. WAGES earned in that week, from you:

He says he earned $ 19.36

If wrong, CORRECT WAGES were $.....

36928 M16-12893

JOHN Q PUBLIC
1234 W WATER ST
ANYTOWN WIS

XYZ MFG CO

2. [✓] As to the END of his work for you:

A. He says he last worked for you in 1958 Wk. No. 33, on 8/12

If wrong, correct here:— Wk. No. ...., on .....

B. Check WHY he is no longer working for you:

(1) [ ] Laid off, lack of work; or

(2) [ ] Quit [ ] Misconduct [ ] Other

List all FACTS on back of top copy.

C. If he is receiving vacation, holiday or dismissal PAY, how much? For which calendar weeks?

SIGNED, for the Employer, BY SPECIMEN

If this report is tardy or incomplete, you may be charged with benefits improperly paid.

Date

Part III. Standard "ELIGIBILITY PHRASES"

Whenever you question an employe's eligibility by entering a standard "Eligibility Phrase" on your Benefit Report, you must support it by a statement of the relevant facts, as explained under the phrase in question below.

If possible, start the supporting statement on the front of your Benefit Report, and finish it on the back of the top copy. If more space is needed, staple another sheet to your report.

The law sets up certain qualifying standards, and suspends or cancels benefits under certain specified conditions. These various "eligibility" conditions are summarized by the following standard "Eligibility Phrases". (Each of these phrases is based on a specific provision of the law, as indicated below.)

Your use of these standard phrases will avoid confusion, prevent misunderstanding, and show what provision of the law you believe applies to the employe.

If you believe an employe's eligibility is questionable, therefore, use a standard "phrase" in the "Eligibility" space on your benefit report (Form UC–203 or Form UC–23).

Before entering any phrase, make sure whether it applies—by reading the legal provision and explanation set forth below.

If you enter a "standard eligibility phrase", it will indicate your belief that the employe is *not* eligible, and will show what legal provision you believe makes him ineligible. (To avoid misunderstanding, always enter the standard "phrase" in full.)

In all cases, your entry of a "standard eligibility phrase" will require a *supporting statement,*—setting forth the specific facts which you believe make the stated eligibility condition apply to the employe in the given week. (A mere contesting entry may be ignored, unless duly supported by the required evidence.)

The explanation of each phrase below tells you *when* such a statement should be filed, and what points it should cover.

If you believe that several "phrases" might apply, enter the phrase on which you prefer to rely; but *also* explain (in a supporting statement) what other provisions you believe are applicable, and why. In that way these other points can be considered, in case your preferred "phrase" is held inapplicable.

Benefits are payable whenever *no phrase is shown on your Benefit Report.*

Benefits may also be paid,—in case the required *supporting evidence is lacking.*

In some cases, you may want to raise a new eligibility issue after you have filed your UC–203 report.

Maybe you forgot to raise the issue on your UC–203 report; or perhaps you learn that something new has happened (such as, refusal of a job offered the claimant by you or another employer).

Tell us promptly. The new information will apply *only* to benefits not yet paid.

Meanwhile, we're sending you copies of benefit checks each week, as a reminder.

A. Phrases which may SUSPEND BENEFITS.

(1) "WORK AVAILABLE". 108.04 (1) (a) provides:—

(a) An employe shall be ineligible for benefits for any week in which he is with due notice called on by his current employing unit to report for work actually available within such week and is unavailable for work or physically unable to do his work.

If that condition applied to an employe in a week for which he has claimed benefits, you may use the phrase "work available" on your Form UC–203 or UC–23. (The above requirement of "due notice" means either actual or reasonably presumed notice to the given employe.)

Explain the facts in a supporting statement. Specify what week it was. Did the employe know on what days there was work for him? Who told him? If nobody told him, how should he have known?

(2) "CONTINUED UNAVAILABILITY"

Section 108.04 (1) (b) provides:—

(b) An employe shall be ineligible for benefits from an employer's account for any week if his employment with such employer was suspended by the employe or by the employer or was terminated by such employer because the employe was unavailable for work, or on a voluntary leave of absence granted for a definite period, or physically unable to work, in case such unavailability or inability continues during the week in question, or if such week occurs during the definite period of such leave and before the employe has returned to work.

"Continued unavailability" cases should be few, and exceptional. This phrase may be used for an employe who has become seriously ill, incapacitated or otherwise unavailable,—but *only if* such unavailability is expected to continue for a considerable number of weeks, and his employment has therefore been suspended or terminated.

You should use the phrase *"work available"* (in preference to "continued unavailability") as to most *short separations* due to illness or other unavailability —including *all low-earning weeks,*—where the employe had due notice of work actually available within the missed week (or on the missed days) in question.

However, if you believe that the above-quoted provisions as to "continued unavailability" do apply to an employe who claims benefits, file Form UC–203 or UC–23 as requested, but enter the phrase "continued unavailability".

Your supporting statement should set forth the facts, and the reasons why you believe the above phrase applies. (If a leave of absence was granted at the employe's request, your supporting statement should say so, and should give the starting and ending dates of the leave, and should tell whether the employe returned to work. If no leave was granted, your statement should give specific facts as to the date on which the employe became unavailable for work or unable to work, the nature of his unavailability or inability, and the date on which his employment was suspended or terminated.

(3) "PREGNANCY". Section 108.04 (1) (c) provides:—

(c) A pregnant woman shall be deemed unavailable for work and ineligible for benefits for the period which begins 8 weeks before the week which includes the expected date of childbirth and which ends 4 weeks after the week which includes the date of childbirth. The commission may require any such claimant to submit a doctor's certificate to establish such dates.

If you believe a woman (claiming benefits from you) is pregnant, use this phrase on your Benefit Report.

The commission's U. C. Dept. will then find out the expected date of childbirth, and will apply the above section.

(4) "WORKMEN'S COMPENSATION"

Section 108.04 (12) (e) provides:—

(e) Any individual who receives a temporary total disability payment under ch. 102 for a given week shall be ineligible for benefits paid or payable for that same week under this chapter.

Ch. 102 is the workmen's (accident) compensation law.

Use this phrase as to an employe, who has claimed U. C. benefits for a given week, when he's receiving (for that same week) a "workmen's compensation" payment for total disability caused by an industrial accident.

Tell us that he's disabled, and getting accident pay.

(5) "DISCIPLINE"

Section 108.04 (6) provides:—

(6) DISCIPLINARY SUSPENSION. As to an employe's weeks of unemployment by reason of a disciplinary suspension by a given employer, the employe shall be ineligible for benefits from such employer's account as follows:

1. If the suspension was for misconduct connected with his employment, he shall be ineligible for each such week.

2. If the suspension was for other good cause connected with his employment, he shall be ineligible for the first three such weeks ending within any calendar year.

The phrase "discipline" indicates a *temporary suspension* for misconduct, or other "good cause". Correspondingly, this phrase suspends benefits temporarily,—without cancelling the employe's past "credit weeks" from the employer.

If an employe files a benefit claim covering any week of "discipline", enter this phrase on your Benefit Report.

Your supporting statement should give specific facts as to the time, place and nature of the alleged misconduct (or other "good cause"), should explain how it was connected with the employe's employment by you, should give the exact date on which the employe was notified of your disciplinary action and should state on what dates the suspension began and ended.

If your claim of "discipline" is based on the employe's violation of a disciplinary rule, your statement should:— (a) quote the rule itself; (b) explain any special circumstances supporting the reasonableness of the rule, if the rule is not self-explanatory and reasonable on its face; (c) state whether the rule is well established and known to your employes; and (d) explain to what extent it has been enforced as to all your employes.

(6) "QUIT"

Section 108.04 (7) provides:—

(7) VOLUNTARY TERMINATION OF EMPLOYMENT. (a) If an employe terminates his employment with an employing unit, he shall be ineligible for any benefits based on such employment, and ineligible for benefits based on other previous employment for the week of termination and the 4 next following weeks, except as hereinafter provided.

(b) Paragraph (a) shall not apply if the commission determines that the employe terminated his employment with good cause attributable to the employing unit.

(c) Paragraph (a) shall not apply if the commission determines that the employe terminated his employment for compelling personal reason; provided that, if the commission determines that he is physically unable to work or substantially unavailable for work, he shall be ineligible while such inability or unavailability continues.

(d) Paragraph (a) shall not apply if the commission determines that the employe terminated his employment to take another job; provided, that he shall be ineligible, for benefits based on the employment terminated, until he has been employed within at least 7 subsequent weeks.

(e) Any benefits paid pursuant to paragraph (c) or (d) based on the employment terminated shall be charged against the fund's balancing account; but the employer shall continue to be recognized as an interested party in any such case.

In case you believe an employe "quit", but he claims benefits,—file a UC–203 or UC–23 for him (promptly upon receipt of a request for such a report). Enter the phrase "quit", under "Eligibility" in your report, and specify the "week number" of the week in which he quit.

Your supporting statement should tell when the employe left your employ, and what reason he gave to you (to his foreman, the personnel department, or the like) for his quitting.

If paragraph (c) or (d) applies, the industrial commission's U. C. Dept. will also apply paragraph (e).

(7) "REFUSED WORK"

Section 108.04 (8) provides:—

(8) SUITABLE WORK. (a) If an employe fails either to apply for work when notified by a public employment office or to accept work when offered to him, and such failure was without good cause as determined by the commission, he shall be ineligible for the week in which such failure occurs and thereafter until he has again been employed within at least 4 weeks and has earned wages equalling at least 4 times his weekly benefit rate.

(b) If the commission determines that such a failure has occurred with good cause, but that the employe is physically unable to work or substantially unavailable for work, he shall be ineligible for the week in which such failure occurred and while such inability or unavailability continues.

Where you know that a totally unemployed worker (claiming benefits from you) has "refused work" offered him by an employer directly (instead of through the employment office),—you should report all relevant facts, as follows:—

(a) If such a job refusal occurs before you file your Benefit Report,—enter the phrase "refused work",—and explain the circumstances.

(b) If the employe is receiving benefits at the time when such a job refusal occurs,—send us a letter at once (addressed to *Adjustments,* Unemployment Compensation Department, 137 East Wilson Street, Madison 1, Wisconsin), and send a copy of your letter to the "Examiner" at your district employment office. Label your letter "Refused Work",—to show that it is urgent.

An employe may of course have "good cause" for refusing a job. For example, under 108.04 (8) (d) or (9).

(8) "LABOR DISPUTE"

Section 108.04 (10) provides:—

(10) An employe who has left (or partially or totally lost) his employment with an employing unit because of a strike or other bona fide labor dispute shall not be eligible for benefits from such . . . employer's account for any week in which such strike or other bona fide labor dispute is in active progress in the establishment in which he is or was employed.

Send a SPECIAL LETTER—AT ONCE.

Promptly after a labor dispute *in your establishment* has started to interrupt work, you should report this fact,—in a letter setting forth the date on which the dispute started, the nature of the controversy, the establishment directly involved, the number of employes employed in such establishment just before the dispute started, and the number of them out-of-work because of the dispute. Don't wait until you have to file a benefit report for one of the employes in question.

Address your letter to "Adjustments, Unemployment Compensation Department, 137 E. Wilson Street, Madison 1, Wisconsin", and send a copy of your letter to the "Examiner" at your district employment office.

If we ask you to file a Benefit Report as to any such employe, you should enter the words "labor dispute—letter of _____", on your UC–203 or UC–23 report, and specify the first week during which the employe was out of work because of such dispute. (Specify the date of the letter which you filed, as to the given dispute.)

B. "MISCONDUCT"—may BAR BENEFITS (and cancel past CREDIT WEEKS)

Section 108.04 (5) provides:—

(5) An employe's eligibility, for benefits based on those credit weeks then accrued with respect to an employing unit, shall be barred for any week of unemployment completed after he has been discharged by the employing unit for misconduct connected with his employment; . . .

In case you believe that the phrase "misconduct" applies to an employe's discharge, but he claims benefits, file a UC–203 or UC–23 for him (promptly upon request). Enter the phrase "misconduct".

Your supporting statement should state specific facts as to the time, place and nature of the alleged misconduct, and should explain how it was connected with the employe's employment by you.

If your claim of "misconduct" is based on the employe's violation of a disciplinary rule, your statement should:— (a) quote the rule itself; (b) explain any special circumstances supporting the reasonableness of the rule, if the rule is not self-explanatory and reasonable on its face; (c) state whether the rule is well established and known to your employes; and (d) explain to what extent it has been enforced as to all your employes.

NOTE: The above provision does not bar benefits where an employe is laid off because of mere inefficiency or poor workmanship. Unsatisfactory conduct, — even though it results in discharge,—is not necessarily *"misconduct"*. In general, "misconduct" exists only where the employe is guilty of some willful act, failure or course of conduct—involving insubordination, the violation of established rules, or violation of those standards of behavior which an employer has a right to expect of every employe.

C. Phrases as to "WAGES" for Specified Weeks

These phrases question:—(a) whether the claimant is unemployed in certain weeks, or (b) whether full benefits are payable.

(1) "HOLIDAY PAY"

Section 108.05 (4) (a) provides:—

> **(a)** An employe's holiday pay for a given week shall, for benefit purposes, be treated as wages for that week only if it has become definitely payable to the employe within 4 days after the close of that week.

When a paid holiday falls in a calendar week for which an employe is claiming benefits, will his pay for that holiday be counted as "wages"—in figuring his benefits for that week?

Only if it has been settled, by Wednesday of the next week, that he will definitely receive pay for that holiday—without any ifs or buts about it.

Whether a claimant's holiday pay will count as "wages" —for the week in which the holiday occurs—doesn't turn on when it's paid. It turns on when his right to receive such pay has become final,—without depending on his being rehired or on any other future event.

If a claimant's right to holiday pay has thus been settled, and has become definite and final,—by the Wednesday which follows the holiday week,—then use the phrase, and specify:—(a) how much holiday pay, and (b) for which week.

(2) "VACATION PAY"

Section 108.05 (4) (b) provides:—

(b) An employe's vacation pay shall, for benefit purposes, be treated as wages for a given week only if it has by the close of that week become definitely allocated and payable to the employe for that week and he has had due notice of such allocation; provided that, in any case where an employe's vacation pay has not been thus allocated to a given week, his employer may:

1. Allocate it to a future week of the employe's unemployment, with due notice to him and to the commission; or
2. Deduct from such pay, without penalty under s. 108.24, such benefits paid for a past week as the employe would not have received if such pay had been currently allocated to such week, in which event the employer shall promptly transmit the amount thus deducted to the commission for his account in the fund and the commission shall correct the employe's benefit credits accordingly.

If an employe claims benefits for a week for which he will receive vacation pay from you, that pay can be counted as wages,—in figuring his benefits for that week,—if by the close of that week:—

(a) It has become definitely payable (so that nothing will prevent his getting paid), *and*

(b) It has been allocated to that week (for example, by union contract or by general practice), *and*

(c) The employe had due notice of that fact (for example, by a letter, posted notice, or union agreement).

If all three of the above conditions have been met, enter the phrase "Vacation Pay" and specify each week for which a vacation payment was or will be made, and its amount for each such week.

What happens if one or more of the above conditions is not met by the close of that week? If you still want the vacation pay taken into account, you have two choices:

(a) You may deduct from the employe's vacation pay the amount of benefits (for a past week) which he would not have received if his vacation pay had been currently allocated to that week. If you do that, you must transmit the amount thus deducted to the commission, to be credited both to your account and to the employe's benefit rights.

or (b) You may notify the commission and the employe that you want the vacation pay allocated to his next week of unemployment. Specify the amount of such vacation pay and the date it was paid.

(3) "DISMISSAL WAGE"

If an employe who claims benefits is being paid a "dismissal wage" for one or more weeks after his lay-off, enter the phrase "Dismissal Wage" under "eligibility" on your UC–203 or UC–23 benefit report for him.

Specify to which weeks the dismissal wage applies, and the amount of dismissal wage for each week.

(4) "OTHER WAGES" or "OTHER WORK"

If you know that a benefit claimant is doing other work for pay, which might affect his benefit payments, tell us where he's working, on form UC–203 or UC–23, or by phone or by letter to the U. C. Examiner at your district employment office. This will help make sure he reports the wages from that job, when he claims each week.

D. Phrases as to QUALIFICATION for BENEFITS

(1) "_____ CANNING SEASON"

Section 108.04 (4) (c) provides:—

(c) An employe shall not be eligible to receive benefits from the account of an employer who is engaged in the canning of fresh perishable fruits or vegetables, based on his weeks of employment by such employer ending within a given calendar year, if during such year he has been employed by such employer solely within the active canning season or seasons (as determined by the commission) of the establishment in which he has been employed by such employer, unless he had earned wages (for services performed for one or more other employing units, and submits adequate evidence of such wages) of $200 or more during the 52 weeks preceding his first week of employment by such canning employer ending within such year.

The phrase should always indicate the season in question, for instance "*pea* canning season", "*corn* canning season", or the like).

Enter the phrase "_____ Canning" on your Benefit Report only if the claimant's only work for you was within your active canning season or seasons.

In such a case, it is then up to the claimant to show that his wages were $200 or more, from all other employing units combined, in the 52 weeks before he began his canning season work for you.

(2) "SELF-EMPLOYED"

Section 108.02 (22) provides:—

(22) Self-Employment. An individual shall be deemed to be "self-employed" if he is engaged (not in the employ of another) in a business or enterprise which he has undertaken for the purpose of producing a substantial part of his gross income.

Section 108.04 (4) (d) provides:—

(d) An employe shall not be eligible for benefits from a given employer's account for any given week, if he is customarily self-employed, and there have been not more than 20 weeks in which he worked as much as 15 hours per week for such employer, and he has worked at his self-employment 30 or more weeks out of the 52 weeks preceding termination of his employment by such employer, and can at such termination reasonably return to his customary (or other similar) self-employment.

When you file a *Benefit Report* with respect to such an employe, you should enter the above phrase under "Eligibility" on Form UC–203 or UC–23.

Your supporting statement should specify in how many of the past 52 weeks the employe worked at his customary self-employment, and should describe the nature of such work. You should also certify that there have been not more than 20 weeks in which the employe worked as much as 15 hours for you, and that all the other (above-quoted) provisions of Section 108.04 (4) (d) applied to the employe *at the close of the last week* covered by your Benefit Report.

(3) "PIN BOY"

Section 108.04 (4) (e) provides:—

(e) In no case shall any employe employed by any bowling alley as a pin boy be eligible to receive any benefits, based on such employment, for unemployment during May, June, July, or August.

If you operate a bowling alley, and a claim is filed by an employe who worked for you *as a pin boy,* you may enter the phrase "pin boy" under "Eligibility" on your Form UC–203 or UC–23 report for him. Your supporting statement should state in how many weeks the employe worked for you solely as a pin boy.

This entry will prevent the payment of benefits for unemployment occurring from the first week ending in May through the last week ending in August.

(4) "STUDENT in _____ of those weeks"

Section 108.04 (4) (f) provides:—

(f) An employe shall not be eligible for benefits from a given employer's account for any given week, nor shall such week be counted as a credit week for benefit purposes, if such employe is or was a student (regularly attending an established educational institution in the most recent school term) and his employment in such week occurred:

1. Solely within the customary vacation days or periods of schools, colleges, and universities.
2. Outside of school hours for not more than 4 hours on any full school day.

3. By such educational institution.
4. By a separate employer as a formal and accredited part of the regular curriculum of such educational institution.
5. Outside of *his* school class hours for not more than 24 hours in the given week, if in such week he is carrying at least a half-time schedule of courses in such school.

If and when you file a *Benefit Report* for such an employe:—(1) Your report should cover all his work weeks. (2) Remember that each work week in which he did *any* work for you, *outside the limits* specified above, is a "credit week"; so don't enter the phrase "student" for any such week. (3) Enter the above phrase on Form UC–203 or UC–23, and specify in how many work weeks you employed him *solely within the above limits.*

(5) "Not Covered in _____ other work-weeks"

If you receive a Benefit Liability Report (UC–203) for any individual who has worked for you, file it promptly,—even if you believe that some or all of his work for you was "not covered" by the law; but enter (and explain) the above phrase under the "Eligibility" section of your report-form, as follows.

If you claim that during some of his work-weeks he did no work at all for you in "employment" covered by the law, do not report those weeks as "credit weeks"; but:—

(a) enter the phrase "Not Covered in _____ other work-weeks"—under the "Eligibility" section—showing in *how many* calendar weeks his work was done *entirely* in an employment *excluded* by the law; and

(b) specify which exclusion you believe applies, under the law,—*and why.* (Compare section 108.02 (5) (g) of the law, and specify on which paragraph you rely.)

This phrase should *not* be used as to any calendar week in which any part of the individual's work was "covered" under the law. Every such week is a "credit week".

E. Phrases as to RETIREMENT

Section 108.04 (15) provides:—

(15) RETIREMENT PAYMENTS. If an employe claims benefits based on his past work for a covered employer, but such employer duly notifies the commission pursuant to subsection (13), and the commission determines, that the employe is receiving or has claimed and will receive retirement payments, as to any week covered by his benefit claim, under a group retirement system to whose financing any employing unit has substantially contributed or under a government retirement (or old-age insurance) system or under both, then the benefits thus claimed:

(a) Shall be denied for any such week, from the account of such employer, if the employe left his employment with that employer to retire before he reached the compulsory retirement age used by that employer.

(b) Shall not be denied for any such week, from the account of such employer, if the employe is otherwise eligible and left or lost his employment with that (or any other) employing unit because he had reached the compulsory retirement age used by the employing unit in question.

(c) Shall, if payable, be determined for any such week by treating all but $5 of the employe's weekly rate of such retirement payments as if it were "wages".

108.04 (15) will apply to a claimant only if the employer (claimed against) chooses to raise the retirement issue.

The employer may raise the retirement issue on his UC–203 report; or he may raise it later, as to benefits not yet paid.

There are really two kinds of "retirement" issues, under section 108.04 (15).

(1) "QUIT TO RETIRE"

The phrase "quit to retire" (i.e. to draw his retirement benefits, without working any more) will apply only if the worker's retirement occurred (a) before any compulsory retirement age which applied to him, or (b) when no such age applied to him.

So, if you claim that a worker "quit to retire", your report to us should specify both (a) the compulsory retirement age which applied to him, if any did, and also, in that case, (b) the worker's age at retirement.

If you have any evidence that the worker left your job in order to draw his retirement pay (and not for some other reason), report that too.

You should also report the kind of retirement pay he is receiving; since when; under what retirement system; and how much, per month.

If 108.04 (15) (a) applies, it bars benefits from the employer thus quit.

(2) "RETIREMENT PAY" (specify)

If this phrase applies, it may reduce a claimant's U. C. benefit payments,—depending on how much retirement pay he is receiving,—pursuant to 108.04 (15) (c).

But note that retirement pay not yet claimed doesn't count.

An employer who lays off an employe may raise this issue. For instance, if he believes the employe is receiving "social security" retirement pay.

If you choose to raise the retirement-pay question about a U. C. claimant, tell us what kind of retirement pay he is receiving; under what retirement system, or systems; since when; and how much, per month. (If you aren't sure how much, report your best estimate.)

For instance, your report might read:—"Retirement pay, $80 per month. Our company pension plan, $30, starting May 1958. Social security (OASI), about $50."

Part IV. Applying the Law's "WORK-TEST"

A. List your Job-Openings with Wisconsin's State Employment Service.

Each jobless claimant in Wisconsin must register for work, with the local office of the Wisconsin State Employment Service,—in order to be eligible for unemployment benefits.

So the public employment service office is your largest and best reservoir of labor supply.

YOU SHOULD USE THAT SERVICE FULLY.

By listing your job openings with the public employment office, you can help workers find jobs more promptly, and thus shorten unemployment and benefits.

If you list your job openings with the employment office it can send you the best qualified workers *available* in its files.

If you don't:—(1) you're failing to use a free source of available labor; and (2) unemployed claimants lose a chance to find a new job connection quickly; and (3) some employer is likely to be charged with extra benefits. (It might be YOU.)

B. Report Promptly the Results of Your Hiring Interviews with Benefit Claimants.

To remain eligible for benefits, a benefit claimant must (unless he has "good cause" under the law) :—

(a) apply for any reasonable job to which the employment office refers him; and

(b) accept any reasonable job which is definitely offered to him by an employer.

This is the law's basic work-test for benefit claimants. How well it works depends in large part on YOU,—and on every other employer.

To do a good job of enforcing the law's work-test, the commission needs certain information from you whenever you interview a job applicant who is currently claiming unemployment benefits.

If the claimant refuses the job (or if you decide not to offer it to him), it is important to have the facts.

A claimant has the right to refuse any job which is not to his liking—before or after it is offered to him; but his refusal may suspend his benefits, unless he had *"good cause"*.

What constitutes "good cause" does not depend solely on the worker's (or the employer's) ideas—the commission must make that determination, based on the facts.

If you offer a job to a claimant, but he refuses it, or if his actions are such as to prevent you from offering him the job (so you believe he is "work-shy"),—report the facts (by phone or letter) to the "U. C. Examiner" at your district employment office.

Report the claimant's name and address (and social security number, if possible); when you interviewed him; what kind of work and hours and wages you discussed; whether you clearly offered him the job; his reason for not wanting that job; and your comments on his reason.

Part V. OTHER U. C. POINTERS

A. Use Your COPIES of Benefit CHECKS.

Each week you will receive copies of any benefit checks charged to your account. From them you can spot any charging errors.

We also ask, each time we send you a worker's check-copy:—"Is he working elsewhere? Could you re-employ him?"

If an employe earns wages in a week for which he claims benefits, he must report them. We record them on his benefit check and on your check copy, near the left end.

In the lower left corner, we show the calendar week *number* of the check's Benefit WEEK.

If you know that an employe earned wages which do not appear on your copy of the check covering the week in which he earned them, tell us. He may be guilty of fraud, and the law's fraud penalties should be applied.

Sometimes an employe claims benefits for one more week, after going back to work for you (but before receiving his pay-check). He shouldn't, if he earns as much as his weekly benefit rate. Do any of YOUR employes do this?

Your benefit check copies will tell you,—if you look. (They won't, if you don't.)

B. Use your U. C. District Office.

To operate Wisconsin's "employment security" program (unemployment compensation and employment service) the industrial commission maintains district offices in these cities:—

Appleton	Lancaster	Rhinelander
Ashland	Madison	Sheboygan
Beaver Dam	Manitowoc	Stevens Point
Beloit	Marinette	Superior
Eau Claire	Milwaukee	Watertown
Fond du Lac	(3 offices)	Waukesha
Green Bay	Neenah	Wausau
Janesville	Oshkosh	Wisconsin Rapids
Kenosha	Racine	
La Crosse		

Get to know your district office, and your U. C. Examiner. (To phone him, look under "Unemployment Compensation" in the phone book.)

C. Use Calendar Week NUMBERS.

You'll find a calendar of U. C. week numbers:—(1) on the back of your UC–203 or UC–23 copy; and also (2) here, on the next page.

To Wisconsin EMPLOYERS:—

Please USE these **UC–201** **Instructions, as to**

BENEFIT NOTICES AND REPORTS

required from you under Wisconsin's U. C. law.

We'll always need YOUR COOPERATION, under Wisconsin's U. C. law:—

1. *to apply the law correctly*
2. *to apply it fairly*
3. *to help workers find suitable jobs*
4. *to pay U. C. benefits promptly*
5. *to encourage more regular work*
6. *to do a good job of operating this important state program*
7. *in all those ways, to help maintain Wisconsin's faith in democratic government.*

Unemployment Compensation Department Representative

REQUEST FOR HEARING. As to any initial determination under section 108.09 or 108.22(8), either party thereto may request a hearing by an appeal tribunal as to any matter therein, pursuant to section 108.09.

Any such request shall be filed in writing with a representative of the commission's unemployment compensation department at a district public employment office, except as a commission deputy may waive that place of filing in a specific case. (See Com. Rule 40A.)

UC-401B
Wis. 2-55

INDUSTRIAL COMMISSION OF WISCONSIN
UNEMPLOYMENT COMPENSATION DEPARTMENT
Appellate Section

137 E. Wilson St.
Madison 1, Wis.

In the matter of the claim of

Employe,

involving

The account of

Employer,

Hearing No.

We acknowledge receipt of your request for hearing on this claim. The matter will be scheduled in the near future, and you will be notified of the time and place of hearing several days in advance of the hearing date. You must be prepared to present your case at the time scheduled, since the commission will not continue hearings to a later date except in case of emergency. Should an emergency arise that will prevent your appearing at the time appointed, immediately phone or otherwise promptly notify your district employment office.

The hearing will be before an appeal tribunal established by the Industrial Commission to hear and decide the issue. You may, if you wish, be represented at the hearing by an attorney or agent, or you may present your own case. The law provides that agents or attorneys representing the employe shall not charge more than 10% of the maximum benefits at issue, unless the commission has first approved a higher fee. If you appear without attorney, the appeal tribunal will endeavor to bring out the necessary facts from the witnesses produced.

Each party must arrange for the appearance of his own witnesses at the time scheduled for the hearing. Be sure to bring to the hearing those persons who have "first hand" knowledge of the facts of the case. The appeal tribunal will not consider hearsay evidence in reaching its decision. If you intend to rely in whole or in part upon documentary evidence, bring the original papers whenever possible and have witnesses in attendance who are competent to testify to their authenticity and contents. If a necessary witness refuses to appear, a subpoena should be obtained from your examiner at your local employment office and served on the witness before the hearing.

If you have not already done so, we suggest that you confer with our examiner at your local employment office so that you may fully understand the law and your rights in regard to this claim. It may appear from such a conference that your request for a hearing was based on a misconception of the law, or that the amount involved is less than you realize. The law contemplates that you may withdraw your request for hearing at any time; and, in view of the delays and expenses necessarily involved in any hearing, we urge that you make certain that you wish to proceed, before a hearing is actually scheduled.

Madison 1, Wis.

Employe,

Hearing No.

involving

The account of

Employer,

To the respondent named above:

You recently received a copy of a decision issued by the deputy of the commission, which decision suspended or terminated the benefit rights of the above employe with respect to your reserve account. The employe has taken exception to the commission decision, and we enclose herewith a copy of the request for hearing which notes the exceptions taken.

The decision of the commission was not based on any denial of liability you may have made but on information obtained from the commission on its own investigation. However, since the matter involves the rights of the employe with respect to your account, you are being furnished a copy of the request for hearing and will be notified of the time and place of hearing.

Inasmuch as the decision was not based on information furnished by you, it will not be necessary for you to attend the hearing, though you may do so if you desire. If you have any facts bearing on the question in issue, we urge you to be present.

Very truly yours,

To the EMPLOYER:-

Please complete this required report—promptly.

Make SURE you fill in Headings 1 and 2.

(A) We need this report from you, in order to determine:-

(a) Whether this Employe has met the law's "qualifying work" requirement; and

(b) Whether he is eligible for benefits, based on his work *for you;* and, if so, for how much benefits.

(B) If you duly contest his claim, under Heading 4, by entering a valid "phrase" plus supporting facts, you will receive a separate determination on your issue; but only if the Employe actually claims *benefits based on his work for you.*

(C) If and when benefits are allowed, based on the Employe's work for you, you will receive a copy of the determination showing how much benefits he might draw, based on such work.

★ ★ ★

In filling out this report, please follow the directions printed under each Heading.

If in doubt, please refer to your copy of our printed "Instructions" (UC-201).

INITIAL DETERMINATION as to UNEMPLOYMENT BENEFITS (under Wisconsin's Law)

Wis. 7-56

A. The EMPLOYE has filed a VALID BENEFIT CLAIM, based on his work for the EMPLOYER. Benefits are ALLOWED, as follows:

B. _____ is the NUMBER of WORK-WEEKS, for the Employer, on which the benefit rights below are based.

C. $_____ is the Employe's "WEEKLY BENEFIT RATE", for a week of TOTAL unemployment.

D. $_____ is the MAXIMUM BENEFITS which may become payable under this DETERMINATION.

E. WK. NO. _____ of 19_____ is the FINAL WEEK for which any of those benefits can be paid.

F. _____ is the NUMBER of BENEFIT WEEKS for TOTAL unemployment.

G. WK. NO. _____ IS the FIRST WEEK for which benefits are being paid, by separate mail.

INDUSTRIAL COMMISSION OF WISCONSIN

Deputy, Unemployment Compensation Dept.

DATED_____
(and delivered or mailed to the Employe)

Benefits are payable only for those weeks in which the Employe is unemployed and eligible.

OVER

To the Employer:— This determination is based on your own report(s).

If you raised any eligibility issue, it has been finally determined under the law, and any disqualification imposed has been satisfied. Therefore this determination is not subject to appeal by you.

However, if you discover any error in your Benefit Liability Report(s) on which this determination is based, and wish to correct it, please write or wire at once to the Unemployment Compensation Dept., 137 East Wilson St., Madison 1, Wisconsin.

To speed any correction, give the employe's U. C. "claim-number", as shown above his last name.

(Adjustment will be made, so far as benefits then unpaid hereunder may permit.)

YOU WILL RECEIVE A COPY OF EACH BENEFIT CHECK issued under this determination.

If you offer a job to this Employe while he is drawing benefits, and he refuses it, report that fact at once. Send us a **special delivery** letter (addressed to **Adjustment,** Unemployment Compensation Dept., 137 East Wilson St., Madison 1, Wisconsin), and send a carbon copy of your letter to the Examiner at your district employment office. Label your letter "Refused Work,"—to show that it is urgent.

How to Win--or Lose

(Fourth in a series.)

UNEMPLOYMENT INSURANCE AND A HANDFUL OF VOTES

In the past session of Congress, one measure of vital importance to labor was saved by two COPE-endorsed Senators who were each elected by less than 51 per cent of the vote—and each of whom will be up for reelection in 1962.

This measure was legislation extending temporary unemployment compensation benefits to 725,000 workers who have exhausted jobless insurance payment rights since July 1960 and who are still out of work. An additional 2.4 million workers who are expected to use up regular state benefits before next April 1 will be helped by the program. Experts estimate that working people will receive a total of some $1 billion from the temporary jobless pay program.

On March 16, the Senate defeated an amendment to the measure by Harry Byrd (D., Va.) requiring each state to repay advances from the Federal Government to it solely from taxes imposed on employers within that state. The effect of this move would have been to transform the program into a deferred-loan operation. Instead of calling for employers across the nation to pay for the cost of the benefits, the Byrd proposal would have put the burden only on employers in states hardest hit by unemployment. **This totally neglected the fact that the recession in employment is national, not local.**

Forty-four Senators voted **against** the Byrd amendment, or **for** an effective temporary unemployment compensation law; and **42** voted **for** the Byrd amendment. In other words a switch of two votes would have meant passage of the amendment and would have crippled the legislation critically.

Two of the Senators voting against the crippling amendment were **John Carroll (D., Colo.) and Joseph Clark (D., Pa.).** It so happens that Carroll's victory margin when he was elected in 1956 was only some **2,800 votes out of 637,000—or a winning percentage of 50.2.** Clark won his election that year by some **18,000 votes out of 4,530,000—or a winning percentage of 50.1.**

In short, if a handful of voters in Colorado and Pennsylvania who favored these two Senators had thought "my vote doesn't count" and had failed to register and to go to the polls on Election Day, millions of working people now walking the streets in search of jobs would have suffered.

Have YOU registered to vote?

THOSE STARRY-EYED YOUNGSTERS

"A program designed to recognize individual achievement and call for **less government control of individual affairs** is to be established as a national project of the U.S. Junior Chamber of Commerce."—The Stuart (Fla.) News.

"Lack of funds may force the closing of the Stuart Chamber of Commerce during the last two weeks of August and most of September, according to William Todt, Chamber president. Todt said that the failure of many Chamber members to pay their dues and **'the lack of support by the City of Stuart'** were causes of the deficiency in funds. **The city annually provides the Chamber with a building and its maintenance** but no longer funds for advertising or publicity, although it pays a press agent $1,200 annually to write 'fishing news'."—Same paper, same day.

PER FARM INCOME TO REACH RECORD HIGH THIS YEAR

The Farm Bureau, Chamber of Commerce and National Association of Manufacturers and their political pals claim that the Kennedy Administration has hurt the farmers. (They also claim it has hurt business despite the fact that profits are up.) But according to Fortune, the magazine of Big Business itself, "1961 will go into the record books as the **best farm year since Korea—on some counts, the best ever."**

Fortune points out that the net realized income per farm will shoot up to a **record** $3,300 this year. It adds, as if to muzzle the Kennedy critics: **"The sharp improvement in farm income** did not originate in the market place; it **was made in Washington . . ."**

135 BANK PRESIDENTS HEADED FOR JAIL

"In the fiscal year we are in, 135 bank presidents in America are going to jail for stealing money from the banks of which they are presidents. If we apply the same percentage it would mean that 12 International Union presidents would go to jail this year because they stole from their members."—AFL-CIO Secretary-Treasurer William F. Schnitzler in address to 36th convention of the Street, Electric Railway & Motor Coach Employes.

10-45 INDUSTRIAL COMMISSION OF WISCONSIN

TO THE EMPLOYE: -

YOUR CURRENT CLAIM FOR UNEMPLOYMENT BENEFITS MEANS THAT YOU WANT A SUITABLE JOB—AND WILL ACCEPT ONE AS SOON AS POSSIBLE.

1. THE EMPLOYMENT SERVICE HAS NOW NOTIFIED YOU THAT A JOB IS OPEN WITH THE EMPLOYER NAMED ON THE FRONT OF THIS SHEET.

   YOU SHOULD APPLY FOR THAT JOB, IN PERSON, AT ONCE.

   FAILURE TO APPLY CAN STOP YOUR BENEFITS. (SEE 4, BELOW.)

2. YOU MUST BRING BACK THIS FORM, WITH THAT EMPLOYER'S SIGNATURE, TO CONTINUE YOUR BENEFIT CLAIM NEXT WEEK.

   FAILURE TO DO SO CAN STOP YOUR BENEFITS. (SEE 4, BELOW.)

3. WHAT SHOULD YOU DO, IF YOU ARE OFFERED A JOB?

   IF YOU ARE OFFERED A JOB, YOU SHOULD TAKE IT, UNLESS YOU HAVE A REASON FOR REFUSING IT WHICH WOULD BE ACCEPTED AS "GOOD CAUSE" UNDER THE LAW.

   FAILURE TO TAKE IT CAN STOP YOUR BENEFITS. (SEE 4, BELOW.

4. WHAT HAPPENS IF YOU FAIL: -

   (A) TO APPLY FOR THE JOB?
   (B) TO BRING BACK THIS FORM?
   (C) TO TAKE A JOB OFFER?

   IF YOU DON'T HAVE "GOOD CAUSE" FOR YOUR FAILURE, THE LAW STOPS (OR POSTPONES) YOUR BENEFITS, UNTIL YOU DO GET A JOB AND (1) WORK IN 4 WEEKS AND (2) EARN 4 TIMES YOUR WEEKLY BENEFIT.

5. WHAT IS "GOOD CAUSE" FOR REFUSING, OR FAILING TO APPLY FOR, A JOB?

   THAT DEPENDS ON YOUR OWN CASE. NO FLAT ANSWER CAN BE GIVEN.

   IF YOU ARE IN DOUBT, YOU SHOULD TALK IT OVER WITH THE UNEMPLOYMENT COMPENSATION REPRESENTATIVE. HE WON'T TELL YOU WHAT TO DO, BUT HE CAN GIVE YOU INFORMATION ABOUT LOSS OF BENEFITS TO HELP YOU DECIDE.

6. YOUR JOB PROSPECTS

   NOT EVERY WORKER WILL BE ABLE TO FIND JUST THE KIND OF JOB (AND PAY) HE WANTS.

   AND REMEMBER, WHENEVER YOU TURN DOWN ANY JOB IT MAY STOP (OR POSTPONE) YOUR UNEMPLOYMENT BENEFITS.

HOW THE PRESENT FEDERAL-STATE SYSTEM CAME TO BE ESTABLISHED

In 1934 the Committee for Economic Security, appointed by President Roosevelt, was strongly impressed by the need for a national unemployment insurance system. For many years unemployment insurance bills had been introduced in state legislatures but only Wisconsin had acted, in 1931. Other states held back fearing to be put at a competitive disadvantage in their industrial development. The states had been reluctant to burden their employers with special taxes when competing industries in other states were not similarly burdened. Furthermore, it was clear that unemployment was more than an individual state problem. It was a national catastrophe and required national action. All these factors argued for a single national system.

On the other hand, the Committee feared that a single national unemployment insurance system might be upset by the Supreme Court which had not yet accepted the broad view of the Federal Government's responsibility for the general welfare.

The result was a combination federal-state program established in Titles III and IX of the Social Security Act.[1] A tax offset feature was used to induce states to set up their own unemployment insurance system. This law makes employers in all states liable for a 3% tax on payrolls. However, they are relieved of payment of 90% of this federal tax if they make contributions to state funds for unemployment compensation. The inducement proved sufficient and every state soon adopted legislation to take advantage of the tax offset.

---

1. The basic federal statute dealing with the unemployment insurance system is the Federal Unemployment Tax Act which is chapter 23 of the Internal Revenue Code. This is contained from pages 287 to 301 in Compilation of the Social Security Laws through December 31, 1958. The remaining statutory provisions dealing with unemployment compensation are contained in several titles of the Social Security Act. Title III of that act (Compilation of the Social Security Laws, pp. 110-112) contains the provisions dealing with grants to the states for unemployment compensation administration. Other provisions relating to the handling of the unemployment trust fund are contained in Title IX of the Social Security Act (Compilation of the Social Security Laws, pp. 130-134). Title XV of the Social Security Act deals with unemployment programs covering employees of the Federal Government and ex-servicemen.

From the remaining 10% of the federal tax, the portion for which no offset was allowed, the Federal Government provides grants to the states for the full cost of the state administration. The federal law also set up certain requirements which must be met under the state laws in order for employers to be eligible for the 90% offset against the federal tax. These "standards" require the (1) payment of benefits through a public employment office, (2) depositing state funds in an unemployment insurance fund managed by the federal treasury, (3) the right of unemployed workers to refuse jobs which do not meet prescribed standards without having their benefits withheld, (4) and the right of an unemployed worker to appeal if his claim is denied. Also, the states must set up administrative measures which are calculated to insure prompt payment of benefits when due.

In short, the function of the Federal Government now is limited primarily to insuring good administrative practices on the part of the state. There are no federal requirements as to eligibility, duration and amount of benefits. The failure of the Federal Government to require adequate benefit standards has been a persistent concern from the beginning.

It was hoped that a compromise federal-state system would bring some uniformity. The federal act levied a 3% tax on payrolls and allowed a 90% offset. It was expected that employers, therefore, would pay 2.7% on payrolls into the state funds. No employer in any state would be at a competitive advantage or disadvantage with any other employer in his own or any other state. With uniform rates it was hoped that the states might adopt fairly uniform provisions governing eligibility, benefits, duration and disqualification.

This has not happened, however, largely because of the introduction of experience rating in the state laws under which employers may pay a lower contribution rate if benefit payments to his own employees are low in number and amount. This principle was adopted from state legislation in the workmen's compensation field where it provided a financial incentive to reduce accidents. The Wisconsin unemployment insurance law had included experience rating on the theory that employers would be able to stabilize their work force and reduce their unemployment. Employers generally favored experience rating as a potential instrument for reduced rates. At the urging of Wisconsin representatives and other supporters of experience rating, Congress made experience rating compulsory

in the states. State contribution rates can be lowered below 2.7% only on the basis of individual employer experience with jobless pay claims. By requiring individual employer experience rating as a condition for the offset, other forms of rate adjustment such as on a state-wide basis were prohibited.

In the changing economic circumstances of war and post-war years experience rating has provided a financial incentive for lagging benefits behind the rise in wage levels and increasing the variations and lack of uniformity in state laws. Differential tax rates as between the states and as between employers have encouraged great variation in benefit levels, eligibility requirements, disqualification rules, etc. The cumulative effect has been a cheapening in several important respects and a generally lower cost level than that originally anticipated.[1]

The average employer contribution in one state may be seven times as much as in another;[2] and within a state tax rates can vary from 0% to 4.5% of taxable payroll.[3]

The variation in the tax rate made possible by experience rating then has defeated the original desire for some uniformity in the state laws, has inhibited adjustment of the weekly benefit amount with rising wage levels, has put many states at a competitive disadvantage, and has raised the question of the need for more federal standards. The variations in benefit levels are discussed in the next chapter.

2. Chart B shows the current variation in average rates as between states.
3. Chart D shows the variation within states.

APPLICATION OF UNEMPLOYMENT INSURANCE PRINCIPLES IN THE STATE LAWS

Some principles of unemployment compensation are uniformly applied and some are not. For example, where the federal government has insisted -- such as on the principle that benefits be payable as a matter of right to eligible workers -- there is general observance. The unemployed worker does not have to submit to a needs test such as he would for relief or public assistance. So long as he is genuinely in the labor market, unemployed through no fault of his own or because of good cause, has genuine intention of working again as soon as he can find a suitable job -- in such a circumstance he is entitled to a benefit regardless of whether he has savings or other income. The application of the eligibility rules vary, but no needs tests are applied.

The great variations in state laws are in those matters where the Federal Government has no supervisory role, notably on benefit amounts and wage qualifying requirements. Chart A in the Appendix compares the state laws state-by-state.

Weekly Benefits and the Wage Insurance Principle

Originally unemployment compensation was conceived as a wage replacement program. The weekly benefit amount was intended to be some specified proportion of the claimant's lost weekly wage.[1] In this way it was presumed that his benefit would cover his living costs or non-deferrable expenditures. Also, with such a benefit formula, a constant proportion of lost purchasing power would be replaced.

Originally state laws embodied this wage loss idea in their individual benefit formulas or benefit schedules, which gave each claimant a benefit of 50% or more of his weekly wage.[2] In addition, a ceiling or maximum amount cut off the individual benefit formula in the higher wage and salary ranges; the higher-paid employees received the fixed maximum rather than a benefit of half their wage loss. The original laws set maximums high enough so that the individual half-of-

---

1. Draft laws prepared by the Committee on Economic Security in 1935 recommended a benefit of 50% or more of weekly wage loss for total unemployment.
2. In most states this is expressed as a fraction of "high quarter" earnings which averages weekly wages over a 13-week period. Eleven states also provide supplemental dependent allowances.

wages benefit principle operated over a wide range of wage levels and for the great majority of covered workers. Only ten or twenty percent of wage earners in the highest brackets received the maximum rather than half their own wage loss.

The subsequent history of the program has changed this wage insurance feature. The maximums have not been raised commensurately with wage levels, with the result that individual benefit formulas have been compressed and restricted in their application to lower-paid employees. As time went on, fewer and fewer claimants drew a benefit of half their own wage loss; more and more drew the maximum. Instead of being a wage insurance system, unemployment insurance has now become a fixed benefit program for the majority of covered employees. In some states now as many as three out of four claimants receive the maximum and, therefore, less than half their own individual wage loss.

To illustrate, a worker making the average wage of $23 in 1939 would receive a benefit of half his own wage in every state. But a worker making the average wage today - $90 - would get $45 in only five states. In all other states he would receive the specified maximum which would be less than half his earnings, and in the state with the lowest maximum, he would receive only $26.

To restore the wage insurance principle, maximums must be raised high enough so that the great majority will receive a benefit of half their individual wage loss. This is the principle in the President's oft-reiterated recommendation to the states.[1]

Obviously a fixed-dollar maximum amount, e.g. $45, may accomplish the desired results in a low wage state but not in a state with higher wage levels. However, if a maximum is specified as a percentage of each state's average weekly wage in covered employment, a general solution is possible. The Department of Labor has estimated that to implement the President's recommendation, maximums in each state must be between 60% and 66-2/3% of average weekly wages in

---

1. See Economic Report of the President, 1954, 1955, 1956, 1957, 1958, 1959, and 1960. The 1960 Economic Report states, on p. 64: "In general, benefits have lagged behind the rise in wages, and it is again recommended that the states increase their benefits to make the great majority of covered workers eligible for payments equal to at least half their regular earnings; and that the states increase the maximum duration of benefits to 26 weeks a year for all eligible workers who remain unemployed that long."

covered employment in that state. This formula will produce a different dollar amount in each state and the dollar amount will be high enough that three out of four covered workers (the great majority) in each state will receive a benefit of at least half their individual wage loss. Only the top 25% of the highest wage earners would then receive the maximum and less than half their wage loss.

With this 60 to 66-2/3% of average weekly wages as a bench mark of adequacy, it is instructive to see what has happened in maximum benefit amounts relative to average weekly wages over the years. In every single state the maximum relative to wages is less now than it was in 1939.

Just how far the maximums relative to wages have fallen since 1939, just how much variation now exists between the states, and how little progress has been made in recent years can be seen from the following table. This table distributes states for selected years according to the ratio their maximum weekly benefit bears to their own average weekly wage.

Maximum Weekly Benefit Amount As A Percentage Of Average Weekly Wage	Number of States				
	1939	1953	1955	1957	1959
Over 70%	18	0	0	0	0
60-69%	17	1	0	0	1
50-59%	15	2	5	6	13
40-49%	1	29	31	32	27
30-39%	0	17	15	13	10
Under 30%	0	2	0	0	0

If maximums must be at least 60% to give expression to the wage insurance principle, it is clear from the table how much the program has deteriorated.[1] Compared with thirty-five states at that level or better in 1939, there is now only one, Hawaii.

The inadequacy of benefit levels has been measured in a series of adequacy studies, the most recent of which was made in Oregon in 1958.[2] The findings included the following:

> Only one out of four of our unemployment compensation claimants received weekly benefits of half or more of their wage loss... The average benefit received by four person families was just enough for food alone...Of all beneficiaries, thirty-two percent borrowed money, thirty-six percent decreased cash savings,

---

1. The declining application of the wage insurance principle has been offset to some extent for the unemployed heads of families by extra dependent allowances in eleven states.
2. Oregon Unemployment Compensation Commission and Dr. Carl M. Stevens, The Adequacy of Unemployment Benefits, (Salem: 1959). Also, see Haber, Fauri, and Cohen, Significant Findings on the Impact of the 1957-58 Recession in Relation to Unemployment Insurance, University of Michigan, School of Social Work.

> forty-four percent increased their debt to stores, eleven percent cancelled life insurance, forty-one percent postponed medicine or dental care.

This is revealing because the average benefit in Oregon is $4 higher than the $30 national average.

Duration of Benefits

On duration of benefits, there is agreement that weekly benefit is "carrying power" until the worker can find a suitable job within a reasonable length of time and within the possible financial and solvency limits. Jobless benefits should preserve the skills and talents of the work force by sustaining the worker until he can find suitable employment.

The lower-than-anticipated cost of jobless insurance combined with the increasing length of the average period of unemployment has brought some liberalization in duration. The average claimant now gets about 22 weeks before his benefits are used up. But some states allow as few as six weeks to some claimants, and others give 39 weeks to some under certain conditions. The Eisenhower Administration has recommended to the states that no claimant should be entitled to less than 26 weeks. The general insufficiency of duration provisions was apparent in 1958-1959, when one out of three claimants had his benefits cut off before finding a job. In some states, almost half the claimants exhausted their benefits.[1] It was in recognition of this that Congress enacted the Temporary Unemployment Compensation Act allowing for extension of duration in the recession emergency.

Wis 46% only 5 other States are high

Who Should Be Covered?

About thirteen million workers are not covered by unemployment insurance. These are distributed between small firms (1.9 million), non-profit firms (1.3 million), farm workers (1.9 million), state and local government employees (5.3 million), and domestics (2.4 million).

Variations in coverage as between states are wide. For example, while fifteen states cover small firms with one or more employees, twenty-seven include only firms with four or more employees, the minimum required by federal law.

---

1. The "exhaustion ratio" for each state is in Chart B in the Appendix.

Economic Purposes of Wage Insurance

The anti-cyclical role for unemployment insurance has been emphasized by economists. If payments were to replace a significant portion of wage loss during recession, they would serve to stabilize personal income and consumer demand.

According to Arthur F. Burns, former Economic Advisor to President Eisenhower, "...it would be wise not to lose time in extending recent efforts to strengthen the resistance of our economy to such recessional tendencies as may develop from time to time...perhaps the most constructive immediate step, would be to improve our unemployment insurance programs. Unemployment insurance is the nation's first line of defense against depression..."[1]

The economic usefulness of this program is curtailed by the shortcomings in coverage and benefits. Of 4.15 million now unemployed, less than 2.3 million are drawing benefits; even in the height of the 1958 recession less than two out of three unemployed were insured. And those drawing benefits receive on the average only one-third of their lost wages. The combined results of low benefits and insufficient coverage is that unemployment insurance replaces only about $1 for every $5 of wage loss due to unemployment. The demand for consumer goods and services receives little support from jobless payments.

In the words of the late Sumner Slichter: "One of the surprising things to me as an economist is that American businessmen have not taken the lead in insisting that Congress protect their markets and protect their investments by giving the country a truly adequate system of unemployment insurance."[2]

In their recent study Lessons of the Recessions, the Woytinskys argue that temporary extensions as in the Temporary Unemployment Compensation Act of 1958 do not enhance this stabilizing role as would permanent improvement through federal benefit standards and extended coverage:

> "We agree wholeheartedly that unemployment insurance requires permanent improvement, not only with a view to mitigating individual hardships but also with the objective of increasing the resistance of our economy to recession. Its extension through H.R. 12065 came too late and, while bringing aid to

some workers' families, increased the disparity between the state programs. The problem requires establishment of minimum federal standards relating to the amount and duration of unemployment benefits within a framework of a system covering all forms of work for wages and salaries."[1]

LEGISLATIVE HISTORY OF FEDERAL STANDARDS

Members of Congress have been concerned with the benefit levels in state laws almost from the beginning. Establishment of uniform federal standards with or without a national reinsurance fund has been proposed several times.

A Senate Committee in 1939 urged that no unemployment compensation law should be recognized for tax offset purposes unless it met prescribed minimum standards.[1]

Representative John W. McCormack in 1939[2] and again in 1940[3] introduced bills providing minimum federal benefit standards, as did Senator Murray in 1940.[4] The Social Security Board also recommended federal standards and a national reinsurance system.

In 1943 and again in 1945, the Wagner-Murray-Dingell Bill[5] was introduced. It proposed a comprehensive social security program including a national unemployment compensation system to replace the existing federal-state system. The Wagner-Murray-Dingell Bill mirrored dissatisfaction with the federal-state system and the failure of efforts to add federal standards.

However, the only federal programs ever enacted for unemployment insurance is the Railroad Unemployment Insurance Act of 1938. The Servicemen's Readjustment Act of 1944, the Federal Employees Unemployed Insurance Act of 1954, the Veterans' Readjustment Assistance Act of 1952 and the Ex-Servicemen's Unemployment Compensation Act of 1958 have provided for state administration, but in the Servicemen's Readjustment Act benefit levels were stipulated by Congress.

In 1949, the "Report of the Advisory Council on Social Security" was widely discussed. It intended to again focus attention on the shortcomings of unemployment insurance, and the way benefit financing serves as a barrier to liberalizing the benefit levels.

---

1. S.2203, 76th Congress, 1st Session (1939), recommended by the Byrnes Committee.
2. Representative McCormack proposed federal standards as amendments to H.R. 5482 (76th Congress, 1st Session, 1939).
3. H.R. 7762,76th Congress, 3rd Session, (1940).
4. S.3365, 76th Congress, 3rd Session, (1940)
5. S.1161, 78th Congress, 1st Session (1943), and S. 1050, 79th Congress 1st Session (1945).

Beginning in 1954, President Eisenhower adopted a policy of proclaiming the responsibility of state legislatures for improving benefits. His recommendation, reiterated each year, is higher maximums and extension of the half-of-lost wages formula to the great majority of covered employees, and a uniform 26 weeks duration.

In 1954, a new attempt was made in the House of Representatives to establish federal benefit standards. Representative Forand advocated a minimum standard of weekly benefits at least 50% of lost wages up to a maximum amount set at two-thirds of each state's average weekly wage, payable for 26 weeks for claimants unable to find a job in the meantime.

These proposals failed, but Congress extended coverage to firms with four or more employees by amending the Unemployment Tax Act. This remains to date the only substantial improvement in the unemployment insurance program since its inauguration.

In 1958, Senator Kennedy and Congressman McCarthy introduced bills to further extended coverage, to establish minimum standards for benefits, eligibility and disqualifications, and to provide a system of reinsurance. The McCarthy Bill was not reported out of the Ways and Means Committee, which recommended only a temporary extension. The Herlong substitute for this became the Temporary Unemployment Compensation Act of 1958. In the Senate, efforts to permanently improve unemployment insurance by providing federal benefit standards were rejected.

A similar bill but without standards on disqualifications was introduced in the current session by Mr. Karsten and Mr. Machrowicz on January 21, 1959, with one hundred and thirty Congressmen declaring their support. This bill is H.R. 3547, now in the Ways and Means Committee, which held hearings in April 1959.

The companion bill in the Senate is S.791 introduced by Senators Kennedy, Case and McCarthy, with the announced support of thirty other senators.

PROVISIONS OF THE FEDERAL MINIMUM STANDARDS BILL

H.R. 3547 (Mr. Karsten) and H.R. 3548 (Mr. Machrowicz) expresses the intent to provide certain minimum levels of adequacy to which the various state unemployment insurance programs must conform and to provide certain reinsurance arrangements for states with high rates of unemployment.

Section 2 provides certain standards dealing with benefits to be provided by the state plans, duration of these benefits, and eligibility for the benefits. With respect to benefit levels, it is required that each individual's primary benefit shall be not less than 50% of his weekly wages with a maximum which is not less than 66-2/3% of the state's average weekly wage. The unemployed worker must receive 50% of his own wage or 2/3rds of the average weekly wage, whichever amount is lower.

It might be noted that what is called a maximum benefit in the unemployment insurance statutes might better be called a ceiling on the benefits. Generally speaking, individuals getting the maximum benefit will be getting less than 50% of weekly wages because of this ceiling provision. The bill would establish a minimum below which the state may not set its ceiling provision. To illustrate the effect of this requirement, assume that the average weekly wage in the state is $90. Two-thirds of this would be $60. The bill requires that the state provide benefits of 50% of weekly wages for all employees whose weekly wages were less than $120. Any employee whose weekly wages were above $120 could be cut off by a maximum payment provision of $60. A state would, of course, be entitled to have a higher maximum than this or to pay employees more than 50% of weekly wages.

The bill requires that benefits shall be payable to all unemployed insured individuals for a period of not less than 39 weeks provided that they meet all of the eligibility requirements under the state law.

The bill provides that no wage qualifying requirement in the state law can be more restrictive than base year earnings of 30 times the weekly benefit amount or 1½ times the high quarter wages, or 20 weeks' employment. The three alternatives are keyed to the particular type of qualifying test provided under the state law.

State benefits cannot be denied or reduced because of the receipt of payments under a plan established to supplement unemployment benefits under the law.

Section 3 of the bill provides that any employer of one or more individuals instead of employers of four or more, as under present law, will be subject to the federal unemployment tax. Section 3 also provides certain definitions necessary to carry out the benefit standards.

Section 4 amends the present federal statute dealing with experience rating credits to provide that the state, in lieu of a system of experience ratings, may provide a uniform credit to all employers in a state.

Section 7 provides for reinsurance grants to the states whose reserves reach a precariously low level. The amount of such grant will be limited to three-quarters of the amount by which the benefits payable under the state law exceed 2% of the state taxable payroll. In other words, only where unemployment benefits are sufficiently large, that they could not be financed through a 2% contribution rate at the current employment level, will the state receive any federal grant. To the extent that the cost of the state's program exceeds 2%, it would still be required to finance one-fourth of the cost of the higher benefits out of state funds. To prevent a state from permitting its fund to become depleted in order that it may receive a federal grant, the bill requires that to be eligible for the federal grant that whenever a state's fund drops below certain minimum requirements, the state must impose a minimum tax rate on employers of at least 1.2%.

Sections 5 and 6 deal principally with technical matters conforming to the other substantive changes. Section 5 particularly provides that the reinsurance grants will be paid out of the federal unemployment account.

Section 8 provides that the provisions extending coverage and establishing benefit standards which must be met by state laws shall be effective as of July 1, 1960. This would have to be extended now to some later date in order to give the states sufficient time to make the necessary statutory changes in their state unemployment compensation laws before the standards become effective.

OTHER UNEMPLOYMENT COMPENSATION BILLS

About 54 bills were introduced which are virtually identical with H.R. 3547 and H.R. 3548.

Two bills, H.R. 175 (Mr. Lane) and H.R. 2474 (Mr. Donohue) are broadly similar to the bills introduced by Mr. Karsten and Mr. Machrowicz in providing standards for state unemployment insurance systems. These bills go further in particular details, providing for inclusion of certain contract services in the definition of employment and providing certain limitations on the ability of the states to disqualify claimants.

Five bills, H.R. 71 (Mr. Celler), H.R. 95 (Mr. Farbstein), H.R. 407 (Mr. Perkins), H.R. 454 (Mr. Zelenko), and H.R. 2394 (Mr. Dollinger) would provide for payment of supplementary unemployment benefits in depressed areas. These would be federally financed payments. H.R. 2475 (Mr. Donohue) would provide for supplementary unemployment benefits in certain areas defined as partly affected by competition with imported goods.

Subsequent to the Ways and Means Committee hearings in April 1959, Mr. Mills and Mr. Simpson introduced H.R. 7177 and H.R. 7178. These measures provide for increasing the federal tax from 3 to 3.1% of the tax base, but further provide that for tax offset purposes the federal tax would remain at 3.0%. This means that the federal portion of the unemployment tax would go from .3 to .4%. The additional revenue would cover increased costs of state and federal administration and provide for replenishing the loan fund. The bill also increases the size of the loan fund from $200 million to $550 million or .4% of total wages in covered employment. It provides for extended coverage to federal instrumentalities, fraternal societies, etc., and extends federal-state unemployment compensation to Puerto Rico. This bill would have no effect on state benefit financing or on benefit levels.

QUESTIONS AND ANSWERS ON THE FEDERAL MINIMUM STANDARDS BILL

Benefit levels in unemployment insurance are now set by each state. Would federal benefit standards be an unwarranted exercise of power as against the rights of states?

No, because the authority of the federal government to set standards was decided long ago in Helvering vs. Davis by the Supreme Court in 1937. The tax offset device was a kind of compulsion to force states to enact unemployment compensation laws. Individually they had failed to do so fearing that payroll taxes would put their employers at a competitive disadvantage. Justice Cardoza's decision cited the national concern with extended unemployment, the responsibility of Congress to promote the general welfare, and the ineffectiveness of separate states in dealing with the problem. The existing standards or requirements in the federal law were upheld, and the federal-state system upheld. Benefit and eligibility standards would simply add to those standards now in the federal law to raise benefits according to the original intent of Congress, and to restore some uniformity in benefits and program costs.

The economy of each state is different and wage levels vary greatly. Is it not inappropriate for the Federal Government to insist on uniform benefit standards?

No, because the formula proposed takes variations in wage levels into account. The proposed standard would not set the same dollar maximum for each state. It would require that the maximum be set at 66-2/3% of the state's average weekly wage.

Similarly, the Bill proposes three minimum standard wage qualifying requirements to fit the three basic approaches to eligibility now in the state laws.

As for the duration standard, this is not related to the wage level of a state but rather to the contingency of length of unemployment. Since each state will continue to administer the "able and available for suitable work" requirements, a minimum standard of 39 weeks simply specifies the longest length of time to which every claimant must be entitled. It is the minimum federal standard, but is also an outside limit. The actual duration still remains subject to the claimants search for work, as required and administered under state law.

Would not extending coverage to firms with one or more employees add excessive administrative burden, both for the employer and the administering agency?

This was the original objection to including firms with fewer than eight employees, but the use of OASDI reporting forms for unemployment insurance and advances in record keeping have greatly simplified procedures both for employers and for the states. Nineteen states have gone beyond the four or more requirement now in the federal law and sixteen states cover firms with only one employee.

Does this bill abolish experience rating?

No, the federal law now requires experience rating. H.R. 3547 would leave it up to the state to determine its own financing rather than making experience rating compulsory.

Is this the first step toward federalizing unemployment compensation?

No, minimum benefit standards will make the present federal state program work more effectively. Federalizing unemployment insurance has not been an active issue since the Wagner-Murray-Dingell bills. (See p. 10)

There is evidence that several state funds are insolvent, or would be in another recession. Won't federal benefit standards precipitate their going broke?

State funds that reached bottom in the last recession did so because their existing benefit levels were inadequately financed, despite the fact that their tax resources were only partially used. To the extent that states are in financial difficulty, it is because they have offered low tax rates and under-financed their present system. The dozen states that must now improve their financing have, in each instance except Alaska and Rhode Island, maintained a tax base that is two-thirds or less of the total payrolls (total payrolls were the original tax base in unemployment insurance.) Adequate financing to assure solvency is easily determined actuarially and statistically. Inadequate financing is a problem of political responsibility, separate and apart from adequacy of benefit levels; poor unemployment insurance programs are being under-financed as well as better ones.

A more difficult problem is the fact that inadequate financing and depleted reserves are used as justification for holding down benefits. By setting minimum federal benefit standards, each state would be given a definite objective for its financial decisions; financing would be adjusted to benefit cost instead of holding down benefits to low tax income.

The standards recommended can in every state be financed by less than the standard 2.7% of payrolls. However, in cases where high incidence of unemployment rather than under-financing causes a depleted reserve, H.R. 3547 provides reinsurance grants from a federal fund that is financed from the federal tax on which there is no offset.

Isn't the recession over? What is all the shouting for?

There are still 3 million unemployed workers drawing inadequate benefits each month. There is still a higher rate of unemployment after this recession than there was after the 1954 recession, which in turn was higher than after the 1949 recession.

With 4 million unemployed, one out of every five of the persons unemployed has been out of work for at least 15 weeks, and one out of eight has been unemployed for 27 weeks or more.

Predictions for 1960 show rapid change in the composition of the work force, which means temporary unemployment for many. "Factory workers will decline absolutely as well as proportionately," according to Ewan Clague, Director of the Bureau of Labor Statistics.

Most important, permanent improvement in unemployment compensation now is simple good sense in advance of the next recession, which, according to William F. Butler, Vice President of the Chase National Bank, is around the corner: "In 1961, general business may move into a virtual plateau, preceding another general down-turn. . . watch with increasing vigilance for signs of the next recession as we move through 1960 and into 1961. . ."

Why should employers be asked to support more of the cost of unemployment benefits?

Because their payments for unemployment insurance relative to their payrolls are now running only one-third of their contribution to unemployment insurance twenty years ago, and because the only alternative for most workers is relief. Last year an estimated 7% of unemployed had applied for public assistance. In 1958, termination of unemployment benefits caused 4,000 families in Pennsylvania to go on relief. In Michigan, 30,000 families went on relief. Other states such as Kentucky, Minnesota and New Jersey had their highest relief loads since before the war. The public is paying in these cases for what employers are not putting into unemployment insurance.

Didn't the states raise their benefits substantially in 1959?

All but three state legislatures met in 1959. Only twenty-three states raised their maximum benefit amounts and sixteen lengthened the duration of benefits. Even after the 1959 amendments only one state now provides a maximum benefit over 60% of its average weekly wage, compared with thirty-two such states in 1939. The sixteen states amending their duration averaged an additional three or four weeks for the average unemployed worker.

The 1959 amendments have not brought benefit levels substantially closer to President Eisenhower's recommendations. Only Hawaii meets his standard for amount and duration.

Who is for federal benefit standards?

Those who have spoken for federal action are: 1. The governors of fifteen states representing a majority of workers covered under unemployment compensation. 2. Private and governmental groups, such as the Rockefeller Brothers Fund, the Federal Advisory Council on Employment Security, the New York State Advisory Council on Unemployment and Unemployment Insurance, etc. 3. The AFL-CIO and its affiliated national unions. 4. Public service organizations such as the National Consumers League, the American Public Welfare Association, and the National Association of Social Workers. 5. Outstanding economists who have studied either the business cycle or the American social security system.

Who is against benefit standards?

1. National employer groups such as the Chamber of Commerce, the American Retail Federation, the American Hotel Association, and the National Association of Manufacturers. 2. Unemployment Benefit Advisors, Inc., a Washington lobby specializing in unemployment compensation and supported by such companies as General Motors, Allis-Chalmers, U.S. Steel, Chrysler Corporation, Socony-Mobile Oil Company, Goodyear Tire and Rubber, etc. 3. The Interstate Conference of Employment Security Agencies, and 4. the Eisenhower Administration.

Collective Bargaining REPORT

DECEMBER 1958
Vol 3, No. 12

SUPPLEMENTAL UNEMPLOYMENT BENEFITS

The economic recession of 1958 brought the first extensive use of supplemental unemployment benefit (SUB) plans negotiated in recent years—and the experience has demonstrated the value of such plans.

The availability of SUB payments has eased the financial strain of unemployment for many laid-off workers. And, by helping to maintain laid-off workers' income, the SUB plans also have helped soften the impact of unemployment on some hard-hit communities.

Prevalence of SUB Plans

SUB plans vary considerably, but typically they call for (a) regular fixed company contributions (b) to a trust fund which (c) pays benefits to laid-off workers to supplement their state unemployment compensation.

The idea of plans to provide greater employment stability and/or special financial aid for laid-off workers is not new. Employment-guarantee plans and plans for severance pay for workers dropped from the payroll have been written into some union contracts for many years. But SUB plans—the setting aside of money by employers in advance to provide unemployment benefits to maintain workers' income while jobless—are relatively new.

And SUB plans have been spread in a short period of time to cover a relatively large number of workers. In all, well over 2 million workers are now covered by some form of SUB plan.

Index for 1958

An Index to the subjects dealt with in the issues of the AFL-CIO Collective Bargaining Report during the year 1958 is presented on page 79.

The first major SUB plans were negotiated by the United Auto Workers at leading auto companies in 1955. Other plans have since been negotiated in a number of different industries, particularly several which have been troubled for years with the problem of recurring unemployment.

In addition to the auto industry, other industries in which large groups are under SUB plans include steel, aluminum, rubber, agricultural equipment and can making. (Major features of two prominent plans, in the auto and steel industries, are outlined on page 77.)

The largest nonmanufacturing group covered are maritime workers under the National Maritime Union plan

with Atlantic and Gulf Coast ship operators (see page 78 for a summary of this plan).

Experience During Recession

Because the recession in 1958 brought a high rate of unemployment, most of the SUB plans have been put to heavy use more quickly and more extensively than had been anticipated as likely when they were negotiated.

Indeed, because the 1958 recession brought layoffs to many workers who thought their jobs were layoff-proof and demonstrated that large-scale unemployment is not necessarily a nonrecurring thing of the past, it has marshalled increased support for the aid offered by SUB plans.

Despite the difference in individual plans and layoff situations, certain other general facts are apparent.

(1) The plans have worked fairly smoothly, with not many hitches or grievances, considering the large numbers of laid-off workers involved and the newness of the plans.

(2) Reaction to the operation of the plans has been highly favorable. Not only the unions and laid-off members, but generally employers as well, have been greatly pleased with the beneficial effects of the SUB payments to idled workers. And those parts of the public which deal with laid-off workers—merchants, banks, welfare officials and civic leaders—have also praised the aid provided by SUB plans.

(3) The large volume of unemployment has placed a heavy drain on SUB funds. Some plans, particularly the newest plans and those with the heaviest layoff loads, have had to cut back benefits substantially under formulas which reduce benefit amounts and/or duration when the plan's finances fall below a specified point.

But most plans had accumulated sufficient funds to enable them to weather this recession without much cutback in benefits. Their experience has shown that employer contributions as modest as 5 cents an hour can finance a substantial amount of unemployment aid.

(4) The existing plans are not a completely adequate answer to the economic problems of layoff. A recurrent criticism has been that "they help, but not enough." Benefit amounts and eligibility problems are the shortcomings most often cited.

Amount of Benefits

How large are the SUB benefits?

Typically, the SUB plans pay, as a supplement to state unemployment compensation benefits and other earnings, the amount needed to raise the laid-off worker's income to 65 percent of his normal weekly straight-time take-home pay (that is, pay after taxes). A maximum of a specified number of dollars is usually placed on the SUB payment, however, so that in the case of some high-paid workers the payment may not quite raise income to the 65-percent mark.

On the average, the 65 percent formula has meant weekly benefit payments in 1958 of $13 to $25. (This supplements state unemployment benefits which in early 1958 averaged only $30 a week.)

The smaller SUB payments were largely in states where unemployment compensation is relatively high so that the supplemental payments required to reach the 65-percent level were smaller.

Exactly how much the typical SUB plan pays the individual worker varies with a number of factors, principally four.

(1) *The level of unemployment benefits of the particular state.* In a state with relatively low benefits, the supplemental amount paid to reach 65 percent of take-home straight-time pay will be larger than in a state with higher benefits.

(2) *The worker's earnings level.* A worker with high earnings will usually require a larger supplemental payment to reach 65 percent of his normal take-home pay than will a worker with lower pay.

(3) *Number of dependents.* Workers with more dependents often get larger benefits. More dependents mean less is paid in taxes, so that 65 percent of after-tax pay is more for a many-dependent worker than for a worker at the same wage rate who has fewer dependents. Also, some plans provide on top of their maximum payment an additional allowance for each dependent. (The steel plans have a maximum supplemental payment of $25 a week plus $2 for each dependent up to four.)

(4) *Financial status of the SUB fund.* Some plans, most notably the steel plans, provide for a reduction in benefits when their finances fall below a certain level. The benefit is cut by a specified percentage according to how much funds remain available. This practice has been adopted to assure that all the money is not drained off for those laid off first, that some funds remain for benefits if and when high-seniority workers are laid off.

Here's how a typical SUB payment is calculated. Assume that a laid-off worker normally earns $80 a week. If he has 3 dependents, his take-home pay after taxes would be about $73.85. The plan assures him 65 percent of this figure ($48.72).

If this worker's state unemployment compensation benefit is $30 a week, the plan would pay the difference between the $30 and the 65 percent of his normal after-tax pay; this would be $18.72.

If the state benefit was larger, say $35, the plan would pay this worker less, in this case $13.72, which is the

(Continued on page 76)

EXPERIENCE UNDER STEELWORKERS' SUB PLANS

A report on the operation of supplemental unemployment benefit plans negotiated by the United Steelworkers was presented to the union's convention in September 1958.

The report noted that more than 200,000 of the union's members had suffered layoffs in the 1958 recession and that an equal number had their income reduced as a result of short-time work. The SUB plans, it stated, "have been of tremendous assistance to our members in this period of heavy layoffs and long unemployment."

Among the specific highlights of the report:

(1) *Number receiving benefits*—No overall figures are available on the number of members who have received SUB benefits, but a survey in May 1958, the month of heaviest unemployment among the union's members during the recession, found that some 83,000 members were then collecting benefits from SUB plans negotiated by the Steelworkers.

The number for the month would have been larger, probably over 100,000, if it had been possible to pay benefits in Ohio and Indiana, where the union has a large number of members but where legal obstacles have prevented SUB plans from operating.

(2) *Total benefits*—In the 9-month period from September 1957 through May 1958, nearly $45 million in benefits were paid out by the union's SUB plans. An estimated $12½ million more was due to laid-off members in Ohio and almost $1½ million more in Indiana, but payments have been held up by legal difficulties in those states.

(3) *Average benefits*—The average weekly SUB payment under the Steelworkers' plans in April, May and June 1958 was between $22 and $24 a week.

This was a considerable supplement to state unemployment compensation, for it was roughly three-quarters as much as the average amount received from state compensation.

(4) *Status of SUB funds*—The plans provide that when their finances fall below certain levels, benefits are reduced. (This is a means of assuring that not all the funds will be spent early in a layoff, with none left when layoffs begin to affect long-service workers.)

The large number of layoffs this year required a large volume of payments; at the same time, some of the plans had not been in existence long enough to accumulate large reserves, and the decline in employment has meant a decline in income to the funds. The result has been a depletion of funds which has required the reduction in benefits in some plans.

Nevertheless, as of August 1958, by which time employment of the union's members was starting to pick up, there were still substantial sums available under most plans and a majority of laid-off workers were still drawing full benefits. Another 30 percent were getting between 60 and 75 percent of the full benefit.

amount needed on top of the $35 to bring the worker's combined income from the state benefit and SUB to $48.72, his 65-percent-of-take-home-pay level.

Total Benefits Paid

Precise information on total benefits paid out by all SUB plans is not available, but the two unions with the largest number of covered members have provided some broad data.

The Auto Workers report that the SUB plans at the three largest auto companies (General Motors, Ford and Chrysler) paid out $33.7 million to laid-off members in the first 8 months of 1958.

The Steelworkers, reporting on all their plans combined, estimated that a total of $45 million was paid to their members in the 9 months since September 1957. In the full year September 1957-58, the plan at United States Steel alone paid out $16 million.

Overall, when all SUB plans are taken into account, it is estimated that during the worst six months of the 1958 recession, SUB payments were running at a monthly rate of $10 to $12 million.

Although this is relatively small compared to aggregate state unemployment compensation payments across the nation, the SUB payments carried special value as an aid in limiting and combatting the economic recession because they were concentrated in several of the areas and industries, auto and steel especially, which were hardest hit by the recession.

Value to Laid-Off Workers

The total number of workers who received SUB payments in 1958 is estimated conservatively as well over 300,000.

The SUB payments may not have solved for these workers the economic problems of layoff but, as some have said, they made these problems "more bearable."

State unemployment compensation benefits alone are inadequate to sustain a laid-off worker and his family on a reasonable basis. With few exceptions, they are so low (average of $30 a week in early 1958), that a laid-off worker has been forced to slash drastically his level of living and usually also to default on financial obligations and/or drain savings or go into debt.

The supplemental payments from SUB plans have made a significant difference. During unemployment, when every dollar counts so heavily, the extra $15 or $20 a week in SUB payments have appreciably reduced financial difficulties and have provided badly needed support for workers' living standards.

Broadly, SUB payments have enabled the average worker to maintain his purchasing power at about two-thirds of normal take-home pay instead of the one-third to one-half possible from reliance solely on state unemployment benefits.

Value to the Community

This easing of financial strains on laid-off workers of course also softens the effect of unemployment on a community.

In a number of cities in which mass layoffs or a shutdown of a plant affected a large part of the local work force, the presence of supplemental unemployment benefits noticeably eased the blow on the community as a whole, particularly on local businessmen who depend on worker spending for the success of their business.

One of the more notable examples has been that of Donora, Pa., a city of some 12,000 people, where the shutdown of a zinc plant late in 1957 resulted in unemployment for more than 450 workers, at the same time that some 700 more workers were being laid off at another major plant, a wire plant, in the same town.

Both plants were subsidiaries of the United States Steel Corp. and the workers were covered by the SUB plan negotiated by the United Steelworkers. The SUB payments cushioned the community problems created by the unemployment.

The *Wall Street Journal*, the prominent business newspaper, reported specially on this experience in Donora. It summarized the moderating effects of SUB on the town's recession by stating:

"Donora thus far has avoided the depression that normally follows such [large employment] cutbacks. In past periods of unemployment here, laid-off workers slashed all spending, drew down their savings, often were forced to default on their debts. Today a different pattern is emerging.

"Reduced income and uncertainty about future employment unquestionably are cutting into retail sales, but the decline is not nearly as sharp as in comparable past periods of unemployment. . . .

"Check merchants along hilly McKean avenue, the gaily decorated main street, and talk with bankers, welfare workers, union officials and laid-off mill hands. Do that and you keep coming up with one big word spelled SUB."

The article also noted specifically that savings bank balances had held up instead of being drawn on heavily as in earlier layoff periods, that there had been little default

(Continued on page 78)

Summary of Major Features of Two Supplemental Unemployment Benefit Plans

United Auto Workers and Ford Motor Company[1]

This plan, the first major SUB plan, was originally negotiated in mid-1955 and was revised in negotiations in 1958. It is effective until 1961.

Financing—The company pays *5 cents an hour* to a trust fund. The company contributions stop when the fund reaches a specified maximum and resume whenever the fund falls below the maximum. (The fund maximum is $393 per worker, but is subject to adjustment downward if average benefits paid out are smaller than $20 a week.)

Eligibility for Benefits—A laid-off worker is eligible for benefits if (1) he has at least *1 year's seniority*, (2) the layoff is not due to specified reasons; (3) he qualifies for and receives unemployment compensation (unless failure to receive it is due to certain reasons specified in the plan), and (4) he meets specified other qualifications.

A worker is also eligible for benefits in a short workweek in which his earnings are less than 65 percent of his normal straight-time take-home pay.

Amount of Benefits—The fund pays the difference between state unemployment compensation (and other earnings) and 65 percent of weekly after-tax straight-time pay.

Maximum benefit payment is $30 a week.

Duration of Benefits—The number of weeks of benefits a worker can draw depends on the number of "credits" he has accumulated (credits are accumulated for each week at work), the amount of money in the fund, and his seniority, according to a formula spelled out in the plan.

The maximum duration is 39 weeks. In states where the duration of unemployment compensation is shorter, the state maximum is observed, but in no case is the maximum less than 26 weeks.

[1] Similar plans have been negotiated by the union with General Motors, Chrysler, and other major companies.

United Steelworkers and United States Steel Corporation[2]

This plan, agreed on in 1956, runs until mid-1959.

Financing—The company pays *3 cents an hour* to a trust fund and sets aside on its books an additional *2 cents an hour as a "contingent liability"* which is payable to the fund when needed for benefits. When the money in the fund plus the contingent liability reach a specified maximum (an average of about $200 per worker), company contributions and accrual of the liability stop and they resume when there is a drop below the maximum.

Eligibility for Benefits—A laid-off worker is eligible for benefits if (1) he has at least *2 years' seniority*, (2) the layoff is not due to specified reasons, (3) he qualifies for and receives state unemployment compensation (unless failure to receive it is due to certain reasons specified in the plan), and (4) he meets specified other qualifications. A worker is also eligible for benefits in a short workweek in which his earnings are less than 65 percent of his normal straight-time take-home pay.

Amount of Benefits—The fund pays the difference between state unemployment compensation (and other earnings) and 65 percent of weekly after-tax straight-time pay. The payment is cut by certain percentages, however, if fund reserves fall below certain levels.

Benefit maximum is $25 a week ($47.50 when state compensation runs out), plus $2 more for each dependent up to 4 dependents.

Duration of Benefits—The number of weeks of benefits a worker can draw depends on how many "credits" he has accumulated (credits are accumulated for each week of work), the amount of money in the fund, and his seniority, according to a formula spelled out in the plan. (The formula is similar in principle to that in the Ford-UAW plan, but is quite different in detail. Primarily, when the auto fund runs low, it is the duration of benefits that is reduced (by accelerating the rate at which a worker's credits are cancelled), while the steel funds are conserved by reducing the benefit amount.)

The maximum duration is 52 weeks.

[2] Similar plans have been negotiated by the union with Bethlehem, Republic, and other leading steel companies.

Note: These summaries provide only a general outline. For specific details, the text of the plan should be examined.

on mortgage payments and that installment loans were being met.

Moreover, relatively few laid-off workers had been forced to apply for public relief. The article reported that an official handling relief cases stated that the laid-off workers who had come on the relief rolls were those who had not been eligible for SUB payments.

Incentive to Stabilizing of Employment

Unions of course want steady employment for members rather than merely unemployment benefits. A major objective of most SUB plans has been, not only to make unemployment benefits available, but to encourage management to stabilize production so as to reduce the need for layoffs.

The plans typically provide that management contributions to the SUB fund stop when the fund reaches an agreed-on level. Since layoffs require payments from the fund, and prevent the fund from reaching the point at which company contributions can be halted, there is a financial inducement for management to minimize layoffs it can control.

In a number of cases, unions have reported that the presence of the plan, plus the fact that negotiations leading up to the plan focused attention on the problem of irregular employment, have led management to review production and layoff policies and to take steps to provide greater employment stability and to reduce the need for making SUB payments.

Integration of SUB with State Unemployment Compensation

Originally, one of the questions confronting SUB plans was whether the states would permit supplementation of their unemployment compensation or whether they would regard payments from SUB plans as "wages" which disqualify workers for state unemployment benefits. Almost all states in which this question has been raised have now acted on it.

A total of 38 states, the District of Columbia and Hawaii have now decided, through administrative rulings or legislative action, that supplementation of state unemployment compensation by benefits from private SUB plans is permissible.

Only 4 states (Indiana, Ohio, North Carolina, and Virginia) have ruled that workers may not receive both unemployment compensation and supplemental private-plan payments at the same time. Unions in these states are moving forward with proposals (often joined by companies) to remove the legal barriers.

SUB PLAN IN MARITIME INDUSTRY

One of the major SUB plans which differs considerably from the type represented by auto and steel plans is that of the National Maritime Union and the Atlantic and Gulf Coast shipping operators. This plan covers over 35,000 workers.

Some of its features reflect the special employment problems of maritime workers. Among the main points of difference with other SUB plans are:

(1) The maritime plan covers many different companies rather than an individual company. The contributions of each employer go to a pooled central fund. Each company pays 25 cents per day per worker to the fund.

(2) Benefits are flat amounts instead of being scaled directly to the worker's unemployment compensation and take-home pay level. To be eligible for the plan's benefits, an unemployed worker must apply for state unemployment compensation benefits, although it is not necessary that he qualify for or receive such compensation.

An unemployed worker is paid $25 a week to supplement his state unemployment compensation. If he does not receive state unemployment compensation, the plan pays him $40. (These are the new higher benefit levels negotiated in 1958, upped from the original 1956 benefits of $15 for those getting state compensation and $30 for those not getting it.)

(3) Duration of benefits is geared to the reason the worker is idle and takes account of types of unemployment peculiar to the maritime industry. Benefits are paid for 3 weeks upon unemployment when a ship is laid-up, lost, or sold, or reduces its complement. Benefits for 4 weeks are provided while waiting to reship after vacation.

Benefits are also paid for certain other time off the job: Up to 13 weeks on disability, 2 weeks on involvement in legal proceedings and 2 weeks for care of a disabled spouse, plus 3 to 5 weeks while waiting to rejoin a ship after idleness for one of these reasons.

(4) A benefit maximum is set in terms of total yearly benefits for any worker: The maximum payment in any 365 consecutive days is $240 (not including any of the benefit payments during weeks off for disability.)

Statistics for Bargaining

Average hourly earnings of nonsupervisory factory workers rose in November by 3 cents to $2.17.

Average weekly earnings rose by $1.62, both because of the hourly increase and an increase in length of the workweek, to $86.58.

Average weekly hours in manufacturing in November increased by two-tenths of an hour to 39.9 hours.

The cost of living, as measured by the Consumer Price Index, rose two-tenths of a percent, as decreases in food and gas prices were more than offset by rises in other prices.

Over the year, from November 1957 to November 1958, the rise in the Index has been 1.9 percent. Over the past two years, the increase has been 5.2 percent.

Employment in November fell by 700,000 to 64.7 million, largely because of a seasonal drop in farm employment.

Manufacturing employment in November was 15.7 million, which is some 850,000 less than a year ago and about 1.5 million lower than in November 1956.

Unemployment remained unchanged at 3.8 million between October and November, a month in which it usually increases. Seasonally adjusted, the rate of unemployment was 5.9 percent in November as against 7.2 percent in October.

Total unemployment was still 600,000 more than in November 1957 and 1,300,000 more than in November 1956.

FACTS about INTERSTATE CLAIMS for Unemployment Benefits

Read.....

General information about interstate laims -- what your rights are and what ou must do to qualify for benefits -- is riefly given in this leaflet.

Read it carefully and keep it for reerence. It contains important information.

The information given is not to be onstrued as the law of any state. Addiional explanation, if needed, may be obained at the local office where you file n interstate claim.

Prepared and distributed by
Public Relations Section,
Tennessee Department of
Employment Security
Nashville 3, Tenn.

INFORMATION FOR INTERSTATE CLAIMANTS

1. Unemployment workers who come into Tennessee may file a claim for unemployment insurance at any Employment Security office in this state against any state, the District of Columbia, Alaska, Hawaii, or Canada, in which they have previously worked.

2. Tennessee, where you are filing such a claim is acting as the Agent State for the one in which you previously worked. The state against which you file your claim is known as the Liable State.

3. Tennessee, the Agent State, will take your claims and send them to the Liable State. The Liable State will determine whether or not you are entitled to benefits and the amounts due. The Liable State will issue all determinations on your claim.

4. Notices showing the amount and duration of benefits and any disqualifications or ineligibility decisions will be sent directly to you by the Liable State. Most Liable States require that you serve a waiting period before benefits become payable.

5. Before any Liable State will pay unemployment insurance to interstate claimants, certain information must be furnished by each claimant and by the Agent State. Among the questions asked are:

On what date did you arrive in Tennessee?
For whom, where and when did you last work?
Have you a separation notice from your most recent employer?
Are you able and available for work here and now?
Are you registered with the Tennessee Employment Security office for work?

ABLE TO WORK

6. Able to work means that you are physically able to perform work of a nature similar to work you have performed in the past or other work for which you are reasonably fitted by experience, training or education.

AVAILABLE FOR WORK

7. Available for work means that you are unemployed but ready to accept work at once, that there are no circumstances, personal or otherwise which would prevent you from accepting suitable work.

Most Liable States require a claimant to be making a reasonable effort to find work for himself in addition to his registration for work with the public Employment Service.

8. Some states hold that a claimant who has left an area in which work could be had and moves to an area in which no similar work exists has removed himself from the labor market and is not available for work.

9. All states require that every claimant be willing to accept suitable work in his locality at the prevailing rate of pay and under the working conditions which are customary there.

DISQUALIFICATIONS

10. If you quit your job, were discharged because of misconduct or if you lost your job because of a labor dispute you may be disqualified from benefits or your benefits may be suspended by the Liable State.

11. If you refuse to accept suitable work in this area you may be disqualified from receiving benefits in accordance with the law of the Liable State.

12. If the Liable State decides that you are not really unemployed, not able and available for work, not making a personal effort to secure work on your own initiative, or not willing to accept suitable work under working conditions that pre-

vail in this area you will probably be declared ineligible by the Liable State against which you are claiming benefits.

APPEALS

13. If you are dissatisfied with any decision in regard to your claim you have a right to appeal. Your appeal rights will be shown on any determination you receive from a Liable State. If you desire, your nearest Employment Security office will assist you in filing your appeal.

14. Information concerning all of the above matters must be obtained by Tennessee, the Agent State, and sent to the Liable State. Your cooperation in furnishing this information will speed up the final determination on your claim. You are required to report to the local Employment Security office in Tennessee on such days and at such times as instructed by the person who takes your claim. The day and hour usually will be shown on your identification card.

15. Your failure to report on the day and at the time provided will delay your claim and may result in a denial of unemployment insurance. If you cannot report at the assigned time or on the proper day, report as soon thereafter as possible.

16. If you return to work and believe you are entitled to benefits for a period prior to your reemployment, notify the nearest local office immediately giving the date and place of last claim filed and date of return to work. The local office can advise you about further filing to cover period between latest claim and return to work. Be sure to give your Social Security number under your name and address.

17. Each time you report to file a claim you must report any employment and the money value received or due you during the week or weeks for which you are claiming insurance. Earnings include, in addition to wages, any tips, board, room, or other payments in any form which you received for having worked. Any pension, workmen's compensation or Social Security benefits you are receiving or may be entitled to get should be reported, as some states require this information.

18. Unemployment insurance payments may sometimes be held up when there is a question whether you earned wages enough to qualify or whether you meet all the conditions fixed by the law. In order to be entitled to insurance you must continue to report to the local office as specified while these questions are being settled.

19. All state laws provide severe penalties for false statements or the withholding of a material fact to obtain benefits to which you are not entitled.

1/ Includes amount credited to States' accounts in the Unemployment Trust Fund, less withdrawals by the States, under the provisions of the Employment Security Administrative Financing Act of 1954.
2/ Taxable wages for 12 months ending March 31, 1959.
3/ Sum of State figures may not equal national totals due to rounding.
4/ Includes payments made under State temporary extended benefit provisions; such payments are also reflected in funds available.
5/ Funds available reflect an advance from Federal account in Unemployment Insurance Trust Fund to: Alaska, $2,630,000 in January 1957, $2,635,000 in February 1958, and $3,000,000 in July 1958; Michigan $113,000,000 in September 1958; Pennsylvania $96,440,000 in April 1959.

January 20, 1960

MEMO

TO: Nelson H. Cruikshank, Director, Department of Social Security

FROM: Raymond Munts, Assistant Director

RE: 1959 Amendments Providing Temporary Extension of Duration

Six states in 1959 enacted permanent provisions for temporary extension of duration. These states now provide additional weeks of benefits to be triggered under conditions of higher than normal rates of unemployment.

State	Basic Duration Provision	Additional Weeks Duration	Unemployment Rate Trigger
California	Variable - 1/2 of base-period wages; maximum of 26 weeks	50% more weeks	Average insured unemployment rate of calendar quarter is 6% or more
Connecticut	Variable - 1/3 of base-period wages; maximum of 26 weeks	50% more weeks	Insured unemployment rate is 6% or more for 8 of the most recent 10 weeks
Idaho	Variable - 32-29% of base-period wages; maximum of 26 weeks	50% more weeks	Insured unemployment rate exceeds 6% and exhaustion ratio is over 10% higher than average for same period for preceding 7 years
Illinois	Variable - 38-32% of base-period wages; maximum of 26 weeks	50% more weeks	Insured unemployment rate is 4.375% or higher for 2 consecutive months
North Carolina	Uniform 26 weeks	8 more weeks	Insured unemployment rate is 9% or more for any 3 weeks in a consecutive 4-calendar-week period
Vermont	Uniform 26 weeks	13 more weeks	Insured unemployment rate exceeds 7% for 4 consecutive weeks

A similar proposal was recommended by the Advisory Council in New York but was not enacted.

There are four specific shortcomings in the temporary extensions as enacted in the six states:

(1) Older workers, minority groups, and others who generally have longer periods of unemployment even in good times get no help from these provisions; neither do those who become unemployed in areas of chronic unemployment within

a state; nor in a town where the major industry closes up. Longer benefits are not available to any of these people simply because the state as a whole does not mirror the high unemployment rate in that particular community.

(2) The amount of unemployment that triggers these extensions is expressed as a percentage of workers in covered employment. As a recession drags on and people exhaust their benefits, they are dropped off the rolls of the insured unemployed. Such an index, then, can seriously understate the extent of unemployment.

(3) Even advocates of experience rating never considered that experience rating was the appropriate method to finance recession-type benefits, which is exactly what the extended duration provisions are supposed to be. But in each state offering extended benefits, the additional benefits are financed through experience rating.

(4) The value of extended benefits will be exaggerated by all who wish to establish in the public mind an image of a generous unemployment compensation program. Some employers in the above states are talking about how their unemployment insurance program now provides 39 weeks of benefits. In the same vein, some employer experts in unemployment compensation see in this approach a way of holding weekly duration at present levels and also reducing the likelihood of federal intervention during recession periods.

In conclusion, uncritical acceptance of this approach can undercut the demonstrated need for longer duration at all times, as urged by the AFL-CIO. However, once a state has an adequate basic duration provision, extended duration which has surmounted some of the above shortcomings might be a useful supplemental program.

AFL-CIO Social Security Department
January 20, 1960

FLEXIBLE MAXIMUMS

Provisions in Six States for Varying Maximum Weekly Benefit Amount with Changes in Wage Levels

State	Method of Computing Maximum Benefit Amount	When Computed (effective date)
Colorado	50% of the most recently available average weekly wage in selected industries	Semi-annually on January 1 and July 1
Kansas	50% of average weekly covered wage during preceding fiscal year	Annually on January 1
Utah	50% of average weekly covered wage during preceding calendar year	Annually on July 1
Vermont	50% of average weekly covered wage during preceding calendar year	Annually on July 1
Wisconsin	52-1/2% of average weekly covered wage during base year ending 6 months prior to effective date	Semi-annually on January 1 and July 1
Wyoming	55% of average weekly covered wage during preceding calendar year.	Annually on July 1

1/ Data cover insured unemployment under the State unemployment insurance programs, the program for Federal employees (UCFE) and the programs for Korean veterans (UCV) and for ex-servicemen (UCX). All temporary extended benefit programs, except that in Ohio, were terminated by the first week of July 1959.

2/ Omits Mayaguez, Ponce and San Juan, Puerto Rico. Each area consists of a principal city or cities and the surrounding area within a reasonable commuting distance.

*/ Data may not be comparable with prior periods because of changes in labor-market-area definitions.

April 6, 1960

MEMORANDUM

TO: Mr. Nelson H. Cruikshank

FROM: Raymond Munts

SUBJECT: Reader's Digest on Unemployment Insurance

A special Senate Committee on Unemployment has just urged federal action to correct the following shortcomings in unemployment compensation:

--- Limited coverage of the law prevents one out of three of the unemployed from qualifying for benefits.

--- A much smaller portion of wages is insured by benefits now than twenty years ago.

--- In the recession, about one-third exhausted their benefits before they could find a job.

--- The employer tax rate today, even after a recession, is only one-third what it was twenty years ago.

These are some of the facts omitted in an original Reader's Digest article on "The Scandal of Unemployment Compensation," (April issue). The author, a Digest staff man, sets himself up as a defender of America's "moral fiber." He reports that "in 1959, one out of every twelve members of our unemployed labor force collected unemployment checks," and writes exclusively about "loafers, quitters, schemers, system beaters, dole grabbers, and parasites."

After being softened up by these scandals, the Digest comes out against the only hope for permanent improvement in the program. "Now the situation threatens to grow worse. Legislation before Congress would put the states completely under the thumb of BES by imposing mandatory federal benefit rates in all states to run nine months for anyone who qualifies for jobless aid. Big unions are already beating the drum for this federal take-over of jobless assistance."

Hidden editorial writing is not new to the Reader's Digest but this violence may be the new look of business in politics. The Digest lays out a plan of political action which includes reporting on your neighbors:

"What can you as a citizen do about this? Here are suggestions: if you know of any cheaters, report the facts to employment officials or to your local newspaper. Find out if your state law needs to be tightened to prevent what you consider unjustified payments. If you decide that something should be done, communicate with your legislator. Write your governor, get your neighbors in-

terested. Find out if your Congressman intends to support national legislation that would turn over unemployment compensation entirely to the Federal Government. . . Just because it is technically legal to dip into the public till, don't let yourself be persuaded that it's the right thing to do. . . We cannot afford to become a nation of loafers, system beaters and dole grabbers."

The Digest held up this article for an opportune political moment (two weeks before the House Ways and Means Committee got ready to report). Actually, it was written in 1958 by a Mr. Gilmore at the request of his boss, Charles Stevenson. Stevenson knew what he wanted: he had done an almost identical piece (different examples, same pitch) for the Digest in December, 1949, after first putting it in the Chamber of Commerce's magazine, Nation's Business.

Both articles, following recessions, are designed to dampen public outrage at the shortcomings of the jobless program.

* * *

Some employer abuses again withheld by the Digest:

--- Two percent of employers are delinquent or defaulting on unemployment compensation taxes, a larger percentage than all worker disqualifications from benefits are to total claims.

--- In Ohio, (where the Digest quotes government officials to back up its charges) employers are allowed to hire "actuarial and service" firms to fight all appeals by their employees. These firms are paid according to their success in defeating the unemployed claimants.

--- Overdue and defaulted employer unemployment compensation taxes are over forty million dollars, better than three times what the Digest says has been taken by "gypsters."

--- Employer pressure on legislatures to hold down benefits, introduce restrictions. (An employer lobby in Washington has admitted spending $125,000 in the 1958 recession to defeat permanent improvement in the program.)

* * *

Millions of Americans and people in 18 countries will get a warped view of a good feature of our American system. In every case of alleged scandal, the Reader's Digest omits the essential fact which weighed in the Court or Appeal Board's decision.

The Wisconsin mine-hoist operator who was discharged: here the Digest omitted the crucial fact that the claimant's superintendent had told him he could stay away until his doctor cleared him for mine-hoist work again.

The inspector in a Pennsylvania defense plant who was discharged for causing scrap: the Digest fails to report that there was no "deliberate and willful action," a conclusion reached by the Board of Review after 53 pages of testimony by the employer.

Both of these cases were difficult ones and decided differently at each step of the appeals procedure. Would the Reader's Digest disqualify anyone discharged for whatever reason? They don't say. They imply the need for reform but never specify what it should be.

The girl who quit as a night-club dancer in Miami when the show moved to Las Vegas: here the Digest doesn't tell you she was justified in quitting because her work and living conditions would have been much worse in Las Vegas.

Two of the Digest "scandals" involve women who quit because they wanted to live with their husbands. One was married and had to move to stay with her husband; the other left to marry a man in another town. Both wanted to continue working and were looking for work in their new residence. The Digest implies that working women should be penalized under the law whenever there's a conflict between their marital and job obligations. Are there no good causes for voluntary quit? The Digest won't say.

The North Carolina schoolteacher who collected benefits during the summer: the Digest withheld the essential fact that his employment was terminated May 29th.

The child-actor who turned down a job paying one-fourth of her regular earnings: does the Digest think one's skill has to be sold immediately to the lowest bidder? One of the purposes of unemployment compensation is to free people from immediate down-grading during a temporary job shortage, and thereby maintain their skills and talents.

. . . Woven through the Digest story is the assumption that jobless pay is an employer's gift and that his interest alone should be respected.

Only the employer's experience with appeals is cited: "In a recent twelve-month period more than two-thirds of their (employer) appeals to referees and the board of review were turned down." The Digest omits the fact that three out of four workers lose their appeal.

There are no instances cited where a worker has been shortchanged by the law. What about the employee who, while off duty, was griping about his employer; when the word got back he lost his job and was disqualified from benefits as "discharged for misconduct."

What about the fact that in almost all states a man looking for work who breaks his arm is disqualified as "unavailable for work," even though there is no work to turn down?

What about the states that disqualify for the entire duration of unemployment? This is punishment for economic circumstances rather than for the disqualifying act.

What about the woman in Michigan who confided to her employer that she was pregnant, but assured him that she would be around for five or six months? In the afternoon she was discharged and then disqualified for benefits on the grounds that pregnancy caused her unemployment.

These are the stories you won't find in the Reader's Digest.

* * *

Attached is a detailed analysis of each of the cases cited in the Reader's Digest. This was prepared by the Department of Labor's Bureau of Employment Security.

due reform. Equalization grants from a federal fund would distribute more evenly the burden of extreme drains on state funds.

Given the late date of introduction of the McCarthy-King bill and the other matters before the House Ways and Means Committee, it is unlikely that its real test will come this year.

Federal Advisory Council on Employment Security

After two years of inactivity, the Federal Advisory Council on Employment Security has been reconstituted by Secretary of Labor Wirtz. He convoked the first meeting on Apr. 5, 1963.

The employee representatives are Harry Boyer, president, Pennsylvania AFL-CIO; Jacob Clayman, administrative director of the Industrial Union Department, AFL-CIO; C. J. Haggerty, president of Building and Construction Trade Department, AFL-CIO; John H. Lyons, Jr., president, International Association of Bridge, Structural and Ornamental Iron Workers, AFL-CIO; Karl F. Feller, president, International Union of United Brewery, Flour, Cereal, Soft Drink and Distillery Workers, AFL-CIO; Nelson H. Cruikshank, director, Department of Social Security, AFL-CIO; A. J. Hayes, president, International Association of Machinists and Aerospace Workers, AFL-CIO; Leonard Woodcock, vicepresident, United Auto Workers, AFL-CIO; and Joseph H. Davis, president, Washington State Labor Council, AFL-CIO.

State Legislation

State legislation in 1962 and 1963 shows some minor improvements which are more than offset by some very serious setbacks. Among the improvements may be noted the following: three jurisdictions—Washington, D. C., North Dakota, and Arkansas—have joined the states that set their weekly maximum as a percentage of state average weekly wages, making 11 such states. A few states have raised their taxable wage base. Several more now limit disqualifications where the unemployed worker is taking an approved training course.

Particularly serious among the setbacks is the trend toward cutting off all benefits following such disqualifying acts as voluntary quit, discharge for misconduct, or refusing suitable employment. More and more the states are using "total disqualification" for the duration of one's unemployment rather than several penalty weeks without compensation.

Three states reduced benefits if a worker goes outside his state to look for employment. This trend is at odds with other national efforts to increase the mobility of the labor force.

In previous reports we have pointed out that state legislation seemed to show change but little net improvement in recent years. For the first time, there has actually been a rollback in benefits.

During the last two years weekly benefit amounts or the

duration of benefits have actually been cut in Wyoming, Colorado, Ohio, South Dakota, Oregon, and Tennessee. In addition, many states have eliminated large numbers of workers from the program through tighter qualifying requirements.

Underfinancing continues to rob the program of vitality. Reserves in 23 states are below the "solvency level," that is, are insufficient to pay benefits for 18 months at recession rates. In seven of these states, the reserves are critical in the sense that there are insufficient funds to pay even 12 months of benefits at recession rates. The legislative experience in Wyoming, Minnesota, Ohio, and Michigan this year illustrates how jobless benefit provisions are subject to attack when the reserves are low—even when the depletion of reserves is due to underfinancing rather than liberal benefits.

1962

District of Columbia: Increased the weekly maximum benefit from $30 to 50 percent of average weekly wages ($48 on effective date, now $49); increased maximum duration from 26 to 34 weeks and raised total benefits allowed from ⅓ to ½ base period wages; extended coverage to non-profit organizations; limited "step-down" qualifying provision; required intervening employment for second benefit year eligibility; allowed slight reduction in taxes.

Kentucky: Raised weekly maximum from $37 to $40; increased penalty for voluntary leaving from 6 to 16 weeks to total disqualification for the duration of unemployment.

Virginia: For the major disqualifying acts extended penalty from 7-12 weeks to total disqualification for the duration of unemployment plus 30 days' work; raised weekly benefit from $32 to $34, raised duration from 20 to 24 weeks; raised base year earnings requirements for every weekly benefit level, including the minimum; non-contributory pension payments were made disqualifying income.

1963

Arkansas: Raised maximum weekly benefit from $30 to 50 percent of state's average weekly wage ($35 on July 1); raised minimum to $15 and required more base quarter earnings to qualify; added contributory pension benefits to disqualifying income; added higher tax rates to "negative balance" accounts and in other ways amended financing provisions.

Colorado: Maximum weeks reduced from 32½ to 26; total potential benefits reduced from ½ to ⅓ base period earnings; reduced weekly benefit amount by deleting definition of full-time weekly wage and modified method of computing benefits; complicates disqualication system with elaborate variety of penalties; broadened disqualification for labor dispute; redefined and tightened seasonal disqualification; charged employer accounts even where compensated unemployment not due to employer action.

HOW UNEMPLOYMENT COMPENSATION BENEFITS MEASURE UP

EFFECT OF LEGISLATIVE AMENDMENTS ADOPTED PRIOR TO JULY 1, 1963

* The 52 weeks potential duration should be achieved through a combination of state and federal benefits.

Florida: Disqualification for voluntary quits extended by limiting "good cause" to cause attributable to employer; allowed overdue benefit payments to be paid to family in case of death of compensated worker; raised maximum tax rate from 2.9 to 4.5 percent; disqualified refugees (Cubans) under certain conditions.

Hawaii: Tightened financing by raising minimum rate to 1 percent and in other ways.

Idaho: Required that when individual draws 75 percent of his benefits in any one benefit year, he must earn 8 times his weekly benefit before being allowed to qualify in next benefit year; increased taxable wage base to $3,600; changed definition of peril point; changed schedules of experience rates.

Massachusetts: Raised maximum $40 to $45; increased wage qualifying requirements.

Michigan: Increased maximum benefits from $30-55 to $33-60; workmen's compensation benefits made disqualifying income; added penalty for duration of unemployment where discharge due to strike action; tightened labor dispute qualification; increased taxable wage base to $3,600.

Montana: Tightened wage qualifying requirement; increased minimum disqualification penalty; redefined minimum fund conditions.

Nebraska: Raised maximum $34 to $38; raised wage qualifying requirements.

New Hampshire: Raised maximum $40 to $45.

New Mexico: Provided different fund levels to trigger new tax rates, including rates to 3.6 percent.

New York: Enacted various changes in experience rating formulas and application.

North Dakota: Reduced duration allowed by limiting to 26 weeks, 22 weeks, or 18 weeks by requiring base year earnings over 70 times, 55 times, and 18 times weekly benefit amounts, respectively; tightened qualifying requirement for all benefit levels; raised weekly maximum from $36 to 50 percent of average weekly wages (43 as of July 1); for voluntary leaving, refusing suitable work and discharge for misconduct; established total disqualification penalty.

Ohio: Changed individual weekly benefit formula substantially to disadvantage of low paid employees; reduced average potential weeks of duration; reduced weekly benefit amount by employer-paid portion of pension benefits; required "active search for work" for eligibility; severely restricted pregnancy disqualification; deleted "prior earnings" as a factor in defining "suitable work;" shifted more of tax burden to companies where claims are high.

Oklahoma: Eased the time period at which experience rating terminates under condition of low fund balance.

Oregon: Withdrew from the eligibility any one entitled to OASI, unless he proves otherwise; raised maximum from $40 to

$44; reduced weekly benefits by computing as 1.25 percent of base period earnings (formerly 1/26th high quarter wages).

Rhode Island: Raised age of dependents from 16 to 18 for payment of dependent allowances.

South Dakota: Added from 7 to 13 non-compensated waiting weeks for those claimants making over $6,000 in the base period; defined week of unemployment as one where claimant makes less than one and a half times his weekly benefit amount; raised the partial earnings allowed before benefit reduction; increased the voluntary leaving penalty from 1-5 to 4-9 weeks; increased the disqualification for discharge for misconduct from 1-10 to 7-24 weeks; raised maximum weekly benefit from $33 to $34.

Tennessee: Tightened wage qualifying provision by requiring more earnings in high quarter and base period and by eliminating "step-down"; changed duration from uniform 22 weeks to variable benefits limited to ⅓ base period wages and maximum of 26 weeks; slightly increased in earnings to requalify for second year benefits; increased penalty on voluntary leaving and misconduct from five weeks to total disqualification for duration of unemployment and until five times weekly benefit is earned; increased weekly maximum from $32 to $36.

Texas: Total disqualification for individual who left work to go to school and who subsequently became unemployed.

Utah: Tightened attachment test by requiring more earnings and more weeks of work in the base year; increased taxable wage base from $3,000 to $4,200.

West Virginia: Increased maximum from $32 to $35; raised base period wages needed to qualify for higher minimum; liberalized penalty for misconduct (other than gross misconduct) from total disqualification for duration of unemployment to six weeks; tightened disqualification for pregnancy; changes in coverage provisions and in experience rating.

Wyoming: Substantially decreased benefits by lowering maximum from 55 percent to 50 percent average weekly wages ($49 to $45) and by eliminating dependents allowances (formerly up to $6); adds an additional qualifying requirement of 26 weeks of covered employment; reduced interstate claims to 75 percent of amount under Wyoming law or maximum in state where claim filed; established total disqualification penalties; adds severe seasonal work limitations.

Workmen's Compensation

During the past two years, strenuous efforts have been made to improve state workmen's compensation laws by state AFL-CIO bodies. Hundreds of workmen's compensation bills were introduced. In 1962, Kentucky, Maryland, New Jersey, New York, Rhode Island and Virginia increased benefit levels, and during 1963 when all legislatures were in session, Colorado, Georgia,

UNEMPLOYMENT INSURANCE

What is Unemployment Insurance?

Payments made to an unemployed individual who loses his job through no fault of his own are termed unemployment insurance or benefits. These payments act as the first line of defense against want when an individual's income stops. Such payments tide the individual and his family over until he finds another job. In doing this it serves not only the individual but the community in which he lives as his payments enable him to maintain a limited purchasing power.

You Should Know Your Rights

If you are protected by this insurance, it is important for you to know your rights and what you should do to collect the payments that may be due you. This leaflet gives some of the important points that you will wish to know, but it does not attempt to tell the whole story.

Who is Protected By Unemployment Insurance?

If you work in a mill, shop, factory, store, bank or mine you probably have job insurance protection.

This protection is authorized in the Tennessee Employment Security Law which requires most types of employers with four or more employees to pay the cost of the insurance just as they pay for fire, burglary, workmen's compensation or any other kind of insurance.

Nothing is deducted from your wages to pay for this protection.

For information concerning unemployment benefits for ex-servicemen and former federal civilian workers, consult your Local Employment Security Office

Who Is Not Protected By Job Insurance?

Your employer has the right to voluntarily cover your employment in any field but he is not required by law to do so if you perform labor in agriculture, work as an insurance agent or insurance solicitor on commission, serve as a domestic in a private home, or work for a non-profit organization.

There are other exemptions which may affect you. For example, you will not have job insurance if you are under 21 years of age and employed by either of your parents, nor at any age if you work for your son, daughter, husband or wife.

Weekly Benefit Amount

The amount of the weekly income from job insurance is given in a table included in the law. It is called the "weekly benefit amount." The total amount you may draw during your benefit year is determined by the total amount of wages you earned during your base period.

Three Kinds of Unemployment

The law provides benefits for three kinds of un employment. These three are total, part-total and partial unemployment.

Briefly, total unemployment occurs when a worker has lost his job connection, is entirely out of work and receives no wages.

Part-total unemployment occurs when a worker has lost his full time employment, but does have some work other than regular employment at which he earns less than his weekly benefit amount.

Partial unemployment occurs when an employee has less than full time work with his regular employer, and earns less than his weekly benefit amount. A partially-unemployed worker has not lost his job. He has a regular employer but is temporarily under-employed. His employer will file partial claims for him.

Requirements

There are certain requirements that you must meet before you can draw unemployment insurance. Among these are:

1. You must be totally, part-totally or partially unemployed through no fault of your own.
2. You must be registered for work with the Tennessee Employment Security Department.
3. You must have worked in covered employment.
4. You must be physically able to work at the time you file your first claim. If you should become sick or disabled later you still may qualify for benefits, provided no job is offered to you that would have been considered suitable at the time you first registered.
5. You must be available for work, that is ready and free to accept suitable work offered you.
6. You must have earned enough wages at your work to qualify for benefits.
7. You must serve one week of waiting for which no payment is made, after claim is filed.
8. You must report any money you have earned when filing claims.
9. You must file your claims in accordance with the law and regulations of the Tennessee Department of Employment Security.
10. You must report the amount of your annuity, pension, or other retirement pay being paid to you by a former employer or from any trust or fund. DO NOT REPORT OASI PAYMENTS.

How to File A Claim

If you think that you are due unemployment insurance you should go in person to the Employment Security office for the area in which you live. If there is no such office where you live, a representative may come to your community from time to time. Ask at the city hall, courthouse or newspaper office for information about the time and place the traveling representative may be found. He will register you for work and take your claim for unemployment benefits.

When you file a claim for benefits, be sure to take your Social Security card and your separation notice with you.

Your first application is called an "initial claim." It will be sent to the Central Office at Nashville for checking against your record.

Later on you will receive an official report on your claim. This report is called a "determination." It will show the amount of wages reported for your "base period" and your weekly benefit amount, if any is due you under the law. Each employer for whom you worked during your base period will be notified when you have filed a valid claim.

You should visit the employment office regularly, at the hour and on the day you are advised to appear. If you should fail to report, without good cause, there will be delay in handling your claim. As long as you meet the legal requirements you may draw benefits until the amount available to you in your benefit year has been exhausted.

Disqualifications

You shall be denied benefits for the duration of of your unemployment and until you return to work for an employer who pays the unemployment insurance tax and earn five times your weekly benefit amount for:

1. Voluntarily quitting work without good cause connected with your work. (No disqualification results if you left your work because you were sick or disabled or you left work in good faith to join the armed forces of the U. S. provided you have met certain requirements.)

2. Being discharged for misconduct (simple) in connection with your work.

3. Failing without good cause to apply for or to accept available suitable work when so directed by the Employment Security Office.

Other sections of the Law provides disqualifications for

1. Making false statements or intentionally withholding information to obtain benefits (Based on the facts in the case, maximum disqualification may extend to 52 weeks.)

2. Taking part in a labor dispute.

3. Being discharged for gross misconduct connected with your work. (No benefits based on wages received prior to the time of discharge, may be paid.)

Rights and Benefits Protected

Benefits paid you under the Tennessee Employment Security Law may not be assigned, pledged, attached or levied in any manner whatever so long as they are not mingled with your other funds. They are exempted from any remedy whatsoever for the collection of all debts except debts incurred for necessaries for you, your wife or your dependents while you are unemployed.

The Law does not permit you to waive, release or commute any of your rights granted under the Law.

You do not have to pay income tax on unemployment insurance benefits.

Interstate Benefit Plan

If you have worked in covered employment in Tennessee and then move to another state (including the District of Columbia) or to Canada, your benefit rights are preserved in Tennessee.

If you lose your job in another state go to the public employment office. The office in the state where you then live will help you to file the claim. You may choose to file against any state in which you have benefit credits available provided you have exhausted all benefits available to you on any current claim you may have established. Under certain conditions, available benefit credits in two or more states may be combined in order to establish a claim.

The same arrangement permits you file to a claim in Tennessee for benefits earned in other states.

You Can Appeal Your Case

You have the legal right to appeal your case if you feel that an injustice has been done. An appeal through your public employment office may be made

from a determination within ten days after it is delivered to you.

An appeal from a decision of the Appeals Tribunal must be made within ten days after it is delivered. You do not have to employ anyone to represent you, but you may so do if you wish.

Since your employer pays for the benefits that you may receive, the amounts paid to you are charged against his account. He also has the legal right to appeal the case.

Penalty For Fraud

It must be borne in mind that both you and your employer can be prosecuted under criminal laws for making false statements. You can also be disqualified from receiving benefits for a period of time and forced to return all money obtained under false pretences. The Law provides that you may be fined up to, but not more than $1,000, or imprisoned in the county jail for not more than one year, or both, in the discretion of the Court for making false statements or withholding needed information.

There is no reason, however, for you or any unemployed worker, to fear filing an honest claim. The money is being kept in reserve for that purpose. The penalties are provided for those who try to beat the Law.

When You Write About Your Claim

In writing to the Department of Employment Security about claims for benefits be sure to print or type your name and correct address, the name and address of your employer, and also your correct Social Security number. All records in the Central Office are filed by Social Security number.

SPECIAL INFORMATION FOR FORMER FEDERAL EMPLOYEES

If you are eligible for unemployment insurance as a former Federal civilian employee, your unemployment insurance benefits are determined:

(1) under the laws of the state in which you had your last official station, or

(2) if at the time of filing your initial claim you reside in a state in which you have worked in employment covered by state law after separation from your Federal employment, then your benefits would be determined under the law of your state of residence, or

(3) if your last official station was outside the United States, the law of the state of your residence would determine your unemployment insurance benefits.

Therefore, the amount of benefits for which you qualify, the reporting and filing requirements to file your claim, etc., are determined by state law. If your claim is filed against Texas, the laws and regulations discussed above concering claimants filing claims against the State of Texas also apply to your claim.

The Federal agency for which you worked should have furnished you with a Notice to Federal Employee About Unemployment Compensation, Standard Form 8, and a Notification of Personnel Action, Standard Form 50, or its equivalent. Please present these documents and your social security account card when you file your initial claim for benefits.

IF YOU HAVE ANY QUESTIONS REGARDING THESE MATTERS, PLEASE CONTACT THE NEAREST TEC OFFICE OR WRITE TO THE TEXAS EMPLOYMENT COMMISSION, TEC BUILDING, AUSTIN, TEXAS 78701.

UNEMPLOYMENT INSURANCE

INFORMATION FOR CLAIMANTS

This pamphlet has been prepared to give you general information concerning unemployment insurance and your rights in claiming benefits. Each state has its own unemployment insurance law and administers its own unemployment insurance program. Accordingly, the following information applies only to claims filed against Texas under the Texas Unemployment Compensation Act. Special information for ex-servicemen and former Federal civilian employees is contained in the last part of this pamphlet. This pamphlet is for information only and does not have the force and effect of statute or regulation.

TEXAS EMPLOYMENT COMMISSION

Form B-91 (8-65)

SPECIAL INFORMATION FOR EX-SERVICEMEN

If you are eligible for unemployment insurance as an ex-serviceman, your unemployment benefits are determined under the laws of the state in which you file your first initial claim and establish entitlement to unemployment insurance following your separation from military service, Therefore, the amount of benefits for which you qualify, the reporting and filing requirements to file your claim, etc., are determined by state law. If your claim is filed against Texas, the laws and regulations discussed above concerning claimants filing state claims against the State of Texas also apply to your claim.

To qualify for unemployment insurance as an ex-serviceman, you must:

(a) have had 90 or more continuous days of active service in the Armed Forces (or less than 90 days if you have been discharged or released because of a service-incurred disability or injury);

(b) have been discharged or released under conditions other than dishonorable (you have not received a bad conduct discharge, or, if an officer, you have not resigned for the good of the service);

(c) have had a certain amount of active service in the Armed Forces within a base period specified in the state unemployment insurance law.

No benefits can be paid during the period covered by lump-sum terminal leave payments (the number of days after discharge or release equal to the number of days of unused leave which is compensated), or during the period covered by mustering-out payments (90 days after discharge or release if you get $300, 60 days if you get $200, and 30 days if you get $100). No benefits can be paid for any period for which you are receiving an education and training allowance under subsection (a), (b), (c), or (d) of Section 232 of the Veterans' Readjustment Assistance Act of 1952; a subsistence allowance under Part VII or Part VIII of the Veterans Regulation Numbered (a), amended; or an education assistance allowance under the War Orphans' Educational Act of 1956.

You need the following records to file a claim as an ex-serviceman:

(a) Separation form DD-214.

(b) Social Security Account Card.

IF YOU HAVE ANY QUESTIONS REGARDING THESE MATTERS, PLEASE CONTACT THE NEAREST TEC OFFICE OR WRITE TO THE TEXAS EMPLOYMENT COMMISSION, TEC BUILDING, AUSTIN, TEXAS 78701.

Information About Unemployment Insurance

WHAT IS UNEMPLOYMENT INSURANCE? It is an insurance program which compensates eligible workers for a portion of their wage loss when they lose their jobs. The objective is to aid unemployed persons while they are looking for work, by providing weekly income for a stipulated period of time.

WHO PAYS FOR UNEMPLOYMENT INSURANCE? In Texas, an employer is subject to a tax for unemployment insurance payments if he employs four or more employees in each of twenty weeks during a calendar year, unless he is specifically exempt by law. No money can be deducted from an employee's wages for unemployment insurance.

When you file your FIRST CLAIM you must bring with you to the commission office your SOCIAL SECURITY card for identification. All your wages have been recorded under your SOCIAL SECURITY number and the TEC uses this in checking your claim and in keeping your records.

WHO CAN QUALIFY? To qualify for unemployment insurance you must have within your Base Period (see explanation below) received from employers who pay the unemployment tax in Texas, wages of not less than $250 in a calendar quarter with at least $125 in some other quarter; or, $1,000 or more in any quarter; or, $450 in total wages with no less than $50 in each of three different quarters.

An individual who worked for a Federal agency or who is an ex-serviceman may qualify for Federal unemployment insurance, or may combine his Federal wages and wages earned in State-covered employment to qualify for benefits. Wages earned in another State also may be used in combination with wages earned in Texas to qualify for benefits.

WHAT IS A BASE PERIOD? It is the first four of the last five completed calendar quarters immediately preceding the date of a claimant's initial claim for unemployment insurance. You can determine your Base Period as follows:

If you claim insurance between:	Your Base Period is the preceding:
Jaunary 1 and March 31	October 1 through September 30
April 1 and June 30	January 1 through December 31
July 1 and September 30	April 1 through March 31
October 1 and December 31	July 1 through June 30

HOW CAN AN INDIVIDUAL CLAIM UNEMPLOYMENT INSURANCE? Before an individual can file for unemployment insurance, he must register for work with a representative of the Texas Employment Commission. After he is registered for work a representative will then help him complete an initial claim. The reason the claimant left his last work must be shown on the claim and a copy of the claim is mailed to the claimant's last employer. The employer has ten (10) days from the date the notice of the claim was mailed to him in which to protest payment of the claim. This claim is not a payable claim but establishes the claimant's entitlement to unemployment insurance.

To be paid unemployment insurance, the claimant must report to a Texas Employment Commission representative and file continued claims after filing an initial claim. A continued claim may be filed at seven-day intervals following the initial claim.

HOW ARE BENEFITS DETERMINED?

The amount of benefits is determined by the amount of qualifying wages paid to a claimant during his base period. (An employer subject to the Act reports only the first $4,800 in wages in a calendar year for each of his employees. Wages in excess of this amount are not reported and are not used in computing benefits). The amount he may be paid for a seven-consecutive-day period of total unemployment is determined by taking 1/25 of his highest quarterly wages in his base period adjusted to the next higher multiple of One Dollar ($1), not to exceed $37. The maximum benefits that can be drawn during a benefit year is determined by taking the lesser of 25% of the total wages reported in his base period or 26 times his weekly benefit amount. (A benefit year is a period of one year beginning on the date of a claimant's valid initial claim.) A claimant with sufficient wage credits may qualify for minimum weekly insurance payments of $10 a week up to maximum weekly payments of $37 a week. The number of weeks a claimant can draw unemployment insurance depends on the total amount of his unemployment insurance except that he cannot draw more than twenty-six weeks for total unemployment during his benefit year.

HOW DOES A CLAIMANT KNOW IF HE QUALIFIES FOR BENEFITS?

IDENTIFICATION CARD

NAME

S. S. No.

OCCUP. CODES

Claim Sched. Day: Hour: AM PM

Type of Claim: UC ☐ UCFE ☐ UCX ☐

H R Yr. of Birth:

Report Date	Symbol	Next Report Date	Office Number	Report Date	Symbol	Next Report Date	Office Number

WBA _____ , MBA _____, AND BYE _____ .

A form (B-11) entitled "Benefit Claim Determination" is mailed to each claimant showing the total amount of unemployment insurance, if any, for which he qualifies, and the maximum weekly amount he may draw. If he does not qualify for benefits, the form will be marked "Disallowed."

The Form B-11 shows whether or not a claimant qualifies for benefits. It does not show if the claimant is ineligible to receive benefits or if he is subject to a disqualification of benefits. If he is ineligible to receive benefits or is disqualified benefits, a second notice entitled "Notice of Claim Determination" will be mailed to him showing the decision made in regard to his claim.

WAITING PERIOD WEEK

A claimant must serve a waiting period of one week covered by a continued claim before he can qualify for any payment of unemployment insurance. He may be paid for this waiting-period-week claim if he subsequently draws four times his maximum weekly benefit amount.

WHAT ARE THE REQUIREMENTS FOR RECEIVING PAYMENTS?

First, a claimant must be less than full-time employed and must not have earned monies equal to or in excess of his weekly benefit amount of unemployment insurance plus $5 or 25% of his weekly benefit amount, whichever is greater. (If he works less than 40 hours and earns less than his weekly benefit amount plus $5 or 25%, whichever is greater, he may draw the difference in unemployment insurance. The difference between the amount drawn and his weekly benefit amount may be claimed in a subsequent week of unemployment during his benefit year.) A claimant who cannot report to file a claim because of having returned to full-time work should immediately notify a Commission office. When necessary, the local office representative will arrange for the claimant to report before or after regular office hours so that a claim may be accepted for the week in which he returned to work.

All hours worked and all wages earned during the time covered by a claim must be reported on the claim, even though wages for the work have not yet been received. Failure to report such work and earnings can result in severe penalties. Earnings reported will reduce benefits payable as described above, but will not reduce the total benefits available to the claimant during his benefit year.

A claimant is not eligible for unemployment insurance unless he is physically able to work. Any illness or physical injury severe enough to keep him away from a job may also keep him from drawing unemployment insurance.

A claimant must be available for work during each of the seven days he is claiming unemployment insurance. Any activities, such as, confining responsibilities at home or being out of town on personal business, which keep him from accepting work, will also keep him from receiving unemployment insurance payments.

CAN A CLAIMANT WHO QUIT WORK DRAW INSURANCE?

A claimant who voluntarily quits his last work without good cause connected with the work is subject to a disqualification of from one week to a maximum of twenty-six weeks. The number of weeks a claimant is disqualified depends upon the circumstances in each case. If a claimant is not disqualified for the maximum, he may file for any remaining benefits after the disqualification period has passed.

WHAT IS "VOLUNTARY" SEPARATION?

It's when a claimant terminates his work through his own choice and action. If forced to leave his last job for reasons beyond his control, he is considered to have left "involuntarily." Involuntary separations are not disqualifying.

WHAT IS "WITHOUT GOOD CAUSE CONNECTED WITH THE WORK"?

This means there were no valid reasons or conditions connected with the work that justified leaving a job. All personal reasons for quitting are reviewed to determine the degree of disqualification to be imposed. Thus, if there's a compelling personal reason for quitting, then a lesser disqualification will be assessed than if the reason is not considered to be a compelling one.

CAN A CLAIMANT WHO IS FIRED FROM HIS LAST WORK DRAW INSURANCE?

A claimant who is discharged from his last work for misconduct connected with the work is subject to a disqualification of from one week to the maximum of twenty-six weeks. The number of weeks the claimant is disqualified depends upon the circumstances in each case. If he is not disqualified for the maximum, he may file for any remaining benefits after the disqualification period has passed.

WHAT IS "MISCONDUCT"?

We use the same definition as found in American Jurisprudence. It is an act of wanton disregard of the employer's interests, a deliberate violation of his rules, or a disregard of standards of behavior which the employer has the right to expect of his employee. Also it's negligence in such degree or recurrence as to show an intentional and substantial disregard of the employee's duties and obligations to the employer.

CAN A CLAIMANT REFUSE WORK AND DRAW INSURANCE?

A claimant who fails without good cause to apply for suitable work when so directed by TEC or to accept suitable work when offered is subject to disqualification of from one to thirteen weeks. If any benefits remain after the disqualification is assesseed, the claimant may file for these benefits after the disqualification period has passed.

WHAT OTHER CONDITIONS PREVENT DRAWING UNEMPLOYMENT INSURANCE?

The law also provides a disqualification preventing the claimant from receiving unemployment insurance if his stoppage of work is because of a labor dispute where he was last employed. Other disqualifications and penalties are applied as a result of misrepresentation or fraud. Payment may also be delayed or reduced by the claimant's receipt of wages in lieu of notice, Old-Age Benefits (Social Security), Workmen's Compensation, wages from partial employment, and, under certain conditions, receipt of vacation pay or holiday pay.

CAN THESE DETERMINATIONS BE APPEALED?

If the claimant disagrees with the "Benefit Claim Determination" he has twelve (12) days from the date it was mailed in which to request a redetermination or appeal. This determination should be checked by the claimant to insure that the wages listed were earned by him. If wages are listed that do not belong to claimant, failure to disclose this fact may subject the claimant to penalties.

If a claimant receives a "Notice of Claim Determination," he has twelve (12) days from the date of the determination in which to file an appeal. If his last employer filed a timely protest to his initial claim, the employer also has twelve (12) days from the date of the determination in which to file an appeal. If no appeal is filed within this twelve-day period, then the decision becomes final and payment will be made or denied in accordance with the determination.

WHAT HAPPENS WHEN AN APPEAL IS FILED?

When an appeal is received from either a claimant or his employer, the Appeal Tribunal schedules a hearing and notifies all interested parties of the time and place. Testimony given in an appeal hearing is under oath and is recorded.

The appeals referee considers the record and testimony and renders a written decision. The decision includes the statement of the facts in issue, the applicable law, and the basis for the referee's decision. Copies are mailed to all interested parties. Further appeal may be made to the Commission within ten (10) days after the mailing of the Appeal Tribunal decision.

After the Commission has rendered its decision, further review may be requested within ten (10) days. After the Commission's decision has become final, appeal may be made to any court of competent jurisdiction in the county of the claimant's residence within the prescribed time limit: i.e., within ten (10) days after the Commission's decision has become final.

CLAIM CERTIFICATION

Each continued claim document requesting payment of unemployment insurance contains the following statement:

"YOUR RIGHTS TO BENEFITS DEPEND ON YOUR ANSWERS TO THESE QUESTIONS. FALSE STATEMENTS MADE TO OBTAIN OR INCREASE BENEFITS ARE PUNISHABLE BY FINE AND/OR IMPRISONMENT. I CERTIFY I AM THE INDIVIDUAL NAMED ON THIS CLAIM AND MY ANSWERS ARE TRUE AND CORRECT."

Each claim must be completed correctly. Hours of work and gross wages earned during the period covered by the claim must be reported. The law provides for criminal prosecution and penalties for making a false statement or failure to disclose a material fact to obtain or increase unemployment insurance payments.

WHAT ABOUT PART-TIME WORK?

Although your ultimate goal, like that of the TEC, is to find you a full-time job, it will be to your advantage to accept part-time work. You may be eligible for job insurance payment in any week in which you are working less than full-time.

You may also be eligible for payments if you are working less than full-time for your REGULAR employer. If you are partially employed with your REGULAR employer you should consult a TEC representative about the procedure you should follow in filing a claim.

REMEMBER:

If you have worked during a period for which you are claiming unemployment insurance, **you must report your earnings** from such work whether you have been paid or not. Failure to correctly report these earnings is a violation of the law.

ABOUT FRAUDULENT CLAIMS:

Severe penalties are provided by law for persons found guilty of trying to obtain benefits to which they are not entitled. An individual who wilfully makes a false statement or representation, or knowingly fails to disclose a material fact in order to obtain unemployment insurance, not only faces disqualification, but also becomes liable for criminal prosecution. Conviction in court for fraud will forfeit your rights to payments for the "BENEFIT YEAR" during which the offense occurred, in addition to any other penalty that may be imposed by the court.

Toward a more effective

Unemployment Insurance Program

A GENERATION of Americans has grown up in the three decades since President Franklin D. Roosevelt signed the Social Security Act which established the Federal-State unemployment insurance system. Today, the program is being examined to see how adequate it is to meet changing conditions.

Over the years, the unemployment insurance system has proved its worth as an economic stabilizer. It eased transitions from World War II and from the Korean conflict to peacetime enterprises. During the four postwar economic recessions, the orderly operation of the UI program and the prompt distribution of UI benefits to unemployed workers contributed significantly to their welfare, to public confidence, and to business stability. Today, the system is a recognized and vital element in the operation of the American economy.

The system's Federal-State character has been firmly established, and its basic goals remain essentially unchanged—to provide partial wage loss as a matter of right, with dignity and dispatch; to maintain purchasing power; to prevent an employer's labor force from dispersal; to maintain workers' skills; and to prevent a breakdown of labor standards. Conditions under which these goals are to be achieved, however, now challenge the system's ability to deal with them.

The UI system now has to serve a labor force of over 78 million; new occupations appear and old ones disappear; there are more white collar jobs than blue; and service workers outnumber those in other occupational categories.

In spite of the advancing economy, a growing number of workers—about 15 million—are still unprotected. They are employed in small firms, in State and local governments, and in other excluded industries and occupations. The standard of living has tripled since 1930, yet UI benefits compensate workers for only about one-third of their wage loss; in many instances, for only one-quarter or one-fifth.

Gaps in the program's coverage, benefit levels, duration, and ability to cope with extended unemployment and to meet the problem of income during training or retraining have weakened the program's effectiveness. Many State laws have been changed, but the changes proceed along established lines and reflect no basic change of direction or philosophy.

The program cannot rest upon a narrow idea of wage replacement. The concept of security entails more than protection against wage loss. A worker's security is not assured by income maintenance alone during layoff periods.

It may depend on his ability to adjust to changes. A man who loses his job today may be losing his lifetime skill or career. One and a half million workers a year exhaust their jobless benefits before finding, if they succeed, other jobs. And a worker's unemployment often means complete disruption of an employment relationship, so that his eventual return to work may well be with a different employer, in a different area, at a job requiring an entirely different skill.

We are living at a time when technological developments will bring innovations in our social and economic structure which at present seem inconceivable. These in turn will bring dramatic changes in the concepts, organization, and administration of our social insurance programs. The unemployment insurance system must fill a new and more creative role. To do so, weakness must be corrected.

Current history has set the stage for discussion of these current problems and issues: How does the changing economy affect the role of UI? How can we balance the need for more liberal benefits with the realities of a reasonable tax structure? How best can we adapt the program to job market changes and developments? What is the relationship between UI and an active manpower policy? What role can UI play in the war on poverty? And how can we reinforce the Federal-State relationship in UI?

The distinguished contributors to this special anniversary issue have reviewed the present system and focused attention on these questions. They have emphasized the need for changes to meet the challenges. As President Johnson said: "Improvements in our unemployment compensation system are essential if the program is to exert a stronger stabilizing effect on the economy and provide people with adequate income when out of work. The system has not kept pace with the times. . . . Now, when unemployment is lower than it has been for years, is the appropriate time to modernize the system so that it will better meet the needs of the workers, the community, and the Nation."

It is important for all to consider these views and to work toward improving the unemployment insurance program so that it may continue to serve well our Nation's goal for a greater society.

W. Willard Wirtz
Secretary of Labor

"Of course, unemployment insurance alone will not make unnecessary all relief for all people out of work for the entire period of a major economic depression, but it is my confident belief that such funds will, by maintaining the purchasing power of those temporarily out of work, act as a stabilizing device in our economic structure and as a method of retarding the rapid downward spiral curve and the onset of severe economic crises."

—*Franklin D. Roosevelt (March 23, 1934)*

"A strengthened unemployment insurance system not only will furnish more adequate aid to those who become unemployed, but also will do more to maintain the high volume of consumer purchasing power so necessary to the welfare of the entire economy. Thus it is a strong element in our program to support growth and expansion in the economy."

—*Harry S. Truman (April 6, 1950)*

"* * * further legislation is still needed. * * * This program has proved to be one of the most successful means for combining the interest of the economy as a whole with the interest of the individual worker."

—*Dwight D. Eisenhower (January 16, 1961)*

"I cannot emphasize too strongly the need and importance of strengthening our unemployment compensation system. These improvements will not only ease the burdens of involuntary unemployment, but will add to our built-in defenses against recession."

—*John F. Kennedy (May 14, 1963)*

"Improvements in our unemployment compensation system are essential if the program is to exert a stronger stabilizing effect on the economy and provide people with adequate income when out of work."

—*Lyndon B. Johnson (May 18, 1965)*

The Challenge of Changing Times

THE Federal-State system of unemployment insurance represented, in 1935, an experimental venture into an unexplored area of government activity by means of a unique intergovernmental arrangement. Guidelines and experience were lacking as to statutory provisions, administrative organization, or procedures best suited to the job. Nevertheless, the program got underway with little delay. By January 1939, all but two States had been collecting contributions for at least 2 years and were paying benefits; the remaining two States began benefit payments in July 1939.

For 30 years, unemployment insurance has been the major protection available to individuals and to the economy against the loss of wages and purchasing power arising from unemployment. Each year, millions of workers have used benefits to pay rent and buy groceries for themselves and their families. The billions of UI dollars thus spent have, in turn, been respent again and again, providing added purchasing power at the community level and helping to stop downward economic spirals.

Recognition of the program's value need not blind us to its shortcomings. It has made a great contribution, but it can make a greater one. Particularly in the light of the current commitment to combat poverty, we should be closing the gaps in UI protection and improving its administration.

It was, therefore, appropriate that the House Ways and Means Committee spent much of the 30th Anniversary month in public hearings on an administration proposal to strengthen and improve the Federal-State program of unemployment insurance for short-term unemployment, and to backstop that program with a Federal program for those of the long-term unemployed with substantial past employment.

As the national economy becomes more and more interrelated, unemployment becomes an increasingly complex problem; one aspect is the existence even in periods of high employment of a significant volume of unemployed workers with firmly demonstrated attachment to the labor force. In both human and economic terms, it is important that they be reabsorbed in productive activity with the least personal hardship and waste of skills. For many, however, reemployment will require personal and occupational adjustments.

Among the issues to be resolved by the Ways and Means Committee is whether the Federal Government should help in this adjustment by a program of extended duration of UI benefits. If the Committee believes there should be a program, it must decide what form it should take, particularly whether it is needed in "good times" as well as bad.

Another decision to be made by the Committee is whether the wide interstate variations in benefit adequacy and in taxes reflect the kind of interstate competition that the Federal act was originally designed to eliminate. The bill before the Congress is designed in part to make it easier for States to provide adequate benefits without having substantially higher employer taxes than those in competing States.

Other changes being considered by the Committee would eliminate some of the limitations on coverage, curb restrictions on payments to claimants who are jobseeking in another State, and soften the trend toward increasingly harsh disqualifications. Still others are aimed at encouraging qualifying requirements which represent a reasonable degree of past attachment to the labor force.

Those of us in the program know, probably better than anyone else, the importance of administration, especially claims determination and adjudication, in the successful working of a UI program. This aspect is recognized by the legislative proposal, which calls for steps to increase the supply of trained personnel and to improve the training of present staff.

Finally, the Committee is considering the advisability of providing for a continuing critical look at unemployment insurance in relation to the changing economy in which it operates, through a comprehensive and continuous program of research to evaluate the effectiveness of the system.

The experiment of 30 years ago has proven its worth. Now, on the basis of 30 years' experience, the program should be reviewed and revised to meet the needs of a changed economy.

ROBERT C. GOODWIN, *Administrator,*
Bureau of Employment Security

The Goals and Tasks Ahead

COMMEMORATIVE issues of magazines all too readily take on the aspects of memorials to past accomplishment. However, 30 years after passage of the Social Security Act initiated the American unemployment insurance system, we are not yet ready to treat unemployment insurance with the combination of respect and indifference that sometimes accompanies memorials.

We need a strong unemployment insurance system. Indeed, it may be argued that this need is even greater now than it was in 1935. Not only in number but also as a proportion of the labor force, many more people now depend on wages for their livelihood than in 1935. At the same time, the development of such characteristics of our economy as installment buying has made the worker's continuity of income more important than ever—for him and his family and also for the economy of the community.

We are a long way from the goal of a wholly adequate unemployment insurance system. The number of wage and salary workers protected by unemployment insurance has more than doubled in 30 years, but the number still lacking that protection—about 15 million wage and salary workers—is almost equal to the program's original coverage. The number of weeks for which benefits are now provided does not cover the full unemployment period of almost a third of the beneficiaries. The limitation on the maximum weekly benefit amount in most States results in failure to provide the insured unemployed worker with a wage-loss replacement equal to half his weekly wage. Universal coverage, benefit duration long enough to cover the temporary unemployment of insured workers, a weekly payment which replaces at least 50 percent of the wage loss of the great majority of insured workers during their unemployment—these are basic goals not yet accomplished.

Until these goals are attained, unemployment insurance must be improved so as to more effectively protect the workers and provide purchasing power to the community. Thirty years ago UI was presented to the people of the United States as our first line of defense against the problems of unemployment. In 1964, only 40 percent of those unemployed in the United States were receiving UI benefits. The 60 percent of unemployed workers not entitled to UI benefits could reasonably suggest that unemployment insurance was a weak "first line of defense."

Unemployment insurance should not be expected to meet the needs of all the unemployed. For example, it does not seem well suited to deal with the self-employed nor does it readily lend itself to meeting the problems of unemployed labor-force entrants. At this point, however, the unfinished agenda of unemployment insurance appropriately includes extending its protection to all wage and salary workers.

Although these still missing program dimensions may loom largest in public discussions of UI, they are only part of the agenda. Unemployment insurance has added considerably to the Nation's economic intelligence, but there remains a great deal that we do not know about the work force, the unemployed, and even the operation of a UI system. The vast changes that have taken place in labor-force patterns, in the economy as a whole, and in unemployment insurance itself have brought a multitude of new problems, relating not only to program content but also to financial and administrative management. For unemployment insurance personnel, their net effect should be anything but complacency. At every level of operation, the challenges to the staff are substantial. They run the gamut—from the apparently simple problem of courtesy to claimants to the complexities of legal interpretation and case adjudication, from scheduling claims reporting to programming for electronic data processing, from making individual benefit computations to devising adequate tax structures. Yet these few examples do little more than illustrate some of the day-to-day urgencies of the task.

Recognizing the seriousness and importance of the work to be done points up the crucial significance of the quality and character of the staff that has to do the job. At the 30-year mark, it is natural to think in terms of generations. In UI circles, comparisons are often drawn and contrasts made between the "old timers" of the program's earliest days and the staff members who have joined the system in recent years—often to the disparagement of the latter group.

It is true that the UI staffs of the late thirties and early forties were, in a very real sense, the products of the same economic and social forces that produced the American UI system. Almost all of them had a close familiarity with the social and economic effects of large-scale unemployment. They knew, from their own experience, or from friends and relatives, what being out of a job means to a worker who depends on wages for his livelihood. As a result, they identified themselves with unemployment insurance as a cause, often worked long hours, and tended to approach their work with zeal and devotion.

Most of the new generation of UI staff have no such personal experience in their background. This does not mean that the young man or young woman who joined the local office staff last year is unaware of economic crises or is unfamiliar with the insecurity of workers who bear the risk inherent in our economic system. What it does mean is that the newer staff member is less likely to start with a preconceived commitment to unemployment insurance as a basic solution to the problems of unemployment; he is more likely to examine it objectively and to compare it with other available approaches. He is more apt to question the program's basic assumptions, both as to content and method, and to be concerned with the question of how the UI system is to be coordinated with other programs dealing with unemployment. To meet today's problems, these values are as much needed and desired as the zeal and dedication of the "old timers."

The future success of the program depends upon the extent to which we can accept the necessity of change in response to today's problems and challenges while still preserving the basic principles upon which the program was founded. This is the demanding and exciting task ahead.

Unemployment Insurance: An Appraisal 30 Years After Establishment

John J. Corson *

THIRTY years have elapsed since that hot August day on which President Roosevelt signed the Social Security Act and, thus, established this country's unemployment insurance system. To what extent, in 1965, does this system meet or fall short of the expectations that were born with its establishment?

The nature of this Federal-State system was outlined by President Roosevelt in a message to the Congress on January 17, 1935. When transmitting the report of the Committee on Economic Security, he said:

> * * * I have concluded that the most practical proposal for unemployment compensation is the levy of a uniform Federal payroll tax, 90 percent of which should be allowed as an offset to employers contributing under a compulsory State unemployment compensation act. The purpose of this is to afford a requirement of a reasonably uniform character for all States cooperating with the Federal Government and to promote and encourage the passage of unemployment compensation laws in the States. The 10 percent not thus offset should be used to cover the costs of Federal and State administration of this broad system. Thus, States will largely administer unemployment compensation, assisted and guided by the Federal Government. An unemployment compensation system should be constructed in such a way as to afford every practicable aid and incentive toward the larger purpose of employment stabilization. This can be helped by the intelligent planning of both public and private employment. It also can be helped by correlating the system with public employment so that a person who has exhausted his benefits may be eligible for some form of public work as is recommended in this report. Moreover, in order to encourage the stabilization of private employment, Federal legislation should not foreclose the States from establishing means for inducing industries to afford an even greater stabilization of employment.

The elements of the Federal-State unemployment insurance system that were enacted by the Congress are enumerated in the first half of the foregoing paragraph. The roots of the extensive adoption of employer merit rating are found in the last sentence (and of course in the Report of the Committee on Economic Security to which the President referred). Only the "intelligent planning of both public and private employment" and the correlation of "the system with public employment" for workers who have exhausted benefits remain lacking after three decades.

Legislative Action Federal and State

Titles III and IX of the Social Security Act, as enacted in 1935, covered only those employers who had eight or more employees in each of 20 weeks within a calendar year. It exempted agricultural labor, domestic service, and family employment because it was deemed to be adminstratively impracticable to include them. Moreover, the powerful organizations of farm employers simply did not want them covered. State and local government employees were exempted because they were beyond the Federal Government's taxing power. For other reasons the employees of employers operating in the navigable waters of the United States and the employees of nonprofit organizations were excluded.

By July 1937, all of the then 48 States, the District of Columbia, Hawaii, and Alaska, had unemployment insurance laws on their books. Most of these laws followed closely the pattern of coverage suggested to them by the Federal law. In 31 of these 51 laws, the employees of employers of 8 or more were covered. Twenty States provided for broader coverage; 10 States covered all employees in establishments with 1 or more employees. The aggregate result was that, in 1938, about 20 million workers were protected by unemployment insurance—a little more than a third of the civilian labor force.

*Dr. Corson is with the Woodrow Wilson School of Public and International Affairs, Princeton University. He served as director of the Bureau of Employment Security from 1941 through 1943 and as chairman of the President's Task Force on Income Maintenance in 1964.

792-968 O—65——2

All but two States (Michigan, $16; and Wyoming, $18) started with maximum basic weekly benefit amounts of $15, as recommended by the Committee on Economic Security. In setting the formulas for benefit duration, however, most States went a little beyond the Committee's recommendations. In four States (Alabama, California, Idaho, and Rhode Island) benefits were payable for as long as 20 weeks. Five other States provided for 10 to 11 weeks of extended benefits (the District of Columbia, Louisiana, Massachusetts, Mississippi, and South Carolina).

In the context of the late 1930's, a period of deep depression, the system that was established was a daring and controversial venture. It was daring in the light of the volume of unemployment then on hand and the volume that might be expected. It was controversial in that the very obligation of the employer to provide for his employees when he laid them off was being established for the first time. And it was controversial in that it chose one set of mechanisms, to create unemployment insurance, from among several—unemployment reserves, employee contributions, governmental contributions, extended benefits, and others—over which debate raged.

"It is our conviction," the Committee on Economic Security wrote, "that these controversies have developed largely because there has been no action and, therefore, no practical experience * * * Further investigations and other devices for delay will merely enhance the negative character of the debate. What is needed at this stage is demonstration, not further debate and research."

Consistent with this empirical approach, great latitude was given to the States in framing their unemployment compensation laws within the requirements of the Social Security Act. It was reasoned, and hoped, that the States would become separate laboratories in which experiments in unemployment insurance would be conducted. Thus, Americans might develop unemployment insurance schemes that would increasingly meet what we now recognize, better than in 1935, as the gnawing and persistent problem of an industrial society.

Evolution of Federal Legislation

During the 30 years that have ensued, State freedom of action on unemployment insurance has, if anything, been increased. Since 1939, when adoption of a personnel merit system was added as a condition for Federal administrative grants, no Federal legislation has been adopted that restricts the freedom originally given to the States by the Social Security Act. On the other hand, the Federal law was amended in 1950 to restrict somewhat the authority of the Secretary of Labor to find that a State unemployment insurance law fails to meet Federal standards for administrative grants and for employers' tax offsets.

A few Federal amendments have increased the scope of unemployment insurance. In 1946, the Federal unemployment tax was extended to maritime service and the States were permitted to cover the crews of American vessels. In 1954, the Social Security Act was amended to provide Federal unemployment benefits for Federal civilian employees (UCFE) with the aid of and through State employment security agencies. Similarly, unemployment benefits were extended in 1958 to ex-servicemen (UCX).

In 1954, the Federal unemployment tax coverage was extended to include firms employing four or more workers. The States followed suit. On January 1, 1956, 28 States covered employers of four or more, 4 States covered employers of three or more, 1 State covered employers of two or more, and 18 covered employers of one or more.

Since 1956, there have been few additional changes. Twenty-one States now cover employers of one or more persons. Michigan, which extended its coverage in 1965 to include employers of one or more, is the fourth State in 20 years to be added to this category.

The program's initial coverage of 20 million has much more than doubled. Average monthly employment covered by unemployment insurance now numbers over 48 million. Noncovered employment, however, totals 15 million.

	Noncovered employment (millions)
Small firms	1.8
Agriculture and farm processing	1.9
Nonprofit organizations	1.7
Domestic service	2.6

Our review suggests that since the passage of the Social Security Act the primary influence of Federal legislation has been to induce some expansion of unemployment insurance coverage. There is, however, one additional and notable Federal effort.

President Franklin D. Roosevelt signing the Social Security Act, August 14, 1935. Titles III and IX of this act provided the basic framework for the Federal-State unemployment insurance program.

Five Federal unemployment benefit programs, all temporary, have been launched since 1944. Three were war products: Servicemen's Readjustment Allowances, provided to unemployed World War II veterans by the 1944 GI Bill of Rights; Reconversion Unemployment Benefits for Seamen, enacted in 1946 for the unemployed members of the World War II Merchant Marine; and Unemployment Compensation for Veterans, adopted in 1952 for unemployed Korean War veterans.

The remaining two temporary Federal programs were recession products. The 1958 Temporary Unemployment Compensation Act gave States a choice whether or not to elect the extended benefits for their exhaustees, and required States that elected such participation to repay the cost to the Federal Government. The 1961 Temporary Extended Unemployment Compensation Act offered the States no choice; it was applicable throughout the United States and was financed by a temporary increase in the Federal unemployment tax rate.

However one evaluates the impact of these temporary programs on the Federal-State partnership in unemployment insurance, it seems clear that through them (a) this country has recognized that the Federal Government has an obligation to pay unemployment benefits under certain circumstances, and (b) we have devised a means of meeting that obligation.

The five programs have differed substantially in specific purposes and provisions. All five have

illustrated, and the permanent UCFE and UCX programs continue to demonstrate, the practicality of the use of the States as the Federal Government's agents in administering such benefits. In general, both the temporary and the permanent programs have tended to make the State law's terms and conditions of benefit payment apply to the Federal beneficiaries; this has kept the protection afforded below desirable standards but has been an inevitable and practical consequence of the Federal-State partnership.

The two temporary Federal extended benefits programs have also stimulated State legislation in a few States to provide "triggered" programs of extended benefits. In California, Connecticut, Hawaii, Idaho, Illinois, North Carolina, Pennsylvania, Puerto Rico, and Vermont, additional weeks of benefits may be paid when unemployment reaches a prescribed level.

Evolution of State Legislation

In all other respects, however, the progress of unemployment insurance since the Social Security Act was passed must be measured by State legislation that does not derive from Federal enactments.

Duration of benefits.—During the years 1935–65, the greatest improvement made in the protection afforded by unemployment insurance has been in the extension of the number of weeks for which benefits would be available.

By the end of 1945, 21 States provided benefits for as long as 20 weeks. Eleven States provided for greater duration, including 5 States whose maximum was 26 weeks of benefits.

Ten years later, only 3 States provided a maximum duration of as little as 16 weeks; 26 States had maximums of 26 weeks; and 1 State had a 30-week maximum.

As of today, only Puerto Rico has a maximum duration of as little as 12 weeks. South Carolina's and South Dakota's maximums are 22 and 24 weeks, respectively. The remainder of the States have maximum durations of 26 weeks or more. The longest maximum duration is Oklahoma's 39 weeks.

Maximum durations available under a State law do not of themselves tell the whole story. In most States, duration of benefit entitlement varies, depending on the worker's base-period wages. Some States, however, have uniform duration for all eligible claimants. Starting with only 1 State (Ohio) in 1937, the number of States with uniform duration grew to 16 by 1945 but has been declining slowly ever since. At present, only 8 States provide uniform duration and, with the exception of Puerto Rico, in each case it is 26 weeks.

Despite the decline of uniform duration provisions, the average potential duration of eligible claimants has risen with the increase in the duration maximums provided by law. This potential was 19.8 weeks in 1946, and 24.2 weeks in 1964. Yet this has not been enough to cover the length of unemployment experienced by substantial numbers of claimants.

There have been only 6 years since 1945 in which fewer than a fourth of all unemployment beneficiaries exhausted their benefit entitlement—1951–53, 1956–57, and 1964. In no year during this period did the ratio of exhaustees go below a fifth of all beneficiaries. In 5 years—1946–47, 1950, 1958, and 1961—more than 30 percent of beneficiaries used up their benefits before finding a job. In short, the protection that is available simply is not sufficient for at least 9 to 10 percent of the unemployed.

Benefit amounts.—The maximum weekly benefit amount paid at the outset of the program (usually $15) was over 50 percent of the average weekly wage in covered employment in every State but Alaska. In 22 States, these 1939 State maximums were more than two-thirds of the State's average weekly wage. Since then, the States have failed to raise their maximum weekly benefit amounts high enough and fast enough to keep pace with the average weekly wages in covered employment.

Only eight States in 1949, and only nine in 1959, paid basic weekly maximum benefits as great as half the State's average weekly wage. The 1959 figure included six States that had abandoned a flat dollar maximum in favor of a regularly computed percentage (usually 50 percent) of the State's average weekly wage in covered employment. By 1965, an additional 10 States had modified their laws to include such provisions, including four States which had amended their laws only this year.

Notably, the States whose laws provide for these "variable maximums" are small or medium-size States; altogether they account for less than 12 percent of the covered workers. In more than two-thirds of the States, the basic maximum weekly benefit amount continues to be less than half of the State's average weekly wage. In 17 States, the

maximum is less than 40 percent of the State's average wage.

Labor-force attachment.—The original unemployment insurance system was designed for individuals who had had steady jobs prior to becoming unemployed. Early in the unemployment insurance program, most States either adopted flat dollar requirements of the wages needed to qualify for benefits, or used formulas based on the individual's wages in his highest calendar quarter of earnings. Efforts to update such requirements have tended to lag behind increases in wage levels. As of the beginning of 1965, 13 States had restated their qualifying requirements in terms of a specified number of weeks of employment, but of the remaining 39 States the median State had a minimum qualifying requirement of only $375 in base-period wages.[1]

Consequently, there has been a proliferation of special "class" disqualifications (including, for example, students, pregnant women, and pensioners) designed to root out of the system beneficiaries of doubtful labor-force attachment. These special "class" disqualifications have, in turn, resulted in a tendency toward mechanical classification of claimants instead of the claims examiner carefully scrutinizing each and every claimant's availability for work.

Financing.—When the Social Security Act was passed, the Federal unemployment tax applied to total payroll for covered employment. In 1939, the Federal taxable wage base was reduced to the first $3,000 paid to a covered worker. The States adopted this change and it made little practical difference because the $3,000 taxable wage base then represented 98 percent of all wages in covered employment. Since 1939, average weekly wages in covered employment have gone up from $26.15 to a 1964 level of $106.48. The Federal taxable wage base has, however, remained at $3,000 and now represents only 54 percent of all covered wages.

Twenty States have raised their taxable wage bases above $3,000. But the wage bases of most States still remain below $4,000. Thus they are taxing less than 70 percent of total covered wages.

The significance of these figures is that high-wage employers pay a substantially smaller percentage of payroll in unemployment insurance taxes than do low-wage employers. With a $3,000 tax wage base, an employer with a 2-percent tax rate pays an actual 2 percent of payroll if each of his workers is paid $3,000 in annual wages. But with annual wages of $6,000 for each of his employees, his 2-percent tax rate becomes only 1 percent of his payroll.

[1] Editor's Note: For purposes of unemployment insurance program operations, the District of Columbia and Puerto Rico are counted as States.

A Look Ahead

What have we learned in 30 years' experience with unemployment insurance?

One fact that was not faced in 1935 has become increasingly apparent, namely, that there are three groups of unemployed: The "beginners" (18–25), who possess little or no experience and no accumulated rights under unemployment insurance; the "regulars," those employed more or less regularly over a period of years, for whom the existing UI system was designed; and the "long termers," many of them older workers and most of whom have been displaced by technological advance and occupational obsolescence.

Second, we have learned, as a people, that unemployment insurance is just as essential to the American way of life in the urbanized industrial society in which we now live as is the community hospital or the fire department. The need for continued availability of benefits for the unemployed and additional purchasing power in times of recession is now fully accepted.

Third, the sharing of responsibility for the financing and administration of this institution between the Federal and State Governments is an accepted fact. There will be changes as they may be required to broaden the protection and render more effective the operation of the system. And if the States will not persistently improve the protection afforded, there will be pressure for more Federal action.

But there is no apparent reason to expect that there will be efforts to abandon the Federal-State partnership in operating the American unemployment insurance system.

Fourth, we have learned that the existing system can and should be strengthened in these ways:

A total of about 5.4 million employees of small firms, nonprofit organizations, and farm workers employed by large agricultural establishments should be covered by the State unemployment insurance laws. In addition, there is no logical reason that justifies the States continuing to exclude State and local government workers.

The Federal Bureau of Employment Security should set standards to assure that individual claimants receive

benefits approximating half their weekly wages, at least up to a maximum benefit of two-thirds of a State's average weekly wage. Employers in States not meeting such requirements should not receive a full Federal tax credit.

Standards should also be established as to qualifying requirements for benefits. These will best be stated in terms of weeks of employment rather than dollar wage requirements. Such standards will furnish a basis for reversing the long-term trend of trying to police benefit eligibility by relying on harsh and unreasonable disqualifications and neglecting scrupulous application of the availability for work requirements.

A system of Federal unemployment benefits should be established. For the "long termers" who have exhausted State benefit rights, benefits should be available for an additional period of weeks under a permanent federally financed program. Benefits should be paid only to individuals with a long attachment to the labor force and to those who agree to receive counseling and, where appropriate, to take training.

The tax base for unemployment insurance taxes should be raised. In 1939, the coverage of the first $3,000 represented the coverage of 90 percent or more of all wages paid to covered workers. If the wage base were now raised to $5,600 it would cover 80 percent of covered wages. The wage base should be raised at least to that level, and preferably to $6,600 or $7,200.

The Federal tax rate should be increased to provide funds to meet the costs of increased benefits and increased administrative costs. The increase required would not be great, perhaps half a percent. This cost would best be borne by employers, by the workers themselves, and by the entire taxpaying public.

These improvements in the Federal-State system will enable it to meet much more adequately the needs of the relatively regularly employed workers when they become unemployed. The provision of extended Federal unemployment benefits will help to meet the need of the "long termers." But in the light of today's needs, there is lacking the correlated system of "public employment" that was originally envisioned 30 years ago.

Unemployment Insurance in Our Economy

Stanley H. Ruttenberg *

THE American unemployment insurance system was initiated in the midthirties when the Great Depression distressingly revealed the grave risks for wage earners of being dependent upon a job in a market-oriented economy. The depression pointed to the need for effective social programs to lessen the burdens of unemployed workers. Unemployment insurance was designed to help deal with the loss of income that individual workers and their families face as a result of temporary unemployment. It was recognized that for these workers the problems resulting from such a loss could be catastrophic, even if there were little unemployment throughout the Nation as a whole.

Unemployment insurance helps unemployed people maintain their dignity and self respect. Benefits paid to unemployed workers from an insurance fund and as a matter of right help to protect them and their families from the embarrassment of seeking welfare or charity. Without any income during unemployment many workers would be in dire need. The fact that unemployment benefits are available provides a measure of security to unemployed workers and also to employed workers who often wonder what they would do should unemployment strike them. Unemployment insurance makes it possible for unemployed workers to look around for jobs suited to their training and experience rather than take the first jobs available.

Although the basic purpose of unemployment insurance is to provide insured unemployed workers with a partial compensation of wage loss during periods of involuntary unemployment, in so doing it also plays a significant role in our economy. That this article concentrates on the economic aspects of unemployment insurance reflects no intent to minimize this basic program mission.

*Administrator, Manpower Administration, U.S. Department of Labor.

Some indication of the magnitude of unemployment insurance in the economy is given by the following data. In 1964, aggregate UI tax collections (including reimbursements to the States for benefits paid to unemployed Federal employees and ex-servicemen) amounted to $3.2 billion. During the same period, $2.7 billion in benefits was paid to 5.8 million beneficiaries under the State and Federal programs. The growth of tax collections and benefit disbursements over the years reflects the continued expansion of the economy and improvements made in the UI program. From 1936 to May 31, 1965, $41.9 billion in contributions was collected under the State programs alone, and $38.7 billion was paid in benefits. Although unemployment compensation plays a significant role in tiding workers over periods of unemployment, the existence of the program has important effects on the economic system; in turn, developments in the economy help determine the role of unemployment insurance.

How UI Affects the Economy

Maintenance of purchasing power.—One clear effect of UI is that it helps to sustain purchasing power in local economies and in the economy as a whole. The UI system provides the vehicle through which the funds set aside when workers are employed are used to provide income when they become unemployed. This redistribution of income has an immediate positive effect on the economy. Since benefits paid are used as intended—to meet current and basic living expenses—they have an impact on the economy exceeding the amount paid. Very little or none of this income is retained as savings. Benefit checks are cashed and spent immediately. This flow of income into the economy induces further spending which helps stabilize consumer income and, in turn, the economy as a whole.

Economists often refer to UI as a "built-in" economic stabilizer, and it is recognized that, as such, it generates economic effects that tend to counteract prevailing tendencies in the business cycle, especially during the downturn and recovery stages. The built-in feature of the UI system means that it responds automatically to changing economic conditions and does not rely upon the use of discretionary powers. It should be pointed out, however, that UI is what it was designed to be—insurance. Stabilization is one important byproduct of the primary purpose of providing protection to workers against the specific risk of unemployment.

The effectiveness with which UI can operate as a counter cyclical device, or, to quote Prof. Paul A. Samuelson of the Massachusetts Institute of Technology, "lean against the prevailing economic winds" is directly related to changes that occur in the level of income and to the way in which income levels are affected by changes in total contributions and benefits paid. The higher the proportion of income levels the taxes and benefits are, when collected and when paid, the greater the effects of the UI system on different stages of the business cycle.

The automatic feature of the UI system is inherent in the payment of benefits to eligible unemployed workers. As a result, soon after unemployment occurs income is automatically released into the Nation's income stream, offsetting in part that which is lost because of unemployment. This valve is shut off when workers are reemployed or no longer draw benefits.

A further indication of the potential and effectiveness of UI as an anti-cyclical device is demonstrated by the role it played during recent recessions to help restore prosperity. During 1961, a recession year, a total of $4.4 billion in State or Federal UI benefits was poured into the economic stream, of which $567 million was in Federal extended benefits. In 1962, a more prosperous year, the total of all benefits paid declined to $3.1 billion. In 1958, another recession year, a total of $4.2 billion in all benefits was paid, of which $398 million came from temporary extended benefit programs compared with the 1957 total of $1.7 billion paid in benefits under State programs alone. The responsiveness of unemployment insurance to changing economic conditions is shown by the fact that, in the recession years 1958 and 1961, UI payments were as high as 19.9 percent and 15.7 percent, respectively, of all social insurance and related payments—but were down to 11.0 percent in 1957 and 10.8 percent in 1962, when economic conditions were more prosperous.

The effectiveness of UI in combating declines in economic activity is directly related to the adequacy of benefits paid or to the amount of wage loss replaced—indicated by comparing benefits paid with previous earnings of eligible unemployed workers. During recession year 1961, average weekly benefits paid amounted to 36 per-

cent of average weekly wages in covered employment. If the average wages of beneficiaries were the same as the average wages of covered workers, then, during a week of unemployment when benefits were paid, slightly over one-third of the lost wages of eligible covered workers were replaced by UI benefits. However, Professor Lester of Princeton University concludes that, on the average, benefits paid during the period 1948–61 were only about 20 percent of wage and salary losses from total unemployment.[1] In any event, benefits paid to insured workers are a smaller percentage of previous earnings now than they were in earlier years. In 1939, benefits replaced 41 percent of wages in covered unemployment.

The full effects of unemployment insurance in offsetting declines in economic activity go somewhat beyond the dollar value of benfits paid to unemployed workers or their multiplying economic effects. By helping to sustain workers while they are unemployed and seeking work at their already attained wage levels and generally to maintain purchasing power and consumer demand, UI also helps sustain wage rates.

Labor-use effect.—The conditions under which unemployed workers become eligible for benefits generate effects that have significance for the economic system. The "able and available" and "registration for work" requirements of the State laws and the fact that the benefit amount is usually no more than 50 percent of a worker's usual earnings (and frequently less) combine to help assure the worker's continued interest in seeking employment. The "suitable work" provisions also help preserve the productivity of the labor force by making it unnecessary for unemployed workers to abandon their job skills by accepting work at lower ability and wage levels.

Economic decision making.—The existence of UI can be a factor in economic decision making. Employers who are mindful of the effects of layoffs on their unemployment insurance costs take these costs into consideration when deciding upon whether to retain or to furlough workers. Such costs then can be a factor in stimulating employers to seek ways and means of leveling out labor requirements. On the other hand, some employers see an advantage that UI, along with other fringe benefits, offers in maintaining a trained and experienced local labor force and for that reason look favorably upon the payment of benefits to workers who might otherwise decide to look for work in another job market area. In the minds of these employers, the cost of unemployment insurance must be weighed against the cost of recruiting and training new workers.

UI also affects the decisions of workers as consumers. The protection UI provides against complete wage loss during unemployment is a source of confidence to employed workers. The strength of consumer credit and installment buying depend upon continuity of worker income. Decisions on whether or not to change jobs or to seek employment in another State may often depend upon workers' eligibility for UI benefits. To these considerations is added the measure of confidence businessmen gain from the contribution that UI makes in helping to maintain effective consumer demand.

UI has also come to play a role in the economic decision making of Government. UI taxes are a necessary part of the cost included in bids on Government contracts. Decisions to cancel a Government contract or to close a military establishment are now made against a background of knowledge that UI benefits are available to help cushion worker adjustments.

How the Economy Affects UI

Coverage.—Changes in the economy give rise to trends in the labor force which affect the number and kinds of workers with UI protection. The growth in the working population results in an automatic increase in the number of employees whose employers are subject to the coverage provisions of the UI laws. Some of the increase in covered employment is attributable to amendments to the laws increasing the number of employers subject to the tax. These factors account for the increase in coverage from 21 million wage and salary workers in 1938 to 48.4 million in 1963.

Labor-force attachment.—Eligibility for unemployment compensation is based upon recent work and wages in covered employment that provide evidence of sufficient labor-force attachment to justify the payment of benefits. Changes in the composition of the labor force and changes in job requirements are significant for UI in that they magnify the difficult problem of determining who should receive benefits and for what period of time. For example, the problem of testing the

[1] Richard A. Lester, *The Economics of Unemployment Compensation* (Princeton, N.J., Princeton University Press, 1962), p. 13.

availability of older workers is now important, but becomes more difficult as technological changes make their job skills obsolete. Changing economic conditions are reflected in the numbers of disqualifications from benefits that are made. In periods when jobs are plentiful, disqualifications are likely to increase and be more severe than when jobs are scarce.

Financing.—Economic conditions affect the cost of financing UI. The three basic benefit cost components—the average weekly benefit amount, the volume of compensated benefit claims, and the average duration for which benefits are paid—are all direct responses to economic conditions. Weekly benefit amounts received by unemployed workers are wage-related and are influenced by developments in the economy that affect wages. Their averages reflect not only State benefit formulas but also the mix of high- and low-wage claimants. The number of new insured claims and the average duration for which benefits are paid mirror the length and depth of unemployment among insured workers.

A claimant's unemployment insurance weekly benefit amount is generally based upon his total earnings in covered employment, but the employer's contributions to finance the payment of benefits are based upon only a legally taxable portion of his total payroll. Since the latter is a fixed dollar figure in every State but Hawaii, the result is that in an expanding economy the gap widens between rising wage levels and the taxable wage base.

Payroll tax financing of UI has led to some concern whether improvements that would require increased taxes might contribute to a "fiscal drag" in that they might divert money that could be used by private industry for economic growth. Appreciation of the magnitude of the problems involved is helpful in reaching a realistic appraisal of such fears. In 1964, Federal and State unemployment taxes represented less than 1.5 percent of total payrolls in covered employment. Program improvements currently in view could increase the unemployment tax total to a figure somewhat under 2.0 percent of total covered payrolls. In 1964, benefits paid were more than two-thirds of the total Federal and State unemployment taxes. Even assuming, at the 2.0 percent tax level, that benefits paid equaled only 60 percent of taxes, the result would be an increase of only 0.3 percent of total payroll (in a year like 1964) in the excess of taxes over benefits. This would seem, at most, a very minor impact on fiscal drag.

Also, it should be recognized that the fiscal-drag concept has implications that money raised in taxes is "removed" from the economy and diverted so that it cannot stimulate economic expansion. To the extent that unemployment taxes are promptly expended as benefits, obviously this is not the case since, as pointed out, benefits are immediately spent by unemployed workers to meet their family needs. The excess of unemployment taxes over benefits that result in prosperous years, however, does not result in sterile money either. That excess is deposited in trust accounts which are invested in Treasury bonds and thus find their way rapidly into Federal expenditures for goods and services. These, too, may have a sustaining, if not a stimulating, effect on the economy.

Weekly benefit amount.—Increased prosperity and rising wages and living standards affect the weekly benefit amount. The problem posed for UI as a result of these trends is the extent to which higher wages paid to workers should be reflected in the amount of benefits they receive when unemployed without affecting their incentive to seek work. In reality, this deals with the role of UI in helping to maintain living standards of unemployed workers.

The benefits unemployed workers receive are determined by the wages they earned while they were employed and reflect increases in productivity or prosperity to the extent that increased prosperity is reflected in the amount of wages paid. However, because benefits paid to unemployed workers are based upon a wage-related scale with legally prescribed minimums and maximums, the effect is that very low paid workers receive a higher proportion of wage loss compensation than higher paid workers. Developments in the economy point to the need for a method of calculating maximum benefits for the unemployed that will ensure more nearly adequate benefits for all claimants—with greater equity for higher paid workers—and one that will permit the rising prosperity of the economic system to be reflected in the amount of income that unemployed workers receive.

Duration.—UI is intended to provide income through a temporary period of unemployment. This has usually been interpreted to mean a duration sufficient to enable the great majority of insured workers to find suitable work before ex-

hausting their benefit rights. Economic conditions affect the adequacy of duration provisions or the length of the period of unemployement during which some form of income maintenance is required. The average number of weeks of unemployment compensation paid is shorter during periods of normal economic activity than in periods of economic decline. In the past, concern for workers who exhausted their regular unemployment benefits during recessions resulted in the establishment of two Federal temporary programs which extended benefits for them. Some State laws now have provisions for extending benefits when unemployment rates reach certain percentages in their States.

The long-term unemployed.—Developments in the economy are now producing a large number of workers who remain unemployed for extended periods of time. Since World War II, despite improvements in the benefit duration provisions of State laws, the annual percentages of beneficiaries who exhaust their benefits before they are reemployed have shown this to be a growing problem. After each of the post-World War II recessions these percentages have dropped, but they recede more and more slowly and to higher residual levels. In 1964, over 1.4 million beneficiaries exhausted their benefits.

It seems clear that the fundamental economic changes reflected in this increasingly significant problem present a different set of premises for UI from those upon which it has been based up to now. Very long-term unemployment—more than 26 weeks—can hardly be considered an abnormal and recession-related phenomenon when almost one out of every four unemployment beneficiaries use up their benefits in a prosperous year like 1964.

It would appear that extension of UI to cover unemployment beyond 26 weeks must be seriously considered. In doing so, account must be taken of the known difficulties of establishing the continued labor-force attachment of many of the very long-term unemployed. Similarly, greater emphasis must be expected, in such extensions, on positive steps that go beyond income maintenance and are more aggressively directed toward assuring the employment of the long-term unemployed.

The increased emphasis on manpower programs designed to assist the long-term unemployed, and others who experience difficulty in the job market, has resulted in a question as to what role UI should play in an active manpower policy. Some have asked rather pointedly whether the UI program, with its wage-loss replacement feature, actually serves as a disincentive for persons in the labor force. In many respects, the question as to the role of the UI program in an active manpower policy turns on the matter of philosophy as to the concept of what unemployment insurance is or what risk of unemployment was intended to be covered in setting up the system. Sound policy would appear to require that the UI program actively assist the Nation's manpower goals by encouraging those UI claimants who lack skills or whose skills are obsolescent to undergo required training. Yet to date only 22 States have amended their laws to pay UI benefits to claimants enrolled in State-approved training or retraining courses. Until all States permit such claimants to continue drawing benefits while in training, the employment security program will continue to present a picture of a program that is at odds with itself, with UI discouraging claimants from taking needed training and the employment service urging and referring them to training sources.

Improving the UI Potential

The potential of the UI program as one means of helping to restore the economy to prosperous levels during periods of economic decline will be greatly enhanced as more of those workers now unprotected are covered and as the weekly benefit amounts and the periods during which benefits may be paid are increased.

The Administration's proposed Employment Security Amendments of 1965, now pending before the Congress, present an opportunity to attain major improvements in the effectiveness of unemployment insurance to assist the individual worker and to advance the growth of the Nation's economy.

Unemployment Insurance and Manpower Policy

Daniel H. Kruger *

ONE important objective of public policy with respect to manpower is to provide security against the hazards of unemployment. The Federal-State unemployment insurance program was designed to provide a measure of economic security for wage earners in covered employment through partial compensation for wage loss incurred through involuntary short term transitional unemployment.

Unemployment insurance is, therefore, an important aspect of manpower policy in a job economy. *Job economy* is more than a descriptive phrase. Our economy has, in fact, become a job economy. The overwhelming majority, over 90 percent, of the Nation's total labor force make their living through having a job. This has not always been the way Americans have earned their livelihood. In earlier periods in the Nation's history, a substantial proportion of the people worked on the land. At a later time, millions of persons were, in effect, "working for themselves" in self-owned professional, business, and service activities.

As our society evolved into a highly urbanized and industrialized economy, self-employment declined; and working as an employee in private enterprise and in government increased significantly. The *job* became the most important economic activity in the lives of most Americans because it provided the central means for earning income.

It is the *centrality* of the job which is the distinguishing characteristic of the job economy. Consequently, preparing for a job, getting, holding, and separating from a job, having income when laid off to tide one over between jobs, and finding another job to replace the one lost are crucial matters for large numbers of American workers.

*Professor of Industrial Relations, School of Labor and Industrial Relations, Michigan State University.

UI in the Job Economy

Of particular concern here is the role of unemployment insurance in the job economy. The evidence is clear as to the economic impact of unemployment insurance. During the 19 years 1946 through 1964, $34.9 billion in benefits was paid to claimants. During the same period 104.2 million first payments were paid to claimants in their benefit years. Unemployment insurance provided the first line of economic defense for these unemployed workers. The income maintenance features of UI are well known but there is another dimension to UI and this is its impact on manpower. The benefit amounts and duration, the application of eligibility requirements, and the disqualification provisions of the State laws all affect workers in covered employment. The manpower dimensions of UI, however, have not been given sufficient attention and study. In this article the implications of UI for manpower development and utilization are discussed briefly.

UI and Worker Mobility

The weekly benefit amount and duration of benefits affect workers' behavior in the job economy. The degree of impact may differ as between claimants who are primary and those who are secondary wage earners. Primary wage earners, on the whole, must work if they are to meet the necessary needs of their families. Few primary wage earners can afford to remain unemployed and draw benefits that are half and usually much less than half their customary weekly wage. On the other hand, secondary wage earners defy such simple analysis. The tendency is strong to think of secondary wage earners as being all of one kind —loosely attached to the labor force. This is not the case. Secondary wage earners vary considerably as to the pressing economic and other motivations that prompt them to seek and retain employment.

If, for example, they are seasonal workers, their benefits may be of such duration that they can draw benefits until they are able to return to their old jobs when the new season begins. However, the duration of seasonal workers' benefits may be short due to their limited employment and earnings and other limitations on payment of benefits to seasonal workers in effect in 20 States.

UI may also affect the mobility of certain groups of secondary wage earners with loose attachment to the labor force, especially those working in the canning industry and in resort areas. UI appears to strengthen the attachment of these workers to their employers. It has been reported that some employers in these industries use UI benefits as a means of retaining from year to year a group of workers who may only want to work part-year and who can draw benefits during the off season.[1] These workers, in effect, rely on their benefits as a regular supplementation to their wage income. Most of these employers are usually located in areas in which alternative employment opportunities are limited in the off season. Claimants, therefore, may be considered available for work although there is little opportunity for them to find work in the area.

While UI may tend to impede mobility among certain groups of seasonal workers, it facilitates, to a degree, labor mobility in other segments of the labor force. The mechanism used is the Interstate Benefit Payment Plan adopted as the result of a voluntary agreement among the States in 1938. This unique agreement was not provided for in the unemployment insurance provisions of the original Social Security Act nor as the result of any subsequent amendments. Under this agreement, eligible unemployed workers who live in one State but work in another, or who move to another State to seek employment, can receive unemployment benefits from the State in which they established their right to them.

Eligibility for benefits is determined in accordance with the laws of the liable State in which benefit rights were accumulated. The State in which the claimant resides and from which he applies acts only as the agent in processing the claim. In the period 1946–64, approximately 14.5 million initial interstate claims (indicating new spells of unemployment) were filed under the Interstate Benefit Plan. This total represents about 6 percent of all initial claims filed during that period.

There are no known studies available as to whether the individual State UI laws impede or restrict mobility. Some recent State legislation and the complexities of interstate claims processing are two factors which may tend to restrict mobility. With respect to the first factor, Alaska, Wyoming, and Ohio reduce the weekly benefit amount if the claimant moves to another State to job hunt; these laws may very well dampen a claimant's desire to cross State lines in search of a job. The second factor—the administration of the interstate benefit plan—in itself may inhibit mobility. Due to the time lapse between mailing benefit applications from an agent State to the liable State, plus additional paper work, payments of interstate claims may lag many weeks behind payment of intrastate claims.

The effects of the mobility stemming from the Interstate Benefit Plan, however, cannot be properly evaluated. Some workers undoubtedly move in search of another job. Others may want to be near their families and will return to their former jobs when and if recalled. The latter group may not strenuously search for work because of the lack of suitable employment opportunities in the area to which they have moved.

One other feature of the State UI laws which may act to impede mobility is that a strict interpretation of the statutory limitation on what constitutes "good cause" for leaving work eliminates consideration of many personal and economic reasons for leaving one job in search of another, however valid they may be for the individual. Such interpretations may discourage a worker's initiative in improving his economic status by postponing or denying him benefits. If a worker is aware that he may be disqualified for trying to get a better job, he may be reluctant to make a change. Many States, in making determinations in such instances, apply the criteria of suitability of the job for the claimant as to whether it would have been good cause for him to refuse the job in the first place because of substandard pay or working conditions, as well as to insure that the UI program does not exert a downward pressure on existing labor standards. On the other hand, many other States do not apply these standards possibly from the fear that employed workers will quit work and use the unemployment insurance program to finance the improvement of their job situations.

UI and Labor-Force Attachment

There are other features of UI which affect job market behavior, especially the eligibility requirements and disqualification provisions. Their interpretation and application by State administrators and State courts represent, in fact, a code of behavior for all workers in covered employment in that State. Each State therefore, has evolved over the years, a comprehensive body of policies which directly and intimately affect manpower. To receive benefits the worker must measure up to this code of behavior. Failure to do so means that the worker will be denied or disqualified from receiving benefits. It may be said that the Federal-State unemployment insurance program, in terms of numbers of workers involved, is one of the most significant aspects of the Nation's manpower policies. For example, 2,139,430 nonmonetary disqualifications affecting insured unemployed workers were made under State laws in 1964, while the number of trainees enrolled under ARA and MDTA training programs totaled 77,633.

In the process of determining benefit eligibility the State UI programs provide important, albeit incomplete, information about worker behavior in the job economy. To qualify the claimant must meet certain criteria, e.g., must have sufficient employment in covered work to evidence a continuing attachment to the labor force. This criterion helps to identify the degree of the worker's firm or loose attachment to the job market. An examination of his work record, family status, and occupation can indicate this degree of attachment. This concept has been a perennial source of controversy because there are no precise measurement guides.

Moreover, both the dynamics of the job economy and the changing characteristics of the labor force have affected the UI labor force concept. For example, the hours of work per week for certain groups of workers, such as the electricians in New York City, have been substantially reduced. Although these electricians work only 25 hours a week, they are considered full-time workers. The growth of part-time workers—women, students and retired workers—has been significant in recent years. These workers may be viewed as having a loose attachment to the labor force but nonetheless can meet the employment and earnings requirements of many State acts. However, the availability provisions of the State laws serve to disqualify those who unreasonably limit their employability. Also, some 33 State laws contain provisions reducing, limiting, or otherwise disqualifying claimants from benefits during those weeks in which they also receive OASI benefits or benefits from employers' pension funds.

Attachment to the labor force means that the claimant must be able and be available for suitable work. If he does not stand ready to do so during the week for which he filed his claim, he is ineligible for benefits. Under this concept, workers, generally speaking, cannot retire voluntarily to a state of idleness and expect to collect benefits. In theory, UI should serve as a motivating force in stimulating the worker in his job search. As noted above, this is not always true for all workers, e.g., part-time or part-year workers. For these claimants the application of the tests of availability which disqualifies those who restrict their hours and days of work, as well as kinds of work, is required.

Testing the availability for work of certain categories of workers presents problems, particularly for older workers. Rapid changes in the occupational structure of the job market are forcing older workers out of lifetime jobs. These workers have difficulties finding employment either because of age discrimination or obsolete skills. They meet some of the availability criteria, that is, being able to work, willing to work, actively seeking work, but are difficult to place, and consequently they are not candidates for available or existing jobs. If they are not candidates for the available jobs, what does this mean in terms of attachment to the labor force? Of course, training programs represent a possible solution to make them eligible, as well as programs to reduce discrimination because of age.

Hard-to-place workers, it is contended, are penalized by the provision that they have to seek work actively if they are to qualify for benefits. These workers, who week-in and week-out have to search for work without any success, can and do become discouraged. They may just stop looking for work. By definition, they sever their attachment to the labor force and become a part of the invisible unemployment.

The available work must be suitable. State agencies consider many factors in evaluating this proviso, e.g., experience, prior earnings, physical fitness, health, training, and location of the job. Of particular importance is the fact that wages, hours, and conditions of employment must not be

substantially less favorable to the worker than those prevailing for similar work in the locality. This mandatory standard was introduced in the basic legislation to prevent the UI system from exerting downward pressures on existing labor standards. Eligible workers are not obligated to accept any kind of job. The framers of the original act also had another objective in mind. It was their intent that efforts should be made to conserve the skills of unemployed workers. They reasoned that if workers were receiving benefits, the pressure on them to take jobs in which they would lose their skills, and the status associated with these skills, would be reduced.

In many instances, the preservation of workers' skills has little significance today. The relentless wave of technological improvements in the postwar period has accelerated skill obsolescence. Workers, especially older workers, who have lost their jobs and whose prospects for being recalled at their old jobs are dim may not possess current marketable skills. They are often unable to compete realistically in the job market because of lack of needed skills. They may need retraining or may have to scale down their expectations as to what they consider suitable work. Similarly, the long-term unemployed may also have to make needed and realistic adjustments to a job market in which they have actively sought work for more than six months without success. In such cases, the definition of suitable work becomes concise. Without its preceptive application, UI may keep alive a false hope and may postpone critical reassessment of what needs to be done in order to get a job.

The dynamics of a rapidly changing job market have underscored the importance of training and retraining activities. The Federal Government in enacting such legislation as the Area Redevelopment Act and Manpower Development and Training Act has recognized that training programs are essential if certain workers are to find a job. The State agencies, in both their employment service and unemployment insurance divisions, are very much involved in training activities. Despite the growing interest and emphasis on such programs, the State UI laws, on the whole, do not encourage claimants to participate in them. The reason for the lack of interest appears to be interrelated with the available for work criteria. Up to now only 22 States have amended the provisions of their laws regarding availability for work during periods of training or retraining. Under these provisions, an otherwise eligible claimant is deemed available for work while he is participating in a training or retraining program approved or recommended by the State employment security agency.

There is other evidence which suggests the present UI laws are not training-oriented. When the State acts were passed nearly 30 years ago, the Social Security Board noted that one of the functions of their unemployment insurance systems should be to "promote regularization of employment." The Board indicated that one of the ways by which this could be accomplished would be "to encourage and assist in the adoption of practical methods of vocational training and retraining." Until recently, the States did almost nothing along these lines and few training programs were developed by State agencies on their own initiative.

Employment Stabilization Efforts

At the inception of the unemployment insurance program, stabilization of employment was considered a primary objective. The assumption was that employers have a substantial degree of control over unemployment. Thus an incentive was provided through differential tax rates to encourage employers to stabilize employment. All State laws (except Puerto Rico's), now have an experience rating system by which individual employers' contribution rates are varied from the standard rate based on their experience with unemployment risk. While stabilization of employment was a desirable objective, its soundness rested on the extent to which the individual employer is able to regularize his employment.

It is now questionable how much of an incentive experience rating has given employers to stabilize their employment, especially in view of cyclical forces and technological changes. Employers have more powerful incentives, such as higher profits, to stabilize employment whenever possible. Moreover, the narrow range on tax rates has perhaps diluted the appeal of experience rating for some employers.

Stabilization efforts appear to be more attractive and practicable only for large companies which can produce for inventory or can move workers to various jobs. This is another limitation to stabilization devices which have important

implications for the job economy. As a result of increased costs of fringe benefits coupled with the costs of unemployment insurance, there are some employers who prefer to have their employees work overtime in order to avoid adding workers for temporary jobs. Undoubtedly their decision to have their employees work overtime is related, in part, to their desire not to injure their experience rating.

The low minimum base period earnings requirement in some States makes it possible for temporary or part-time workers to be employed for a short time in covered employment to acquire the needed wage credits to be eligible for benefits if their work is terminated. Thus if these workers are hired and then laid off, the employers' experience ratings would be adversely affected, and their contribution tax rates would be higher.

Other UI Effects on Manpower

From the employers' point of view, UI has affected manpower in a manner not contemplated in the original act. UI, it is contended, facilitated the introduction of technological improvements. Evidence to support this contention is not available. It does seem reasonable, however, to assume that employers could introduce the new equipment somewhat earlier as a result of unemployment insurance. In the postwar period, employers, especially the larger ones, have become more concerned with their "image." Throwing large numbers of workers out of work does not reflect favorably on the employer especially if these workers had very limited financial resources. Through the unemployment insurance mechanism, the displaced workers receive benefits. The economic dislocation and hardships resulting from the introduction of technological improvements, therefore, are somewhat softened.

Conclusion

In summary, the emphasis in the past has been focused on the income maintenance character of UI. The basic Federal legislation and subsequent State acts reflected the economic conditions and the nature and composition of the labor force existing in the mid-1930's. Conditions in the job market today have drastically changed. Much more attention by State legislators and UI administrators needs to be given to the implications of UI as it relates to manpower development and utilization. As was pointed out, UI does indeed affect manpower in many ways. Moreover, given the Federal-State system, there are 52 sets of manpower policies in practice. The need for more uniformity in the system is obvious, especially in view of the changes occurring in the job economy. Furthermore, the State acts, and their administration and interpretation, must take into account these dramatic changes. Confidence in the UI mechanism will be determined by the degree of responsiveness it makes to these changes.

Unemployment Insurance and the War on Poverty

Elizabeth Wickenden *

In the present war on poverty, as in other forms of combat, it is perhaps inevitable that, in the public mind, assistance to current casualties should initially overshadow the longrun strategies of building a stable and organized social order in which such casualties can no longer occur. Many people find it easier to grasp the need for particular forms of immediate aid to deprived individuals than to consider the need for basic reform in the institutional structures which affect us all.

Unemployment insurance, as the principal mechanism for giving the worker assured income to partially replace that which he loses through involuntary unemployment, is clearly such an institutional structure and hence a major weapon in the strategy of fighting poverty. Nevertheless, it is not surprising that its central role in any effective war on poverty has not yet received the same degree of pinpointed public attention as the crash program of innovation measures popularly known as "the poverty program," authorized by the Economic Opportunity Act to help the present victims of poverty.

One of the major purposes of the poverty program is to center the attention of all elements in our affluent society on the presence in its midst of over 30 million persons who are not sharing that affluence. This is bound to create a more critical and constructive interest in the basic institutional lags and weaknesses out of which that poverty springs. Thus, the poverty program, as it becomes fully operational, is almost certain to bring about increased attention to the values of the UI mechanism and the need to bring it up-to-date to meet current problems. This article is devoted to an analysis of this process and the challenge it presents.

*Technical Consultant on Public Social Policy, National Social Welfare Assembly, Inc.

Assets of the UI System

What are the particular assets of the UI system as a major weapon in the war on poverty? There are four closely interrelated and central attributes whose values will surely be brought into sharper focus as the programs of the Economic Opportunity Act center increasing attention on the needs of the poverty-stricken in our society.

First, UI is a program of cash payments.—Our economy, like other market-oriented industrial economies, is basically money-oriented. Poverty, for virtually all individuals in the United States, must be measured in the first instance as a gap between their money income and that which is considered a tolerable level of individual or family income in relationship to the total actual or potential productivity of the Nation. Obviously, the poverty level in the United States, where average per capita income currently amounts to about $3,000 a year, is a quite different one from that in an underdeveloped country where per capita income runs below $100 a year.

Poverty is also different in modern America from what it was in the days when most people lived directly off the land, many of them in the relative isolation of the frontier. In those days individual enterprise and energetic self-reliance might well make the difference between a groaning board and constricting poverty. Today the individual must earn his livelihood from a job (and increasingly that job requires a large capital investment from a source over which he lacks control), or sell some product or service in the market, or live from the income of savings, or receive cash income from a governmental or other program of transfer payments—like social insurance.

There are many forms of nonmonetary benefit and service, especially those related to education and vocational training, that can enhance an in-

dividual's earning capacity, others that can help him make more effective use of his income, and others that either supplement his cash income or meet very particular needs not susceptible of answer in the market economy. In the final analysis, however, most people will measure their removal from poverty in terms of their cash income.

Not only is money income the measure of removal from poverty for most people, but it is also the measure of their dignity and freedom in a modern society. The framers of the Social Security Act understood very well this value of the cash payment for they had clearly before them the indignities of the grocery order, the rent payment, the community woodshed and the poorhouse. As these horrors have receded from memory, the proposers and makers of policy have sometimes been less aggressive in their advocacy of the "unrestricted cash payment" and some of their qualifications of the principle have good practical justification. But for the poor themselves, the most obvious answer to poverty is more cash in their pockets. UI is not the answer to the cash needs of all, but in the circumstances for which it is logical—interruption of wages due to unemployment—its cash payment aspect is a major asset.

Second, the purpose of UI is to prevent poverty, not to alleviate poverty after it has occurred.—While most people will gladly concede in theory the primacy of measures designed to prevent poverty, most of the popular criticisms directed against the UI system ignore this distinction. The alleviation of poverty is a welfare job with benefits based on and related to the fact and existence of poverty, more commonly designated as "need." But UI is designed to prevent poverty by assuring to the unemployed worker a predictable and objectively determined income which is related to his previous earnings but unrelated to his other assets or his need and granted as a matter of insured right. It is this attribute that gives UI dignity in the eyes of the beneficiary. The fact that the benefit payment is often too low under many of the State laws to serve in preventing poverty is a different question, discussed later. But the basic role of UI is a preventive one.

Two kinds of criticism, operating on quite different levels of sophistication, are frequently made with respect to this preventive aspect of UI. The first is epitomized by the recurrent newspaper story of the unemployed movie star arriving in his limousine to pick up his unemployment check. Here a naive or deliberate confusion is cultivated between UI, in which entitlement is based on prior work history and availability for work, and public assistance where entitlement is based on actual need. Both programs suffer from this common confusion of their purposes. A more sophisticated version of the same confusion goes something like this: "Assuming a limited amount of money available to 'help' the unemployed, any payments made by unemployment insurance to the nonpoor, in effect, make it impossible to give adequate aid to the poverty-stricken unemployed."

The first fallacy in this line of reasoning is the assumption that either the number of the unemployed or the amount available for their support is fixed. Obviously well adapted economic, educational and service policies should be capable of reducing the extent of unemployment to manageable proportions. But even assuming present levels of unemployment, payments made to the unemployed play such a role in maintaining the consumption side of the market equilibrium as to justify them as an element of production costs. In any case the cost of making payments related not to need but to joblessness is not so great as to justify distorting a preventive institution into one based on need. If one starts with the assumption that prevention of poverty is a primary social goal, no benefit conditioned on the fact of poverty can serve that goal.

Again many of the criticisms directed toward UI are based not on its basic concept of entitlement but on its inadequate implementation in terms of extent of coverage, benefit levels, and conditions of entitlement. Obviously, the answer to these problems is not a different system but a better adapted use of the existing system.

Third, a closely related value of UI is the factor of legally enforceable objective criteria for entitlement based on a previous work history.—If one accepts the premise that in the modern world individuals are largely dependent on social instrumentalities for their income, it follows that the only effective answer to a sense of helplessness on the part of individuals lies in legally enforceable rights and entitlements. This aspect of the war on poverty has been recognized by the Office of Economic Opportunity in the strong encouragement it is giving to the financing of legal services to the poor and the emphasis placed in discussions of those services on representation of individuals

before the governmental bodies controlling public benefits. It becomes especially important with respect to those benefits, like public assistance and unemployment insurance, where adverse public opinion in particular circumstances may influence the decisions and policies of administering agencies.

It is sometimes difficult for employees of governmental agencies, conscious of their efforts to protect the interests of their program beneficiaries against every sort of pressure and criticism, to recognize the extent to which the right of appeal against their decisions and representation by a lawyer or other outside advocate protects the health of the program for which they are responsible. The effective utilization of the right of appeal would also seem to require the review and consideration of State agency practices related to legal representation and assistance for UI claimants and the difficulties they sometimes encounter during the appeals process. Not only the observance of the objective rule of law guaranteeing appeal rights, but the maintenance of a fair balance between the administrative and beneficiary relationships is the essence of legal processes to protect the rights of the latter.

A legal right, however, must also be rooted in a well-accepted social value and here again the entitlement factor in UI has a basic strength in its relationship to a work history. For work is still the most generally accepted basis for income in our society, despite the interesting speculations of groups like the Ad Hoc Committee on the Triple Revolution that automation with its attendant abundance may ultimately make this an obsolescent relationship. Certainly for the present there is no question but that income from productive labor is the most acceptable basis both to the individual and to the molders of public policy. In this sense UI may be regarded as a kind of deferred return on labor already performed as well as a token of good faith with respect to the willingness of the worker to return to productive labor as soon as a job is available to him. Since his ability to perform such labor is conditioned on the productive apparatus of the country, the cost of carrying him over this period of involuntary unemployment is considered an appropriate charge against the cost of production itself, and his entitlement to benefits is still firmly based on his status as a member of the work force in good standing.

There are many precedents for legal entitlements surrounding an individual in his capacity as a worker and unemployment insurance derives great strength from its association with them. Here again the shortcomings of UI in this respect are not intrinsic to the concept. They result from failures to make the adaptive modifications required to meet changing conditions.

Fourth, and basic to all other UI values, is its ongoing institutional stability.—For not only does the mechanism of social insurance protection against the risk of unemployment assure predictable income to the individual, it also plays a major role in the total institutional structure on which the health of our society increasingly depends. Neither production nor consumption can any longer be regarded as functions based exclusively on independent individual initiative and effort. Production requires heavy investment in highly complex organizational structures which in turn rely on a market situation largely supported by the availability of expendable income. An employer cannot control his market conditions any more than a worker can control his job. Both are equally dependent on an elaborate complex of delicately balanced interactive institutional mechanisms in which the market economy is only one of many factors. In this situation the health of the market economy is as dependent on overall institutional mechanisms as is the employer for a return on his investment and the worker for a return on his labor. In simple fact, all are equally dependent on their common instrumentality, government—not to supplant their own functions but to create the institutional relationships within which all can function and thrive.

Obviously, within such a complex interaction of institutional relationships the role of government must itself be institutionalized, i.e., based on a rule of law and operational mechanisms which function with predictable continuity. It is conceivable, of course, that government might deal with the fact of individual poverty due to joblessness in a purely *ad hoc* manner with some official reaching into a common fund for the relief of destitution according to his own best judgment of the moment. But in the anarchy of such an arrangement more than the dignity and security of the worker would suffer. All aspects of economic functioning would be thrown into disarray and the rule of law which is the essence of stable government would be totally undermined. In other

words, the prospect is so unthinkable in the modern world as to make the point really unarguable: institutional continuity is a major asset in the role of UI in an effective war on poverty.

Adaptations for the UI System

But institutional continuity does not mean institutional rigidity, and this turns attention to the other half of this analysis: the changes that are needed to make the UI program a really effective instrument for fighting poverty. For institutions are like people; constant growth and adaptation are not only indispensable for effective functioning, they are the very price of survival itself. So when one comes to look at the shortcomings of UI as a weapon against poverty, one must consider first the failure of our policymakers to keep it up-to-date.

In the 30 years since the passage of the Social Security Act in 1935, our gross national product has grown from $72.5 billion to $634.6 billion in 1964; our total civilian labor force has grown from 52.8 million to 74.2 million and the distribution of that force, both in terms of occupation and geographical location, has drastically altered; changes in the relative contribution of machinery and labor to production have started a process of revolutionary change which is bound to accelerate; the educational and skill components of required labor within that production pattern are equally altered; the age and sex distribution of the work force has likewise undergone a major change; the average weekly gross earnings of a production worker in manufacturing has risen from $23.64 in 1939 to $103.38 in 1964; and the scope of both domestic and world markets has constantly widened. These are just some of the factors that have revolutionized the economic and, more specifically, the job market situation in which UI is expected to play its appropriate role.

What has been done in that 30-year period to bring about commensurate adaptations in unemployment insurance? The answer is very simple: At the Federal level, at least, virtually nothing. While its companion social insurance program of Old Age, Survivors and Disability Insurance (OASDI) has been repeatedly enlarged, strengthened, and adapted to changing needs—through wider coverage, higher benefits, and new forms of protection—the Federal-State UI system has stood virtually still except as individual States have moved ahead of the country as a whole. Fortunately, there are now signs of real hope for imminent change in the fact that the Administration has put forward major remedial proposals, now under consideration by the Congress.

What would be the effect of these proposed changes in terms of the war on poverty? Without discussing the individual provisions in detail their impact applies to five broad related areas: coverage, benefit levels, benefit duration, benefits while retraining, and the role of the Federal Government in UI.

Coverage

The criticism is made frequently that the UI system fails to protect those who earn the least, who are the most vulnerable to unemployment and hence most quickly thrown into poverty if they lose their jobs. Obviously, this is not an attribute of the system itself but of our failure to move it out of the selective coverage with which it, like OASDI, began its existence into one of more universal applicability. Assuming, as this article does, that employment opportunities almost universally derive from a total institutional complex which is subject to social and economic factors that cannot be controlled either by the individual employer or the worker, protection against the risk of individual unemployment within that complex should be universally shared. The current proposals move in that direction by extending coverage to 5 million additional workers, mainly those in small firms, in nonprofit organizations, and on large farms, and by modifying the requirements for effective coverage. The fact that many of the workers in these groups are peculiarly vulnerable to destitution is important to the war on poverty but less so, in the view of this observer, than the fact that it is a movement toward universal coverage. For only when all workers are covered will the preventive wall against poverty due to temporary joblessness be complete.

Benefit Levels

Poverty, to the jobless worker, must be measured by two yardsticks: the absolute levels of his current income and the degree to which he has suffered a reduction from his normal standard of living. By neither standard is our current UI system adequately meeting its proper role as a preventive of poverty. The war on poverty has used

a rough average of $3,000 a year for a family of four as the pivotal measure below which poverty may be assumed. Reduced to a weekly figure this would require an income of something over $57 for the elimination or prevention of poverty. But even with all the wide variations among the State benefit schedules the average weekly benefit payment in 1964 was only $35.96. There are, moreover, only seven States (at this writing) which permit unemployment insurance payments—under even the most favorable circumstances—to reach this out-of-poverty level under current maximum limitations.

For the worker who bases his standard of living on the assumption of a continuing earning power, the other measure of poverty is equally important. In turn, our very economy is based on this same worker's willingness to make long-term expenditure commitments in terms of such essentials as the mortgage on his house or rental levels established by lease, his time payments on an automobile and all the other expensive investments of modern living, his health and other insurance payments, his educational obligations to his children, and his taxes. When he loses his job, not only his personal economy but his role in the national economy is thrown into disarray unless his replacement income bears a reasonable relationship to his earnings. Yet here UI payments are not only hopelessly inadequate, averaging only 35 percent in terms of wage replacement, but are actually 6 percent lower than they were in 1939. Under the provisions of the proposed legislation all States would be required to raise the weekly benefit amount to 50 percent of the individual's weekly wage up to the State maximum, and the maximum would be set initially at 50 percent of the statewide average weekly wage, thus rectifying the situation to that extent. This is a long overdue step in the right direction.

Duration

In this hasty overview it is clearly impossible to discuss the full implications of existing duration limitations on the effectiveness of UI as a preventive of poverty. Perhaps the most significant fact to note in this area is the changing character of unemployment itself. In the UI system envisioned by the framers of the Social Security Act in 1934, it was apparently assumed that most unemployment would result from seasonal factors in production or temporary dislocations in the market. The role of the worker in this picture was assumed to be relatively static; after the seasonal or market dislocations had passed, the worker would return to his former or similar job. But in today's changing economic pattern the causes of unemployment have changed in ways that create a far greater risk for particular workers of long-term unemployment or major changes of occupation, skill, or location that require considerable time for readjustment. Thus, in practical fact, the exhaustion of claimants' benefit rights under existing duration restrictions of the State laws has become a major factor in creating poverty and dependency. Even though the actual number of individuals exhausting their benefit rights before securing employment has gone down in recent years, they still constitute nearly one quarter of all beneficiaries. Obviously, these people have no choice but to turn to public assistance or relatives if jobs cannot be found.

The legislative proposals aim to improve this situation in three ways: (1) by requiring the States to provide benefits for at least 26 weeks to eligible claimants who meet the requirement of 20 weeks of prior employment; (2) by giving additional financial help to States whose own funds are depleted due to heavy unemployment; and (3) by the provision of a permanent program of Federal Unemployment Adjustment Benefits (FUAB) for the long-term unemployed worker with a strong prior attachment to the labor force.

Retraining

Closely related to the problem of duration, as discussed above, is the question of whether the unemployed worker can hope to find a job without acquiring a new or different skill. Under the original UI concept a primary condition of entitlement was considered to be "availability for suitable work," by which was meant that the worker must be continually available in case a job similar to the one he had formerly held opened up. But for a worker displaced by automation, changing skill requirements, or major shifts in employment distribution such continuous "availability" may prove an actual handicap to reemployment if it prevents him from acquiring a new skill through training or from moving to a new location to seek employment. The FUAB program would make a progressive step toward solving this problem by conditioning these extended benefits on retraining where appropriate and by the provision

requiring States to pay regular benefits to unemployed workers while taking training approved by the State agency.

A Stronger Federal Role

Perhaps the most significant contribution of the current proposals to make the UI system a more effective weapon in preventing poverty is the recognition that unemployment is a national problem requiring nationwide standards of remedy. Even though the Social Security Act left the actual administration of UI to the States, it recognized the need for a nationwide system by the ingenious tax offset system which virtually assured universal State participation (which in fact did occur), and imposed certain minimum standards to achieve the elements of a common program. Again, failure to update those standards to meet changing conditions has left the States in the situation where any initiative by a particular State to raise standards above the Federal requirement is resisted by employers who fear for their competitive situation in relationship to those employers in less enterprising States. Obviously, in a Federal system where many States must function within a single national market, the Federal Government is the only jurisdiction which can assure simultaneous updating of provisions among all the States, thus providing a reasonable standard of adequacy without competitive disadvantage to any one State.

From the point of view of the worker, the benefits of such action are obvious, but it is hard to understand why employers have not all been equally alert to see its advantages for them. Not only will this action simultaneously protect their own work force and their own competitive position, but it is the surest way to maintain the market on which their prosperity ultimately depends.

Limitations on UI System

In conclusion something should be said about the limitations of the UI system in the war on poverty. Not all or even a majority of the people who are presently poor can expect to have their poverty eliminated either by finding a job or receiving the kind of substitute income provided by UI. It is even possible that the expanding productivity of each worker may still further reduce the work force by extending the period of youthful preparation, speeding the retirement of the elderly, and encouraging other forms of activity for persons whose major usefulness and fulfillment may lie outside the wage economy. There are other ways of assuring adequate income to these groups, and the effectiveness of UI would not be enhanced by trying to stretch its provisions to meet their needs.

Moreover, UI can never substitute for a full employment economy. By its very concept of entitlement, its role must always presuppose the ultimate and, in fact, prior existence of a job. Thus the creation of jobs—whether in the private sector motivated by profit, the public sector providing authorized services, or the possible extension of public works jobs specifically designed to make good use of available workers—must always take priority as a goal. But within its own supportive limits UI should be recognized for what it is—a major arm of the country's poverty-fighting establishment, needing only the kind of updating of its weaponry that has been so generously supported in other kinds of warfare.

Some "Firsts" in the History of Unemployment Insurance in the United States

1916—The first proposal for a State unemployment insurance law in the United States was made in 1916 when a bill, modeled largely after the British Act of 1911, was introduced in the Massachusetts legislature.

1931—In a special legislative session, Wisconsin enacted the first unemployment insurance law in this country. The Wisconsin Unemployment Reserves and Compensation Act, approved on January 28, 1932, culminated 10 years of legislative discussion in the State.

1935—Following approval of the Social Security Act on August 14, which established the Federal-State system of unemployment insurance in the United States, Congress enacted the unemployment compensation law for the District of Columbia on August 28. This was the first "State law" to include coverage of one or more at any time, and to provide benefit allowances for dependents.

1935—The first State unemployment insurance laws were approved by the Social Security Board: District of Columbia on November 15 and Wisconsin on November 27.

1936—On August 17, Wisconsin paid the first unemployment benefit check to be issued in this country from a State unemployment insurance fund.

1940—On September 23, New Jersey became the first State to enact a provision for preserving servicemen's benefit rights earned before induction for use after military service.

1942—On April 29, Rhode Island became the first State to enact a temporary disability insurance law, to be administered in coordination with the unemployment insurance program.

1944—Michigan was the first State to add a provision for dependents' allowances to its State unemployment insurance law.

1945—Maryland was the first State to eliminate the waiting period.

1946—Total benefit payments exceeded $1 billion for the first time.

1949—On February 28, Kansas became the first State to enact legislation providing for a flexible maximum weekly benefit amount.

1953—Nevada was the first State to increase maximum taxable wages above $3,000.

1954—The Employment Security Administrative Financing Act of August 5, included the first permanent provision for Federal assistance to States with low reserve funds.

1954—September 1, marked the first major extension of coverage under the Federal Unemployment Tax Act—to firms employing four or more employees in 20 weeks, effective after January 1, 1956.

1958—On June 6, Pennsylvania became the first State to sign an agreement with the U.S. Secretary of Labor electing to participate fully in the Temporary Unemployment Compensation program. However, on April 16, Connecticut, prior to the inception of the Federal-State TUC program, but while it was under active discussion,was the first State to initiate its own program of paying additional benefits, equal to 50 percent of regular benefits, to claimants who exhausted their regular unemployment insurance benefits.

1964—On May 2, Hawaii became the first State requiring employer contributions on a flexible taxable wage base. Beginning in 1965, an employer was required to pay contributions in a calendar year based on remuneration paid for employment to each individual not to exceed 90 percent of the "State average annual wages." In 1963, one house of the Idaho legislature passed a measure providing for a flexible taxable wage base.

Significant Dates in Federal Income Maintenance Legislation

1935—The Social Security Act, approved on August 14, provided in titles III and IX of the act the basic framework for the Federal-State unemployment insurance system.

1937—On May 24, the constitutionality of the Federal-State unemployment insurance system was upheld by the U.S. Supreme Court in cases raised by Alabama employers.

1937—Enactment of the Illinois Unemployment Compensation Act on June 30, completed the Federal-State system with laws in 51 jurisdictions—the 48 States, District of Columbia, Hawaii, and Alaska.

1938—Approval of the Railroad Unemployment Insurance Act on June 25, removed railroad workers from coverage under the Federal-State system and set up a special system of unemployment insurance for them.

1944—The Servicemen's Readjustment Act (GI Bill of Rights), approved June 22, included provision for "readjustment allowances." On a uniform formula, Federal benefits for unemployed veterans to be paid by State employment security agencies as agents of the Federal Government.

1946—On August 10, the Reconversion Unemployment Benefits for Seamen program was added as title XIII of the Social Security Act—providing temporary benefits for seamen employed by agents of the War Shipping Administration.

1952—The Veterans' Readjustment Assistance Act, approved July 16, provided for unemployment compensation for veterans under a uniform Federal benefit formula but subject to State availability and disqualification provisions.

1954—A new title, XV, of the Social Security Act was approved on September 1, providing benefits for Federal civilian employees (UCFE). To be financed by Federal funds and paid by State agencies under their own benefit formulas—as though Federal employment had been service under State law.

1954—September 1, also marked congressional approval of the first major extension of coverage under the Federal Unemployment Tax Act. This included employees of firms employing four or more in 20 weeks, after January 1, 1956.

1958—The Temporary Unemployment Compensation Act, approved June 4, provided that, in States choosing to participate in the program, additional unemployment insurance could be paid on a temporary basis to jobless workers who exhausted their regular unemployment insurance benefit rights after June 30, 1957, or some later date selected by a participating State. Federal civilian employees, veterans, and ex-servicemen were included. Administrative and benefit costs for the temporary unemployment compensation (TUC) program were advanced to the States by the Federal Government from general revenue. Effective June 1958; expired June 30, 1959.

1958—The Ex-Servicemen's Unemployment Compensation Act (UCX, an amendment to title XV) approved on August 28, provided unemployment compensation from Federal funds for ex-servicemen completing active qualifying service in the Armed Forces. Benefits are based on the ex-serviceman's pay grade at time of separation. Eligibility requirements of the unemployment insurance law of the State in which he first files his claim for benefits must be met.

1960—Amendments to the Social Security Act, approved September 13, narrowed the employment exclusion so as to include certain instrumentalities of the Federal Government in which the United States has no ownership, employees serving on or in connection with American aircraft outside the United States, employees of "feeder" organizations, and various employees of certain tax-exempt organizations. Increased the Federal tax to 3.1 percent and tightened the eligibility requirements for loans to States. Brought Puerto Rico into the Federal-State system.

1961—The Temporary Extended Unemployment Compensation Act (TEUC) approved March 24, provided additional weeks of benefits to jobless workers who exhausted their regular benefit rights after June 30, 1960. Additional benefits were limited to 13 weeks and States were reimbursed for regular benefits paid after 26 weeks. Federal civilian employees and ex-servicemen were included. No new claims could be filed after March 31, 1962; the program expired June 30, 1962.

1961—The Area Redevelopment Act, approved May 1, included provisions for occupational training and retraining of individuals in redevelopment areas and for weekly retraining payments up to 16 weeks. The weekly rate was based on the average State UI payment for a week of total unemployment. (The training part of the area redevelopment program to be phased out between July and December 1965 and become part of the Manpower Development and Training Act.)

Continued on page 34

1962—The Manpower Development and Training Act, approved March 15, provided for weekly vocational and on-the-job training payments, subsistence allowances for trainees living away from home, and transportation allowances for those commuting to the training facility. Weekly training payments based on the average State UI payment for a week of total unemployment but reduced for youth and increased for those potentially entitled to State UI benefits.

1962—The Trade Expansion Act, approved on October 11, initiated a program of Trade Readjustment Allowances and Relocation Allowances for workers adversely affected by trade agreements, permitted under the act, between the United States and other nations.

1963—On December 19, the Manpower Development and Training Act was amended to provide grants or loans in assisting involuntarily unemployed individuals to relocate from their resident community where they cannot reasonably be expected to obtain full-time employment to another community where they have a bona fide offer of employment. Relocation assistance allowances include transportation costs for such individuals, their families, and their household goods.

1965—In the Manpower Act of 1965, approved April 26, benefit and eligibility requirements and relocation assistance allowances were further liberalized.

U.S. GOVERNMENT PRINTING OFFICE: 1965 O—792-968

Summary of Proposed Employment Security Amendments of 1965*

Federal Unemployment Adjustment Benefits (FUAB)

Eligibility: 26 weeks unemployment; 26 weeks employment (or equivalent) in the State base period and total of 78 weeks employment (or equivalent) in 3-year qualifying period (State base period and preceding 2 years); no current or potential State benefit rights.
Weekly Benefit Amount: That amount payable in the State benefit year which begins the 3-year Federal benefit period.
Total Benefits: 26 weeks in 3-year Federal benefit period.
Payment of Benefits: Special disqualification and certification provisions.

Financing

Matching Grants for Excess Benefit Costs: Annual Federal grants of two-thirds of State benefit costs above two percent of total wages.
Additional Financing: To pay costs of FUAB and matching grants for excess benefit costs, 0.15 percent employer tax and equal amount from general revenue.
Wage Base: Increases taxable wage base to $5,600 in 1967, to $6,600 in 1971 (bringing the UI base in line with OASDI).
Experience Rating: Present standard deleted. Full credit for reduced rates (less than 2.7 percent) to pooled funds (used in all States) regardless of State basis for rate reduction.

Coverage

Nearly 5 million additional workers would be covered under unemployment compensation laws:

- Workers in small firms (one or more at any time).
- Workers on large farms (using 300 man-days of hired farm labor in any quarter).
- Workers in certain agricultural processing.
- Workers in nonprofit organizations except individuals in certain categories.
- Driver salesmen and others working under similar arrangements.

Benefit Requirements

Full Federal tax credit to employers only if State provides:

- Qualifying requirement of no more than 20 weeks of work or equivalent.
- Weekly benefit amount equal to 50 percent of individual's average weekly wage.
- Maximum WBA at least 50 percent of State wage by July 1, 1967; 60 percent, by July 1, 1969, and 66⅔ percent by July 1, 1971.
- At least 26 weeks of benefits for workers with 20 weeks of work in base period.

Additional Conditions

For any Federal tax credit to employers, State must provide:

- Equal treatment for out-of-State claimants as to eligibility and benefit amount.
- Disqualifications (except for fraud, labor disputes, and conviction of a work-connected crime) limited to 6 weeks, with no cancellation or reduction of rights.
- No denial of benefits to individuals taking approved training.
- Denial of benefits if claimant has not worked since beginning of previous benefit year.

Other Provisions

No tax credit to maritime employers in States which do not provide equal treatment for maritime workers.
Staff training for personnel working in the unemployment insurance program.
Increase in basic unemployment insurance research.
Special Advisory Commission on Unemployment Compensation to be appointed in 3 years to study the Federal-State program and make recommendations for improvement of the system.
Change in certification date from December 31 to October 31.

---

*The proposed Employment Security Amendments of 1965 (H.R. 8282 and S. 1991) were introduced during the first session of the 89th Congress. Hearings on H.R. 8282 were held in August 1965 before the Ways and Means Committee of the House of Representatives.

in the question of judicial review of the Secretary of Labor's decisions in conformity cases.

Following its reconstitution in 1963, the Federal Advisory Council on Employment Security held two meetings, neither of which proved productive. The Secretary of Labor has not summoned the committee for almost two years.

State Legislation

At the state level, AFL-CIO affiliates obtained some significant victories and suffered some notable defeats. The South Dakota Federation of Labor took a difficult unemployment insurance issue to state referendum and won. The Pennsylvania AFL-CIO lost by one vote in the legislature a fight to stop Governor William W. Scranton's program for drastically reducing total benefit payments. The Iowa Federation of Labor succeded with its program to eliminate variable maximums; the Maine State Federated Labor Council successfully worked to have "high-quarter" benefit computations replace those based on "annual wages" and liberalized disqualifications. These two states and Rhode Island and Hawaii moved into the growing group that sets the maximum as a percentage of average weekly wages rather than as a fixed dollar amount. Only Hawaii has reached the AFL-CIO recommendations for a maximum weekly benefit amount at two-thirds of average weekly wages and a potential duration of 26 weeks for all claimants.

In other states new maximums obtained restored some relatively recent and inadequate benefit-wage ratio. In general, the old patterns persist: adjustment of the maximums at the price of protection for irregularly employed workers; shaky financial practices, only partially relieved in a few states by slight increases in the tax base.

1964 Legislative Sessions

Arizona: Raised maximum from $35 to $43; raised tax base to $3,600.

Delaware: Allowed agencies or subdivisions of state to elect coverage on a reimbursable cost basis.

Hawaii: Tightened wage qualifying requirement; improved financing.

Louisiana: Raised maximum from $35 to $40 for those with high-quarter earnings over $875.

Maryland: Raised maximum from $38 to $46 but latter also applies to claimants with dependents; changed tax schedules.

Massachusetts: Amended labor dispute provision to allow benefits for those not recalled within one week following dispute.

Mississippi: Changed from "payroll decline" to "benefit ratio" form of experience rating.

PAGINATION INCORRECT

Pennsylvania: Raised maximum from $40 to $45; reduced duration from 30 weeks for all to 18-30 weeks (total benefits no more than one-half base period wages); tightened wage qualifying requirements; eliminated second year benefits based on lag quarter wages without intervening employment; added triggered extended benefits; raised tax base to $3,600; extended tax schedules downward to zero percent; added an "active search for work" requirement; added extensively to disqualifications for pregnancy, after childbirth, receipt of pensions, vacation pay, severance pay, etc.

South Dakota: Tightened eligibility requirement, but later this amendment was defeated in a state referendum.

Puerto Rico: Raised maximum from $16 to $20; broadened extended duration to cover sugar cane workers.

Virginia: Raised maximum from $34 to $36; dropped lower paid workers at bottom of benefit schedule; tightened wage qualifying requirement; raised maximum duration to 26 weeks for higher paid workers only.

1965 Legislative Sessions

Alabama: Raised maximum from $32 to $38; tightened wage qualifying requirement; added pregnancy disqualification; made minor changes in requalifying requirement, definition of waiting week, and definition of voluntary leaving.

Alaska: Minor technical changes in definition of wages and administrative procedures.

Arkansas: Legislature tightened wage qualifying requirement and penalty disqualifications for duration of unemployment. Vetoed by governor.

California: Increased maximum from $55 to $65; raised qualifying requirement to $720 from $600; raised qualifying requirement for triggered extended benefits; added total disqualification (for duration of unemployment) for voluntary quit and discharge for misconduct; raised tax base to $4,100 temporarily; raised uniform surtax from 0.5 to 1 percent temporarily; directed agency to investigate labor disputes and publicize classes of workers ineligible.

Colorado: Added changes and restrictions affecting eligibility and disqualifications; enacted total disqualification for refusal of suitable work offered at any time between base period and time of application for benefit.

Connecticut: Raised maximum from $45 for an average weekly wage of at least $89 to $50 for an average wage of $99 or more; raised base year qualifying requirement from $300 to $750; raised dependent allowance from $4 to $5 for each child.

Florida: Reduced benefit by amount of a pension; enacted minimum rates below .1 percent.

Hawaii: Raised maximum which is to be set annually at two-thirds of state's average weekly wage.

Illinois: Raised variable maximum from $38 to $42 for claimant with no children and from $59 to $70 for claimant with four children; increased slightly required qualifying earnings and voluntary leaving penalty; tightened the definition of recession for triggering the extended benefits program; anticipated adjustment in federal tax base increase with provision to lower rates.

Indiana: Raised maximum from $36 to $40 except that a claimant with nonworking spouse is entitled up to $43; doubled wage qualifying requirement; tightened disqualifications; declared termination under compulsory retirement clause in union contract is not a basis for ineligibility; altered funding.

Iowa: Abolished variable maximum benefit structure and set individual benefits at 1/22nd of high-quarter earnings with maximum at 50 percent of state's average weekly wage; liberalized duration provision; raised highest tax rate; waiting week to be compensable retroactively after a fifth week.

Maine: Changed from annual wage to high-quarter benefit formula; set weekly benefits at 1/25th of high-quarter earnings subject to maximum at 50 percent of state's average weekly wage: changed from 26 weeks uniform duration to lesser of 26 weeks or 1/3rd base period wages; raised qualifying earnings; liberalized definition of partial unemployment; liberalized disqualification definitions and penalties; established tax rates above standard rates; waiting week to be paid retroactively after fourth week.

Maryland: Raised maximum from $46 to $48 for claimants with and without dependents; to allow concurrent benefit and vacation pay payable at time of separation.

Massachusetts: Raised basic maximum from $45 to $50.

Michigan: Increased the basic maximum from $33 to $43 and the augmented maximum from $60 to $72; raised individual benefits below maximum from 50 to 55 percent of claimant's average weekly earnings; maximum duration remains at 26 weeks but entitlement increased from 2 benefit weeks for 3 credit weeks to 3 benefit weeks for 4 credit weeks; decreased disqualification penalty from total denial for duration of unemployment to 6 weeks benefit cancellation; extended coverage to employers of one or more; and made numerous other changes in disqualifications, coverage and financing.

Minnesota: Raised maximum from $38 to $47, with individual benefits to be figured at 50 percent of average weekly wage rather than by annual wage formula; tightened qualifying earnings requirements; required "actively seeking work;" increased disqualification penalties; raised tax base to $4,800; made other financing changes.

Missouri: Raised maximum from $40 to $45; raised partial earnings allowance; redefined week of unemployment.

Nebraska: Increased the maximum from $38 to $40; changed the penalties for discharge for misconduct and refusal of suitable work from 6 weeks denial to 4 to 8 weeks denial.

Nevada: Raised basic minimum benefit from $8 to $16 and maximum from $37.50 to $41, (or $61 with dependent allowances); raised earnings requirement; disqualified voluntary quits because of marital obligation for duration of unemployment unless sole support of family; raised taxable wage base from $3600 to $3800 and highest tax rate to 3 percent.

New Hampshire: Raised maximum from $45 for at least $3,600 annual earnings to $49 for $4,500 or more; changed disqualification for misconduct and refusal of suitable work 4 weeks to total disqualification for duration of unemployment; raised peril point of fund, lowered minimum allowable rate, and made other funding changes.

New York: Extended coverage to nonprofit employes subject to federal amendment permitting reimbursable financing; raised maximum from $50 to $55; covered persons in personal or domestic service of employer who pays $500 or more in any calendar quarter.

North Carolina: Raised maximum from $35 to $42; tightened earnings requirement; added waiting week; declared a person not unemployed if he received any termination benefit.

Oregon: Made minor changes in coverage, administration, tax base.

Rhode Island: Increased maximum from $36 to 50 percent of state's average weekly wage; lifted individual weekly benefit from 50 to 55 percent of claimant's average wage; raised maximum rates and changed tax structure to permit experience rating at lower fund levels.

South Dakota: Raised maximum from $34 to $36.

Tennessee: Raised maximum from $36 to $38; permitted enrollment in training course without being held ineligible as unavailable for work.

Vermont: Declared available for work and, therefore, eligible a claimant taking an approved training course; allows claimant's attorney to be paid from administrative funds.

Workmen's Compensation

During the past two years, there have been a number of significant improvements in state workmen's compensation laws. The vigorous efforts of AFL-CIO state central bodies have generally been responsible for these gains. Unfortunately, the gap between the workmen's compensation goals of the federa-

[1]Weekly benefit amount abbreviated in columns and footnotes as wba.

[2]Unless otherwise noted, waiting period is the same for total or partial unemployment. In Alabama, Iowa, and New Hampshire waiting period for partial benefits is 2 weeks; in New York 2-4 weeks; and in West Virginia no waiting period is required for partial unemployment. No partial benefits are paid in Montana but earnings not exceeding greater of $15 or 1 day's work of 8 hours disregarded for total unemployment.

[3]When States use a weighted high-quarter formula, annual-wage formula, or average-weekly-wage formula, approximate fractions or percentages are figured at mid-point of lowest and highest normal wage brackets. When dependents' allowances are provided, the fraction applies to the basic benefit amount. In Alaska, maximum for interstate claimants is $20; in Ohio and Wyoming, maximum amount for interstate claimants may be less than that shown.

[4]When 2 amounts are given, higher includes dependents' allowances. Higher for minimum wba includes maximum allowance for one dependent; Michigan—for one dependent child or 2 dependents other than a child; Ohio—for a dependent spouse or a dependent child if there is no spouse. In the District of Columbia and Maryland, same maximum with or without dependents. In Massachusetts maximum augmented payment not shown since such augmentation is limited only by the claimant's average weekly wage. In Alaska no dependents' allowances are paid to interstate claimants.

[5]In States noted full wba is paid if earnings are less than ½ wba; ½ wba if earnings are ½ wba but less than wba.

[6]With the exception of Montana and North Dakota, States noted have a weighted schedule, with percent of benefits based on bottom of lowest and highest wage brackets. In Montana, duration is 13, 20 and 26 weeks, depending on quarters of employment. In North Dakota, 18, 22, and 26 weeks, depending on amount of base-period earnings.

[7]Benefits are extended when unemployment in State reaches specified levels: California, Connecticut, Hawaii, Idaho, Illinois, Pennsylvania, and Vermont, by 50% and in North Carolina, by 8 weeks. In Puerto Rico, benefits are extended by 40 weeks in certain industries, occupations, or establishments when a special unemployment situation exists.

[8]For claimants with minumum qualifying wages and minimum wba. In States noted, range of duration applies to claimants with minimum qualifying wages in base period: longer duration applies with the minimum wba; the shorter duration applies with maximum possible concentration of wages in the high quarter, and therefore the highest wba possible for such base-period earnings.

[9]Rate represents minimum and maximum rates assigned to employers during calendar year 1965. Alabama, Alaska, and New Jersey also require employee taxes. Contributions required on wages up to $3,000 in all States except; Tennessee ($3,300), Arizona, Delaware, Idaho, Massachusetts, Michigan, Oregon, Pennsylvania, Rhode Island, Vermont, West Virginia, and Wisconsin ($3,600); Nevada ($3,800); California ($4,100); Utah ($4,200); Hawaii ($4,300); Minnesota ($4,800), and Alaska ($7,200).

[10]Waiting period becomes compensable if claimant is entitled to 12 consecutive weeks of benefits (Hawaii); 5 consecutive weeks (Iowa); is unemployed for at least 6 weeks and is not disqualified (Louisiana); commences other full-time work within 13 weeks after being laid off indefinitely or for a definite period of more than 4 weeks (Michigan); when benefits become payable for third consecutive week following waiting period (New Jersey); when benefits become payable for fourth consecutive week following waiting period (Maine); after benefits are paid for 4 weeks (Texas).

[11]Employers of fewer than 4 employees (not subject to the Federal Unemployment Tax Act) outside corporate limits of cities of 10,000 or more population are not liable for contributions.

[12]Or 15 weeks in last year and 40 weeks in last 2 years at average weekly wage of $15 or more (New York); or 14 weeks in base period and 55 weeks in those 52 weeks plus any base period which ended not more than 10 weeks before the start of those 52 weeks (Wisconsin).

[13]For New York, waiting period is 4 "effective days" accumulated in 1-4 weeks; partial benefits are 1/4 of wba for each 1 to 3 effective days. "Effective day": the fourth and each subsequent day of total unemployment in a week for which not more than $55 is paid.

State	BENEFITS: Wage or employment qualifications (number times weekly benefit amount unless otherwise indicated)[1]	Waiting period[2] (weeks)	Computation of weekly benefit amount (fraction of high-quarter wages unless otherwise indicated)[3]	Weekly benefit amount for total unemployment[4] (in dollars): Minimum	Maximum	Earnings disregarded in computing weekly benefit for partial unemployment[5]	Duration in 52-week period: Proportion of wages in base period[6]	Weeks of benefits for total unemployment[7]: Minimum[8]	Maximum	COVERAGE: Size of firm (minimum number of employees and/or size of payroll)	TAXES: Employer contribution rates for 1965 (percentage of wages[9]): Minimum	Maximum
Idaho	33+-38+ but not less than $572; with $365 in 1 quarter and wages in 2 quarters	1	1/23-1/26 up to greater of 52-½% of state average weekly wage or $40	17	48	1/2 wba	[6]31-29%	[7]10	[7]26	1 and $150 in any quarter	[9].9	[9]4.5
Illinois	$800; with $175 outside high quarter	1	1/20-1/26 up to $42; up to $50-$70 for claimants with 1-4 dependents	10	42-70	$7	[6]37-33%	[7,8]10-26	[7]26	4 in 20 weeks	.1	4.0

[1] Calendar 1964

[2] Where two figures are shown, the larger includes maximum dependents' allowances.

[3] Includes all legislation enacted in 1965 regardless of effective date.

[4] Where two figures are shown, the lower represents the shortest possible duration. In most States this is the entitlement of a claimant with minimum weekly benefits and minimum qualifying wages. But in six States a higher than minimum weekly benefit amount may result in shorter duration where the distribution of earnings is concentrated in the high quarter.

[5] Taxable wages have remained at the first $3000 of employees' earnings since 1939, except in Tennessee ($3,300); Arizona, Delaware, Idaho, Massachusetts, Michigan, Oregon, Pennsylvania, Rhode Island, Vermont, West Virginia, Wisconsin ($3,600); Nevada ($3,800); California ($4,100); Utah ($4,200); Minnesota ($4,800); Alaska ($7,200); and Hawaii (90 percent of State average annual wage).

[6] Benefits are extended when unemployment in State reaches specified levels in California, Connecticut, Hawaii, Idaho, Illinois, Pennsylvania and Vermont, by 50 percent; in North Carolina by 8 weeks; and in Puerto Rico, benefits are extended by 40 weeks in certain industries, occupations or establishments when a special unemployment situation exists.

[7] Maximum weekly benefit is determined as a specified percent of average weekly covered wages and is computed annually at 50 percent in Arkansas, District of Columbia, Kansas, Iowa, North Dakota, Rhode Island, South Carolina, Utah, Vermont, and Wyoming, 52.5 percent in Idaho and 66-2/3 percent in Hawaii; computed semi-annually in Wisconsin at 52.5 percent, and in Colorado 50 percent of average weekly wages in selected industries. The base year used for setting the maximum is not necessarily annual 1964 shown in this table, which explains why the percentage figures in the fourth column may vary slightly from the statutory percentages.

[8] Augmented amount includes $6 per dependent up to individual's average weekly wage.

[1] The lower figure represents the benefit for a single worker; the higher the maximum for workers with dependents.

[2] Benefits may not exceed period of time or amounts indicated.

[3] Covers only specified dust or pulmonary diseases and/or diseases caused by the inhalation of poisonous gases or fumes.

[4] "W" means payment to widow until death or remarriage; "C" means payment to children until age specified.

[5] Plus an additional $10.00 per month if there are dependents.

[6] 55 percent of 85 percent of the average wage as computed by the Employment Security Commission in Kentucky and two-thirds of the State's average weekly wage in Maine.

[7] May be extended by commission without limit.

[8] 55 percent of state's average production wage.

[9] If worker is receiving benefits under the State temporary disability insurance act, benefits under the workmen's compensation act are limited to $40.00.

[10] An additional $500 may be allowed.

[11] Dollar maximum does not apply to children under 18 nor to unmarried children over 18 for 104 weeks beyond their 18th birthday, if incapable of self-support, nor to unremarried widow physically or mentally incapable of self-support.

[12] Disability benefits already made are deducted from death benefits payable.

[13] During the first 12 weeks of disability the amount is $56.00, but thereafter, the maximum amount drops to $49.00.

[14] Provides $6.00 additional for each total dependent not to exceed the average weekly wage of the employe.

[15] In cases of occupational disease, no time limit is imposed. If employe with occupational disease is able to continue work, while undergoing medical treatment, medical benefit is limited to $1,000. In cases of total disability where the $2,500 is insufficient to meet all hospitalization expenses, additional benefits may be allowed.

[16] Benefits set in accordance with a "wage and compensation schedule period." Under this schedule, the 66-2/3 percent level is substantially adhered to for workers earning wages of $45 a week or less. For workers who earn more, the schedule fixes benefits which are less than 66-2/3 percent.

[17] Up to $15,000 may be authorized.

[18] Hospitalization for six months in addition to the $450 total medical and surgical allowance. Replacements for artificial limbs or eye together with continued medical care prescribed by attending doctor are without regard to the limitation in the law.

[19] Children studying until 25.

[20] Order of Commissioner required if aggregate exceeds $7,500.

[21] The Commissioner upon application and reasonable proof being furnished may order additional services not to exceed an aggregate cost of $18,300.

[22] Plus $2.50 for each dependent child under 21.

[23] Commission may extend for an additional period of 2 years.

[24] May be increased without limit, but no medical benefits are payable in silicosis cases.

[25] Additional death benefits payable from state fund for children.

[26] The commission may extend additional medical care in cases showing justifiable need.

[27] Reasonable medical and hospital services or other remedial care for 6 months and additional 6 month periods upon written request to the Commissioner. Commissioner may grant extension for aid not to exceed one year.

[28] Reasonable medical, surgical, and hospital treatment and supplies, apparatus, artificial members for six months, which may be extended.

[29] No specific coverage but some workers have won benefits through court decisions.

[30] Additional payments out of Medical Disaster Insurance Fund in excess of payments under Workmen's Compensation Act and Occupational Disease Act, maximum, $35,000.

[31] The one exception is radiation disease.

Unemployment Compensation

AL, THURSDAY, APRIL 14, 1966

One-Sided Reform

Congress Ignores Wasteful Practices in Jobless Benefits

By JOHN F. LAWRENCE

The current effort to draft the first Congressional overhaul of the nation's 30-year-old unemployment compensation system has abundant precedent in state reform measures of recent years. But while continuing the trend to bigger benefits, Congress so far is ignoring another side of the state reforms: The drive to reduce wasteful payments.

Despite heated opposition from labor leaders, many states have managed to close loopholes which have allowed payments to pour out to pensioners—who were collecting compensation on top of Social Security and company pensions—and to an array of other individuals whose attachment to the work force was, at best, dubious. These include new mothers, Christmas-time employes in department stores, and other seasonal workers and even those who quit jobs voluntarily.

But many states have yet to act. At least a score, for example, still permit payments to pensioners and an equal number don't specifically require a recipient even to maintain an active search for work.

Actually, it's not the Administration backers of the Federal legislation who are blocking any moves to slice some of these people from the compensation rolls. Rather, it's the states themselves. Already concerned lest the Federal bill impose too many standards on the individual state programs, state officials aren't anxious to propose any Federal eligibility restrictions. And employers, who stand to lose most through higher payroll taxes to fund the bigger benefits, aren't anxious to buck the state officials.

What this translates into, however, is added waste. As the Federal bill is developing, it will probably require that all states pay recipients who qualify for full benefits an amount equal to half the average wage in the state. Nationally, the average benefit is about $37 a week and some 33 states would be required to boost payments under the new bill. Further, Congress is likely to extend the number of weeks a person can collect benefits, at least in times of recession adding perhaps 13 weeks to the 26-week maximum most states have now.

Benefiting the Deadbeats

Unfortunately, in addition to benefiting those genuinely thrown out of work by layoffs, such improvements will also benefit the deadbeats. Wall Street Journal reporters talking to the unemployed in the last two years have found a sizable minority admitting freely that they were hoping to collect the benefits for the full term and weren't especially anxious to find a job, at least until benefits ran out. This was particularly true of pensioners, more than a few of whom actually could add up more income from compensation, pension and Social Security than they made on the job.

Just how much potential savings could come from eliminating such payments is pointed up dramatically in Pennsylvania, where Gov. Scranton managed to push through a reform measure in 1964 over violent AFL-CIO opposition. (Union leaders are still fighting to have some of the reforms repealed.)

In the first full fiscal year (ended last June 30), under the reformed system, Pennsylvania was able to eliminate or reduce payments to 44,500 pensioners, saving more than $16 million. All told, the state's tightened requirements saved $30 million in benefits that previously would have been paid, or 23% of the state's total benefit payments of $132 million. At the same time, despite a

refuse suitable work when offered, who are retired and drawing pensions, who are on vacations, and who for a variety of reasons are not really 'available for work' even though they may satisfy the technical requirements of the law on the basis of the inadequate tests that can be applied by a public employment service office."

Few union leaders are willing to concede that a significant number even of these individuals wouldn't snap up a job if offered to them. Supporting their view is Albert B. Tieburg, director of California's employment department, one state administrator who strongly supports the Federal legislation.

"We had thousands of women with seasonal jobs in the canneries and people were screaming they shouldn't be paid benefits during the off season because they weren't really looking for work," he relates. "Then the food freezing industry started and those women literally fought for those jobs" in what had been the off season. "My impression is the great bulk of people do want a job," he concludes.

Not Many Looking

Talks with the unemployed, however, suggest that however quickly some might grab up a good job, many of those of the type described by the NAM representative are by no means conducting an agonizing search for such an offer. One grandmother in Pittsburgh, for example, admitted to collecting unemployment compensation every year since 1950 following a regular summer park job. A retired 69-year-old overhead crane operator would take another overhead crane job and that's all. He admitted he was neither likely to find such a post at his age nor particularly worried about it. "I wasn't going to put in for compensation but the company said I was entitled to it."

Even granting the argument that the broadest possible coverage serves to benefit the economy in bad times, hence isn't wasteful, personnel men point to another consideration—the matter of conserving benefits for those who deserve them most. In a year in which Vietnam has forced the Administration into some difficult choices between heavier spending for weapons or for welfare and other antipoverty efforts, it should be clear that an endless supply of cash isn't always available, some critics observe.

The NAM representative points out that the types of cases he describes "are not necessarily fraudulent. But they are expensive and they deplete the funds that should be available for payments to people who are involuntarily unemployed."

While employers and many state administrators agree with this view, most currently want to reserve the reform efforts for the individual states to undertake. They make a strong case for letting the states tailor eligibility, as well as most other standards, to local needs.

"Letting Congress get into that would just open the floodgates," contends one compesation expert.

Instead, state officials are fighting at least to prevent Congress from writing anything into the new legislation to make closing the loopholes any more difficult. One state official insists some current language being considered could be interpreted to prevent states from cutting pensioners off the rolls or reducing their payments by the amount of Social Security they receive.

Labor Department's Veto

fits that previously would have been paid, or 23% of the state's total benefit payments of $132 million. At the same time, despite a boom year, provisions to increase payments to the qualified unemployed added $4 million to the year's benefits and would add considerably more in a time of recession.

The Pennsylvania reforms also point up the severe battle state officials and employers face in closing any such loopholes. Despite the fact it did boost payments to fully qualified recipients and added to taxes paid into the compensation fund by employers, one union pamphlet described the reform as the Scranton "ripper" bill. The Pennsylvania AFL-CIO insists the savings effected in the last fiscal year were at the expense of creating severe hardships among some unemployed.

More than hardship is involved, in the unions' reasoning, however. Union officials generally contend that by softening the blow to the economy as well as to the individual in periods of widespread unemployment, the benefits of the insurance far outweigh any waste. Thus, they contend the benefits should include retirees who may need a job to supplement pensions and Social Security.

There's little disagreement on either side about the value of the compensation system. But employers and many state administrators insist it shouldn't be construed as a welfare program. Rather, they say, it's designed to require employers to pay into a fund to support people that are laid off during a reasonable period of job hunting. "There's no question the Administration is making the system part of the war on poverty," complains one California management man.

To help avoid making it a welfare program, a representative of the National Association of Manufacturers, typical of many company officials, calls for removal from the system "the people who have quit voluntarily, who are not looking for jobs, who amount of Social Security they receive.

Labor Department's Veto

These officials also are pressing for Congress to permit judicial review of the Labor Department's right, under current law, to veto some state reforms. The department can do this by declaring a state's program "out of conformity" with the guidelines already written into Federal law. Actually, this power hasn't been used to block many reforms, but state officials nonetheless consider it a potent club. Before introducing the reform measure in Pennsylvania, Scranton aides checked it closely with the Government. And one notable reform in South Dakota was effectively killed by the department. This proposed reform involved delaying compensation payments to workers thrown out of a job who previously had had a high level of earnings.

Some state administrators already are talking among themselves about enacting in their own states some severe restrictions, at least as to who can collect the extended Federal benefits during recessions. Some even talk of going so far as to limit these payments to the primary wage earner, eliminating the possibility of two recipients in one family.

As compelling as is the argument about keeping the loophole question out of Congress, two factors would seem to warn against passing up too quickly the chance for at least some measure of national reform. One is that the Federal legislation will set some standards on the side of fatter benefits. The other is that the history of state reforms suggests the best time to push through some eligibility reforms over union protests is while adding to the benefits the fully qualified unemployed will receive.

Moreover, reform at both the state and Federal levels is going to be difficult to win as long as labor leaders fail to see that a good insurance program is hardly one that rewards those who abuse it.

AMENDMENTS To EMPLOYMENT SECURITY LAW

SUBSEQUENT TO
MARCH 1960

ENACTED IN
1964 AND 1966

BEN T. HUIET
Commissioner
Department of Labor of Georgia
Employment Security Agency
ATLANTA

AMENDMENTS TO THE GEORGIA EMPLOYMENT SECURITY LAW SUBSEQUENT TO MARCH, 1960

1964 Amendments

Section 9 (c) amended, effective March 4, 1964, as follows:

"Money credited to the account of this State in the Unemployment Trust Fund by the Secretary of the Treasury of the United States of America pursuant to section 903 of the Social Security Act, as amended, may be requisitioned and used in the payment of expenses incurred for the administration of this Act pursuant to a specific appropriattion by the legislature, provided that the expenses are incurred and the money is requisitioned after the enactment of an appropriation law which:

"(A) specifies the purposes for which such money is appropriated and the amount appropriated therefor,

"(B) limits the period within which such money may be expended to a period ending not more than two years after the date of the enactment of the appropriation law,

"(C) limits the amount which may be used during a twelve-month period beginning on July 1 and ending on the next June 30 to an amount which does not exceed the amount by which (i) the aggregate of the amounts credited to the account of this State pursuant to section 903 of the Social Security Act, as amended, during the same twelve-month period and the nine preceding twelve-

month periods, exceeds (ii) the aggregate of the amounts used pursuant to this subsection and charged against the amounts credited to the account of this State during any of such ten twelve-month periods. For the purposes of this subsection, amounts used during any such twelve-month period shall be charged against equivalent amounts which were first credited and which are not already so charged; except that no amount used for administration during any such twelve-month period may be charged against any amount credited during such a twelve-month period earlier than the ninth preceding such period."

Section 10 added new paragraph, effective April 1, 1964, as follows:

"The director shall exercise all authority granted by law to the Commissioner of Labor which the Commissioner of Labor may delegate to him in writing with respect to the collection of contributions, or taxes, due under this Chapter. He shall execute all documents and papers, including assessments for taxes, executions for taxes, jeopardy assessments, and all other documents necessary in the performance of such duties and the exercise of such authority. Any such tax execution, assessment, or other document signed and executed by the director of the Employment Security Agency shall be of the same force and effect as if signed and executed by the Commissioner of Labor."

Section 14 (e) amended effective April 1, 1964, as follows:

"(e) Execution for collection of tax; affidavit of illegality.—In addition to any other method provided by law for the collection of contributions, any contribution not paid when

due, including any interest, penalty and costs thereon, may be collected by the Commissioner of Labor, by and with the same authority as is contained in sections 92-3306 and 92-8443 of the Code of Georgia Annotated providing for the collection of taxes by the State Revenue Commissioner. If any contribution, or tax, imposed by this Chapter is not paid within 10 days after notice and demand from the Commissioner of Labor, the Commissioner shall issue an execution directed to the sheriff, or his lawful deputies, of any county of the State, requiring said officer to levy upon and sell the real or personal property of any delinquent taxpayer, found within his county, in sufficient amount to satisfy the said execution so issued, together with penalties, interest, and all costs of executing and collecting the said execution, and to return such execution to the Commissioner of Labor, together with all such sums collected under and by virtue thereof, by a time to be therein specified, not more than 60 days from the date of the execution. The sheriff of any such county shall, within 10 days after the receipt of any such execution from the Commissioner of Labor, file the same, together with his entry of levy, with the clerk of the superior court of the county of the taxpayer's residence, and it shall thereupon be the duty of the clerk of the superior court to enter the said execution on the general execution docket of the superior court of said county in the same manner and form as prescribed by the general laws of the State of Georgia relating to executions issued by the superior court of this State, and said execution when so docketed shall become a lien on the title to and interest in all real and personal property of the said taxpayer against whom the said execu-

tion was issued in the same manner as if the said judgment had been duly issued from the superior court of taxpayer's residence and duly recorded on the general execution docket: Provided that nothing herein contained shall prevent the Commissioner of Labor from having said fi. fa. entered upon the general execution docket prior to the time the same is turned over to the sheriff for collection and when said fi. fa. is so entered on the general execution docket it shall be entitled to all the priorities accorded to other tax executions under the general law of this State, from the date of record. The sheriff shall thereupon proceed upon the same in all respects, with like effect and under the same rules as prescribed by the general laws relating and with respect to executions issued by any superior court of this State or other court of record, and shall be entitled to the same fees for his services in executing and collecting the said execution as allowed by law for like services to be collected under any superior court execution. In the event that any taxpayer may desire to contest the said execution, he may do so by filing an affidavit of illegality with the levying officer at the time of the levy, arresting the same as now prescribed by the general laws relating to the filing of affidavits of illegality, and when said affidavit of illegality is so filed and the tax is paid or bond for the eventual condemnation money is given it shall be the duty of the levying officer to return the said execution, together with the affidavit of illegality bond, and in case of personal property, bond for the forthcoming of the property, to the clerk of the superior court of the county of the taxpayer or defendant in execution, and the superior court of the said county shall then and there, at the first or next term,

cause the said issue so made to be tried by a jury in the superior court of the county of the residence of the taxpayer, under the same rules of law and evidence as prevail in this State. It shall be the duty of counsel for the Employment Security Agency to represent the Commissioner of Labor when any such cases or contests made by affidavits of illegality are filed in any county or any legal action in courts results from the issuance of any execution. The Commissioner of Labor, with respect to the administration of the Employment Security Law and the collection of contributions thereunder, shall have all of the rights, authority and prerogatives provided the State Revenue Commissioner for securing reports and the collection of taxes as contained in Title 92 of the Code of Georgia Annotated."

Section 14 (f) added, effective April 1, 1964, as follows:

"(f) Taxes made personal debt; attachment and garnishment; levy.—All contributions, or taxes, under this chapter are hereby made a personal debt of the person required hereunder to file the returns or to pay the taxes imposed hereby. The Commissioner of Labor, or his authorized representative, may attach the property of a delinquent taxpayer on any ground provided by section 8-101 of the Code of Georgia Annotated or on the ground that the taxpayer is liquidating his property in an effort to avoid payment of the tax. The Commissioner of Labor, or his authorized representative, may use garnishment to collect the tax imposed by this Chapter. Garnishment may be issued by the Commissioner of Labor in the same manner as is provided for the issuance of garnishment by tax collectors in Chapter 92-75 of the Code

of Georgia Annotated. In case of neglect or refusal by a taxpayer to pay any taxes under this Chapter due the State, the Commissioner of Labor, or his authorized representative, may levy upon all property and rights to property, except such as are exempt by law, belonging to such taxpayer, for the payment of the sum due, with interest and penalty for nonpayment, and also of such further sum as shall be sufficient for the fees, costs and expenses of such levy. The Commisioner of Labor, or his authorized representative, may levy and conduct judicial sales in the manner now provided for sales by sheriffs and constables. Levy, in the case of personal property, shall be advertised 10 days before the date of sale, which advertisement shall designate the time and place of sale, giving a reasonable description of the property to be sold, and be posted in three public places in the county, and inserted at least one time in the newspaper in which sheriff's sales in such county are advertised. The sales shall be at the courthouse of the county in which the property levied on is situated, and be between the hours of 10 a.m. and four o'clock p.m. In the event the levy is upon real property, the said Commissioner of Labor, or his authorized representative, after making said levy, shall make a return of such levy on the execution to the sheriff of the county in which the property is located, and such sheriff shall proceed to advertise and sell the same as required by law."

Nothing in this Act shall be construed to affect executions heretofore issued by the State Revenue Commissioner for delinquent taxes due the State of Georgia under the provisions of the Georgia Employment Security Law and all executions, affidavits of illegality,

suits and other proceedings relating to taxes or contributions pursuant to the Georgia Employment Security Law shall be prosecuted by the Commissioner of Labor to final judgment and conclusion. (Act No. 879, Section 5, effective April 1, 1964)

Section 3 (b) amended, effective July 1, 1966, as follows:

"(b) Weekly Benefit

"(l) Amount—

"An individual's "weekly benefit amount" shall be the amount appearing in Column B in the table of this section on the same horizontal line on which appears in Column A of said table the total insured wages paid such individual in that quarter of his base period in which such total wages were highest, provided insured wages were paid such individual during two or more quarters of his base period and the total of such wages equals or exceeds the amount shown in Column C of the table on the same line.

COLUMN A	COLUMN B	COLUMN C
Wages Paid in Highest Quarter of Base Period	Weekly Benefit Amount	Qualifying Wages in Base Period
$ 175.00 - $ 199.99	$ 8	$ 288
200.00 - 224.99	9	324
225.00 - 249.99	10	360
250.00 - 274.99	11	396
275.00 - 299.99	12	432
300.00 - 324.99	13	468
325.00 - 349.99	14	504
350.00 - 374.99	15	540
375.00 - 399.99	16	576
400.00 - 424.99	17	612
425.00 - 449.99	18	648
450.00 - 474.99	19	684
475.00 - 499.99	20	720
500.00 - 524.99	21	756
525.00 - 549.99	22	792
550.00 - 574.99	23	828
575.00 - 599.99	24	864
600.00 - 624.99	25	900
625.00 - 649.99	26	936
650.00 - 674.99	27	972
675.00 - 699.99	28	1,008
700.00 - 724.99	29	1,044
725.00 - 749.99	30	1,080
750.00 - 774.99	31	1,116
775.00 - 799.99	32	1,152
800.00 - 824.99	33	1,188
825.00 - 849.99	34	1,224
850.00 - 874.99	35	1,260
875.00 - 899.99	36	1,296
900.00 - 924.99	37	1,332
925.00 - 949.99	38	1,368
950.00 - 974.99	39	1,404
975.00 - 999.99	40	1,440
1,000.00 - 1,024.99	41	1,476
1,025.00 - 1,049.99	42	1,512
1,050.00 and over	43	1,548

"The foregoing Benefit Table shall be effective with benefit year beginning July 1, 1966, and through June 30, 1967.

"Provided, there shall be added to the foregoing Benefit Table two (2) additional steps effective with benefit years beginning July 1, 1967 increasing the Weekly Benefit

Amount to a maximum of forty-five dollars ($45.00), with the Benefit Table remaining the same except for the last step and the two additional steps which shall then read:

Column A	Column B	Column C
$1,050.00 - $1,074.99	$43	$1,548
1,075.00 - 1,099.99	44	1,584
1,100.00 and over	45	1,620

"Provided, however, that benefits shall not be paid for any week during which the employee is engaged in picketing or is a participant in a picket line at the factory, establishment, or other premises at which he is, or was last, employed, even though the stoppage of work shall have ceased and operations have been resumed.

"(2) Duration—

"Any otherwise eligible individual shall be entitled during any benefit year to a total amount of benefits equal to twenty-six (26) times his weekly benefit amount or one-fourth (¼) of his wages for insured work paid during the base period, whichever is the lesser; provided that such total amount of benefits, if not a multiple of the weekly benefit amount, shall be adjusted to the nearest multiple of the weekly benefit amount."

Section 4 (c) amended, effective April 1, 1966, as follows:

"Provided further, that satisfactory attendance and satisfactory progress in a training course approved by the Employment Security Agency shall be evidence of availability and an otherwise eligible individual shall not be ineligible to receive benefits while attending such training course."

Section 5 added new paragraph, lettered (g), effective April 1, 1966, as follows:

"(g) Who is attending a training course as provided in Section 4(c) of the Act (Section 54-609 Ga. Ann. Code) and voluntarily quits attending such course without good cause, shall be disqualified for benefits under the provisions of Section 5 (a) (Section 54-610 (a) Ga. Ann. Code) providing for a disqualification for voluntarily quitting a job."

Section 7 (c), Paragraph (2), added new paragraph lettered (D), effective April 1, 1966, as follows:

"(D) If an individual's employment was terminated by the retirement of the individual pursuant to a retirement or lump-sum retirement pay plan under which the age of mandatory retirement has been agreed upon by the employer and his employees or by the bargaining agent representing such employees, any such benefits paid to such individuals shall be charged against the fund and not against the account of the employer."

Section 7 (c), paragraph (5), added new paragraph, effective April 1, 1966, as follows:

"Provided however, that as of any computation date, any employer who has failed to file by the end of the month following any computation date (unless the time for filing reports has been extended under Section 16 (e) (Section 54-632.1 Ga. Ann. Code)) all required reports with respect to employment and wages paid together with such other information as is necessary to compute his contribution rate under this section, shall not be eligible for a reduced rate but shall be assigned the standard rate of 2.7 per centum if his account shows an excess of con-

tributions paid over benefits charged, or the maximum rate of 4.2 per centum if his account shows an excess of benefits charged over contributions paid. Such rate shall remain effective until the end of the calendar year for which such rate has been assigned.", so that said paragraph (5) of subsection (c) of Section 7, when so amended, shall read as follows:

"(5) For the year 1942 and each calendar year thereafter, employers shall be classified in accordance with their actual experience in the payment of contributions, and with respect to benefits charged against their accounts, with a view of fixing such contribution rates as will reflect such benefit experience. Each employer's rate for any calendar year shall be determined on the basis of his record as of the computation date for that calendar year.

"Provided, however, that as of any computation date, any employer who has failed to file by the end of the month following any computation date (unless the time for filing reports has been extended under Section 16 (e) (Section 54-632.1 Ga. Ann. Code)) all required reports with respect to employment and wages paid together with such other information as is necessary to compute his contribution rate under this section, shall not be eligible for a reduced rate but shall be assigned the standard rate of 2.7 per centum if his account shows an excess of contributions paid over benefits charged, or the maximum rate of 4.2 per centum if his account shows an excess of benefits charged over contributions paid. Such rate shall remain effective until the end of the calendar year for which such rate has been assigned."

Section 7 (c), paragraph 7 (iv), amended effective April 1, 1966, as follows:

"(iv) The term "computation date" means December 31, of each calendar year with respect to rates applicable to the succeeding calendar year for each employer whose account could have been chargeable with benefits throughout the twelve consecutive calendar months period ending on the "computation date"; provided, however, that any corporation, partnership, individual, or other legal entity, who acquires by purchase, merger, consolidation, or other means, substantially all of the business, or assets thereof, of any employer, and who thereafter continues such acquired business, shall be deemed to be a successor to the predecessor from whom such business was acquired for purposes of Section 7, and, if not already an employer prior to such acquisition, shall become an employer on the date of such acquisition. The successor shall succeed to the employment benefit experience record of the predecessor. If the successor is not already an employer at the time of such acquisition, the rate of contributions applicable at such time to the predecessor unit shall continue to be applicable to the successor as to contributions payable based on wages of employees, of such acquired unit only, until the time hereinafter stipulated, but if the successor is already an employer at the time of such acquisition, the rate of contributions applicable to the successor at the time of the acquisition shall continue to be applicable to the successor after the acquisition until the time hereinafter stipulated. In either case, such rate, or rates, shall continue in effect until the first day of the next calendar quarter immediately following such acquisition, at which time it

shall be the duty of the Commissioner to compute a rate based upon the combined employment benefit experience record of the predecessor and successor, subject to the provisions of subsection (6) (i) hereof, which rate shall be applicable to the successor from the first day of such quarter until the next computation date hereunder. Commencing with the next calendar quarter after acquisition, the employment experience of the former employer and the successor employer shall be combined, and the rate of the successor for such quarter and thereafter shall be based on such combined experience. All rates thereafter shall be computed on the basis of such combined employment benefit experience records. The Commisioner shall prescribe by regulation the notice to be given of such acquisition. The provisions of this subparagraph shall apply to all contributions payable by a successor, regardless of whether or not such succesor acquired the business, or assets thereof, from his predecessor prior or subsequent to the effective date of this subparagraph.

"It is further provided that in cases where a corporation, partnership, individual, or other legal entity acquires any clearly indentifiable or segregable portion of the business of an employer, and such successor is an employer at the time of the acquisition, or becomes an employer before or within the two calendar quarters immediately following the quarter in which the acquisition was made, or within one complete calendar quarter after the passage of this Act, whichever is later, the Commissioner shall upon notice of such acquisition and with the mutual consent of both parties, transfer to such successor the portion of the predecessor's payroll records

and experience rating records which are attributable to the portion of the business which was acquired. The Commissioner shall prescribe by regulation the period within which notification of such acquisition shall be given and the method by which the experience to be transferred shall be computed. The experience rating records of the predecessor employer, as thus computed, shall be used as the basis for the contribution rate of the successor; provided that, where the successor is an employer the experience rating records transferred shall be combined with his experience rating records effective as of the first day of the next calendar quarter immediately following such acquisition, at which time it shall be used to compute a rate based upon the combined experience of the predecessor and successor. Nothing in this subparagraph shall be construed to authorize or require that refund of any sums lawfully paid into the trust fund created by Section 9 (a), or to otherwise use any of the same except to pay compensation benefits, provided, that if and when the Federal Social Security Law or any other Federal Unemployment Compensation Law should in the future be so amended as to: (1) Reduce the basic period of time experience for reduced rating or (2) give to war veterans the benefit of time in the service in computing said base period or (3) allow war veterans concessions in computing base period experience by adding that served in one employing entity to that served in another employing entity, whether successor or not, then the Commissioner of Labor is hereby authorized to give effect to any or all such amendments for the benefit of Georgia employers by Executive Order."

Section 7 (c), paragraph 8, amended effective April 1, 1966, as follows:

"(8) If on the last day of any calendar quarter the balance in the Unemployment Compensation Trust Fund is less than one hundred fifty million dollars ($150,000,000), each employer whose rate of contribution is computed in accordance with subsection (c) of Section 7, shall have an additional rate of 0.5 per centum added to such computed rate, but not to exceed a cumulative contribution rate of 4.2 per centum. Such additional rate shall become effective on his taxable payroll on the first day of the immediately following calendar quarter and shall continue in effect until the last day of that calendar year.

"Provided, however, that if on the last day of any calendar year the balance in the Unemployment Compensation Trust Fund is less than one hundred twenty-five million dollars ($125,000,000), the additional rate shall be 1.0 per centum effective on the first day of the next calendar year, and shall continue in effect until the last day of that calendar year.

"Provided further, that if on the last day of any calendar year the balance in the Unemployment Compensation Trust Fund is less than one hundred million dollars ($100,000,000), the additional rate shall be 1.5 per centum effective on the first day of the next calendar year and shall continue in effect until the last day of that calendar year.

"Provided further, that if on the last day of any calendar year, the balance in the Unemployment Compensation Trust Fund is less than seventy-five million dollars ($75,000,000), the additional rate shall be 2.0 per centum effective on the first day of the next

calendar year and shall continue in effect until the last day of that calendar year.

"Notwithstanding any other provision herein, any additional rate imposed by this section shall be in addition to the computed rate each year for eligible employers, but not to exceed a cumulative contribution rate of 4.2 per centum. The provisions of this paragraph (8) of subsection (c) of Section 7 shall operate prospectively as and when in the future said conditions shall be found to exist.

"The Commissioner will give notice to each employer of any rate change by reason of the above provisions."

Section 14 (b), paragraph (1), added new paragraph, effective April 1, 1966, as follows:

"(l) If, after due notice, any employer defaults in any payment of contributions or interest thereon, the amount due, including any penalty, may be collected by civil action in the name of the Commissioner, and the employer adjudged in default shall pay the cost of such action. Civil actions brought under this Section to collect contributions, interest or penalty thereon from an employer shall be heard by the court at the earliest possible date and shall be entitled to preference upon the calendar of the court over all other civil actions except petitions for judicial review under this Act and cases arising under the Workmen's Compensation Law of this State, and other actions to which the State is a material party, which are now given precedence.

"Any employer failing to make return or to pay the contributions levied under this Chapter for a period of ninety days after the end of the calendar quarter for which the re-

ports and contributions are due, and who has not ceased to be an employer as provided therein, may be enjoined from employing individuals in employment as defined in this Chapter upon the complaint of the Commissioner, or his designate, in the Superior Court of any county in which said employer may be doing business; and such employer so failing to make return or to pay contributions levied hereunder shall be enjoined from employing individuals in employment until such return shall have been made and the contributions shown to be due thereunder paid to the Commissioner."

Section 19 (h) (7) (M) amended effective March 2, 1966, as follows:

"Section 19(h) (7) (M). Service performed by an individual for an employer as an insurance agent or as an insurance solicitor or as a licensed real estate salesman, if all such service performed by such individual for such employer is performed for the remuneration solely by way of commission."

Section 19 (n) added new paragraph, numbered (3), effective July 1, 1966, as follows:

"(n) "Wages" means all remuneration for personal services, including commissions and bonuses and the cash value of all remuneration paid in any medium other than cash. The reasonable cash value of remuneration in any medium other than cash shall be estimated and determined in accordance with the rules prescribed by the Commissioner, provided, that the term "wages" shall not include, ***:

"(3) Payments made after July 1, 1966 as commission by a real estate broker to a licensed real estate salesman exclusively for the sale of real property; and"

KENTUCKY AFL-CIO GOALS FOR IMPROVING UNEMPLOYMENT COMPENSATION

1. Individual Weekly Benefits Shall Be AT LEAST 65% of Worker's Past Full-time Earnings.

2. Maximum Basic Benefit Should be NOT LESS THAN TWO-THIRDS of State's Average Weekly Wage in Covered Employment.

3. Elimination of One-Week waiting Period Before Benefits Can Be Paid.

4. Dependency Benefits.

5. Benefits Shall be Payable for Not Less Than 39 Weeks.

6. Liberalized Eligibility Requirements.

7. Elimination of Excessive and Arbitrary Disqualification Provisions.

8. Extending Coverage to State and Local Government Employees.

9. Extending Coverage to Employers of One or More Workers.

10. Elimination of Employer Experience Rating.

WHO IS COVERED?

Generally, every employer in Kentucky who has four or more workers regularly employed for any length of time, is required to provide unemployment compensation coverage.

Employers who regularly employ fewer than four workers may provide coverage by voluntarily subscribing to the Act.

Federal government employees are entitled to compensation on the same basis as other workers.

State and local government employees in Kentucky are NOT COVERED under the law — with only one exception, the employees of the Department of Economic Security.

"Is this a recession or a depression?"

HOW DO I APPLY?

To gain your benefits first file your claim at the nearest Economic Security Office.

WHEN TO FILE

File your application the first day the office is open after you become unemployed, unless special arrangements have been made in the case of mass layoffs.

WHAT TO TAKE WITH YOU

1. Social Security card.

2. Name and address of the last company for which you worked.

3. Know your approximate earnings.

VETERANS should take a copy of their discharge papers.

FEDERAL GOVERNMENT EMPLOYEES should take their separation papers.

The unemployment insurance program is administered by the Department of Economic Security which also operates the Division of Employment Service.

Your claim has been filed at, and you should report as directed to the Economic Security office indicated below:

If lost, please return this booklet to the person whose name and address appear on the inside front cover.

APPLICANT IDENTIFICATION CARD

AND

INFORMATION FOR WORKERS ON UNEMPLOYMENT INSURANCE

DEPARTMENT OF ECONOMIC SECURITY FRANKFORT, KENTUCKY

ES - 506B (REV. 1-65)

HOW TO FILE

1. Keep the applicant identification card that will be given you at the Economic Security Office. **IMPORTANT!** This is your identification, do not lose it. It is also important that you read this booklet, and take it with you each time you visit the Employment Security Office.

2. You will be registered for employment. The following form must be filled out. If you will need assistance someone will help you.

3. You must report back to the Economic Security Office every two weeks. BE SURE YOU REPORT ON THE DATE AND HOUR YOU ARE ASKED. BE ON TIME!

4. After you have filed your claim it will be necessary for you to report at a later date. You will be given a notice of Benefits Rights which shows your earnings, benefit rate and the maximum amount you can receive if you meet the requirements of the law.

5. You must keep yourself attached to the labor market. One attempt to obtain employment by personal contact is **not** considered sufficient effort to obtain employment.

REV. 1-65

IF YOU EARNED WAGES IN ANOTHER STATE

The claims-taker will advise you if it will be to your advantage to file an out-state claim or you may be able to file a combined claim with a state in which you have additional earnings.

If you have a claim with another State or the Railroad Retirement Board, you cannot file a claim in Kentucky until you receive all the benefits to which you are entitled.

AM I ELIGIBLE?

You must first file a claim to receive benefits, then:

1. Be able, available, and willing to accept suitable work.

2. Have earnings of not less than $250.00 in your highest yearly quarter of earnings PLUS additional earnings of at least ⅜ times the high

REASONS INVALID

1. LESS THAN $250.00 IN HIGH QUARTER
2. TOTAL BASE PERIOD WAGES ARE LESS THAN 1½ TIMES THE HIGH QUARTER WAGES.
3. TOTAL WAGES IN THE LAST TWO QUARTERS OF THE BASE PERIOD ARE LESS THAN 8 TIMES THE WEEKLY RATE

Form will be revised July, 1966.

quarter in the other three quarters PLUS earnings in the last six months of your base year equal to eight times the benefit rate.

3. Availability means that you are willing to accept suitable work, and will make an effort to obtain work as might be expected of a normal worker.

FIGURING ELIGIBILITY

(1) Your base year is determined when you file your claim. It is defined by law as the first four of the last five completed calendar quarters coming before the quarter in which you filed your claim.

Example—Joe Worker files his claim on January 10, 1966. The last five completed quarters for Joe Worker consist of the last quarter of 1964, and the four quarters of 1965. The first four of the five completed quarters consist of the last quarter of 1964 and the first three quarters of 1965.

The following table will enable you to calculate your base period.

Claim Filed Between	Base Period is the Preceding
Jan. 1 and March 31	Oct. 1 to Sept. 30
April 1 and June 30	Jan. 1 to Dec. 31
July 1 and Sept. 30	Apr. 1 to Mar. 31
Oct. 1 and Dec. 31	July 1 to June 30

(2) In any one of the four quarters of the base year, an unemployed worker must have earnings of at least $250. Since there are 13 weeks in the quarter, this would mean earnings of approximately $19.50 a week. IN ADDITION, the unemployed worker must have additional earnings of at least ⅜ times the high quarter in the other three quarters in the base year.

Example — Joe Worker has earnings in covered employment of $300 in his high quarter. In order to qualify, he would have had to earn at least ⅜'s of $300 in the other three quarters — $112.50.

(3) IN ADDITION to the (1) $250 requirement in the high quarter and (2) ⅜'s additional earnings in the other three quarters, an unemployed worker must have had earnings in the last two quarters (six months) of the base year equal to eight times the benefit rate.

Example — Joe Worker's high quarter is $625. His weekly benefit rate is determined to be $25.00. In order to qualify for benefits, he would have had to earn eight (8) times the $25.00 in the last six months, or $200.

HOW MUCH DO I GET?

The first week after the filing of your claim is a waiting week, for which you are not paid.

After this one week waiting period, your weekly benefits depend on your high quarter earnings.

SCHEDULE OF BENEFITS

High Quarter Wages		Weekly Benefit Rate
Less than	$250.00	$ 0.00
$250.00	312.50	12.00
312.51	337.50	13.00
337.51	362.50	14.00
362.51	387.50	15.00
387.51	412.50	16.00
412.51	437.50	17.00
437.51	462.50	18.00
462.51	487.50	19.00
487.51	512.50	20.00
512.51	537.50	21.00
537.51	562.50	22.00
562.51	587.50	23.00
587.51	612.50	24.00
612.51	637.50	25.00
637.51	662.50	26.00
662.51	687.50	27.00
687.51	712.50	28.00
712.51	737.50	29.00
737.51	762.50	30.00
762.51	787.50	31.00
787.51	812.50	32.00
812.51	837.50	33.00
837.51	862.50	34.00
862.51	887.50	35.00
887.51	912.50	36.00
912.51	937.50	37.00
937.51	962.50	38.00
962.51	987.50	39.00
987.51		40.00*

* Effective July 1, 1966, the Weekly Benefit Rate is being increased to a maximum amount of $45 per week, based on additional earnings.

Examples — Joe Worker had high quarter earnings of $500. His weekly benefit amount will be $20.00 if the balance of his earnings meet the requirements as stated under "Figuring Eligibility."

If Joe Worker had high quarter earnings of $950 his weekly amount will be $38.00.

PARTIAL PAYMENTS

Each time you report on your claim, it is your responsibility to tell the claims-taker about any hours worked and any money earned during the period of unemployment for which you are reporting. Besides earnings, you are to report any vacation pay; bonuses; separation pay; or other money received from regular or part-time employers or self-employment.

It is very important that you keep an accurate record of these, and it is recommended that you post them on the yellow pages in the back of your Applicant Identification Card booklet.

As an inducement for you to obtain employment and thereby increase your weekly income, your weekly rate is reduced by only 80% of your total earnings during that week in which you had earnings.

Example — Joe Worker's weekly benefit rate is $25. For a week of total unemployment with no earnings, he would receive $25. For a week during which he earned $10, $8 would be deducted and his benefit check would be $17. The amount deducted is not entirely lost as he may receive it — if he remains unemployed.

HOW MANY CHECKS CAN I GET?

If you are totally unemployed, you can receive between 15 (minimum) and 26 (maximum) checks. If you are partially unemployed, you may receive more.

The maximum amount of benefits you may receive during your benefit year is determined by whichever is the lesser of (1) 26 times your weekly benefit rate or (2) one-third your total base-period wages, except that it shall not be less than 15

times your weekly benefit rate if your earnings qualify you for a valid claim.

Example — Joe Worker who earned $1,200 in base year is awarded benefits of $18 because his high quarter earnings were $450. One-third of Joe's yearly earnings is $400. Joe's weekly benefit amount is $18. He may receive a total of 22 weekly checks of $18 and 23rd check of $4 — a total of $400.

"You know, this could get complicated."

DISQUALIFICATIONS AND POSTPONEMENTS

The law provides complete disqualification and no benefits under certain conditions. Under other conditions, benefits will be postponed for a period of one week to sixteen weeks.

Illustration:

Disqualification for the duration of any period of unemployment:

1. If you were discharged for dishonesty at your last job.

2. If you quit your job to get married.

3. If you quit your job to attend school.

4. If you quit your job to become self-employed.

5. If you left your most recent suitable work voluntarily without good cause.

Postponement from six to sixteen weeks:

1. If you were discharged from your last job for misconduct in connection with your work.

Postponement for one or more weeks:

1. If you were not available for suitable work.

2. If you failed to accept suitable work.

PROSECUTION FOR FALSE REPORTING

1. If you knowingly made a false statement to establish your right to or the amount of the claim you may be prosecuted criminally.

STRIKES AND LOCKOUTS

A worker who is unemployed because of a bona fide labor dispute in the plant in which he is employed is not entitled to receive unemployment benefits. However, if the Department of Economic Security determines that there is a lockout, no worker shall be denied credit for a waiting period or denied benefits because of the lockout.

If during a strike you are permanently separated from your employment, you may file a claim.

APPEALS AND PROTESTS

(1) When you apply for benefits, your last employer will be notified that you have filed. Your employer has the right under the law to file a protest within seven (7) days.

(2) An examiner of the Department will take sworn statements from you and your employer and send this information to Frankfort. The Department will then rule on your claim and notify you and the employer of the decision as to whether or not there is a disqualification or postponement. Here is the form used to notify you of the decision.

UI 492
(Rev. 4-58)

COMMONWEALTH OF KENTUCKY
DEPARTMENT OF ECONOMIC SECURITY
DIVISION OF UNEMPLOYMENT INSURANCE
FRANKFORT

Date _____
Local Office _____

NOTICE OF ADJUSTED DETERMINATION

EMPLOYER | CLAIMANT (S. S. #)

Effective Date of Claim | Issue(s) and Date(s)

After careful consideration of the available facts, it is determined that the provisions of KRS 341.3 apply to this case. This section of the law is quoted on the reverse of this form.

FINDINGS:

It is determined:

- ☐ No disqualification is imposed.
- ☐ The claimant is disqualified _____ weeks from _____ through _____
- ☐ The claimant is disqualified from _____ until he has secured bona fide employment _____
- ☐ The claimant is ineligible for benefits from _____ through _____
- ☐ The claimant was disqualified by a previous determination for an indefinite period. This disqualification terminated _____
- ☐ The claimant is eligible for benefits as of _____
- ☐ No benefits payable under this claim, subsequent to this separation, will be charged to reserve account number _____ unless the employer is notified to the contrary by a later determination.
- ☐ Any benefits paid will constitute a valid charge to the reserve account of this employer.

IMPORTANT

Any party affected by this determination may file an appeal for a review by a referee of this Division if such party believes the determination is contrary to fact or law. To be valid, such an appeal must be in writing, must state the grounds that are relied upon for a reversal, and must be on file with this Division within ten (10) days of the date shown in the upper right hand corner of this notice. Requests for explanation will not be considered as an appeal request.

Signed John L. Duncan, Supervisor of Benefits

(3) Either party may then appeal the determination. Such appeal must be in an office of the Department of Economic Security within ten days of the date that the determination was mailed to you. A referee of the Unemployment Insurance Commission will conduct a hearing

in the local Unemployment Office. Both parties will be notified in advance of the hearing. The hearings are conducted informally and it is not necessary that you be represented by an attorney, or other representatives, unless you so desire.

(4) The decision of the referee is not final, and either party can then appeal to the Unemployment Insurance Commission and further, to the Circuit Court usually in the county in which you were last employed, within the time limits specified in the law.

Urgs Comp.

Jobless benefit reserves in better shape, but—

State reserve funds for unemployment benefits generally are in better shape than at any time in a decade.

The table at right, prepared from U.S. Labor Department information, shows that the funds of but 13 states—the red bloc at the bottom—are still in the danger zone. These states are still struggling to overcome the drain of the 1958 recession.

However, the situation is much improved from four years ago when THE MACHINIST published a similar survey. At that time 23 state reserve funds were in the danger zone, with seven of them in critical condition.

A state needs reserves equal to at least one and a half times the drain of the worst 12 months of unemployment during the past 10 years. In most states, the yardstick is the 1958-59 period.

As the table shows, the District of Columbia fund is in the best shape with a Solvency Rating of 5.30—reserves more than five times the cost of the worst year of the recent past.

Fair benefits

Moreover, the District's maximum benefit of $57 a week is among the best—though still much below labor's goal. This is despite the fact that the D.C. tax is but one half of 1 per cent of total payroll.

Many states with good Solvency Ratings pay inadequate benefits. In fact, among the first 25 states listed only eight pay maximum benefits of $50 per week or more. Labor's goal is a benefit equal to two-thirds of a worker's average weekly earnings.

Most states have cut the tax rate on employers rather than raise benefits for the jobless as their unemployment funds built up from the low of the 1958-60 recession. This testifies to business' greater influence in the legislatures.

Nationally, employers contributed 2.66 per cent of total payrolls in 1939. Over the years this has been shaved to an average 1.1 per cent payroll tax today.

Last year the AFL-CIO succeeded in getting the U.S. Senate to adopt a bill calling for national standards for unemployment compensation benefits. The measure would have required states to pay maximum weekly benefits of at least half the state's average weekly wage, rising by steps to two-thirds in the early 1970's.

This would have forced many states to raise benefits and pay them for longer periods. Unfortunately, the measure failed to get through the House. With 44 fewer friends in the House than last year, the outlook for any Congressional action until after the 1968 elections is dim.

Legislatures in session

To win improved benefits this year, unions will have to fight for them in the states legislatures, almost all of which will be in session this year.

Recently, William U. Norwood Jr., director of the U.S. Unemployment Insurance Service, warned of complacency. Norwood declared:

"This is probably an opportune time to consider more adequate benefits rather than to slice the melon of lower tax rates."

Norwood warned that today's larger labor force means that, in a recession, many more would be laid off at much higher cost than in recessions of the past.

The 13 states at the bottom of the list with Solvency Ratings of less than 1.5, of course, have real problems right now.

Labor's objective in these state legislatures will be to raise tax rates so that these funds can be built up to a safe level, above the 1.5 mark on the solvency scale.

Michigan and Alaska have added problems. Michigan still owes $71,000,000 and Alaska, $7,000,000, to the Federal Government. This is money borrowed when state funds nearly went broke because of inadequate taxes and high unemployment during the recession years.

Out of the red

Pennsylvania paid off a big debt to the Federal Government and has just recently climbed out of the red. However, the Scranton Administration achieved this more by cutting benefits to the unemployed than by raising taxes on employers. Unions will be on guard that this does not happen in other states.

The AFL-CIO sees 1967 as a key year to put state unemployment benefit systems in shape to meet any future employment emergency.

How sound is your state's unemployment benefit fund?

Solvency rating in last column below is the relation between a state's Unemployment Compensation reserve fund and the cost of benefits in the worst recession year of the recent past. A state should have a reserve at least 1.5 times this figure to be above the danger level. States are ranked in order from best to worst.

	State	Max. Wkly. Benefits	Reserve, Sept. '66 (Millions)	Est. Av. Payroll Tax, '66	Solvency Rating 1.5=Danger	
1.	D.C.	$57	68.0	0.5%	5.30	Good

FACTS YOU SHOULD KNOW

about

CLAIMING UNEMPLOYMENT BENEFITS

under

WISCONSIN'S U. C. LAW

(Chapter 108, Wis. Statutes)

Administered by the

INDUSTRIAL COMMISSION
OF WISCONSIN
UNEMPLOYMENT
COMPENSATION DEPARTMENT

January, 1967

UC-10
WIS. 11-66

It is **important** that you **read** and **understand** this folder. It explains your rights and responsibilities under the Wisconsin Unemployment Compensation (U. C.) Law. If you have any questions, be sure to ask when filing your claim.

STARTING YOUR CLAIM

If you become unemployed, and are able to work and available for work:

1. register for work with a public employment office; and

2. start a claim for unemployment benefits in the same office.

A list of the Wisconsin offices appears on the back of this folder.

WEEKLY REPORTING

The law uses *calendar weeks* — which begin Sunday and end Saturday.

You can't get credit for a *calendar week* of no wages unless you:

1. register for work and file a claim for benefits WITHIN the week; and

2. after the week is over, turn in your claim form for that week, promptly, but no later than 4 weeks after its close.

TAXES TO PAY BENEFITS

Only employers pay taxes to finance unemployment benefits paid under Wisconsin State Law. Your employer makes no deductions from your pay check for U. C. purposes.

COVERED WORK

Work which earns benefit rights is called *covered* employment. For work to be covered under the Wisconsin Unemployment Compensation Law it must be:

1. for an employer *covered* by that law; and

2. in a type of work not specifically *excluded* by law.

Generally an employer is *covered* by the U. C. Law if he has 4 or more workers for at least 20 weeks in a calendar year. A few smaller employers have voluntarily chosen to come under the law.

Examples of work specifically *excluded* under the law are: agricultural work, domestic work in a private home, work for certain religious, charitable or educational organizations.

QUALIFYING EMPLOYMENT

To qualify for Wisconsin U. C. benefits at all, you need 18 weeks of covered work with one or more employers in the 52 weeks before you start a new claim.

A few cases may qualify with 14 to 17 weeks in that period. Ask your claims office.

BASE PERIOD

When you file a new (beginning) claim for benefits, your rights will be based on your work and wages in the 52-week period prior to the week in which you filed your claim. This is called your *base period*. In some instances of long workmen's compensation or termination pay, that base period may be lengthened. Ask your claims office.

Be sure to list ALL employers in your base period. Otherwise, you may lose some benefits. Tell us right away about every employer you had.

Every worker should keep a complete record as to every employer.

BENEFIT YEAR

A benefit year begins with the week in which you file a valid claim and lasts 52 weeks. Once a benefit year has started, its rights cannot be increased by later covered work.

Such later work builds credits, but only for a future year. Those credits cannot be used until the current benefit year ends.

SCHEDULE OF BENEFITS

The number of weeks for which benefits may be paid during a benefit year depends on the number of weeks you worked for each employer in your base period.

The following table shows the number of benefit weeks from each employer for a given number of work weeks.

No. of Work Weeks	Benefit Weeks	No. of Work Weeks	Benefit Weeks
1	1	23	18½
2	1½	24	19
3	2½	25	20
4	3	26	21
5	4	27	21½
6	5	28	22½
7	5½	29	23
8	6½	30	24
9	7	31	25
10	8	32	25½
11	9	33	26½
12	9½	34	27
13	10½	35	28
14	11	36	29
15	12	37	29½
16	13	38	30½
17	13½	39	31
18	14½	40	32
19	15	41	33
20	16	42	33½
21	17	43 or more	34
22	17½		

34 is the top number of benefit weeks which may be paid in any benefit year.

The weekly rate at which your benefits are paid from a given employer depends on your *average weekly wage* with that employer for work weeks in your base period. All work weeks are used in figuring the average. Overtime weeks tend to increase the average while short weeks decrease it.

The following table shows the benefit rate which results from a given average weekly wage.

Average Weekly Wage	Benefit Rate
Under $16.	None
$ 16. to 19.	$11
19.01 to 22.	12
22.01 to 24.50	13
24.51 to 27.	14
27.01 to 29.50	15
29.51 to 32.	16
32.01 to 34.	17
34.01 to 36.	18
36.01 to 38.	19
38.01 to 40.	20
40.01 to 42.	21
42.01 to 44.	22
44.01 to 46.	23
46.01 to 48.	24
48.01 to 50.	25
50.01 to 52.	26
52.01 to 54.	27
54.01 to 56.	28
56.01 to 58.	29
58.01 to 60.	30
60.01 to 62.	31
62.01 to 64.	32
64.01 to 66.	33
66.01 to 68.	34
68.01 to 70.	35
70.01 to 72.	36
72.01 to 74.	37
74.01 to 76.	38
76.01 to 78.	39
78.01 to 80.	40

Average Weekly Wage	Benefit Rate
$ 80.01 to $ 82.	$41
82.01 to 84.	42
84.01 to 86.	43
86.01 to 88.	44
88.01 to 90.	45
90.01 to 92.	46
92.01 to 94.	47
94.01 to 96.	48
96.01 to 98.	49
98.01 to 100.	50
100.01 to 102.	51
102.01 to 104.	52
104.01 to 106.	53
106.01 to 108.	54
108.01 to 110.	55
110.01 to 112.	56
112.01 to 114.	57
114.01 to 116.	58
116.01 or more	59

The top benefit rate may move up or down on January 1 or July 1. If the average weekly wage for ALL workers goes up enough, then the top benefit rate moves up. If that average wage goes down enough, the top benefit rate goes down.

WAITING PERIOD

Before you can draw benefits in a given benefit year, you must serve one waiting week. No benefits are payable for that week. But you must file a claim for the week and meet all the same requirements you would have to meet to get a benefit check.

FIRST CHECK

The first check is due a few days after your third weekly visit.

The first week is a waiting period without benefits. The second week will be paid for, but only after it is over and reported. In the **third** week you report about the **second** week. The first check can usually be mailed a few days later unless your case is disputed.

ELIGIBILITY

When you file a claim for benefits for either a waiting period or a check you must meet these eligibility requirements.

1. Be unemployed, in that calendar week. That means you did no work, and got no pay for that week; or if you did some work, you earned less pay than your weekly benefit rate.

   Be sure to tell us about ALL wages, earned IN or received FOR a week. "Wages" include every form of pay for work done, dismissal, holiday and vacation pay, value of room and board, tips, working off a bill or debt. Under some conditions, with notice to you, retirement pay (including social security) will be treated as wages.

2. You must be physically *able to work*. You can't draw benefits if you can't work.

3. You must be *available for work*. This means you must be ready and willing to take any suitable employment offered to you. You can't draw benefits if you don't want a job.

PARTIAL UNEMPLOYMENT

If you get some pay, but less than your weekly benefit rate, for a calendar week in which you did all the work your employer had for you, you may be eligible for benefits. This is called *partial unemployment.*

To get benefits for a week of partial unemployment you must file a claim for that week, promptly, within 4 weeks after its close.

Be sure to report all your (gross) pay or wages FOR each week from all employers. If your wages are half or more of your benefit rate, a half check may be paid; if under half, a full benefit check.

DISQUALIFICATIONS

Although you may meet the *reporting, qualifying* and *eligibility* requirements, you may be *disqualified* for various reasons. Some examples are listed below.

If your employer says you quit or were discharged, your benefits are held up while we investigate the facts. We get your story and the employer's. Then we issue a written decision as to whether you are eligible for benefits. A copy is sent to you and one to the employer.

You or the employer can *appeal* the decision within the time limit it shows. An *appeal* means a formal hearing at which you and the employer, as well as any witnesses, appear in person.

If you get a job offer take it, unless there's a reason for refusing it which could be *good cause* under the Wisconsin U. C. Law. The same thing is true if the employment service tells you about a job — go see the employer.

If you don't have good cause the law stops (postpones) benefits until you do get a job and work in 4 weeks and earn 4 times your weekly benefit rate.

A pregnant woman can't be paid for weeks in which she can't work. In any event, she can't be paid for 10 weeks before the week in which the child is expected to be born or for 4 weeks after the week in which the child was born. Then she must notify her last employer that she is able to work and available for work. She must also establish that she has personally applied for work each week with employers in her area.

This same search for work is required in other instances; for example if you are self-employed or an owner of a family corporation. Your claims office will instruct you.

No benefits are payable if you lost your employment because of a labor dispute in your employer's establishment.

FRAUDULENT CLAIMS

Answer ALL the questions on your weekly claim forms and the supplemental questionnaire, "Statement on Ability to Work and Availability for Work," honestly and completely.

Report ALL your WORK and WAGES each week you claim, even if you haven't been paid yet. Report the total pay earned, not just the take home pay.

A claimant who fails to report his wages or fails to report a job offer is filing a *fraudulent* claim.

The penalties for *fraud* are severe:

1. Jail — up to 30 days for each week's fraud.

2. Court fines — up to $100 for each fraud.

3. Recovery of any fraud benefits.

4. Benefit losses — up to 3 benefit weeks cancelled for each fraud week.

KEEP A RECORD

Keep a record of each benefit check you get. The UC-30 benefit determination which will be mailed to you after you establish your eligibility has space on the back for recording each check. Be sure to do it.

CASH YOUR OWN CHECKS

No one but you should endorse and cash your benefit checks. Each U. C. check requires you to identify yourself when you are cashing it.

FEDERAL EMPLOYMENT

You may be eligible for benefits based on recent federal employment or on recent service in the armed forces. Ask your claims office.

Min Wage - Fair Labor Stds

Labor News 2/24/67

Automatic Sprinkler Firm Named In Wage-Hour Suit

GREENSBORO—U.S. Secretary of Labor W. Willard Wirtz has filed a Fair Labor Standards Act (FLSA) suit in U.S. District Court here naming Viking Sprinkler Co., Inc., as defendant.

The defendant is engaged in fabrication, construction, installation and sale of automatic sprinkler systems, with its principal place of business in High Point, Guilford County, N.C.

The complaint alleges the defendant is in violation of the overtime pay, minimum wage and record-keeping provisions of the FLSA. The action asserts employes of the firm are covered by the FLSA on the basis that it has employed employes in commerce or in the production of goods for commerce; its annual gross volume of sales is not less than $1,000,000; and it is an enterprise within the meaning of the Act.

The action seeks an order enjoining the defendant from future violations of the FLSA and restraining the further withholding of overtime pay due certain employes.

Labon F. Chappell, supervisor of the U.S. Labor Department's Wage and Hour and Public Contracts Divisions' field office at Room 253, Post Office and Courthouse Building, 324 W. Market St., Greensboro, N.C. 27402, said litigation resulted from investigation by his staff.

MAR 01 1967

House of Representatives, U. S.
Committee on Agriculture
Washington, D. C.

IMMEDIATE RELEASE February 27, 1967

The House Committee on Agriculture today adopted the following resolution:

MINIMUM WAGE IN AGRICULTURE

RESOLUTION

WHEREAS: By an act of the Congress in 1966, a minimum wage is being applied to agricultural workers in 1967 for the first time in history; and

WHEREAS: Prices received by farmers for what they produce now are actually 8 percent below what they were in 1947, while the wages of manufacturing labor during these last 20 years have increased by 123 percent, and the dividends paid by corporations by 232 percent; and

WHEREAS: Agriculture now is caught in a cost-price squeeze, farm prices have declined for five consecutive months, so that the parity ratio now stands at only 75 and the costs of tractors and other machinery, chemicals, and other inputs required by farmers to produce their crop have advanced by 47 percent, and the average wages paid by farmers already are up by 108 percent compared with 20 years ago; and

WHEREAS: Farmers employing the workers now being blanketed under the minimum wage, unlike employers in industry, are unable to set the price on what they produce to cover the increased wage costs, but must continue to take whatever the markets offer; and

WHEREAS: Many farmers will be forced to close down their operations completely, or severely reduce the number of employees, because of the increased costs, and this threatens to bring on another migration of large numbers of farm workers into the slums of the cities; and

WHEREAS: The suffering in the creation of unemployment and the uprooting of people in Rural America will greatly outweigh any advantages which may be gained by workers through application of a Federal minimum wage for agriculture until such time as farm income is improved to the extent that this income will cover increases of wages; NOW, THEREFORE

BE IT RESOLVED: That the Committee on Agriculture, in the interest of farm workers and employers alike, and of consumers, recommends the enactment of legislation amending the Fair Labor Standards Act, providing that the minimum wage as applied by present law shall apply in no year following a year in which the unadjusted parity ratio stands at a level below 100.

March 6, 1967

MAR 7 1967

Fay Bennett
Executive Secretary
National Advisory Committee
on Farm Labor
112 East 19th Street
New York, New York 10003

Dear Fay:

I have your letter of March 3rd concerning the minimum wage resolution of the House Agriculture Committee.

I think the resolution was a scare tactic to get the Wage and House Administration to back down on some of its proposed sharecropper regulations. Many of the southern members want sharecroppers exempted. The Department intends to cover any sharecropper who has no management authority. As I told you before, I think the sharecropper situation is one which you ought to watch very closely. You will recall that I gave you the names of several people to contact.

The Agriculture Committee has no authority to report a minimum wage resolution to the House floor. It can only adopt such a resolution to show its feeling and then send the resolution to the House Labor Committee, which has the jurisdiction. In other words, I don't think that the Agriculture Committee can pass any legislation in this area, but it is attempting to pressure.

Best regards.

Sincerely yours,

Arnold

States 'Erode' Unemployment Benefits

Unemployment Compensation

Jobless Insurance Program Needs Federal Overhaul

WASHINGTON, D.C.—Legislation to strengthen the "eroded" unemployment insurance system "should have the most urgent priority" in this Congress, an article in the Federationist, the AFL-CIO magazine, emphasizes.

The system which was set up to be "the nation's first line of defense against want and poverty," writes James O'Brien, "has deteriorated to a level where it perpetuates poverty and its evils."

"The jobless worker, the grocer, the merchant and the entire economy are the actual and potential victims of the shocking erosion of the system."

O'Brien, an assistant director of the AFL-CIO Dept. of Social Security, notes that the federal-state system was enacted in 1935 to aid jobless workers voluntarily separated from their jobs.

"But the record shows the system has been moving away from this goal," he points out.

He cites figures showing that more than one-half of the jobless drew some benefit from the system 10 years ago, while only four out of 10 were benefitting by 1965, and the ratio is now down to three out of 10.

Noting that 16 million wage and salary workers —one-fourth of the nation's total—were not covered by the system in 1967, the author warns that "this number increases annually as employment expands in uncovered industries."

The argument by opponents of federal standards that the states can be relied upon to modernize the system and make improvements has been completely disproved by the record of state legislatures in recent years, the article stresses.

Its review of state improvements adds up to this picture:

A few "insignificant extensions" of unemployment insurance coverage, minor changes in the taxable base for employers in a few states and "continuing deterioration of the benefit structure" despite slight increases in benefit payments.

"In fact," O'Brien says, "half-hearted state action and federal inaction have made the unemployment compensation meaningless for more than half the jobless workers."

The article focuses on these aspects of the system, among others, in which there are "major deficiencies" that are regularly getting worse:

QUALIFICATIONS—While a half a dozen states qualify 90 to 95 percent of new claimants for unemployment benefits, "far too many states deny benefits to 25 and 30 percent of new claimants."

In the three years of 1965, 1966 and 1967 there were 16 states that increased benefits and at the same time "robbed Peter to pay Paul" by imposing stricter qualification requirements.

FINANCING—State after state has deviated from the 2.7 percent state tax on employers that was counted on to finance the unemployment system, along with a three-tenths of 1 percent federal tax on employers.

In 1967, ten states permitted application of zero tax rates to some employers. The average employer tax rate during the year for the entire system was only 1.6 percent of taxable payrolls.

This "underfinancing" has occurred for one apparent reason, O'Brien observes. It is part of the competition among states to pirate industry from another section of the country with the lure of low taxes.

DISQUALIFICATIONS—Provisions for challenging employees on unemployment rolls and denying them benefits have increased to the extent that "a hostile attitude toward the unemployed has developed within the system itself."

BENEFITS—In the early years of the program, the maximum weekly jobless benefit in most states equaled 65 percent of the average weekly wage. Today, the typical maximum benefit represents only 42 percent of the average wage.

There are only two states in which the maximum weekly benefit is not lower in relation to wages than it was in 1939.

Only seven states have maximum benefits that maintain a worker with three dependents above the poverty-level income of $3,335 per year for a four-member family set by the Health, Education & Welfare Dept. in 1966.

Surely, O'Brien maintains, a worker who has made a contribution to the nation's affluence during his employment is entitled "to more than a poverty level of income during unemployment."

Summing up the "dismal record" of the states in improving jobless benefits, O'Brien concludes that this failure "demonstrates that the states are either unable or unwilling to modernize the system."

"The one sure way of establishing minimum standards in the system," he adds, "is through federal legislation and this should be a first order of business in the 91st Congress."

Unemployment Comp.

Overhaul Urged For Unemployment Benefits Program

WASHINGTON — Workers and their families have less real protection against "temporary" unemployment today than when the nation's unemployment insurance system began more than 30 years ago, an AFL-CIO spokesman reported.

The federation's call for nationwide standards for unemployment compensation benefit levels, duration and eligibility, was renewed by James O'Brien, an assistant director of the AFL-CIO Department of Social Security, on Labor News Conference. The public affairs interview is broadcast Tuesdays at 7:35 p.m., EST, on the Mutual Radio Network.

O'Brien emphasized that the lack of federal standards for unemployment insurance has led to "serious deterioration" of the system. He pointed out that:

- Maximum benefits have fallen from 65 percent of the average weekly wage in covered employment in 1938, to about 30 percent today.
- Some 18 million workers, many of them public employes, farm workers and domestics, are still denied protection of the insurance that "stands out like Pikes Peak in our present system of income maintenance."
- Harsh disqualifications that rule out protection for many who would otherwise be eligible for temporary help while looking for work.

He also pointed out that of 11 million people out of work at some time during 1966, only three in 10 drew even the "benefits that allow less than poverty level subsistence."

The union spokesman said that the long-sustained growth of the nation's economy and relatively low unemployment levels tend to lessen the sense of urgency to modernize and up-date the unemployment compensation system. But, he urged, "this would be the most opportune time" to make long-overdue improvements.

"Refusal to improve the system at this time is like the position of a farmer who refuses to fix his tractor in the wintertime because he will not need it until spring," he stressed.

Reporers questioning O'Brien were Sam Sharkey of the Newhouse Newspapers and Neil Gilbride, of the Associated Press.

The Labor Department was founded the same year that President Nixon was born—1913. In those 56 years, the number of wage earners in the United States has risen from 21 million to 77 million; the average wage, from 21 cents to $3.10 per hour.

Unemployment compensation

Unemployment compensation is no substitute for a job. It helps, however, to prevent a layoff from being the unrelieved disaster for working families that it was before the federal-state income-insurance programs were adopted a generation ago.

The table below shows, state by state, where benefit levels stand today. The compensation laws and the benefits are best in states where trade unions are strong, weakest where unions are weak and where employer interests dominate state legislatures. See how your state compares with others.

The second and third columns show how long a worker must be employed and how much he must earn before he loses his job to qualify for benefits. The third and fourth columns show the maximum he can collect and how long he can collect it.

For example: To qualify, an Alabama worker must have worked 15 months—the last five three-month quarters. If he earned $1,830 in that period, with $1,209 during one quarter, he is eligible to receive the maximum $47 a week for 26 weeks.

Benefits state by state

State	Base period for eligibility	Minimum Wages in base period required for Maximum Benefits	Maximum Weekly Benefit	Maximum Duration in weeks
Ala.	First 4 of last 5 quarters	$1,830; $1,209 in high quarter	$47	26
Alaska	First 4 of last 5 quarters	$5,500	$60 to $85*	28
Ariz.	First 4 of last 5 quarters	$1,856; $1,237 in high quarter	$50	26

The pressure is on for safer products

Government, consumers, and the law are forcing industry to change

When the final report of the Public Land Law Commission arrived at the White House last week, President Nixon received it in person in front of photographers. The same day, he got the final report of the National Commission on Product Safety. But for all the attention that report received, it might, as one wag suggested, "have been slipped between the bars of the White House fence."

The ho-hum reaction was not due to any lack of vigor in the commission's recommendations. After a two-year study, the group, headed by New York attorney Arnold B. Elkind, concluded that the country needs an "omnibus" consumer product safety act and a new, independent federal agency to set and enforce safety standards. Consumer products, the commission said, injure 20-million people a year—four times as many as are hurt in highway accidents.

The Administration does not favor a new agency, but Congress may have other ideas. The Democratic leadership is already running against the Administration on consumer issues. Senator Frank E. Moss (D-Utah), chairman of the consumer subcommittee of the Senate Commerce Committee, expects to start hearings soon on the proposed safety act and seems determined to get some action by Congress this election year.

Proponents of a new, independent agency for product safety may have to reconcile it with other proposals that would make a product safety agency subordinate to a new consumer protection agency. Another question is whether Congress will be willing to give up the power to set standards, industry by industry, that it has exercised in the past.

Mandate. The safety agency recommended by the commission would have wide-ranging powers. It would set mandatory standards, enforce them through civil and criminal sanctions, enjoin distribution of products that violate federal standards "or are unreasonably hazardous," and inspect manufacturing facilities to implement compliance. It would also:

- Require consumer notification or recall of defective products.
- Conduct public hearings, with power to subpoena.
- Disseminate information about hazardous products and ways to reduce hazards.
- Require products to be tested, and accredit private laboratories to do such work.
- Operate its own facility for research and development of testing methods and for analysis of consumer products.

In addition, the commission recommended that injured consumers be permitted to file treble damage claims in federal courts against manufacturers who "intentionally violate" safety standards; that class-action procedures be made applicable; and that state and federal courts adopt the principles of strict tort liability. The commission said the Small Business Administration should be authorized to make low-interest loans to help small businesses meet stiffer product safety requirements.

The commission did not concern itself with products such as autos, tires, pesticides, and paints, which are already under federal safety regulation. It found fault, however, with a long list of everyday products, including glass bottles, color television sets, household chemicals, architectural glass, power tools, and rotary lawn mowers.

What's pending in safety laws

Product	Legislation
Plastic sheet, plastic bags	House bill would authorize HEW Secretary to prescribe standards of design to avoid hazards
Paints	Various House and Senate bills would ban lead from paints or set procedures to reduce danger of poisoning to children
Glues and paints	House bill would amend Hazardous Substances Act to ban products containing unsafe toxic solvents
Eyeglass frames and sunglasses	House bill would ban sale or import of those made from cellulose nitrate or other flammable materials
Medicine cabinets	Senate bill would require that those used in federally-assisted housing have latches to prevent children gaining access
Medical devices	House and Senate bills would establish federal medical evaluations board to regulate biological products, medical devices, drugs
Child-resistant packaging	House bill would amend Hazardous Substances Act to keep children from access to toxic household products

How companies are reacting

Hoover Co. has set up a corporate product safety committee. Toro Mfg. Corp. watches customers operate its power mowers. American Machine & Foundry sends its "leisure time" products to be checked at a company test center.

Each of these companies, in its own way, is responding to the changing climate surrounding product safety. Together with managements throughout industry, they are taking a closer look at the things they make, spurred by a rash of public inquiries, newspaper and magazine articles, new and proposed legislation, court decisions, and rising insurance rates. And though some are reluctant to admit that product changes are needed, even manufacturers of top-quality goods concede that the clamor has had an effect on the way they do business.

Not all the changes are substantive. Hoover's new safety committee "hasn't increased the safety of our products, says G. P. Daiger, engineering vice-president. "It tells the people we are conscious of safety, and when we get in trouble on it, the committee provides a better public image." That image—of a company with specific, centralized control over safety—can close off a main line of attack in liability suits, he says.

Daiger hastens to add that Hoover has reviewed its production procedures since the clamor began, but found no

PAGINATION INCORRECT

wan, where the provincial government has cancelled contracts with companies that granted raises of more than 6% to plumbers and electricians. The province, a victim of the world wheat glut that has reduced farm incomes, has had its own 6% guideline for three years. It applies to public employees, employees of government-owned corporations, and employees of federal contractors.

Ottawa would like other provinces to follow Saskatchewan's example. Most provincial leaders feel that the initiative belongs logically to the federal government. They also tend to agree with some business and labor leaders, who regard any Canadian anti-inflation policy as futile as long as the U. S. fails to control its own inflation.

In response, Ottawa points to the slight falloff in the Canadian consumer price index (from 129.7 in April to 129.6 in May), a contrast to the steady climb of the U. S. index. It also cites the Canadian unemployment rate—a seasonally adjusted 6.2%, the highest in eight years—as a sound reason for labor wage restraint.

The CLC has been notably unimpressed by these arguments. Its latest move was a proposal for a national conference of federal officials, labor figures, and business leaders to devise "a new and more realistic and cooperative approach to our present economic problems." The Prices & Incomes Commission is not invited. ■

BW Unemployment Compensation

Jobless pay is due for overhaul

Sharply rising unemployment is beginning to cause serious drains on state jobless-pay reserves and is spurring labor's demands for "modernization" of programs that remain substantially unchanged since they were laid out in the 1930s. President Nixon has given high legislative priority to reforms, but if the programs are changed, the soundness of present funds may have to be reassessed.

In all 50 states, the reserves are sound enough now. At the end of last year, they totaled a record $12.6-billion. Benefits paid in 1969 amounted to more than $2.1-billion, but this payout was more than offset by employer contributions of $2.5-billion plus $536-million in interest on reserves.

Since then, the national unemployment rate has jumped to 5%, and the number of jobless covered by federal-state unemployment insurance also rose, to about 3.5%. The drain on reserves grew heavier, especially in Washington, California, and other states hit by aerospace layoffs.

Status of unemployment benefit funds

Year	Employer contributions: Millions of dollars	Employer contributions: Percent of total wages	Benefit payments: Millions of dollars	Benefit payments: Percent of total wages	Yearend reserves: Millions of dollars	Yearend reserves: Percent of total wages
1960	$2,289	1.17%	$2,727	1.40%	$6,643	3.41%
1961	2,450	1.23	3,423	1.72	5,802	2.91
1962	2,952	1.39	2,675	1.26	6,273	2.95
1963	3,019	1.35	2,775	1.24	6,648	2.98
1964	3,048	1.27	2,522	1.05	7,296	3.05
1965	3,053	1.18	2,166	0.84	8,357	3.24
1966	3,030	1.07	1,771	0.62	9,828	3.46
1967	2,678	0.89	2,091	0.69	10,778	3.57
1968	2,552	0.80	2,032	0.64	11,717	3.71
1969	2,545	—	2,127	—	12,637	—

Data: Bureau of Employment Security

The federal government keeps a sharp watch on the 50 state reserves. It sees no worries at present, but it wants to know what actuarial problems might arise if reforms were adopted. Under present conditions of rising unemployment, it believes each state should keep a reserve equal to 1.5 times the state's highest 12-month benefit costs. Currently, 15 states are below this rule-of-thumb minimum. If any state's reserve runs short, the government will advance funds to meet benefits payments. If unemployment deepens drastically, it may have to stand behind some programs as a guarantor.

The federal-state program for unemployment compensation is based on a 3.1% payroll tax on employers: 2.7% for the state and 0.4% to the federal government. But, except in Alaska, few employers pay the full amount because their tax obligation is reduced by a system of payments and credits. In Virginia, only 0.8% is actually levied on the employer. In the government's eyes, the low level of these taxes in some states produces undersized reserves.

Demands. Labor unions want new federal standards written into the state programs—and one of these standards could be an "adequate" tax level. In states with low tax rates, payments to jobless tend to be lower, they are paid for shorter periods, and the list of eligibles is more restricted. This has been a primary point of attack by the unions: They want bigger benefits for more workers over longer periods.

President Nixon, in his recent nationwide address on economic policy, took a long step toward the labor position, without going all the way. He called for swift enactment of reforms to "provide more help now to those workers who lose their jobs."

If the Administration's proposals were enacted quickly, political heat generated by the rise in unemployment might be shifted from White House to statehouse. It would be up to governors and legislatures to bring state laws into compliance with new federal standards, permitting extended benefits for the unemployed in their states. Since few state legislatures meet until next year, the spring of 1971 is the earliest that the new standards would apply for the jobless in most states.

The new bill. Chances are good that Congress will pass the proposals this year. The Senate and House each has approved its own version of the President's unemployment insurance bill, and a conference committee has worked out the differences between the versions. A minor roadblock has been raised by Senator John Williams, leading Republican on the Senate Finance Committee. He threatens to hold up the bill unless the Senate agrees to attach a rider to it concerning high-interest bonds—a matter that has nothing to do with the bill. Williams might drop the rider, however, if it becomes the only obstacle to enactment.

A much bigger roadblock is growing from Senate insistence that the new bill must include coverage of farm workers. The House version does not include them. The AFL-CIO has written every member of both houses demanding that the bill be kept in conference until it includes the farm workers.

The bill would cover an additional 4.8-million workers, increase some benefits, and provide extended benefits if national or state unemployment reached high levels. Payment of extended benefits would be triggered nationally if the insured unemployment rate reached 4.5% for three straight months. For a state, such payments would be triggered when its rate was 120% of the average for the same period during the two previous years. Employers' payroll taxes would be raised 0.1% to 3.2%.

Similar systems are already at work in Puerto Rico and in nine states. So far, they have taken effect only in Washington, on May 17. ■

Unemployment Compensation

FLORIDA

Coverage

The Florida law covers employers of four or more workers for one day in each of twenty weeks during the calendar year, or employers of four or more workers in eight weeks with a payroll over $6,000 in a calendar quarter. Twenty-six states have extended coverage to firms employing fewer workers. Arkansas is one of these states; it has extended coverage to employers of one or more workers in ten days during the calendar year.

Our recommendations include extending coverage to all employing units with one or more workers at any time. In Florida, there are over 108,800 workers in firms employing from one to three workers.

The industries in which the majority of the workers are employed include: agricultural services (2,200), contract construction (10,300), manufacturing (4,100), transportation and other public utilities (2,700), retail trade (31,800), finance (11,500), wholesale trade (6,800) and services (36,600).

The largest category of unprotected employment, and the fastest growing, is employment for the State and its political subdivisions. The Florida law now permits coverage of State and local government employees by election of their employing units, but this has not provided the employees with any protection since no jurisdiction has elected to cover its workers. Our recommendations provide for mandatory coverage of employment in State and local government. Almost 250,000 Florida workers employed by State and local governments have the same risks of unemployment as do workers employed by the Federal Government and private industry. Florida could cover them on the contributory basis used by private industry or could use the reimbursement method used by other states and the Federal Government to cover their employees. Under the reimbursement method, the state is billed periodically, usually at quarterly intervals, for the amount of benefits charged to its account. It then repays this amount to the state unemployment compensation fund.

Alabama provides mandatory coverage of county employees in Walker County and Louisiana provides mandatory coverage for board of education custodial workers in cities of 500,000 population or more. Alabama covers the Walker County workers on a reimbursement basis, and Louisiana requires coverage of the custodial workers on a contributory basis.

In addition to Florida, other Southern States including: Louisiana, Tennessee, and Texas permit political subdivisions to elect coverage for public employees but no elections have been reported. This may be due to the fact that the law in each of these states specifies the contributory method of financing. The contributory system of financing would require the political subdivisions to pay taxes to the Federal Government, and it is more costly than the reimbursement system of financing coverage.

Other excluded categories you may want to consider covering are the workers in nonprofit organizations, in agricultural processing, and on large farms.

Qualifying Requirements

The Florida law requires wages equal to at least 20 times the individual's average weekly wage and an average weekly wage of at least $20 a week or more to qualify for benefits. The average weekly wage is determined by dividing an individual's total base-period wages by the number of weeks in which he worked. This formula provides benefits to workers who worked 20 weeks at $20 a week, but it could deny benefits to workers who not only worked 20 weeks at $20 a week (or more) but also had additional weeks of work for which they received lower pay that reduced their average weekly wage below $20; for example,

20 weeks at $20 per week=	$400.00
5 weeks at $15 per week=	$ 75.00
25 weeks	$475.00

average weekly wage - $475.00 ÷ 25 = $19.00

As a result of the application of this formula in 1965, only 71.2 percent of new claims filed had sufficient wage credits to qualify for benefits as compared to the national average of 86.6 percent.

Our recommendations are for requiring a worker to meet only one formula or type of wage qualifying requirement. In Florida, a worker should not be required to have more than 20 weeks of employment with earnings of $20 in each week to qualify for benefits.

Benefit Duration

Benefit duration under the Florida law is one half of the number of weeks of base period employment up to a maximum of 26 weeks. To qualify for 26 weeks of benefits a worker must have 52 weeks of base period employment. As a result, in 1965, a period of law insured unemployment, the average potential duration of new insured Florida workers filing claims was among the lowest in the country (19.5 weeks). Only Georgia, Idaho, and Indiana were lower, and Florida's benefit exhaustion ratio was one of the highest; only Texas had a higher exhaustion rate. A comparison of Florida with other Southern States relative to potential benefit duration and benefit exhaustion rates is made in the following table:

State	Potential Benefits Average Duration (in-weeks)	Workers Exhausting Benefits (% of first payment)
Florida	19.5	34.7
Alabama	23.7	29.6
Arkansas	22.1	23.3
Georgia	19.4	27.0
Louisiana	23.3	27.7
Mississippi	22.9	21.0
North Carolina	26.0	14.0
South Carolina	20.7	30.5
Tennessee	23.3	21.6
Texas	20.4	36.1

Most states provide at least two weeks of benefits for every three weeks of employment. We recommend a benefit duration of 26 weeks for all qualifying workers, but, if this standard cannot be attained, the formula should at least provide the overwhelming majority of workers 26 weeks of benefits with a minimum of at least 20 weeks and a maximum of at least 30 weeks.

Maximum Weekly Benefit Amount

Florida recently increased the maximum weekly benefit amount payable from $33.00 to $40.00. This was the first change in the maximum benefit amount since 1959 but the increase was totally inadequate. In 1959, the $33.00 maximum weekly benefit amount was 44 percent of the 1958 statewide average weekly wage of $74.43 in covered employment. The new maximum weekly benefit amount - - $40.00 - - represents only 42 percent of the 1965 statewide average weekly wage of $96.34. Below the $40.00 maximum workers can receive benefits equal to one half of their average weekly wage. No one, however, whose weekly wage is above $80 can receive a benefit amount which will compensate for half his wage loss. A number of neighboring states pay higher maximum weekly benefit amounts: Georgia ($45), South Carolina ($42), and North Carolina ($42). The maximum weekly benefit amount in South Carolina and North Carolina is equal to 50 percent of the statewide average weekly wage in covered employment.

With a state average weekly wage of $96.32 in 1965 and maximum weekly benefits of $40.00, most Florida workers with enough employment to qualify could not receive benefits equal to one half of their normal earnings. One-third of the states now express the maximum benefit amount as a specified percentage, usually 50 percent, of the state's average weekly wage in covered employment rather than a dollar amount. Such a provision automatically adjusts the dollar amount of the maximum to the changes in the wage level in the state. We recommend that the maximum weekly benefit amount provided by the law be increased to at least 66 2/3 percent of the statewide average weekly wage and provision made for annual recomputation.

This method of establishing the maximum benefit amount has been enacted in to law in Arkansas, Kentucky, Mississippi (limited to $30 maximum per week), South Carolina, and other states.

Disqualification

The disqualification provisions, in the Florida law are more stringent than in most states. The disqualification for discharge for misconduct or a voluntary quit is the same in either case - - the week of the occurrence and 1 - 12 weeks immediately following and until re-employed with wages equal to ten times the workers weekly benefit amount.

Our recommendations are for fixed periods of disqualification commensurate with the average spell of unemployment in the state. A requirement for earnings with no possible alternate can result in workers not receiving benefits when their continuing unemployment is due to lack of job opportunities in the area.

Benefit Rights of Trainees

Benefits should not be denied to a worker who is taking training courses approved by the state agency. Twenty four state laws, including Arkansas, Georgia and Tennessee, specifically permit a finding of availability for work during periods of approved training.

Benefit Financing

Efforts should be made to obtain a higher taxable wage base; we are pressing for the same base used for OASDHI. This could be accomplished in Florida by increasing the taxable wage base over a period of time; for example, annual increases as follows:

$4,200 in 1968
$5,600 in 1969
$6,600 in 1970 and

for calendar years after 1970 the definition of wages should be identical with the definition of wages in the Internal Revenue Code of 1954 for OASDHI purposes.

We realize it may not be feasible to raise the base to these levels immediately, but any improvement in the prevailing $3,000 base would be beneficial. A number of state bodies have taken this approach to the problem and many of them, including one Southern State - Tennessee, have been successful in obtaining increases in the taxable wage base within their state. Small states such as Delaware and Rhode Island have had a taxable wage base of $3,600 for a number of years. West Virginia has had a $3,600 base since 1962 and Tennessee has had a $3,300 base since 1963. An attempt to increase the base to one of these levels may be more realistic at this time.

Unemployment Compensation

GEORGIA

Coverage

The Georgia law covers employers of four or more workers in each of twenty weeks during the calendar year. This is the minimum coverage provided for in the Federal Unemployment Tax Act. Twenty six states have extended coverage to firms employing fewer workers. Arkansas is one of these states; it has extended coverage to firms employing one or more workers in ten days during the calendar year.

Our recommendations include extending coverage to all employing units with one or more workers at any time. In Georgia, there are approximately 64,000 workers in firms employing from one to three workers.

The industries in which the majority of these workers are employed include: contract construction(5,000), manufacturing (3,600), wholesale trade (4,700), retail trade (21,600), finance (5,500) and services (19,300).

The largest category of uncovered employment in Georgia, and the fastest growing, is employment for the State and its political subdivisions. About 160,000 Georgia workers employed by the State and local governments have the same risks of unemployment as do workers employed by the Federal Government or private industry. Georgia could cover them on the contributory basis used for private industry, or could use the reimbursement method used by other states and the Federal Government to cover their employees. Under the reimbursement method, the state is billed periodically, usually at quarterly intervals, for the amount of benefits charged to its account. It then repays this amount to the state unemployment compensation fund.

Alabama provides mandatory coverage of Walker County employees under this method. Louisiana provides mandatory coverage for board of education custodial workers in cities of 500,000 population, but it requires they be covered by the contributory method.

In addition to this mandatory coverage, a number of Southern States: Florida, Louisiana, Tennessee and Texas permit political subdivisions to elect coverage for public employees; however, no elections of coverage in these states have been reported. This may be due to the fact that the law in each of these states specifies the use of the contributory method of financing. The contributory method of financing would require the political subdivisions to pay taxes to the Federal Government and it is more costly than the reimbursement method of financing coverage.

Other excluded categories you may want to consider covering are the workers in nonprofit organizations, in agricultural processing and on large farms.

Maximum Weekly Benefit Amount

The present maximum weekly benefit amount in Georgia is $45. This represents a higher weekly benefit amount in dollars than most other Southern States are paying. However, it is only 49 percent of the 1965 statewide average weekly wage. Assuming a normal increase in the statewide average weekly wage in 1966 and 1967, this benefit level would now be less than 50 percent of the statewide average weekly wage. At this time, no one whose weekly wage is above $90 can receive a benefit amount which will compensate for half their wage loss. This problem has been eliminated in South Carolina, Arkansas and Kentucky, along with other states, by expressing the maximum weekly benefit amount as percent of the statewide average weekly wage in covered employment. The maximum weekly benefit amount is recomputed annually in each of these states and it usually becomes effective on or about July 1.

Our recommendations are for a maximum benefit equal to 66 2/3 percent of the average statewide weekly earnings in covered employment. We realize that many states are not at this level and the primary goal of many AFL-CIO affiliates is to have the maximum stated as a percentage (not less than 50 percent) of wages in covered employment. Once this goal is attained, it would be possible to move progressively to the 66 2/3 percent objective.

Benefit Duration

The Georgia law has a variable duration which provides for the lesser of 26 times the weekly benefit amount or one-fourth of base period wages. This fraction is the lowest used by any state, only three states use so low a level of compensation in computing benefit duration. In 1965, Georgia's new insured worker's filing claims had an average potential benefit duration of only 19.4 weeks; only Idaho and Indiana were lower. A comparison of a new insured workers potential benefit duration in Georgia and other Southern States can be made from the following table:

State	Potential Benefits Average Duration (in weeks)
Georgia	19.4
Alabama	23.7
Arkansas	22.1
Florida	19.3
Louisiana	23.3
Mississippi	22.9
North Carolina	26.0
South Carolina	20.7
Tennessee	23.3
Texas	20.4

The fraction of a worker's base period wages used to determine benefit duration in other Southern States is much higher:

State	Fraction of Base Period Wages
Arkansas	1/2
Louisiana	2/3
Mississippi	1/3
South Carolina	1/3
Tennessee	1/3

Florida determines benefit duration according to weeks of employment and North Carolina has a uniform potential duration of 26 weeks for all covered workers.

We recommend a 26 week benefit duration for all qualifying workers. Where this goal is unobtainable, the formula should at least provide the overwhelming majority of workers 26 weeks of benefits with a minimum of at least 20 weeks and a maximum of at least 30 weeks. A move in this direction could be made in Georgia by increasing the fraction from (¼) to (1/3) or (½) a worker's base period wages.

Disqualifications

The disqualification provisions in the Georgia Employment Security Law are severe. Benefit rights may be reduced by an amount equal to the number of weeks of disqualification multiplied by the weekly benefit amount. This results in postponing benefits to a disqualified worker in the early stages of his unemployment and it could also shorten the duration of the worker's benefits.

Our recommendations are for fixed periods of disqualifications commensurate with the average period of unemployment in the state.

Benefit Rights of Trainees

Although individuals attending approved training courses are held available for work and paid benefits under your law, there is no provision to protect them from disqualification for refusing work. Seventeen states, including Arkansas, have provisions of this nature in their laws.

Benefit Financing

Efforts should be made to obtain a higher taxable wage base. Twenty-one states, including Tennessee, have increased the taxable wage base above $3,000. We are pressing for the same base used for OASDHI. This could be accomplished in Georgia by increasing the taxable wage base over a period of time; for example, annual increases as follows:

$4,200 in 1968
$5,600 in 1969
$6,600 in 1970 and

for calendar years after 1970 the definition of wages should be identical with the definition of wages in the Internal Revenue Code of 1954 for OASDHI purposes.

We realize it may not be feasible to raise the base to these levels immediately, but any improvement in the prevailing $3,000 base would be beneficial. A number of state bodies have taken this approach to the problem and many of them, including one Southern State - Tennessee, have been successful in obtaining increases in the taxable wage base within their state. Small states such as Delaware and Rhode Island have had a taxable wage base of $3,600 for a number of years. West Virginia has had a $3,600 base since 1962 and Tennessee has had a $3,300 base since 1963. An attempt to increase the base to one of these levels may be more realistic at this time.

NORTH CAROLINA

1. Benefit Formula

a. Qualifying Requirement

To qualify for benefits an individual must earn $550 in his base period, and such wages must be earned in more than one calendar quarter. A flat amount of earnings is not a satisfactory measure of a claimant's attachment to the labor market. For example, the claimant earning $100 a week can satisfy the requirement by 5½ weeks of employment provided his employment overlaps 2 quarters, but a worker earning $30 a week would need over 18 weeks of employment to qualify.

b. Base Period

The current law defines base period as the first 4 of the last 6 completed calendar quarters. This means that the lag period between the base period and the benefit year may be from 6 to almost 9 months. Such a long lag period is contrary to the objective that eligibility for benefits and the amount of the weekly benefit be based on recent employment and earnings.

c. Weekly Benefit Amount

A current State law provides for an annual wage formula with weekly benefit amounts ranging from a $12 minimum to a $35 maximum. These benefits range from 2 percent of the base period earnings at the minimum benefit level to 1 percent of such wages at the maximum benefit level. Although the maximum benefit is equal to 47 percent of the State's 1963 average weekly wage of $76.45, only 11.2 percent of the claimants in 1963 qualified for the maximum

amount. The reason for the small proportion of claimants qualifying at the maximum benefit amount is that the qualifying wage requirements at this and other benefit levels are very high. For example, only one other State with an annual wage formula requires such high annual earnings to qualify for the maximum weekly benefit amount as the $3,600 required in North Carolina to qualify for a $35 weekly benefit amount--West Virginia law requires $3,650. This means that a person who earns $70 a week in his base period would need more than 51 weeks of work to qualify for a weekly benefit amount ($35) equal to 1/2 of his weekly wage.

Benefits based on a percentage of annual earnings bear only a chance relationship to the claimant's earnings. A high quarter or an average weekly wage formula would more closely relate benefits to regular weekly earnings. The maximum benefit amount could be related to recent State average weekly wage and could provide for an automatic adjustment at least once a year. It is generally considered that a formula which relates the weekly benefit to high quarter wages or to the individual's average weekly wage and sets the maximum benefit amount at 2/3 of the State's average weekly wage will assure that most covered workers will be able to qualify, when unemployed, for benefits which approximate 1/2 of their regular earnings.

d. Duration

The current law provides for uniform duration of 26 weeks and for an 8-week period of extended benefits when insured unemployment rate averages 9 percent or more for any 3 weeks in a consecutive 4-calendar-week period. Since the rate of insured unemployment has exceeded 6 percent only twice since 1946

(6.4 percent in 1954 and 6.2 percent in 1958), it is unlikely that the extended benefits provision will become operative in any forseeable future unless the percentage which would trigger the provision is reduced.

2. Disqualifications

a. The disqualification period under the current State law for voluntary leaving and refusal of suitable work is for 4 to 12 weeks (for misconduct, 5 to 12 weeks) beginning with the first week in which the claim is filed if the claimant is found unemployed as a result of the disqualifying act. Also benefits are reduced for a period equal to the number of weeks for which claimant is disqualified. These provisions are inconsistent with the view that the disqualification should (1) postpone benefits for only that number of weeks in which claimant's unemployment is considered to result from his disqualifying act (on the basis of national data, about a 6-week period), (2) not reduce benefits, and (3) begin with the week of the disqualifying act. Also, the provision imposing disqualification for voluntary leaving limits "good cause" to that "attributable to the employer" and thereby requires disqualification in situations where the quit is for good personal cause, such as illness.

b. The current labor dispute provision requires imposition of a disqualification if the claimant's unemployment is caused by a labor dispute at the place where he is or was last employed or is caused by a labor dispute "at another place, either within or without this State, which is owned or operated by the same employing unit which owns or operates the factory, establishment, or other premises at which he is or was last employed and which supplies materials

or services necessary to the continued and usual operation of the premises at which he is or was last employed" regardless of whether the claimant is directly interested in the dispute. This is one of the most severe labor dispute disqualifications in the country. Consideration should be given to restoring provisions which were in effect prior to the 1961 amendments, when the State law limited disqualification for unemployment caused by a labor dispute at the place where the claimant was last employed with the usual "escape clauses" exempting from denial of benefits workers who were not participating in, financing or directly interested in the dispute or who did not belong to a group or class of workers who were participating in, financing or directly interested in the dispute.

c. The current law provides that the claimant must actively seek work. This requirement is strictly applied and in some cases results in fruitless search for work and needless irritation of employers. Consideration could be given whether the provisions could be amended so as to permit the suspension of this requirement when labor market conditions in the locality where claimant seeks employment make such search meaningless.

d. The current law includes seasonality provisions which limit payment of benefits based on wages earned in seasonal employment to the period corresponding with the active seasonal period of the base period employer with whom the claimant earned wages in seasonal employment. These provisions are not only burdensome to administer but seem inequitable with respect to claimants with only part of their base period earnings from seasonal employment. The question should be explored whether the seasonal provisions would be considered necessary if the State law included a qualifying requirement, such

as a weeks-of-work test, which would exclude marginal seasonal workers from the State unemployment insurance program.

e. The current law provides for denial of benefits in cases of separation for pregnancy with an irrebuttable presumption of ineligibility during the 3-month period preceding and the 3-month period following childbirth with the latter becoming a rebuttable presumption in the event of the death of the child. It would be preferable if the eligibility of claimants who become separated were determined under the availability-for-work and ability-to-work provisions.

f. Under the present law, severance pay is considered as wages and is allocated on the basis of the normal full-time weekly wage to weeks following separation. Thus, an individual is considered not to be unemployed and is ineligible for benefits in weeks to which such pay is allocated. Consideration should be given as to whether the ineligibility period should extend beyond the week in which the claimant receives such pay.

3. Eligibility During Training

The current law does not include a provision specifically exempting a claimant who is taking training approved for him by the State agency from the availability-for-work and search-for-work provision. For some claimants, taking such training may be the most reasonable course which they could pursue in order to become reemployed. Unless this can be done by interpretation of the current law, an enactment of a provision should be sought which would provide for exemption of such trainees, if otherwise eligible and entitled to benefits, from the stated eligibility requirements.

4. Coverage

The coverage provisions of the North Carolina law provide for coverage of an employer with 4 workers in 20 weeks. This excludes 37,300 employing units or 34.9 percent of all employing units. It further excludes 65,200 workers or 6.6 percent of all nonagricultural workers.

Unemployment Compensation

NORTH CAROLINA

Coverage

The North Carolina Employment Security Law covers employers of four or more workers for one day in each of twenty weeks during the calendar year. This is the minimum coverage provided by the Federal Act and it leaves a significant number of workers in the state unprotected. Twenty-six states have extended coverage to firms employing fewer workers. Arkansas is one of these states; it has extended coverage to employers of one or more in ten days during the calendar year.

Our recommendations include extending coverage to all employing units with one or more workers at any time. In North Carolina, there are over 70,000 workers in firms employing from one to three workers. The industries in which the majority of these workers are employed include: contract construction (7,400), manufacturing (3,700), wholesale trade (4,700), retail trade (24,500), finance (5,300) and services (22,100).

The largest category of excluded employment, and the fastest growing, is employment for the State and its political subdivisions. Almost 175,000 North Carolina workers employed by State and local governments have the same risks of unemployment as do those employed by the Federal Government and private industry. North Carolina could cover them on the contributory basis used for private industry or could use the reimbursement method used by other states and the Federal Government to cover their employees. Under the reimbursement method, the state is billed periodically, usually at quarterly intervals, for the amount of benefits charged to its account. It then repays this amount to the state unemployment compensation fund.

Alabama provides mandatory coverage of Walker County employees under this method. Louisiana provides mandatory coverage for board of education custodial workers in cities of 500,000 population, but it requires they be covered by the contributory method.

In addition to this mandatory coverage, a number of Southern states: Florida, Louisiana, Tennessee and Texas permit political subdivisions to elect coverage for public employees; however, no elections of coverage in these states have been reported. This may be due to the fact that the law in each of these states specifies that coverage be financed by the contributory method. The contributory method of financing would require the political subdivisions to pay taxes to the Federal Government and it is more costly than the reimbursement method.

Other unprotected categories you may want to consider covering are the workers in nonprofit organizations, in agricultural processing and on large farms.

Benefits

North Carolina is one of six states which base benefits on annual wages without considering weeks of employment. A worker's benefit amount is thereby reduced if his annual wages are depressed for any reason - - short work-weeks, time off for personal reasons or illness. Weekly benefits based on annual wages cannot be expected to assure that a worker's weekly benefit amount will replace at least 50 percent of his usual weekly earnings at benefit levels below the maximum. Other states avoid this by establishing the weekly benefit at one half the worker's weekly earnings in his best base year quarter. Wages lost in other quarters do not reduce his weekly benefit amount, therefore, the benefit approaches, to some degree, 50 percent of the worker's full time weekly earnings. Alabama and South Carolina are two states in your Region that use the high-quarter formula. In each case it is 1½ times high-quarter wages. Arkansas expresses the formula as a multiple of the weekly benefit amount; this formula requires wages in two quarters equal to 30 times the weekly benefit. These are the type of wage qualifying requirements contained in our recommendations.

Maximum Weekly Benefit Amount

The maximum weekly benefit amount which was raised to $42 in 1965 represents 50 percent of the 1965 statewide average weekly wage of $84.09. Assuming a normal increase in the statewide average weekly wage in 1966 and 1967, this benefit level would now be less than 50 percent of the statewide average weekly wage. At this time, no worker whose weekly wage is above $84.00 can receive a weekly benefit to compensate for one half his wage loss. This problem has been eliminated in South Carolina, Arkansas, Kentucky and other states by expressing the maximum weekly benefit amount as a percent of the statewide average weekly wage in covered employment. This type of legislation provides for the automatic adjustment and recomputation of the maximum benefit amount. This is usually done annually on or about July 1 in each state. This arrangement also has the advantage of eliminating the need to approach the legislature time after time to improve the benefit structure of the program.

Our recommendations are for a maximum benefit equal to 66 2/3 percent of the average statewide weekly earnings in covered employment. We realize that many states are not at this level and the primary goal of many AFL-CIO affiliates is to have the maximum benefit stated as a percentage (not less than 50 percent) of wages in covered employment. Once this goal is attained, it would be possible to move progressively to the 66 2/3 percent objective.

Disqualifications

North Carolina law permits cancellation of benefit rights for each week of penalty disqualification. This results in postponing benefits to a disqualified worker in the early stages of his unemployment and it could also shorten the duration of the worker's benefits.

Our recommendations are for fixed periods of disqualification commensurate with the average period of unemployment in the state.

Benefit Rights of Trainees

We recommend that each state law contain a provision prohibiting the denial of benefits to any worker that is participating in a training course with the approval of the state agency. Twenty-four state laws, including Arkansas, Georgia and Tennessee already have provisions regarding eligibility for unemployment benefits during periods of approved training.

Taxable Wage Base

Efforts should be made to obtain a higher taxable wage base. Twenty-one states, including Tennessee, have increased the taxable wage base over $3,000. We are pressing for the same base used for OASDHI. This could be accomplished in South Carolina by increasing the taxable wage base over a period of time; for example, annual increases as follows:

$4,200 in 1968
$5,600 in 1969
$6,600 in 1970 and

for calender years after 1970 the definition of wages should be identical with the definition of wages in the Internal Revenue Code of 1954 for OASDHI purposes.

We realize it may not be feasible to raise the base to these levels immediately, but any improvement in the prevailing $3,000 base would be beneficial. A number of state bodies have taken this approach to the problem and many of them, including one Southern State - Tennessee, have been successful in obtaining increases in the taxable wage base within their state. Small states such as Delaware and Rhode Island have had a taxable wage base of $3,600 for a number of years. West Virginia has had a $3,600 base since 1962 and Tennessee has had a $3,300 base since 1963. An attempt to increase the base to one of these levels may be more realistic at this time.

Oklahoma

1. Benefit Formula

a. Weekly Benefit Amount

The present law provides for a $10 minimum and a $32 maximum weekly benefit amount. The maximum is one of the five lowest in the country and represents only 35 percent of the 1963 State-wide average weekly wage of $92.25. In 1963, about 46 percent of the claimants were entitled to the maximum weekly benefit amount. This high concentration of claimants at the maximum indicates that the formula no longer relates benefit amounts to earnings for a high percentage of the claimants but rather that their benefits are determined by the statutory maximum--in effect, a flat rate of $32.

Under the Oklahoma high-quarter benefit formula, benefits are computed as 1/26 of the claimant's wages in insured work paid him during the quarter of highest earnings in the base period. The use of this fraction assures that benefits at levels below the maximum approximate 1/2 of the claimants' earnings only if they have been employed in 13 weeks in the high quarter. Many claimants work less than this number of weeks in the high quarter.

The maximum benefit amount should be related to recent State average weekly wage, and the formula should provide for periodic, such as annual, adjustment. A formula under which the maximum benefit represents 2/3 of the State's average weekly wage generally assures that the great majority of the covered workers will, when unemployed, qualify for benefits which will approximate 1/2 of their regular weekly earnings.

b. Duration

The present law provides for the lesser of (1) 39 times an individual's weekly benefit amount or (2) 1/3 of his base-period wages. Although the 39-week potential duration period is the highest in the country, it is available to only a small percentage of claimants. In 1963, about 10 percent of the claimants were entitled to the 39-week duration. In the same period, the average potential duration was 26.8 weeks; average actual duration, 13.3 weeks; and average duration of exhaustees 23.2 weeks. In fact, 41 percent of all claimants qualified for less than 26 weeks while 63 percent of exhaustees received less than 26 weeks in 1963.

One of the reasons why only a small percentage of claimants qualify for the maximum duration is that the formula is so constructed that only some claimants who qualify at the maximum weekly benefit amount of $32 can qualify for the maximum duration. It takes $3,744 in base period earnings to qualify for 39 weeks (more than four times the minimum high-quarter earnings of $806.01 needed to qualify for the maximum weekly benefit amount). At all levels below the maximum, even a claimant with base-period earnings equal to four times the upper limit of the high-quarter earnings requirement, i.e., fully employed year round, would be unable to qualify for the maximum duration because of the limitation that total benefits cannot exceed 1/3 of base period wages. For example, a claimant who qualified for a $20 weekly benefit amount and had base period earnings of $2,080 (four times the upper limit of the high-quarter earnings requirement at this benefit level) would be entitled only to $694 in benefits, or for a period of 34.7 weeks.

Another reason is that section 229(1) of the State law (definition of "wages") permits the use of only taxable wages in the computation of duration and weekly benefit amounts. Since only $3,000 of an individual's earnings from any employer in a calendar year is taxable, it would appear that only claimants whose base periods overlap parts of two calendar years or who have taxable base period earnings from two or more employers can qualify for maximum duration. The latter group would include only those workers who are not subject to the provision of the State law which limits the taxable wages paid by the predecessor and successor to any worker in a calendar year to $3,000.

If the maximum weekly benefit amount were higher than it is now--as it should be--even fewer individuals would qualify for 39 weeks.

In addition to an appropriate adjustment in the duration formula so that claimants could qualify for maximum duration of 39 weeks at all benefit levels, consideration should be given to the amendment of the definition of "wages," so that all earnings in insured work could be used in the computation of claimants' duration and benefit amounts.

2. Disqualifications

a. The provision relating to voluntary leaving provides for disqualification except where the quit is for "good cause connected with claimant's work." By so limiting "good cause," the provision requires the imposition of a disqualification in cases where the claimant has good personal cause for leaving, such as illness, for the reason that such cause is not connected with his work.

b. The provisions relating to voluntary leaving and misconduct provide for a 6-week disqualification period immediately following the claimant's filing

of a valid claim. This permits the imposition of a disqualification long after the period of unemployment which presumably resulted from the claimant's action (i.e. voluntary leaving or misconduct) has passed.

c. The State law provides for the deduction from unemployment benefits of the entire primary OASI benefits and of payments from private pension plans sponsored or participated in by the employer. Such a provision requires the deduction of pension payments even when benefits are paid on the basis of wages earned after claimant's retirement. Also, it does not take into account that the claimant may have contributed to the retirement fund. For example, one-half of the claimant's primary OASI benefits are based on his contributions to the retirement fund.

d. The State law does not include a provision which would permit payment of unemployment benefits during weeks in which a claimant is attending training which has been approved for him by the State agency. Under some circumstances, attending such training is the most reasonable course for the claimant to pursue in order to become reemployed. Therefore, unless this can be accomplished by interpretation of the current statutory provisions, the State law should be amended to provide specifically that a claimant who is taking such training will be eligible for benefits.

e. The State law provides for a 6-week disqualification period preceding childbirth and the 6-week period following the actual birth of the child. Consideration might be given whether this provision could be expressed in terms of a rebuttable presumption of ineligibility during such periods.

3. Taxable Wage Base

The State law limits wages to $3,000 not only for the purposes of contributions but also with respect to benefits. Although all earnings for insured work are used in determining whether the claimant satisfied the qualifying earnings requirement, benefit amounts and duration are determined only on the basis of taxable wages. For a case in point see Commerce Clearing House Reporter page 39591, paragraph 8106.2

4. Coverage

The coverage provisions of the Oklahoma law provide for coverage of an employer with 4 workers in 20 weeks. This excludes 25,500 employing units, or 57.1 percent of all employing units. It further excludes 43,000 workers or 10.2 percent of all nonagricultural workers.

SOUTH CAROLINA

1. Benefit Formula

a. Weekly Benefit Amount

The present law provides for a $10 minimum and an annually adjusted maximum weekly benefit amount of 50 percent of the State average weekly wage. The current maximum weekly amount is $38.

Under the South Carolina high-quarter benefit formula, benefits are computed as 1/26 of the claimant's wages in insured work paid him during the quarter of highest earnings in the base period. The use of this fraction results in benefits at levels below the maximum which approximate 1/2 of the claimants' earnings only if they have been employed in 13 weeks in the high-quarter. Many claimants work less than this number of weeks in the high quarter.

Consideration might also be given to defining the maximum weekly benefit amount as 2/3 of the State average weekly wage instead of the present 50 percent. If any worker earning more than the average weekly wage is to be compensated for 50 percent of his wage loss, the maximum needs to be set at a level higher than 50 percent of such average weekly wage. The Bureau recommends that the maximum weekly benefit amount be set at a point that would assure that the great majority of covered workers, when unemployed, would be compensated for 50 percent of their wage loss. In general, this goal would be achieved if the maximum weekly benefit amount were set at 2/3 of the State average weekly wage.

b. Duration

South Carolina has a variable duration period with a minimum of 10 weeks and a maximum limited to the lesser of 1/3 of base period wages or 22 weeks. The

maximum 22-week duration period is the lowest in the country. In calendar year 1963, 70.9 percent of all new claimants were entitled to the maximum duration of 22 weeks. In the same year, the average actual duration of exhaustees was 19.5 weeks. Of the claimants who filed claims and received first payments in fiscal year 1962, 36.2 percent (the third highest ratio in the country) exhausted their benefits during 1963. In view of the number of claimants entitled to maximum duration and the high exhaustion ratio, there appears to be a need for increasing both the duration fraction and the maximum weeks of duration. A uniform duration period of 26 weeks or an alternative variable duration period ranging from a minimum of 20 weeks to a maximum of at least 30 weeks with a duration fraction of 3/5 or 2/3 of base-period wages would be desirable. The State law does not include any provision authorizing payment of extended benefits in the event of prolonged and widespread unemployment.

2. Disqualifications--three major causes

The disqualification periods for the major causes vary. The disqualification period for voluntarily leaving most recent work without good cause and for discharge for misconduct connected with the most recent work begins with the effective date of the claim; the disqualification period is 2 to 6 weeks and 6 to 23 weeks, respectively. For refusal of suitable work without good cause, the disqualification period is the week of occurrence and 4 weeks. For repeated refusals the individual may be disqualified until he becomes reemployed with wages equal to 8 times his weekly benefit amount. For all three causes, if the Commission determines the circumstances warrant, an individual's potential benefits may be reduced by an amount equal to the weekly benefit amount multiplied by the number of weeks of disqualification.

It is considered desirable to have the length of the disqualification period the same for all three major causes. The period of disqualification should be limited to the length of time ordinarily required for an employable worker

to find suitable work in a reasonably normal labor market. The period of disqualification should apply immediately after the week of the disqualifying act. The discretionary charge against benefits acts as a penalty and should be discontinued.

3. We found the availability provisions in South Carolina to be subject to undesirable interpretation. In order to qualify for benefits, a claimant must be available for the same sort of work and at the same hours as at his last place of employment. Consequently, if a person moves to an area which does not provide work similar to that which the claimant last performed, he is held unavailable.

   An application for workmen's compensation benefits is considered an admission by the claimant that he is unable to do the kind of work he was previously doing and he is therefore ruled ineligible for benefits.

   A union worker who restricts his work search to the union wage scale and to union employment is deemed not available, because the prevailing wage is lower than the union scale.

4. The coverage provisions of the South Carolina law provide for coverage of an employer with 4 workers in 20 weeks. This excludes 17,400 employing units or 52.2 percent of all employing units. It further excludes 30,600 workers or 6.6 percent of all nonagricultural workers.

5. The taxable wage base in South Carolina is $3,000. Although the financing conditions in South Carolina are good, if our recommended changes are adopted, it might be necessary for an increase in the taxable wage base.

6. We have noticed that the South Carolina law does not have a provision for extended unemployment benefits in instances of high unemployment or a provision to protect claimants taking training which is approved for them by the State agency from being held ineligible for benefits. Under some circumstances, attending such training is the most reasonable course for the claimant to pursue in order to become reemployed. Therefore, unless this can be accomplished by interpretation of the current statutory provisions, the State law should be amended to provide specifically that a claimant, if entitled and otherwise eligible for unemployment benefits, will not be denied such benefits while he is taking such training.

Texas

1. Benefit Formula

a. Wages Limitation

Section 3(e) of the current State law provides that, for purposes of determining the weekly benefit amounts and duration of benefits, the $3,000 limitation on taxable wages does not apply but that only remuneration in insured work up to $4,800 may be used for these purposes. Since the provisions of the State law which prescribe the earnings qualifying requirements (section 4(e)) are not referred to in section 3(e), it appears that the $3,000 limit on taxable wages is applied in determining whether the claimant has met any of the three alternative qualifying requirements. If so, an amendment should be sought which would remove the restriction that, for purposes of the qualifying requirements, only taxable wages may be used.

b. Weekly Benefit Amount

The present law provides for $10 minimum and a $37 maximum benefit amount. The maximum represents only 40 percent of the State average weekly wage for the 12-month period ending on June 30, 1964. The laws in 31 States currently provide for a higher maximum benefit amount. In 1963, about 44 percent of the claimants were entitled to the maximum benefit amount. This high concentration of the claimants at the maximum indicates that the formula no longer relates benefit amounts to earnings for a high percentage of claimants but rather that their benefits are determined by the statutory maximum--in effect, a flat rate of $37.

Under the current high-quarter benefit formula, benefits are computed as 1/25 of the claimant's wages in insured work paid him during the quarter of highest earnings in the base period. The use of this fraction results in benefits at benefit levels below the maximum which approximate one-half the claimants' wage loss only if they have been employed at least 12½ weeks in the high quarter. Many claimants work less than this number of weeks in the high quarter.

The maximum benefit amount could be related to recent State average weekly wage; and the formula should provide for its periodic adjustment, such as once a year. It is generally considered that a formula under which the maximum benefit represents 2/3 of the State's average weekly wage generally will assure that the great majority of the covered workers would, when unemployed, qualify for benefits which would approximate 1/2 of their regular weekly earnings.

c. Duration

The present law provides for the lesser of (1) 26 times the weekly benefit amount or (2) 27 percent of the wage credits (wage credits are limited to $4,800 earned in a calendar year) with a 10-week minimum duration period. Texas is among the four States with the lowest duration fraction. Georgia, Indiana and Virginia limit benefits to 1/4 of base-period wages and Texas to 27 percent. The average actual duration of exhaustees in calendar year 1963 was 16.8 weeks. Of the claimants who filed claims and received first payments

in fiscal year 1962, 41.3 percent exhausted their benefits during 1963. In view of the low average actual duration of exhaustees and the high ratio of exhaustions, a need is indicated for increasing duration either by providing for uniform duration or by increasing the percentage which limits benefits to a proportion of base-period wages to at least 40 percent of such base-period wages.

2. Qualifying Requirements

The State law provides for the following three alternative qualifying requirements:

(a) $375 total wages in the base period, with at least $250 in one quarter and $125 in another quarter;

(b) $450 total wages in the base period, with at least $50 in each of 3 quarters; and

(c) $1,000 in one quarter of the base period.

The current alternative requirements are inequitable as between low and high wage earners. For example, an individual who qualifies under the $1,000 in one quarter requirement can do so in 13 weeks or less. Claimants who qualify under the $450 requirement need $350 in the high quarter and at least $50 in each of two other quarters, and those who qualify under the $375 requirement must have earned at least $125 outside of the high quarter. A weeks-of-work qualifying requirement would appear to provide a more effective test of claimants' attachment to the labor market than the current alternative requirements.

3. Disqualifications

The current law provides for a 1- to 26-week disqualification period for voluntary leaving and misconduct and for a 1- to 13-week disqualification period for refusal of suitable work, with the disqualification period beginning with the week of the filing of the valid claim. In addition, the State law requires that an individual's total benefits be reduced by the number of weeks which corresponds to the number of weeks for which he is disqualified for any of the three major causes.

Provisions which require that the disqualification period begin with the week of the valid claim permit disqualification for periods which are beyond those generally considered to have been caused by the claimant's disqualifying act. The disqualification should be only for the period during which claimant's unemployment is considered to have resulted from his own action and should not provide for reduction of total benefits thereby making it in effect a penalty provision. It is desirable that the length of the disqualification period for the three major causes be the same and that this period not be longer than that generally considered necessary for an employable worker to find work in a normal labor market. On the basis of national data, this would be about a 6-week period.

The disqualification provision relating to voluntary quits limits "good cause" to that connected with the claimant's work. Such a provision is undesirable because it requires disqualification in cases where the claimant may be forced to quit a job for good personal cause, such as illness.

Although the labor dispute disqualification provision includes the usual "escape clauses" it provides for the denial of benefits not only when the labor dispute occurs at the place where the claimant is or was last employed, but also when his unemployment is "because of a labor dispute at another place, either within or without this State which is owned or operated by the same employing unit which owns or operates the premises at which he is or was last employed, and supplies materials or services necessary to the continued and usual operation of the premises at which he is or was last employed." This is one of the most severe labor dispute disqualification provisions which are in effect in this and in a few other States. Consideration should be given to whether the provision could be amended to limit disqualification during weeks of unemployment which arises from a dispute at the place where the worker is or was last employed.

In our review of the agency decisions in cases where a labor dispute was in issue, we have noted that in some instances the merits of the labor dispute are considered and if the finding is that claimants have violated the employment contract the disqualification for misconduct, instead of that pertinent to labor disputes, is applied. In this respect, the agency seems to follow a different rule with respect to workers than it does with respect to the employers. For example, if the finding is that the labor dispute resulted from the employer's violation of the contract, the claimants would be disqualified under the labor dispute provision. Consideration could be given as to whether amendment of the State law is necessary to preclude the determinations which go to the merits of labor dispute.

The State law also provides for the reduction of unemployment benefits by amounts paid to the claimants in the form of old-age benefits and compensation for temporary partial disability. Since the claimant contributes one-half of the cost to the fund from which old-age and survivors insurance payments are made, it would appear that if such payments are to be deducted from unemployment benefits not more than one-half of such payments should be deductible.

It seems inequitable to deduct temporary partial disability payments from unemployment benefits if the partial disability for which such payments are made does not affect the claimant's availability for work. Such partial disability may have already penalized the claimant because it made it necessary that he seek less remunerative work than that he previously performed.

4. Availability During Training

The State law does not currently include a provision which would permit the payment of unemployment benefits during weeks in which a claimant is otherwise eligible but is attending training which has been approved for him by the State agency. Under some circumstances, attending such training is the most reasonable course for a claimant to pursue in order to become reemployed. Therefore, unless this can be accomplished by interpretation of the current statutory provisions, the State law should be amended to provide specifically that a claimant who is taking such training, if otherwise eligible for and entitled to unemployment benefits, will not be denied such benefits during weeks in which he is taking such training.

5. Coverage

The State law covers any employing unit of four workers in 20 weeks in any calendar year. This excludes 101,600 employing units or about 56 percent of all employing units. It thereby also excludes 171,400 workers of such employing units, or about 8.6 percent of all nonagricultural workers.

Unemployment Compensation

VIRGINIA

Coverage

The Virginia Unemployment Compensation Act covers employers of four or more workers for one day in each of twenty weeks during the calendar year. This is the minimum coverage required by the Federal Unemployment Tax Act, and it leaves a significant number of workers in the state unprotected. Twenty-six jurisdictions have extended coverage to firms employing fewer workers. A number of Virginia's neighbors are among the jurisdictions that have extended coverage including the following:

Jurisdiction	Coverage
District of Columbia	one worker at any time
Maryland	one worker at any time
Delaware	one worker in each of 20 weeks
Pennsylvania	one worker at any time

Our recommendations include extending coverage to all employing units with one or more workers at any time. In Virginia, there are over 56,000 workers in firms employing from one to three individuals. The industries in which the majority of these workers are employed include: contract construction (6,500), manufacturing (2,000), transportation and public utilities (2,000), wholesale trade (2,800), retail trade (18,000), finance (5,200), services (18,400).

The largest category of excluded employment, and the fastest growing, is employment for the State and its political subdivisions. Almost 173,000 Virginia workers employed by the State and local governments have the same risks of unemployment as do those employed by the Federal Government and private industry. Virginia could cover them on the contributory basis used to finance private industry coverage, or it could use the reimbursement method of financing used by other states and the Federal Government to cover their employees. Under the reimbursement method of financing coverage, the state is billed periodically, usually at quarterly intervals, for the amount of benefits charged to its account. It then repays this amount to the state unemployment compensation fund.

The District of Columbia has elected to cover all its workers under this method of financing. Delaware also permits State and local government agencies to elect coverage for their employees under this method.

A number of other states including: Florida, Kentucky, Tennessee, and Maryland permit state agencies and political subdivisions to elect coverage for public employees, but they require the contributory method of financing. The contributory method of financing requires the state agency or political subdivision electing coverage to pay taxes to the Federal Government, and elections of coverage have not been widespread.

Other unprotected categories you may want to consider covering under the Virginia law are workers in nonprofit organizations, workers employed in plants processing agricultural products and workers on large farms.

Wage Qualifying Requirements

The Virginia law requires 46 weeks of employment with earnings of at least $736 in two quarters of the base period. This is the most restrictive wage qualifying provision contained in any state law. None of Virginia's neighboring states apply such a severe test of labor force attachment. I have listed the wage or employment qualifications required in a few of these states below:

State	Wage or Employment Qualifications
District of Columbia	1½ times high quarter wages but not less than $276; with $130 in 1 quarter
Maryland	1½ times high quarter wages; with $192.01 in 1 quarter and wages in 2 quarters
Pennsylvania	36 weeks with $120 in high quarter and at least 20% of base period wages in another quarter
West Virginia	$700 in base period
Tennessee	36 weeks; with $338.01 in 1 quarter
North Carolina	$550 in base period; 20% of wages in quarter other than high quarter

Benefits

The maximum weekly benefit amount in Virginia in 1967 is $42. The average weekly wage in covered employment, as of January 1, 1967, was $93. The maximum weekly benefit represented only 45 percent of the statewide average weekly wage. Assuming a normal increase in the statewide average weekly wage during the year; this benefit level as a percent of the statewide average weekly wage is perhaps even lower at this time. Under the current benefit structure no worker earning more than $84.00 a week can receive a benefit equal to 50 percent of his weekly wage.

The problem of maintaining the maximum benefit at a level equal or close to 50 percent of the statewide average weekly wage has been eliminated in a number of states including South Carolina, Kentucky, West Virginia, and the District of Columbia by expressing the maximum weekly benefit amount as a percent of the statewide average weekly wage in covered employment. This type of legislation provides for the recomputation and automatic adjustment of the maximum benefit amount. This is usually done annually on or about July 1 in each state. This arrangement also has the advantage of eliminating the need to approach the legislature time after time to improve the benefit structure of the program.

Our recommendations are for establishing a maximum weekly benefit equal to 66 2/3 percent of the average statewide weekly wage in covered employment. We realize that many states are not at this level, but the primary goal of many AFL-CIO affiliates is to have the maximum benefit stated as a percentage (not less than 50 percent) of weekly wages in covered employment. Once this goal is attained, it would be possible to move progressively to the 66 2/3 percent objective.

Benefit Duration

Benefit duration under the Virginia law is variable. It is based upon a percent of base period wages (26-25 percent). This is one of the lowest percentages or fractions used by any state upon which to base benefit duration. North Carolina, West Virginia, and Maryland laws provide all qualifying workers a benefit duration period of 26 weeks. Other states use percentages or fractions of base period wages, but they are higher than Virginia:

State	Fraction or Percent of Base Period Wages Used to Determine Benefit Duration
South Carolina	1/3
Tennessee	1/3
Kentucky	1/3
Pennsylvania	1/2
Delaware	40%
District of Columbia	1/2

As a result of the low percentage of base period wages used to determine benefit duration, in 1965, a period of low unemployment, the average potential duration of new insured Virginia workers filing claims was among the lowest in the country (20.0 weeks). Only Florida, Georgia, Idaho, Indiana, and Puerto Rico were lower. A comparison of Virginia and other states in this area relative to potential benefit duration are made in the following table:

State	Potential Benefit Average Duration (in weeks)
District of Columbia	30.2
Maryland	26.0
Delaware	23.2
Pennsylvania	28.6
West Virginia	26.0
Tennessee	23.3
Kentucky	23.1
North Carolina	26.0

Most states provide at least two weeks of benefits for every three weeks of employment. We recommend a uniform benefit duration of 26 weeks for all qualifying workers, but if this standard cannot be attained the formula should at least provide the overwhelming majority of workers, 26 weeks of benefit duration after

a qualifying labor force attachment period of 20 weeks.

Disqualifications

The disqualification provisions in the Virginia law are more stringent than in most states. The penalty for voluntary quit, discharge for misconduct, and refusal of suitable work is for the period of unemployment plus thirty days work.

Our recommendations are for fixed periods of disqualification commensurate with the average spell of unemployment in the state. A requirement of re-employment with no possible alternate can result in workers not receiving benefits when their continuing unemployment is due to lack of job opportunities in the area.

As you know, Virginia is one of six states that does not permit simultaneous receipt of unemployment insurance and supplemental unemployment benefits. The other states are New Hampshire, New Mexico, Puerto Rico, South Carolina, and South Dakota. Forty six states permit the simultaneous receipt of these benefits, but the Virginia law, that might have been interpreted to permit it, was amended to forbid it.

Benefit Rights of Trainees

We recommend that each state law contain a provision prohibiting the denial of benefits to any worker that is participating in a training program with the approval of the state agency. The Virginia law does not contain such a provision, but twenty-six states including the District of Columbia, Delaware, Pennsylvania, West Virginia, Tennessee, Georgia, and North Carolina already have enacted provisions relative to unemployment insurance benefit eligibility during periods of approved training.

Taxable Wage Base

Efforts should be made in Virginia to obtain a higher taxable wage base. Twenty-one states including Delaware, Pennsylvania, West Virginia, and Tennessee have increased their taxable wage base above $3,000. We are pressing for the same tax base used for OASDHI purposes. This could be accomplished in Virginia by increasing the taxable wage base over a period of time; for example, annual increases as follows:

$4,200 in 1968

$5,600 in 1969

$6,600 in 1970, and

for calendar years after 1970 the definition of wages should be identical with the definition of wages stated in the Internal Revenue Code of 1954 for OASDHI purposes.

We realize that increasing the taxable wage base to the levels mentioned above may be difficult at this time, but a start should be made. This is the procedure the states listed above have followed. None of the states are at the $4,200 level yet, but they are above the original $3,000 taxable wage base.

State	Taxable Wage Base
Delaware	$3,600
Pennsylvania	$3,600
Tennessee	$3,300
West Virginia	$3,600

TEXAS EMPLOYMENT COMMISSION

AUSTIN 1, TEXAS

YOUR UNEMPLOYMENT TAX DOLLAR

UNEMPLOYMENT INSURANCE • ECONOMIC STABILIZER •

THE HARDEST WORKING TAX DOLLAR IN YOUR COMMUNITY

IF

every employer could keep all of his workers busy throughout the year . . .

and hire a few new workers every year to take care of the increase in the labor force . . .

most all of our problems would be solved . . .

we wouldn't have to think about unemployment. . .

and you wouldn't be taxed to pay for unemployment insurance . . .

BUT

it doesn't work out that way . . .

demand for your goods or services is never constant . . .

when it goes up, you may need more workers—but let it go down and you have to cut the cost of doing business . . .

so, while you may not like to do it, you have to let some of your workers go . . .

thus creating UNEMPLOYMENT.

WHEN

you are affected by a decline in business, the chances are that other employers feel the pinch too . . .

and they do what you had to do—lay off some of their workers . . .

and that makes matters worse in your community—or, in some cases, a bad situation all over the country . . .

pretty soon you notice that orders from other parts of the country are getting smaller—and the reason may be that unemployment is cutting into the purchase of your products . . .

UNLESS

something can be done to keep up a man's ability to pay for goods and services, business begins to slow down . . .

and demand for the goods and services you have to sell may slacken, too . . .

in recent years up to 5 million workers a year and their families would have had to stop buying many goods and services because of unemployment

they would have—if they didn't have UNEMPLOYMENT INSURANCE.

THEN

unemployment insurance money each week makes all the difference in the world to a man who is out of work . . .

it makes a difference to grocers, landlords and the man who runs the corner shoe repair shop . . .

unemployment insurance fights fear of want in your community—a wage earner knows if slack times come he can still buy the essentials because you have insured him by paying his premium on unemployment insurance . . .

SO

while workers put off buying many things, since unemployment insurance doesn't give them full purchasing power . . .

it helps them stay out of debt for their nondeferrable expenses while they look for work . . .

and when they are back at work they come into the market for new goods right away, instead of waiting to pay off old debts . . .

they start buying things sooner—and that's good for BUSINESS.

AS soon as your unemployment tax dollar is paid out it goes to work . . .

it probably passes through more hands more quickly than any other tax money . . .

it starts out with the business people in a neighborhood—a grocer, a landlord, a druggist . . .

it gets right back into the main stream of the economy and keeps on going . . .

until sooner or later it gets into the hands of someone who is in the market for the goods you make or the service vou offer . . .

it may not come back to you 100 percent, but it certainly has a fast passage through the hands of your fellow businessmen, other wage earners, bankers, first in your community and then in other parts of the country . . .

every time this happens the whole country benefits from your unemployment tax dollar. . . .

HOW SELF-EMPLOYMENT

affects unemployment benefits

A new provision of Wisconsin's U.C. Law denies benefits to a self-employed claimant, for any week, unless in that week he made an active and bona fide search for work as an employe.

Here are some questions and answers about the new provision:

1. WHAT IS SELF-EMPLOYMENT?

   A PERSON IS CONSIDERED SELF-EMPLOYED IF HE WORKS FOR HIMSELF (NOT EMPLOYED BY ANOTHER) IN A BUSINESS OR UNDERTAKING WHICH HE HAS ENTERED FOR THE PURPOSE OF PRODUCING A SUBSTANTIAL PART OF HIS INCOME.

2. IF I AM SELF-EMPLOYED IN A WEEK, CAN I DRAW UNEMPLOYMENT BENEFITS?

   ONLY IF YOU CAN SHOW THAT, DURING THAT WEEK, YOU HAVE MADE AN ACTIVE AND BONA FIDE SEARCH FOR WORK.

3. WHAT IS AN ACTIVE AND BONA FIDE SEARCH FOR WORK AS AN EMPLOYE?

   AN ACTIVE AND BONA FIDE SEARCH FOR WORK MEANS THAT YOU MUST PERSONALLY APPLY FOR WORK WITH EMPLOYERS IN YOUR AREA, WHO ORDINARILY HIRE A PERSON WITH YOUR SKILLS OR MIGHT HAVE SOME OTHER JOB YOU COULD DO.

4. WHAT RECORDS SHOULD I KEEP OF MY SEARCH FOR WORK?

   KEEP A COMPLETE RECORD ON THE FORM WHICH WE GIVE YOU, OF EVERY CONTACT YOU MAKE.

August 1965

1965–1967 TEXT of WISCONSIN'S UNEMPLOYMENT COMPENSATION LAW

Wisconsin's Unemployment Compensation Law, passed in January 1932, is now Chapter 108 of the statutes.

Contributions have been paid by covered employers since July 1934. Unemployment benefits have been paid to eligible workers since August 1936.

The law now covers about 37,000 employers (of 4 or more persons), and over 980,000 workers.

Through June 1965 the state "unemployment reserve fund" had paid over $617 million in benefits, including over $346 million paid after June 1958,—and had a net balance of $202 million left.

This "1965–1967 TEXT of WISCONSIN'S UNEMPLOYMENT COMPENSATION LAW" includes all amendments through August of 1965 (namely Chapters 10 and 231, Laws of 1965).

CHAPTER 108

UNEMPLOYMENT RESERVES AND COMPENSATION

108.01 PUBLIC POLICY DECLARATION. Without intending that this section shall supersede, alter or modify the specific provisions hereinafter contained in this chapter, the public policy of this state is declared as follows:

(1) Unemployment in Wisconsin is recognized as an urgent public problem, gravely affecting the health, morals and welfare of the people of this state. The burdens resulting from irregular employment and reduced annual earnings fall directly on the unemployed worker and his family. The decreased and irregular purchasing power of wage earners in turn vitally affects the livelihood of farmers, merchants and manufacturers, results in a decreased demand for their products, and thus tends partially to paralyze the economic life of the entire state. In good times and in bad times unemployment is a heavy social cost, directly affecting many thousands of wage earners. Each employing unit in Wisconsin should pay at least a part of this social cost, connected with its own irregular operations, by financing compensation for its own unemployed workers. Each employer's contribution rate should vary in accordance with his own unemployment costs, as shown by experience under this chapter. Whether or not a given employing unit can provide steadier work and wages for its own employes, it can reasonably be required to build up a limited reserve for unemployment, out of which benefits shall be paid to its eligible unemployed workers, as a matter of right, based on their respective wages and lengths of service.

(2) The economic burdens resulting from unemployment should not only be shared more fairly, but should also be decreased and prevented as far as possible. A sound system of unemployment reserves, contributions and benefits should induce and reward steady operations by each employer, since he is in a better position than any other agency to share in and to reduce the social costs of his own irregular employment. Employers and employes throughout the state should co-operate, in advisory committees under government supervision, to promote and encourage the steadiest possible employment. A more adequate system of free public employment offices should be provided, at the expense of employers, to place workers more efficiently and to shorten the periods between jobs. Education and retraining of workers during their unemployment should be encouraged. Governmental construction providing emergency relief through work and wages should be stimulated.

(3) A gradual and constructive solution of the unemployment problem along these lines has become an imperative public need.

108.02 DEFINITIONS. As used in this chapter:

(1) **"Benefits"** means the money allowance payable to an employe as compensation for his wage losses due to unemployment as provided in this chapter.

(2) **"Commission"** means the industrial commission.

(3) **Employe.** (a) "Employe" means any individual who is or has been performing services for an employing unit, in an employment, whether or not he is paid directly by such employing unit; except as provided in par. (b). If a contractor performing services for an employing unit is an employe under this subsection and not an employer subject to the contribution provisions of this chapter, a person employed by the contractor in fulfilment of his contract with the employing unit shall be considered the employe of the employing unit.

(b) Paragraph (a) shall not apply to an individual performing services for an employing unit if the employing unit satisfies the commission as to both the following conditions:

1. That such individual has been and will continue to be free from the employing unit's control or direction over the performance of his services both under his contract and in fact; and

2. That such services have been performed in an independently established trade, business or profession in which the individual is customarily engaged.

(c) This subsection shall be used in determining an employing unit's liability under the contribution provisions of this chapter, and shall likewise be used in determining the status of claimants under the benefit provisions of this chapter.

(d) Any individual who is, under this subsection, an "employe" of a given employing unit shall be deemed "employed" by that employing unit for the purposes of this chapter.

(4) **Employer.** (a) "Employer", except where the term by its context may apply to any unit employing one or more individuals, means any person, partnership, association, corporation, whether domestic or foreign, (or legal representative or trustee in bankruptcy or receiver or trustee of a person, partnership, association or corporation, or legal representative of a deceased person), including this state and any city of the first class (but excluding any other political

subdivision) and any frateral benefit society as defined in s. 208.01, who is subject to this chapter under the statutes of 1955, or who has had employment in Wisconsin and becomes subject to this chapter under the provisions of this subsection.

(b) Any other employer who is subject to the federal unemployment tax act for any calendar year shall become an "employer" subject hereto as of the beginning of such calendar year.

(c) Any other employer shall become an "employer" subject hereto in case the wages paid or payable by him for employment occurring in any calendar quarter exceed $10,000 (counting for this purpose not more than $1,000 of such wages per individual employed), as of the beginning of that calendar year in which such quarter occurs.

(d) Any other employer, who has employed as many as 4 individuals in "employment" on each of some 20 days during the taxable year, each day being in a different calendar week, counting the total number of individuals who were employed by him in employment for some portion of the day (whether or not at the same moment of time), effective after December 31, 1955, shall become an "employer" subject hereto as of the start of that calendar year in which such employment occurred. If an employer's records for a given calendar year do not permit accurate determination of his status on the foregoing basis, and the aggregate "wages" paid or payable for "employment" by him equalled or exceeded $6,000 for such year, he shall become an "employer" subject hereto as of the start of such year.

(e) Any other employer, who succeeds to the business of any "employer" hereunder, shall thereby become an "employer" subject to this chapter, as provided in s. 108.16 (8).

(f) Any employer, including any political subdivision of the state, not otherwise subject to this chapter, who files with the commission his written election to become an "employer" subject hereto for not less than 3 calendar years, shall, with the written approval of such election by the commission, become an "employer" fully subject to this chapter, as of the date and under the conditions stated in such ap-

proved election. Any political subdivision may limit its election to one or more of its operating units.

1. The commission may refuse to approve any such election, in the interests of the proper administration of this chapter. Any election approved by the commission shall be void, in case the electing party was himself "employed" in the same enterprise as the individuals to whom such election applied. The commission may at any time by written notice to the employer terminate any election in the interests of proper administration of this chapter.

2. An electing employer may, after 3 such years, terminate his election and thereby cease to be an "employer" subject hereto, despite par. (g), at the close of any week which ends after the month in which he has filed a written notice to that effect with the commission, provided he is not then subject to this chapter under par. (b), (c), (d), or (e).

(g) An employer shall cease to be subject to this chapter only upon commission action terminating his coverage. The commission may terminate an employer's coverage, on its own motion or on application by the employer, by mailing a notice of termination to the employer's last known address. If a termination of coverage is based on an employer's application, it shall be effective as of the close of the calendar month in which the application was filed. Otherwise, it shall be effective as of the close of the calendar month in which the notice of termination is mailed, subject to appeal by the employer under s. 108.10 by the close of the following month. The commission shall terminate an employer's coverage only if the employer would not otherwise be subject under sub. (4) (b), and only if the employer:

1. Has ceased to exist; or

2. Has transferred his entire business to another person or persons; or

3. Has been covered by this chapter throughout each of the 2 most recently completed calendar years, but has, in each such year, had less than 20 weeks (lying wholly within that year) within which he employed 3 or more employes.

(h) The commission shall not terminate an employer's coverage under par. (g) 3, if during any calendar year (or year ending on a computation date) of his coverage his payroll for such year was $20,000 or more or if on any compu-

tation date his employer's account was overdrawn, until 6 years have elapsed since the close of the last such year or since the most recent such computation date (next following a calendar year of some payroll).

(5) Employment. (a) "Employment", subject to the other provisions of this subsection, means any service, including service in interstate commerce, performed by an individual for pay.

(b) The term "employment" shall include an individual's entire service (performed within, or partly within and partly outside, Wisconsin), if such service is "localized" in Wisconsin; and shall also include such service, if it is not "localized" in any state but is performed partly within Wisconsin, and if:

1. The base of operations, or, if there is no base of operations, then the place from which such service is directed or controlled, is in Wisconsin; or

2. The base of operations or place from which such service is directed or controlled is not in any state in which some part of such service is performed, but the individual's residence is in Wisconsin.

(c) An individual's entire service for an employer, whether performed partly within or entirely outside Wisconsin, shall be deemed "employment" subject to this chapter, provided both the following conditions exist:

1. Such service is deemed "employment" covered by this chapter pursuant to a reciprocal arrangement between the commission and each agency administering the unemployment compensation law of a jurisdiction in which part of such service is performed; or no contributions are required with respect to any of such service under any other unemployment compensation law; and

2. The employer so elects with the commission's approval and with written notice to the individual.

(d) An individual's entire service shall be deemed "localized" within a state, if such service is performed entirely within such state, or if such service is performed partly within and partly outside such state but the service performed outside such state is incidental to the individual's services within such state (for example, is temporary or transitory in nature or consists of isolated transactions).

(e) In determining whether an individual's entire services shall be deemed "employment" subject to this chapter, under pars. (b). (c) and (d) the commission may determine and redetermine the individual's status hereunder for such reasonable periods as it deems advisable, and may refund (as paid by mistake) any contributions which have been paid hereunder with respect to services duly covered under any other unemployment compensation law.

(f) The term **"employment"**, as applied to work for a governmental unit, except as such unit duly elects otherwise with the commission's approval, **shall not include:**

1. Employment as an elected or appointed public officer.

2. Employment, of a professional or consulting nature, paid on a per diem or retainer basis.

3. Employment by a govenmental unit on an unemployment work relief project, recognized as such by the commission.

4. Employment, by an educational institution supported wholly or substantially from public funds, of any student enrolled in such institution and carrying at least half its full-time schedule in the most recent school term, or of any person as a teacher in such institution.

5. Employment directly by the state fair during its active duration (including the week before and the week after the fair); or employment by the Wisconsin National Guard directly and solely in connection with its summer training camps or for emergencies; or employment directly by the conservation commission for emergency fire fighting.

6. Employment by a governmental unit in a given week, for the removal of snow or ice or for work connected with floods, of an individual who has worked for such governmental unit in 6 or less of the 52 weeks preceding the given week.

7. Service solely as a school crossing guard.

8. Part-time or occasional service in recreational activities.

9. Past service in a regular annual school-year position (other than teaching) by an individual who still (when claiming benefits) has status therein as a school-year employe.

11. Part-time or occasional service or work by visually handicapped persons performed in the workshop for the blind.

12. Employment by the state legislature except on transfer from another state agency.

(g) The term **"employment"**, except as a given employer elects otherwise with the commission's approval, **shall not include:**

1. Employment in agricultural labor.

2. Domestic service in the employ of an individual in his private home, or domestic service in the employ of a local college club or of a local chapter of a college fraternity or sorority.

3. Employment as a caddy on a golf course.

4. Employment as a newsboy, selling or distributing newspapers or magazines on the street or from house to house.

5. Service performed after June 30, 1939, with respect to which unemployment compensation is payable under the railroad unemployment insurance act (52 Stat. 1094).

6. Any type of maritime service specifically excluded from the coverage of the federal unemployment tax act.

108.02 (5)

7. Service performed in the employ of a religious, charitable, educational, or other organization described in s. 501 (c) (3) of the internal revenue code which is exempt from federal income tax under s. 501 (a) of said code.

8. Service performed by an individual for a person as an insurance agent or as an insurance solicitor, if all such service performed by such individual for such person is performed for remuneration solely by way of commissions.

11. Service as an unpaid officer of a corporation or association.

13. Service covered by any other unemployment compensation law pursuant to a reciprocal arrangement made by the commission under s. 108.14 (8m).

14. Service for an employer who would otherwise be subject to this chapter solely because of sub. (4) (b), if and while the employer, with written notice to and approval by the commission, duly covers, under the unemployment compensation law of another jurisdiction, all services for him which would otherwise be covered under this chapter.

15. Service performed in any calendar quarter in the employ of any organization exempt from federal income tax under s. 501 (a) of the internal revenue code (other than an organization described in s. 401 (a) of said code) or under s. 521 of the internal revenue code, if the remuneration for such service is less than $50.

16. Service performed by an individual in the employ of his son, daughter, or spouse, and service performed by a child under the age of 21 in the employ of his father or mother.

17. Service as an enrollee or other beneficiary of any program under the federal Economic Opportunity Act of 1964 (P. L. 88–452).

(h) If the federal unemployment tax act is so amended after 1944 as to make subject thereto remuneration paid for any employment excluded under par. (g), such exclusion under this chapter shall cease as of the date when said fed-

eral act first applies to such remuneration, except as provided in s. 108.14 (8m) (b).

(6) Wages. "Wages" means every form of remuneration payable for a given period (or paid within such period, if this basis is permitted or prescribed by the commission) to an individual for personal services, including salaries, commissions, vacation pay, dismissal wages, bonuses and the reasonable (actual or estimated average) value of board, rent, housing, lodging, payments in kind, and any other similar advantage received from the individual's employing unit or directly with respect to work for it; but there shall not be treated as "wages" the actual (or reasonably estimated average) amount of any required or necessary expenses incurred by an individual on his job. Tips shall be counted as "wages" solely for benefit purposes.

(7) Average weekly wage. (a) An employe's "average weekly wage" with respect to a given employer and benefit determination means the average weekly amount determined by dividing the employe's number of weeks of employment by such employer, within the period specified by s. 108.06 (1) (a), which have not been used in a previous benefit determination, into the total gross wages paid for such employment.

(b) In lieu of the foregoing standard procedure for determining an employe's average weekly wage, the commission may, on application of an employe or his employer or on its own motion, prescribe reasonable substitute procedure for determining or redetermining the average weekly wage of any employe if it finds, after consulting the employe and the given employer, that application of the standard procedure would be inequitable in such case.

(8) (a) An employer's **"payroll"** for a period shall include all wages paid within that period to the employer's employes for their "employment" by him.

(b) But an employer's "payroll" for any calendar year after 1965 shall not include more than the first $3,600 of wages paid by him during such year to an individual with respect to "employment" (including any employment covered by the unemployment compensation law of any other state).

108.02 (8)

(c) If the federal unemployment tax is amended to apply to a higher amount than the first $3,600 of wages (paid to an individual during a calendar year), then such higher amount shall likewise apply under par. (b), as a substitute for the $3,600 there specified, starting with the same period to which such federal amendment first applies.

(d) If $4,000 or a higher amount is applied pursuant to par. (c), the employer contribution rates (on payroll) determined under s. 108.18 (4) ,(5), (6) and (10) for the first 3 calendar years to which that higher amount applies shall be reduced by one-tenth of one per cent (on payroll), except where an experience rate of zero per cent applies.

(9) "Fund" means the unemployment reserve fund established in s. 108.16.

(10) "Employer's account" means a separate account in the fund, reflecting the employer's experience with respect to contribution credits and benefit charges under this chapter.

(11) "Reserve percentage" shall for contribution purposes refer to the status of an employer's account, as determined by the commission as of the applicable "computation date". In calculating an employer's net reserve as of any computation date, his account shall be charged with benefits paid on or before said date, and shall be credited with contributions, on his payroll through said date, if paid by the close of the month which follows said date or if paid pursuant to s. 108.18 (7) and within the period therein specified. The employer's "reserve percentage" means his account's net reserve as of the computation date, stated as a percentage of his "payroll" in the year ending on such date or in the year applicable under s. 108.18 (6).

(11m) "Computation date" means that date as of the close of which the commission computes reserve percentages and determines contribution rates for the next calendar year. The computation date shall be June 30, starting in 1963.

(12) "Week" means calendar week, starting Sunday and ending Saturday; but, where an employe starts a working shift on a given Saturday, all his hours and pay for that shift shall be counted in the calendar week which includes that Saturday.

(12m) "52 weeks" means 52 consecutive weeks, or 53 consecutive weeks if they include the fifty-third week ending in a calendar year, for the purposes of any determination issued under this chapter as to an employe's base period or benefit year.

(13) An employe's **"weeks of employment"** by an employer means all those weeks within each of which the employe has performed any wage-earning services for the employer in employment subject to this chapter.

(14) "Credit week" means a week of employment (of an employe by an employer) counted in computing benefits under s. 108.06.

(15) Weekly benefit rate. An employe's "weekly benefit rate" from a given employer means the amount determined in accordance with s. 108.05.

(16) Partial unemployment. An employe is "partially unemployed" in any week for which he receives some wages but less than his weekly benefit rate.

(17) Total unemployment. An employe shall be deemed "totally unemployed" in any week for which he receives no wages.

(18) Eligibility. An employe shall be deemed "eligible" for benefits for any given week of his unemployment unless he is disqualified by a specific provision of this chapter from receiving benefits for such week of unemployment, and shall be deemed "ineligible" for any week to which such a disqualification applies.

(19) An employe's **"waiting period"** means any period of time (for which no benefits are payable) required of the employe pursuant to s. 108.04 (3), as a condition precedent to his receipt of benefits.

(20) "Administration fund" means the fund established in s. 108.20.

(21) Undefined Terms. Any word or phrase used in this chapter and not specifically defined herein shall be interpreted in accordance with the common and approved usage thereof and in accordance with other accepted rules of statutory construction. No legislative enactment shall control the meaning or interpretation of any such word or

phrase, unless such enactment specifically refers to this chapter or is specifically referred to in this chapter.

(22) Self-Employment. An individual shall be deemed to be "self-employed" if he is engaged (not in the employ of another) in a business or enterprise which he has undertaken for the purpose of producing a substantial part of his gross income.

(23) Agricultural Labor. "Agricultural labor" means service performed:

(a) On a farm, in connection with cultivating the soil, or in connection with raising or harvesting any agricultural or horticultural commodity, including the raising, shearing, feeding, caring for, training and management of live stock, bees, poultry, and fur-bearing animals and wildlife.

(b) In the employ of the owner or tenant or other operator of a farm, in connection with the operation, management, conservation, improvement, or maintenance of such farm and its tools and equipment, or in salvaging timber or clearing land of brush and other debris left by a hurricane, if the major part of such service is performed on a farm.

(c) In connection with the production or harvesting of maple sirup or maple sugar or any commodity defined as an agricultural commodity in section 15 (g) of the federal agricultural marketing act, as amended, or in connection with the raising or harvesting of mushrooms, or in connection with the hatching of poultry, or in connection with the ginning of cotton, or in connection with the operation or maintenance of ditches, canals, reservoirs, or waterways used exclusively for supplying and storing water for farming purposes.

(d) In handling, planting, drying, packing, packaging, processing, freezing, grading, storing, or delivering to storage or to market or to a carrier for transportation to market, any agricultural or horticultural commodity; but only if such service is performed as an incident to ordinary farming operations or, in the case of fruits and vegetables, as an incident to the preparation of such fruits or vegetables for market. The provisions of this paragraph shall not be deemed to be applicable with respect to service performed in connection with commercial canning or commercial freezing or in connection with any agricultural or horticultural commodity after its delivery to a terminal market for distribution for consumption.

(e) As used in this subsection, the term "farm" includes stock, dairy, poultry, fruit, fur-bearing animal, and truck farms, plantations, ranches, nurseries, ranges, greenhouses or other similar structures used primarily for the raising of agricultural or horticultural commodities, and orchards.

(24) An employe's **"benefit year"** means the period for which his benefit rights are determined under ss. 108.06 and 108.061.

(25) An employe's **"base period"** means the period, immediately preceding his benefit year, which is used to determine his benefit rights for that year pursuant to ss. 108.06 and 108.061.

108.03 PAYMENT OF BENEFITS. (1) Benefits shall be paid to each unemployed and eligible employe from his employer's account, under the conditions and in the amounts stated in (or approved by the commission pursuant to) this chapter, and at such times, at such places, and in such manner as the commission may from time to time approve or prescribe.

(2) (a) The benefit liability of each employer's account shall begin to accrue under s. 108.06 in the first week completed on or after the first day of that calendar year within which his contributions first began to accrue under this chapter.

(b) Benefits shall become payable from each employer's account beginning with the first week completed 6 months after the first day of that calendar year within which his contributions first began to accrue under this chapter.

(3) When an employer, after due notice of a benefit claim against his account, has conceded liability thereunder or has failed to file the required report thereon or has failed to raise any eligibility issue thereunder, any benefits allowed under any resulting benefit determination shall be promptly paid; and any issue thereafter raised by the employer shall not affect benefits already paid.

108.04 ELIGIBILITY FOR BENEFITS.

(1) AVAILABILITY FOR WORK. (a) An employe shall be ineligible for benefits for any week in which he is with due notice called on by his current employing unit to report for work actually available within such week and is unavailable for work or physically unable to do his work.

(b) An employe shall be ineligible for benefits from an employer's account:

1. While he is physically unable to work, or substantially unavailable for work, if his employment with such employer was suspended by the employe or by the employer or was terminated by such employer because the employe was physically unable to do, or unavailable for, his work; or

2. While he is on a voluntary leave of absence granted for a definite period, until such period has ended or until the employe has returned to work, whichever occurs first.

108.04 (1)

(c) A pregnant woman shall be deemed unavailable for work and ineligible for benefits for the period which begins 10 weeks before the week which includes the expected date of childbirth and which ends 4 weeks after the week which includes the date of childbirth. The commission may require any such claimant to submit a doctor's certificate to establish such dates.

(d) 1. A woman whose eligibility is suspended under par. (c) shall continue to be ineligible, after the 4 weeks specified in par. (c), until the week in which she has notified her most recent employer that she is physically able to work and available for work.

2. Thereafter, until she has had 30 hours of employment in a week, she shall not be eligible for benefits for any week unless she establishes to the satisfaction of the commission that during such week she has made an active and bona fide search for employment.

(e) An individual who is **self-employed** shall not be eligible for benefits for any week in which he has worked at his self-employment, unless he establishes to the satisfaction of the commission that during such week he made an active and bona fide search for employment.

(f) If an employe is required by law to have a **license**, issued by a governmental agency, to perform his customary work for an employer, the employe shall not be eligible for benefits from the employer's account where the employe's employment was suspended or terminated because his license has been suspended, revoked or not renewed due to his own fault, until he has a valid license to perform such work.

(g) In case an individual claims benefits based on his employment by a corporation, if he and the members of his immediate **family** together own 51 per cent or more of its voting stock, or if he and his spouse together own 20 per cent or more of its voting stock and one of them was during such employment an officer or director of the corporation, then:

1. The corporate employer shall so inform the commission on its reports (as to such individual) for benefit purposes; and

2. The individual shall so report, when claiming benefits; and

3. The individual shall not be eligible for benefits based on such employment for any week of his unemployment, unless he establishes to the satisfaction of the commission that during such week he made an active and bona fide search for employment.

(2) REGISTRATION FOR WORK. (a) An employe shall be deemed eligible, for waiting period or benefit purposes, as to any given week for which he receives no wages, only if he has within such week registered for work in such manner as may then be prescribed by commission rules; provided that, if the commission finds that there are conditions under which an employe cannot reasonably be required to comply with the foregoing registration requirement, the commission may by general rule waive this requirement under such stated conditions. Each employer shall inform his employes of the foregoing registration requirement, in such reasonable manner as the commission may from time to time prescribe.

(b) Any claimant, thus registered, may also be required at any time to make such other efforts to secure work as the commission may reasonably direct under the circumstances, and to supply proper evidence thereof; and shall, if he fails without good cause to do so, be ineligible for each week such failure continues.

(c) A claimant who earns or receives wages for one or more weeks of unemployment may be required, pursuant to commission rules, to register and be available for work in order to be or remain eligible for benefits for any such week.

(3) WAITING PERIOD. The first week of an employe's benefit year shall be his "waiting period" for that year.

108.04 (4)

(4) QUALIFYING CONDITIONS. (a) An employe shall not be eligible to start a benefit year with any given week of unemployment unless he has had a total of 18 or more "weeks of employment" from one or more employers within the 52 weeks preceding that week or within those 52 weeks plus the number of any weeks over 7 (occurring within those 52 weeks) for which he received dismissal or termination pay, or temporary total disability payments under ch. 102.

(af) There shall be counted toward the "weeks of employment" required by par. (a) any federal service, within the relevant period, which is assigned to Wisconsin under an agreement pursuant to title XV of the social security act.

(al) Paragraph (a) shall not disqualify an employe who has had 14 or more but less than 18 weeks of employment, within the 52 weeks specified by par. (a), if he has totaled 55 or more weeks of employment, including weeks under par. (af), within those 52 weeks plus any base period which ended not more than 10 weeks before the start of those 52 weeks.

(b) An employe shall be ineligible for benefits, based on his past employment by a given employer, while his applicable "average weekly wage" as to such employer is under $16, unless s. 108.07 (2) is applied to that employment.

(c) An employe shall not be eligible to receive benefits from the account of an employer who is engaged in the canning of fresh perishable fruits or vegetables, based on his weeks of employment by such employer ending within a given calendar year, if during such year he has been employed by such employer within fewer than 18 weeks and solely within the active canning season or seasons (as determined by the commission) of the establishment in which he has been employed by such employer, unless he had earned wages (for services performed for one or more other covered employers, and submits adequate evidence of such wages) of $200 or more during the 52 weeks preceding his

first week of employment by such canning employer ending within such year.

(e) In no case shall any employe employed by any bowling alley as a **pin boy** be eligible to receive any benefits, based on such employment, for unemployment during May, June, July, or August.

(f) If a **student,** while he is regularly attending an educational institution and carrying at least a half-time schedule, is employed in a given week, it shall not be counted as a credit week for benefit purposes if in such week he has worked for the given employer:

1. Not more than 24 hours; or

2. As a formal and accredited part of the regular curriculum of his school; or

3. Solely within the customary vacation days or periods of his school.

(g) Similarly, if an individual who was such a student throughout his school's most recently completed term works for an employer within the ensuing vacation weeks, such weeks shall not be counted as credit weeks for benefit purposes, unless the student had graduated from his school.

(5) DISCHARGE FOR MISCONDUCT. An employe's eligibility, for benefits based on those credit weeks then accrued with respect to an employing unit, shall be barred for any week of unemployment completed after he has been discharged by the employing unit for misconduct connected with his employment; provided, moreover, that such employe shall be deemed ineligible for benefits (from other previous employer accounts) for the week in which such discharge occurred and for the 3 next following weeks.

(6) DISCIPLINARY SUSPENSION. As to an employe's weeks of unemployment by reason of a disciplinary suspension by a given employer, the employe shall be ineligible for benefits as follows:

(a) If the suspension was for misconduct connected with his employment, he shall be ineligible from the given employer's account for each such week and ineligible from other previous employer accounts for the first 3 such weeks.

108.04 (6)

(b) If the suspension was for other good cause connected with his employment, he shall be ineligible for the first 3 such weeks.

(7) VOLUNTARY TERMINATION OF EMPLOYMENT. (a) If an employe terminates his employment with an employing unit, he shall be ineligible for any benefits based on such employment, and ineligible for benefits based on other previous employment for the week of termination and the 4 next following weeks, except as hereinafter provided.

(b) Paragraph (a) shall not apply if the commission determines that the employe terminated his employment with good cause attributable to the employing unit.

(c) Paragraph (a) shall not apply if the commission determines that the employe terminated his employment because he was physically unable to do his work or because the health of a member of his immediate family left him no reasonable alternative; provided that if the commission determines that he is physically unable to work or substantially unavailable for work, he shall be ineligible while such inability or unavailability continues.

(d) Paragraph (a) shall not apply if the commission determines that the employe terminated his employment to take another job; provided, that he shall be ineligible, for benefits based on the employment terminated, until he has been employed within at least 7 subsequent weeks.

(f) Paragraph (a) shall not apply if the commission determines that the employe terminated his employment because he was transferred by his employing unit to work paying less than two-thirds of his immediately preceding wage rate with the employing unit; provided that he shall be ineligible for benefits for the week of termination and the 4 next following weeks.

(8) SUITABLE WORK. (a) If an employe fails either to apply for work when notified by a public employment office or to accept work when offered to him, and such failure was without good cause as determined by the commission, he

shall be ineligible for the week in which such failure occurs and thereafter until he has again been employed within at least 4 weeks and has earned wages equalling at least 4 times his weekly benefit rate.

(af) If an employe fails to return to work with a former employer who has duly recalled him, and such failure was without good cause as determined by the commission, he shall be ineligible for benefits from that employer's account for the week in which such failure occurs and thereafter until he has again been employed within at least 4 weeks and has earned wages equalling at least 4 times his weekly benefit rate.

(b) If the commission determines that such a failure has occurred with good cause, but that the employe is physically unable to work or substantially unavailable for work, he shall be ineligible for the week in which such failure occurred and while such inability or unavailability continues.

(c) When a claimant accepts work which he could have refused with good cause, and then terminates such employment with the same good cause and within the first 10 weeks after starting work, his eligibility for benefits based on other previous employment shall not be suspended, under sub. (7), by reason of such termination.

(d) A claimant shall be deemed to have good cause under par. (a) if the commission determines that his failure related to work at a lower grade of skill or significantly lower rate of pay than applied to him on one or more recent jobs, and that he had not yet had a reasonable opportunity (in view of labor market conditions and his degree of skill, but not to exceed 6 weeks after he became unemployed) to seek a new job substantially in line with his job skill and prior rate of pay.

108.04 (9)

(9) PROTECTION OF LABOR STANDARDS. Benefits shall not be denied under this chapter to any otherwise eligible individual for refusing to accept new work under any of the following conditions:

(a) If the position offered is vacant due directly to a strike, lockout, or other labor dispute.

(b) If the wages, hours or other conditions of the work offered are substantially less favorable to the individual than those prevailing for similar work in the locality.

(c) If as a condition of being employed the individual would be required to join a company union or to resign from or refrain from joining any bona fide labor organization.

(10) LABOR DISPUTE. An employe who has left (or partially or totally lost) his employment with an employing unit because of a strike or other bona fide labor dispute shall not be eligible for benefits from such (or any previous) employer's account for any week in which such strike or other bona fide labor dispute is in active progress in the establishment in which he is or was employed.

(10m) If the active progress of such a strike or other bona fide labor dispute ends on a Sunday, it shall not be deemed under sub. (10) to be in active progress in the calendar week beginning on that Sunday as to any employe who did not normally work on Sundays in such establishment.

(11) FRAUDULENT CLAIMS. In addition to any other provision, including penalties, which may apply under this chapter:

(a) If a claimant, in filing his claim for any week, conceals any part of his wages earned in or paid or payable for that week, or conceals his refusal (within that week) of a job offer or any other material fact relating to his eligibility for benefits, so much of any benefit payment as was paid because of such concealment shall be recovered as an overpayment.

(b) Any such claimant may also, by a determination issued under s. 108.09, be required, as to each such act of concealment, to forfeit such benefits as would otherwise become payable to him for not more than 3 weeks of compensable unemployment completed not later than 2 years following the date of such determination. The benefits thus forfeited by a claimant shall be duly charged against his benefit credits and against the proper employer's account and shall be credited to the fund's balancing account.

(12) PREVENTION OF DUPLICATE PAYMENTS. (a) Any individual who is entitled to federal readjustment allowances under the servicemen's readjustment act of 1944 may nevertheless claim benefits based on his available credit weeks under this chapter, and may receive such benefits if otherwise eligible; but any individual who receives a federal readjustment allowance for a given week shall be ineligible for benefits paid or payable for that same week under this chapter.

(b) Similarly, any individual who receives, through the commission, any other type of unemployment benefit or allowance for a given week shall be ineligible for benefits paid or payable for that same week under this chapter.

(c) Any individual who receives unemployment compensation for a given week under any federal law through any federal agency shall be ineligible for benefits paid or payable for that same week under this chapter.

(d) Any individual who receives unemployment compensation for a given week under the law of any other state (with no use of benefit credits earned under this chapter) shall be ineligible for benefits paid or payable for that same week under this chapter.

(e) Any individual who receives a temporary total disability payment under ch. 102 for a given week shall be ineligible for benefits paid or payable for that same week under this chapter.

108.04 (12)

(f) The provisions of this subsection, denying an individual's eligibility for benefits under this chapter as to any week for which he receives any type of benefit or allowance (or supplementary payment) for unemployment under any federal law, shall not prevent benefits under this chapter from being paid to an otherwise eligible individual who may later be (but has not yet been) held to have been "adversely affected" and therefore eligible for a "trade readjustment allowance" under the federal Trade Expansion Act of 1962 (P.L. 87–794). As to any such individual, and any week for which such benefits have been paid to him and for which such a federal allowance later becomes payable to him, those benefits, if federally reimbursed to the commission and the fund, shall be treated as a (partial) federal allowance payment to him for such week, and the commission may, pursuant to an agreement under said act, pay him any additional federal allowance due him for such week. In any such case, the individual's benefit credits under this chapter shall be restored accordingly, and the relevant amount of federal reimbursement shall be credited by the commission to the proper employer's account in the fund.

(13) NOTIFICATION AS TO INELIGIBILITY. (a) The commission may take administrative notice of any fact indicating an employe's ineligibility, whether or not the employing unit has reported such fact or asserted the employe's ineligibility under this chapter.

(b) Unless an employer has duly notified the commission (in such manner and within such time limit as the commission's rules and regulations may prescribe) that he believes a designated provision of this section or of the "employment" definition of s. 108.02 should operate to deny benefits from his account to the given employe for the week or weeks in question, or unless the commission applies the provisions of par. (a), no provision of this section or of such definition shall operate to deny such benefits to such employe; provided, however, that this subsection shall not affect the application of subs. (2), (3), (4) (a) and (b), (8) and (11), even though the commission has not been thus notified; and provided, further, that said sub. (2) shall not

apply to a case for which the employer in question expressly waives its application by written notice to and with the approval of the commission.

(c) In case an employer, after a request therefor has been duly mailed to him, fails to file the required report on the eligibility, weekly benefit rate and credit weeks of an employe who has claimed benefits from the employer's account, or if such report is received more than 7 days after such mailing:

1. The commission may determine and proceed to pay the benefits thus claimed, based on the claimant's statements.

2. If benefits are thus determined, the employer shall be liable for a tardy filing fee of $5, to be paid to the commission and credited to the administration fund, except where the employer later files the required report and satisfies the commission that it was tardy because of circumstances beyond his control.

(d) As to any benefits paid from one employer's account by reason of another employer's failure to file duly a report requested from him by the commission, the first week's benefits thus paid shall not be recovered from the employe but shall be credited to the one employer's account and charged to the other employer's account.

(e) Whenever an individual claims benefits based on his employment by a government unit, it shall, if it believes that sub. (15) as to retirement payments may apply, so notify the commission. In any such case the Wisconsin retirement fund and the state teachers retirement system shall, on request from the commission, report to it the relevant facts, and the commission shall apply sub. (15) accordingly.

(14) If the commission finds that the official war-time manpower policies of the United States are or may be materially hampered, in any clearly definable class of cases, by any application of subs. (7) or (8), so as to interfere with the effective war-time use of civilian manpower in Wisconsin, the commission may by general rule, after public hearing, modify or suspend such application accordingly.

108.04 (15)

(15) RETIREMENT PAYMENTS. If an employe claims benefits based on his past work for a covered employer, but such employer duly notifies the commission pursuant to sub. (13), and the commission determines, that the employe is receiving or has claimed and will receive, or has been retired at such employer's compulsory retirement age and could claim and receive, retirement payments, as to any week covered by his benefit claim, under a group retirement system to whose financing any employing unit has substantially contributed or under a government retirement (or old-age insurance) system or under both, then the benefits thus claimed:

(a) Shall be denied for any such week, from the account of such employer, if the employe left his employment with that employer to retire before he reached the compulsory retirement age used by that employer.

(b) Shall not be denied for any such week, from the account of such employer, if the employe is otherwise eligible and left or lost his employment with that (or any other) employing unit because he had reached the compulsory retirement age used by the employing unit in question.

(c) Shall, if payable, be determined for any such week by treating as if it were wages:

(1) That amount of the employe's weekly rate of retirement payments which has been financed by his employer or others (and not by the employe's own contributions), under any retirement system where such amount is separately calculated or can be estimated with reasonable accuracy, provided acceptable evidence as to such amount is furnished the commission.

(2) All but $5 of the employe's weekly rate of retirement payments under one or more other retirement systems.

108.05 AMOUNT OF BENEFITS.

(1) WEEKLY BENEFIT RATE, FOR TOTAL UNEMPLOYMENT. Each eligible employe shall be paid benefits from his employer's account for each week of his total unemployment at the weekly benefit rate, based on the employe's "average weekly wage" from the given employer, shown by the following schedule:

SCHEDULE

Line	Average Weekly Wage Class	Weekly Benefit Rate	Line	Average Weekly Wage Class	Weekly Benefit Rate
1.	Under $ 16.00	$ None	26.	$ 68.01 to $ 70.00	$35
2.	$ 16.00 to 19.00	11	27.	70.01 to 72.00	36
3.	19.01 to 22.00	12	28.	72.01 to 74.00	37
4.	22.01 to 24.50	13	29.	74.01 to 76.00	38
5.	24.51 to 27.00	14	30.	76.01 to 78.00	39
6.	27.01 to 29.50	15	31.	78.01 to 80.00	40
7.	29.51 to 32.00	16	32.	80.01 to 82.00	41
8.	32.01 to 34.00	17	33.	82.01 to 84.00	42
9.	34.01 to 36.00	18	34.	84.01 to 86.00	43
10.	36.01 to 38.00	19	35.	86.01 to 88.00	44
11.	38.01 to 40.00	20	36.	88.01 to 90.00	45
12.	40.01 to 42.00	21	37.	90.01 to 92.00	46
13.	42.01 to 44.00	22	38.	92.01 to 94.00	47
14.	44.01 to 46.00	23	39.	94.01 to 96.00	48
15.	46.01 to 48.00	24	40.	96.01 to 98.00	49
16.	48.01 to 50.00	25	41.	98.01 to 100.00	50
17.	50.01 to 52.00	26	42.	100.01 to 102.00	51
18.	52.01 to 54.00	27	43.	102.01 to 104.00	52
19.	54.01 to 56.00	28	44.	104.01 to 106.00	53
20.	56.01 to 58.00	29	45.	106.01 to 108.00	54
21.	58.01 to 60.00	30	46.	108.01 to 110.00	55
22.	60.01 to 62.00	31	47.	110.01 or more	56
23.	62.01 to 64.00	32			
24.	64.01 to 66.00	33			
25.	66.01 to 68.00	34			

Note: The maximum weekly benefit rate under this schedule is adjusted semiannually, pursuant to s. 108.05 (2). The schedule printed above applies to benefit determinations issued in the period starting July 5, 1965 and ending December 31, 1965.

108.05 (1m)

(1m) FINAL PAYMENTS IN CERTAIN CASES. Whenever an employe's benefit credits under a given determination are nearly exhausted, so that paying the benefits normally due him for a given week of unemployment would reduce such credits below his applicable weekly benefit rate, his actual benefits for such week shall equal all benefit credits remaining under said determination.

(2) SEMIANNUAL ADJUSTMENT OF MAXIMUM BENEFIT RATE. (a) This chapter's maximum weekly benefit rate, as to benefit determinations whose first benefit check is issued in a given half year (starting January 1 or July 1), shall be based on the "average wages per average week" of the preceding "base year" (ended 6 months before the starting date of the given half year) pursuant to this subsection.

(b) The commission shall determine semiannually, by December 1 and by June 1, for the last completed "base year" (ended June 30 or December 31), from reports to the commission (including corrections thereof) filed within 3 months after the close of that year by employers (except government units) covered by this chapter as to their employes in employment covered by this chapter:

1. The gross wages thus reported by all such employers as paid in that year for such employment; and

2. The average of the 12 mid-month totals of all such employes in employment thus reported for that year; and

3. The quotient obtained by dividing said gross wages by said average; and

4. The amount (herein called "average wages per average week") obtained by dividing said quotient by 52.

(c) Based on the amount of "average wages per average week" thus determined, this chapter's maximum weekly benefit rate, as to benefit determinations whose first benefit check is issued in the ensuing half year (starting January 1 or July 1), shall equal the result obtained by rounding 52.5 per cent of said "average wages per average week" to the nearest multiple of one dollar.

(d) Whenever said result is higher or lower than the current half year's maximum weekly benefit rate, under the schedule which currently applies under this section, the commission shall change the closing lines of that schedule, for benefit determinations whose first benefit check is issued in the next half year, so that each such line will show an "average weekly wage class" two dollars higher and a "weekly benefit rate" one dollar higher than the preceding line, except that the new last line, showing the new maximum weekly benefit rate determined under par. (c), shall specify that "average weekly wage class" which ranges upward without limit and starts one cent above the higher wage figure of the next preceding line.

(e) The commission shall promptly record in its minutes, and shall have officially published within 10 days, the "average wages per average week" and the corresponding maximum weekly benefit rate thus determined by it, and the resulting schedule of average weekly wage classes and weekly benefit rates, which shall then apply to all benefit determinations whose first benefit check is issued in the ensuing half year.

(f) The commission shall certify such schedule to the revisor of statutes, who shall when publishing the statutes include the latest such schedule then available.

(g) Whenever the result obtained under par. (c) is $1 or more higher (or lower) than the current half year's maximum weekly benefit rate, then the weekly benefit rate of any outstanding benefit determination whose weekly benefit rate in the current half year is at the maximum of that current half year shall be increased (or lowered) by $1 as to any checks issued thereunder after that current half year.

(h) Whenever January 1 or July 1 does not fall on Saturday, Sunday or Monday, any change in weekly benefit rates under this subsection shall apply to checks issued after the first Sunday thereafter.

(3) BENEFITS FOR PARTIAL UNEMPLOYMENT. (a) If an eligible employe's total wages for a given week are less than his applicable weekly benefit rate, but are at least

one-half of said rate, he shall be paid one-half of his weekly benefit rate for such week.

(b) If an eligible employe's total wages for a given week are less than one-half of his applicable weekly benefit rate, he shall be paid his full weekly benefit rate for such week.

(4) HOLIDAY OR VACATION PAY. (a) An employe's holiday pay for a given week shall, for benefit purposes, be treated as wages for that week only if it has become definitely payable to the employe within 4 days after the close of that week.

(b) An employe's vacation pay shall, for benefit purposes, be treated as wages for a given week only if it has by the close of that week become definitely allocated and payable to the employe for that week and he has had due notice thereof, and only if such pay (until fully assigned) is allocated:

1. At not less than the employe's approximate full weekly wage rate; or

2. Pursuant to any other reasonable basis of allocation, including any basis commonly used in computing the vacation rights of employes.

(5) DISMISSAL PAY. An employe's dismissal or termination pay shall, for benefit purposes, be treated as wages for a given week only if it has by the close of that week become definitely allocated and payable to the employe for that week, and he has had due notice thereof, and only if such pay (until fully assigned) is allocated:

(a) At not less than the employe's approximate full weekly wage rate; or

(b) Pursuant to any other reasonable basis of allocation, including any basis commonly used in computing the termination pay of employes.

(6) BACK PAY. A payment to an individual by an employing unit, which is in the nature of back pay (or in lieu of pay for personal services) for certain past weeks, whether made under a back-pay award or similar decision or otherwise, shall be wages for benefit purposes but only when paid within 104 weeks after the start of the earliest such week.

108.06 BENEFIT LIABILITY OF EMPLOYER'S ACCOUNT.

(1) BENEFIT CREDIT WEEKS. (a) Except as this section or s. 108.04 provides otherwise, there shall be counted as a credit week for benefit purposes each week of employment, of a given employe by a given employer, which is or has been completed:

1. After the benefit liability of the employer's account has begun to accrue; and

2. Within the employe's base period, for the benefit year in question, determined pursuant to s. 108.061.

(b) In case an employe has had more than 45 weeks of employment by an employer within the period specified in par. (a) 2, only 45 of such weeks shall be counted and available as "credit weeks" with respect to such employer under any one benefit determination.

(2) DURATION OF BENEFITS, BASED ON CREDIT WEEKS. (a) Each benefit determination issued under s. 108.09 shall allow benefits to an employe, if otherwise eligible, based on the number of his credit weeks then available with respect to an employer.

(c) Each such credit week shall, in determining the employe's total benefit credits, be valued at eight-tenths of his weekly benefit rate as to that employer.

(d) The total benefit credits thus resulting under any benefit determination, based on its credit weeks and weekly benefit rate, shall be adjusted to the nearest multiple of one-half of said weekly benefit rate.

(e) No such determination shall allow benefits totaling more than 34 times its weekly benefit rate.

(2m) MAXIMUM DURATION OF BENEFITS. If the credit weeks available in an employe's base period would permit two or more benefit determinations allowing him a total of more than 34 weeks of benefits for total unemploy-

ment in his benefit year, such total shall be reduced to 34 weeks of such benefits by eliminating the last benefit credits available to be charged.

(3) DURATION OF LIABILITY. (a) In no case shall the fund remain or be liable to pay benefits to an employe, based on credit weeks in his base period, for any week of unemployment occurring after the close of the employe's ensuing benefit year, determined pursuant to s. 108.061.

(b) Once a determination has been made under s. 108.09 as to the amount of benefits potentially payable to an employe based on his available credit weeks with respect to a given employer, all benefits thereafter payable to the employe based on credit weeks from that employer shall be paid in accordance with that determination, until it ceases to apply.

Note: Under the above provisions, benefit weeks are figured from one employer at a time, based on the number of work-weeks available from that one employer, as follows:

Work weeks	Benefit weeks	Work weeks	Benefit weeks	Work weeks	Benefit weeks
1	1	16	13	31	25
2	1½	17	13½	32	25½
3	2½	18	14½	33	26½
4	3	19	15	34	27
5	4	20	16	35	28
6	5	21	17	36	29
7	5½	22	17½	37	29½
8	6½	23	18½	38	30½
9	7	24	19	39	31
10	8	25	20	40	32
11	9	26	21	41	33
12	9½	27	21½	42	33½
13	10½	28	22½	43 or more	34
14	11	29	23		
15	12	30	24		

(c) A given determination shall cease to apply only when all benefit credits available thereunder have been charged or canceled, or as to unemployment occuring after the close of the benefit year to which such determination applies.

(d) Credit weeks included in a given benefit determination shall not be available for use in any subsequent benefit determination.

(e) To determine qualifying employment under s. 108.04 (4) (a), and any other subsequently determined benefit rights, the commission shall count all weeks of employment covered by an employer's report and all credit weeks included in any benefit determination as if they had all occurred consecutively during the most recent part of the period covered by the given report or determination.

108.061 BASE PERIOD AND BENEFIT YEAR.

(1) There shall be payable to an employe, for weeks ending within his benefit year, only those benefits determined for that benefit year based on his credit weeks in his immediately preceding base period.

(2) Except as this section provides otherwise, an employe's "base period" shall be the 52 weeks which immediately precede a "valid new claim week", and his "benefit year" shall be the 52 weeks which begin with a "valid new claim week".

(3) An employe shall have a "valid new claim week" (starting a new benefit year) if all the following conditions are met:

(a) The week is not within an unexpired benefit year.

(b) He is totally or partially unemployed in that week, and has claimed as to that week pursuant to s. 108.08 (1).

(c) He has registered for work pursuant to s. 108.04 (2), if it applies to that week.

(d) As of the start of that week, he has qualifying employment pursuant to s. 108.04 (4) (a), (af), (al) and (b).

(e) As of the start of that week, he has some uncancelled and uncharged credit weeks in the preceding 52 weeks, or in any longer base period which would apply under sub. (4).

(f) He is otherwise eligible as to that week.

(4) If an employe receives dismissal or termination pay, or temporary total disability payments under ch. 102:

(a) For more than 7 of the 52 weeks preceding a valid new claim week, his base period shall be lengthened by the number of weeks over 7 (occurring within those 52 weeks) for which he received such payments.

(b) For more than 17 of the 52 weeks of a benefit year, that benefit year shall be lengthened by the number of weeks over 17 (occurring within those 52 weeks) for which he received such payments.

108.07 LIABILITY OF SEVERAL EMPLOYERS.

(1) (a) In case an employe is unemployed and eligible as to 2 or more employers in the same week, and has claimed benefits, he shall, for the purposes of this subsection and s. 108.04 (13), be deemed to have claimed benefits from the account of each such employer; but his benefits for such unemployment in such week shall be paid only from the account of that one of such employers by whom he was most recently employed within his base period, except as provided in this section.

(b) After an employe has become eligible for a benefit check under a given benefit determination, he shall, while it remains valid under s. 108.06 (3), be eligible for benefits solely under that determination, except while it is suspended under s. 108.04.

(2) In case an employe has usually performed services in the same week for 2 or more employers, under an arrangement between such employers, the commission may combine his wages and his employment from such employers to determine his benefit rights under s. 108.05 and 108.06 as if such wages and employment had been from a single employer, and may pay benefits accordingly, and may prorate the resulting benefit charges between the accounts of such employers, by such methods as it deems fair and reasonable. The commission may temporarily charge such benefit payments to the fund's balancing account, pending their pro rata allocation to the accounts of such employers.

(3) In case an employe, to whom no benefit determination then applies, becomes unemployed and eligible as to 2 or more employers, the commission may, if it finds that applying sub. (1) (a) would be grossly inequitable to the employe, determine and use first his most fairly representative benefit rights.

(4) Once a benefit determination has been issued to an employe based on his work for a former employer, benefit payments and charges thereunder shall not be affected by any later determination that a subsequent employing unit was also a covered employer.

108.08 NOTIFICATION. (1) To receive benefits for any given week of his unemployment an employe shall give notice to the commission with respect to such week of unemployment, through a public employment office, within such time limit and in such manner as the commission may by rule prescribe.

(2) The commission may require from any or each employer notification of the partial or total unemployment of his employes, within such time, in such form, and in accordance with such rules as the commission may prescribe.

108.09 SETTLEMENT OF BENEFIT CLAIMS

(1) FILING. Claims for benefits shall be filed pursuant to general commission rules, either at the public employ-

ment office for the district or as the commission's rules may otherwise direct; provided that the commission may waive the filing of a claim directly by the employe himself, for benefits from a given employer's account, where due notice of the employe's unemployment is given the employer by the commission or is given the commission by the employer, which notice shall in either of such cases serve as a claim for benefits. The employer from whose account benefits are claimed (whether directly by the employe or through the commission) shall promptly inform the commission in writing of his acceptance or rejection of such claim, together with his reasons therefor.

(2) INITIAL DETERMINATION. A deputy designated by the commission shall promptly determine whether or not the claim is valid and the amount of benefits apparently payable thereunder, and shall also determine whenever necessary whether or not the employe's eligibility for benefits has been suspended or terminated; provided however, that the deputy may set aside or amend a determination at any time on the basis of subsequent information or to correct a clerical mistake. A copy of each determination shall be mailed to the last known address of each of the parties. Either party to the determination may request a hearing as to any matter therein, by filing such request within 10 days after such mailing and in accordance with procedure prescribed by the commission; except that the employer may not request a hearing with respect to benefits already paid in accordance with his concession of liability.

(2m) In any case in which an employe has filed a claim for benefits from an employer's account, the employe's statement may be taken as to his eligibility, weekly benefit rate, and credit weeks. In any such case a commission deputy may issue a determination as to the employe's benefit rights, based on the employe's statement and on any other information then available. In accordance with sub. (2), such determination shall be mailed to the last known address of

each of the parties, and either party to the determination may request a hearing as to any matter therein, by filing such request within 10 days after such mailing and in accordance with procedure prescribed by the commission; but the employer's request shall be valid only if his report (as to the eligibility, weekly benefit rate, and credit weeks of the employe) is included in (or, if filed earlier, incorporated by specific reference in) such request.

(2r) The employe's copy of any benefit determination may be given to him, instead of being mailed to him; and he may in that event request a hearing as to any matter therein by duly filing such request within 10 days after such delivery.

(3) APPEALS. Unless such request for a hearing is withdrawn, each of the parties shall be afforded reasonable opportunity to be heard, and the claim thus disputed shall be promptly decided by such appeal tribunal as the commission may designate or establish for this purpose, or by the commission as provided in sub. (6). If the party requesting a hearing fails to appear at the hearing, a commission examiner designated for this purpose may dismiss the appeal, provided that due notice of the hearing was mailed to the party's last known address and good cause for his failure to appear has not been shown said examiner within 10 days after the hearing date. If the other party fails to appear at the hearing, the appeal tribunal shall proceed with the hearing, provided that due notice of the hearing was mailed to said party's last known address, and may issue its decision without further hearing, provided that good cause for his failure to appear has not been shown said examiner within 10 days after the hearing date.

(3m) REPORTS BY EXPERTS. The contents of verified or certified reports by qualified experts shall be received in evidence in any proceeding under this section in the same manner and subject to the same conditions as would apply to such reports under s. 102.17 (1) (as).

(4) APPEAL TRIBUNALS. To hear and decide a disputed claim, the commission shall establish an appeal tribunal. Any such tribunal may consist of 1 or 3 full-time

salaried examiners; or it may consist of an appeal board composed of 1 full-time salaried examiner who shall serve as chairman, and of 2 other members appointed by the commission, namely an employer or representative of employers and an employe or representative of employes, who shall each be paid a fee of not more than $10 per day of active service on such tribunal (plus necessary expenses). No person shall hear any case in which he is a directly interested party. The chairman of such an appeal board shall act for it at any session in the absence of one or both other members, provided they have had due notice of such session.

(5) PROCEDURE. (a) The manner in which claims shall be presented, the reports thereon required from the employe and from employers, and the conduct of hearings and appeals shall be governed by general commission rules (whether or not they conform to common law or statutory rules of evidence and other technical rules of procedure) for determining the rights of the parties.

(b) All testimony at any hearing under this section shall be taken down by a stenographer, or by a recording machine, but need not be transcribed unless either of the parties requests a transcript prior to expiration of his right to further appeal hereunder and pays to the commission in advance a fee of $5 therefor, plus 25 cents for each page by which the transcript exceeds 20 pages. When a transcript is thus furnished one of the parties at his request, a copy of the transcript shall be furnished the other party free of charge. The transcript fee thus collected shall be paid to the administration fund.

(6) COMMISSION REVIEW. (a) At any time before a deputy's determination or an appeal tribunal's decision on a claim is mailed to the parties, the commission may transfer the proceedings on the claim from such deputy or appeal tribunal to itself.

(b) Either party may petition the commission for review of an appeal tribunal decision, pursuant to general commission rules, within 10 days after it was mailed to his last known address. Promptly after the filing of such a peti-

tion, the commission may either dismiss it as not timely at any level or may affirm, reverse, change, or set aside such decision, on the basis of the evidence previously submitted in such case, or direct the taking of additional testimony.

(c) Within 10 days after expiration of the right of the parties to request a hearing by an appeal tribunal or to petition for review by the commission, or within 30 days after a decision of the commission was mailed to the parties, the commission may on its own motion reverse, change, or set aside the determination or decision, on the basis of evidence previously submitted in such case, or direct the taking of additional testimony.

(d) After an employe's eligibility for benefits has been established by a commission decision or affirmance of the appeal tribunal decision, benefits then due the employe shall be payable to him on the eleventh day after such commission decision or affirmance, unless the commission finds, by resolution duly entered in its minutes, that the case involves an issue of precedenting importance or a labor dispute issue or the actual or potential eligibility of a substantial number or percentage of the employer's employes, in which event such benefits shall become payable only if judicial review has not been duly commenced under sub. (7) or has finally allowed benefits. In case final adjudication determines that benefits paid under this subsection were improperly charged against the employer's account, s. 108.16 (2m) shall apply to the charging and recovery of such payments.

(e) Where benefits are not paid to an employe on the eleventh day specified by par. (d), but are subsequently determined to be payable, they shall be calculated as of that eleventh day.

(6m) MAILED APPEALS. If an appeal under sub. (2) or (2m) or (2r) or (6) (b) is received after the 10 days time limit therein specified, the commission shall nevertheless, if such appeal is mailed and postmarked within the time limit, accept it as timely as to any benefit checks not yet issued on the day when such appeal is received.

(7) JUDICIAL REVIEW. (a) Either party may commence judicial action for the review of a decision of the commission hereunder, provided said party (after exhausting the remedies provided hereunder) has commenced such judicial action within 30 days after a decision of the commission was mailed to his last known address.

(b) Any judicial review hereunder shall be confined to questions of law, and the other provisions of ch. 102 of the 1959 statutes with respect to judicial review of orders and awards shall likewise apply to any decision of the commission reviewed under this section. Any such judicial action may be defended, in behalf of the commission, by any qualified attorney who is a regular salaried employe of the commission and has been designated by it for this purpose, or at the commission's request by the attorney-general.

(8) LIMITATION OF FEES. No employe shall be charged fees of any kind by the commission or its representatives, in any proceeding under this chapter. Any employe claiming benefits in any commission proceeding may be represented by counsel or other duly authorized agent; but no such counsel or agents shall together charge or receive from the employe for such services more than 10 per cent of the maximum benefits at issue in such proceedings, unless the commission has first approved a specified higher fee.

108.10 SETTLEMENT OF ISSUES OTHER THAN BENEFIT CLAIMS.

(1) In connection with any issue arising under this chapter as to any liability, of an employer of one or more persons in Wisconsin, for which no review is provided under s. 108.09 and with respect to which no penalty is provided in s. 108.24, the following procedure shall apply:

(2) A deputy designated by the commission for the purpose shall investigate the existence and extent of any such liability, and may issue an initial determination accordingly; provided, however, that such a deputy may set aside or amend any such determination at any time on the basis of subsequent information or to correct a clerical mistake. A copy of each determination shall be mailed to the last known address of the employer affected thereby. The employer may

request a hearing as to any matter therein, by filing such request with the deputy within 20 days after such mailing and in accordance with such procedure as the commission may by rule prescribe.

(3) Any hearing duly requested shall be held before an appeal tribunal established in the manner provided by s. 108.09(4), and s. 108.09(5) shall be applicable to the proceedings before such tribunal. Within 20 days after the appeal tribunal's decision has been mailed to the employer's last known address, he may petition the commission for review thereof pursuant to general commission rules, or the commission on recommendation of counsel may on its own motion transfer the proceedings to itself and reverse, change, or set aside the decision of the appeal tribunal on the basis of evidence previously submitted in such case, or direct the taking of additional testimony.

(4) The commission's authority to take action as to any issue or proceeding under this section shall be the same as that specified in s. 108.09 (6) (a), (b), and (c).

(5) The employer may commence action for the judicial review of a commission decision hereunder, provided said employer, after exhausting the remedies provided hereunder, has commenced such action within 30 days after such decision was mailed to his last known address. The scope of judicial review, and the manner thereof insofar as applicable, shall be the same as that provided in s. 108.09 (7).

(6) The mailing of determinations and decisions provided in subs. (2), (3), (4), and (5) shall be first class, and may include the use of services performed by the postal department requiring the payment of extra fees.

(7) Any determination by a deputy or any decision by an appeal tribunal or by the commission shall become conclusive with respect to the employer unless he has acted to secure a hearing or review as hereinbefore provided, but shall be binding on the commission only in so far as the relevant facts were included in the record which was before the deputy, appeal tribunal, or commission at the time the determination or decision was issued.

108.11 AGREEMENT TO CONTRIBUTE BY EMPLOYES VOID. (1) No agreement by an employe or by employes to pay any portion of the contributions required under this chapter from employers shall be valid. No employer shall make a deduction for such purpose from wages. Any employe claiming a violation of this provision may, to recover wage deductions wrongfully made, have recourse to the method set up in s. 108.09 for settling disputed benefit claims.

(2) But nothing in this chapter shall affect the validity of voluntary arrangements whereby employes freely agree to make contributions to a fund for the purpose of securing unemployment compensation additional to the benefits provided in this chapter.

108.12 WAIVER OF BENEFIT VOID. No agreement by an employe to waive his right to benefits or any other rights under this chapter shall be valid. No employe shall, in any proceeding involving benefits under this chapter, be prevented from asserting all facts relevant to his eligibility, regardless of any prior erroneous representation with respect to such facts.

108.13 ASSIGNMENT. (1) No claim for benefit under this chapter nor any interest in any unemployment benefit fund or reserve maintained under this chapter shall be assignable before payment, but this provision shall not affect the survival thereof; nor shall any claim for benefit awarded, adjudged, or paid, nor any interest in any such unemployment benefit fund or reserve, be subject to be taken for the debts of the party entitled thereto.

(2) In case an employe dies after the close of a week of unemployment in which he was eligible and for which benefits are payable under this chapter, the commission may designate any person who might in its judgment properly receive such benefits, and a receipt or an endorsement from the person so designated shall fully discharge the fund from liability for such benefits.

108.14 ADMINISTRATION. (1) This chapter shall be administered by the industrial commission.

(2) The commission shall have power and authority to adopt and enforce all rules and regulations which it finds necessary or suitable to carry out the provisions of this chapter. A copy of such rules and regulations shall be delivered to every person making application therefor. The commission may require from employers, whether subject to this chapter or not, any reports on employment, wages, hours and related matters which it deems necessary to carry out the provisions of this chapter.

(2m) In the discharge of their duties under this chapter any member of an appeal tribunal, and any deputy, examiner, commissioner, or other duly authorized representative of the commission shall have power to administer oaths to persons appearing before them, take depositions, certify to official acts, and by subpoenas (served in the manner in which circuit court subpoenas are served) to compel attendance of witnesses and the production of books, papers, documents, and records necessary or convenient to be used by them in connection with any investigation, hearing, or other proceeding under this chapter. Provided, that in any investigation, hearing or other proceeding involving the administration of oaths or the use of subpoenas under this subsection due notice shall be given to any interested party involved, who shall be given an opportunity to appear and be heard at any such proceeding and to examine witnesses and otherwise participate therein. Witness fees and other expenses involved in proceedings under this chapter, including a party's travelling expenses, may be allowed by the appeal tribunal or representative of the commission at rates specified by general commission rules, and shall be paid from the unemployment administration fund.

(3) The commission may appoint, employ and pay as many persons as it deems necessary to administer and to carry out the purposes of this chapter, and may make all other expenditures of any kind and take any other action consistent herewith which it deems necessary or suitable to this end.

108.14 (3m)

(3m) In any court action to enforce the provisions of this chapter the commission and the state may be represented by any qualified attorney who is a regular salaried employe of the commission and is designated by it for this purpose, and/or at the commission's request by the attorney-general. In case the governor designates special counsel to defend, in behalf of the state, the validity of this chapter or of any provision of title IX of the federal social security act, the expenses and compensation of such special counsel and of any experts employed by the commission in connection with such proceeding may be charged to the administration fund.

(4) The commission may create as many employment districts and district appeal boards and may establish and maintain as many free public employment offices as it deems necessary to carry out the provisions of this chapter. The commission shall have power to finance either partly or completely such public employment offices as it deems necessary under this chapter, from the funds appropriated to the commission for its expenses under this chapter, whether or not the political subdivision in which such office is located agrees to pay or does pay any part of the expenses of such office.

(5) The commission shall appoint a state advisory committee on this chapter, and may appoint additional committees for industries or local districts. Each such committee shall consist of a salaried commission employe, who shall serve as chairman, and of one or more representatives of employers, and an equal number of representatives of employes, who shall receive for each day of active service such reasonable compensation as the commission may determine and reimbursement of necessary expenses, and shall assist the commission in administering and carrying out the purposes of this chapter.

(5m) The state advisory committee appointed by the commission under sub. (5) shall submit its recommendations with respect to amendments of this chapter to each regular session of the legislature, and shall report its views on any pending bill relating to this chapter to the proper legislative committee.

(6) It shall be one of the purposes of this chapter to promote the regularization of employment in enterprises, localities, industries and the state. The commission, with the advice and aid of its advisory employment committees, shall take all appropriate steps within its means to reduce

and prevent unemployment. To this end the commission may employ experts, and may carry on and publish the results of any investigations and research which it deems relevant, whether or not directly related to the other purposes and specific provisions of this chapter. At least once a year the commission shall compile and publish a summary report stating the experience of employer accounts (without naming any employer) and covering such other material as it deems significant in connection with the operations and purposes of this chapter.

(7) The reports, records, files, accounts, papers and memoranda, of any nature whatsoever, received or made or maintained by the commission in connection with the administration of this chapter shall be open to public inspection only when and to the extent that the commission may allow such inspection as it deems advisable in the interests of effective administration. The commission may provide for the printing and distribution of such number of copies of any forms, records, decisions, regulations, rules, pamphlets or reports, related to the operation of this chapter, as it deems advisable for the effective operation thereof.

(8) (a) The commission may enter into administrative arrangements with any agency similarly charged with the administration of any other unemployment compensation law, for the purpose of assisting the commission and such agencies in paying benefits under the several laws to employes while outside their territorial jurisdictions. Such arrangements may provide that the respective agencies shall, for and on behalf of each other, act as agents in effecting registration for work, notices of unemployment, and any other certifications or statements relating to an employe's claim for benefits, in making investigations, taking depositions, holding hearings, or otherwise securing information relating to coverage or contribution liability or benefit eligibility and payments; and in such other matters as the commission may consider suitable in effecting the purpose of these administrative arrangements.

(b) The eligibility of an employe with respect to a benefit claim (based on past credit weeks under this chapter) may be established through arrangements authorized in this subsection, and he shall then be paid the benefits due him under this chapter.

(c) Any person who wilfully makes a false statement or misrepresentation regarding a benefit claim, to the commission (or its repre-

sentative) acting under any administrative arrangement authorized herein, shall on conviction be deemed guilty of a misdemeanor and be punished in the manner provided in s. 108.24.

(8m) (a) The commission may enter into reciprocal arrangements, with any agency administering another unemployment compensation law, whereby all the services performed by an individual for a single employing unit, which services are customarily performed in more than one state or jurisdiction, shall be deemed to be employment covered by the law of a specified state or jurisdiction (a) in which a part of such services are performed, or (b) in which such individual has his residence, or (c) in which such employing unit maintains a place of business; provided there is in effect, as to such services, an election by such employing unit, approved by the agency administering the specified law, pursuant to which all the services performed by such individual for such employing unit are deemed to be employment covered by such law.

(b) If the federal unemployment tax act is so amended as to make subject thereto remuneration paid for any maritime employment excluded under s. 108.02 (5) (g) 6, such exclusion under this chapter shall cease if the commission enters into a reciprocal arrangement with respect to such employment pursuant to this paragraph, as of the effective date of such arrangement. The commission may enter into reciprocal arrangements with the appropriate agencies of other states with respect to such maritime services, whereby all such services by an individual for a single employer, wherever performed, shall be deemed performed wholly within this state or within any such other state. Any such services thus deemed performed in Wisconsin shall also be deemed "employment" covered by this chapter, and the election requirement of s. 108.02 (5) (c) 2 shall not apply.

(8n) (a) The commission may enter into reciprocal arrangements, with any agency administering an unemployment compensation law, to provide more equitable benefit coverage for individuals whose recent work has been covered by the unemployment compensation laws of two or more jurisdictions.

(b) Such arrangements may provide, as to any individual whose employment has been covered by this chapter and by the unemployment compensation law of one or more other participating jurisdictions, for transfer by the commission to another agency of relevant records or information, and the acceptance and use thereof (in combination with similar data from other jurisdictions) by such other agency, as a basis for determining and paying benefits under the law administered by such other agency. Reciprocally, such arrangements may provide for similar acceptance, combination and use by the commission of data received from other jurisdictions to determine and pay benefits under this chapter.

(c) Such arrangements shall provide for mutual acceptance by the participating agencies of data thus supplied, including reasonable estimates of relevant data not otherwise available in the transferring agency.

(d) Such arrangements shall specify an equitable basis for reimbursing the unemployment fund of each participating jurisdiction for any benefits paid therefrom on the basis of covered employment in (and data supplied by the agency of) another such jurisdiction, out of the unemployment fund of such other jurisdiction.

(e) Any reimbursement under this subsection shall if paid from the fund be charged to its balancing account and if paid to the fund be credited to that account. Benefits paid under this subsection directly from the fund shall also be charged to its balancing account, except that any benefits thus paid shall be charged to the proper employer account to the extent that they would be paid and thus charged if this subsection were not being applied.

(f) To facilitate the application of such arrangements to this chapter, the commission may make reasonable estimates to convert into weekly benefit rates and credit weeks the data received by it under such arrangements, and may determine and pay benefits accordingly.

(8s) If the agency administering another unemployment compensation law has overpaid benefits to an individual located in Wisconsin, and certifies to the commission the facts involved and that the individual is liable, under such law, to repay such benefits, and requests the commission to recover such overpayment, and agrees to reimburse the commission for any court costs incurred by it in such recovery efforts, the commission may in its own name, but acting as agent for such other agency, collect such overpayment by civil action, and shall pay the net amount recovered to such other agency. If benefits are currently payable under this chapter to such individual, the commission may, with notice to the individual, pay as much of such benefits to such agency as are necessary to satisfy the individual's indebtedness to such agency.

(9) The commission may make its records relating to the administration of this chapter available to the railroad retirement board, and may furnish the railroad retirement board, at the expense of said board, such copies thereof as said board deems necessary for its purposes. The commission may afford reasonable co-operation with every agency of the United States charged with the administration of any unemployment compensation law. The commission may make arrangements or agreements with the railroad retirement board, or any other agency of the United States charged with the administration of an unemployment compensation law, with respect to the establishment, maintenance and use of free employment service facilities, the taking and certifying of claims, the making of investigations,

and the supplying of other information or services related to unemployment compensation. But the commission shall not make or renew any such arrangement or agreement unless it finds that its resulting administrative costs are approximately covered or offset by the facilities, services and payments to be made available thereunder by such federal agency. Any moneys received by the commission under this subsection shall be paid into the administration fund under s. 108.20.

(9m) The commission may afford reasonable co-operation with any government agency charged with war-effort or post-war planning responsibilities or with the administration of any system of unemployment allowances or unemployment assistance or of any other program designed to prevent or relieve unemployment.

(9r) The commission may continue to pay training allowances and related payments to trainees pursuant to an agreement under the federal Manpower Development and Training Act of 1962 (P. L. 87–415) from federal moneys made available to the commission for that purpose; and may also use pursuant to such an agreement any state matching money made available to the commission for that purpose, but only if and when such matching is required by said act, including any amendment thereof.

(10) For the purposes of s. 108.15 the commission's functions financed from the unemployment administration fund shall be treated as a separate budget subdivision, and any election made by the commission pursuant to s. 108.02 (5) (f) may be limited to individuals engaged in such functions.

(11) The commission may require any employer of one or more individuals in Wisconsin to make such arrangements as will reasonably assure the commssion that the employer will keep such records, make such reports, and pay such contributions as are required under this chapter. Any employer whom the commission has notified, through notice served on him or sent by registered mail to his last known address or served on him through the secretary of state pursuant to s. 180.825 (2), that he is required to make such arrangements, if he fails to do so within 20 days after such notification, may, through proceedings instituted by the commission in the circuit court of Dane county, be restrained from doing business in Wisconsin until he has made such arrangements.

(12) (a) Consistently with the provisions of pars. (8) and (9) of s. 303 (a) of title III of the federal social security act, all moneys received in the administration fund from any federal agency under said title III shall be expended solely for the purposes and in the amounts found necessary by said agency for the proper and efficient administration of this chapter.

(b) Consistently with said provisions of said title III, any such moneys, received prior to July 1, 1941, and remaining unencumbered on said date or received on or after said date, which, because of any action or contingency, have been lost or have been expended for purposes other than, or in amounts in excess of, those found necessary by said agency for the proper administration of this chapter, shall be replaced within a reasonable time. This paragraph is the declared policy of this state, as enunciated by the 1941 legislature, and shall be implemented as further provided in this subsection.

(c) If it is believed that any amount of money thus received has been thus lost or improperly expended, the commission on its own motion or on notice from said agency shall promptly investigate and determine the matter and shall, depending on the nature of its determination, take such steps as it may deem necessary to protect the interests of the state.

(d) If it be finally determined that moneys thus received have been thus lost or improperly expended, then the commission shall either make the necessary replacement from those administration fund moneys specified in s. 20.440 (1) (v) or shall submit, at the next budget hearings conducted by the governor and at the budget hearings conducted by the next legislature convened in regular session, a request that the necessary replacement be made by an appropriation from the general fund.

(e) This subsection shall not be construed to relieve this state of any obligation existing prior to its enactment with respect to moneys received prior to July 1, 1941, pursuant to said title III.

(13) The commission may, with the advice of its state advisory committee on this chapter, by general rule modify or suspend any provision of this chapter if and to the extent necessary to permit continued certification of this chapter under title III of the federal social security act and under ss. 3303 and 3304 of the federal unemployment tax act.

(14) The commission shall fully co-operate with the agencies of other states, and shall make every proper effort within its means, to oppose and prevent any further action which would in its judgment tend to effect complete or substantial federalization of state unemployment compensation funds or state employment security programs.

(15) The commission may make, and may co-operate with other appropriate agencies in making, studies as to the practicality and probable cost of possible new state-administered social security programs, and the relative desirability of state (rather than national) action in any such field.

108.14 (16)

(16) The commission shall have duplicated or printed, and shall distribute without charge, such employment security reports, studies and other materials (including the text of this chapter and instructional or explanatory pamphlets for employers or workers) as it deems necessary for public information or for the proper administration of this chapter; but the commission may collect a reasonable charge, which shall be credited to the unemployment administration fund, for any such item the cost of which is not fully covered by federal administrative grants.

(17) To help provide suitable quarters for the administration of this chapter at the lowest practicable long-run cost, the commission may, with the governor's approval and subject to all relevant statutory requirements, use part of the moneys available for such administration under s. 20.440 (1) (u) and (v) to buy suitable real property, or to help construct suitable quarters on any state-owned land, or for the long-term rental or rental-purchase of suitable land and quarters. In each such case full and proper use shall be made of any federal grants available for the administration of this chapter.

108.141 EXTENDED BENEFITS. (1) If a federal enactment provides for complete federal financing of added weeks of benefits to be paid (after regular benefits) by the commission, for weeks within a period (of heavier unemployment) specified by or to be determined pursuant to such enactment, to unemployed individuals qualifying and eligible for such extended benefits, subject to an agreement between the commission and the secretary of labor as to such benefits, the commission shall execute such an agreement and shall pay such benefits accordingly.

(2) If a federal enactment provides for joint federal-state financing of such a program of extended benefits, with at least half the cost to be federally financed, in any state which accepts the program and finances its share of the cost, the commission shall execute an agreement to pay such benefits, from the fund's balancing account, and shall charge to said account the state's share of said cost.

(3) If such enactment provides, subject to such an agreement, for reimbursing the fund for certain benefits paid

under this chapter, the commission shall agree to and accept such reimbursements and credit them to the fund's balancing account.

(4) To apply such enactment fully the commission may join in amending any existing agreement as to its payment of regular benefits under a normal federal unemployment compensation program.

(5) Any agreement executed by the commission under sub. (2) shall pay extended benefits for those weeks for which partial federal financing is available, but not for any week ending after 1967.

108.15 FINANCING BENEFITS FOR PUBLIC EMPLOYES.

(1) BENEFIT PAYMENTS. (a) Benefits shall be payable to any public employe, if unemployed and otherwise eligible, based on his "employment" by any government unit which is an "employer" covered by this chapter. Section 108.03 (2) shall not apply.

(ah) Section 108.02 (5) (g) 7 shall not apply to any government unit covered by this section.

(b) The fund including its balancing account is hereby made available to finance such benefits, on a revolving basis, pending reimbursement thereof pursuant to this section.

(2) EXEMPTION OF GOVERNMENT UNITS FROM ADVANCE CONTRIBUTIONS. Government units are hereby exempted from the contribution requirements of s. 108.17 and 108.18.

(3) SUBSTITUTE REQUIREMENTS. In lieu of such contributions, each government unit shall reimburse the fund for benefits duly charged to its account, at such times and by such due dates as the commission shall by rule prescribe.

(4) EMPLOYER ACCOUNTS FOR GOVERNMENT UNITS. (a) For each government unit covered by this chapter, the fund's treasurer shall maintain an "employer account", as a subaccount of the fund's balancing account.

(b) Each government unit's account shall be duly charged with any benefits based on work for such unit, and shall be duly credited with any reimbursement paid by or for it to the fund.

(c) Any government unit other than a state agency may at any time make payments into its account in the fund pursuant to s. 108.18 (7).

(d) Whenever a government unit's account has a positive net balance no reimbursement of the benefits charged thereto shall be required hereunder.

(e) Whenever a government unit's account has a negative balance, any benefits chargeable to such account shall be duly paid and charged thereto; and reimbursements covering the total negative balance thus resulting shall become due pursuant to this section.

(f) The write-off provisions of s. 108.16 (7) (c) shall not apply to the account of any government unit. In lieu thereof, any such unit may, if the benefits charged to its account hereunder in any calendar year exceed 2 per cent of its "payroll" for that year, request the write-off of such excess at any time within the following calendar year. The fund's treasurer shall in that event determine and write off the amount of such excess, and no reimbursement thereof shall be required hereunder.

(fm) As applied to any government unit which has limited its election by excluding one or more of its operating units, the "2 per cent" limit of par. (f) shall be figured on the "payroll" of all its operating units, as if all were covered by its election.

(fr) As to the account of any state government unit, a 4 per cent limit shall apply in lieu of the "2 per cent" limit of par. (f).

(g) If any government unit covered by this chapter requests the commission to maintain separate accounts for parts of such unit which are separately operated or financed, the commission may do so for such periods and under such conditions as it may from time to time determine.

(5) REIMBURSEMENTS. (a) Each government unit which is an "employer" shall include in its budget for each budgetary period an estimated amount for payment of the reimbursements required by this section, including in each case any reimbursement remaining unpaid for the current or any prior period.

(b) The fund's treasurer shall, pursuant to commission rules, bill each such government unit for the reimbursements required under this section, and any reimbursement thus billed shall be promptly paid by such government unit.

(c) Reimbursements due hereunder from budget subdivisions of the state shall be paid pursuant to sub. (7).

(d) Reimbursements due hereunder from other government units shall, if they remain unpaid after their due date, be collected pursuant to sub. (6) or pursuant to any other applicable provision of law.

(6) DELINQUENT PAYMENTS. (a) Any reimbursement, duly billed hereunder, which remains unpaid after its applicable due date is a "delinquent payment" under s. 108.22 (1).

(b) Whenever a government unit's "delinquent payments" (including interest and penalties thereon) total more than the benefits duly charged to such unit's account for the 6 most recent months, a commission deputy shall so determine under s. 108.10.

(c) If such delinquency is finally established pursuant to s. 108.10, the fund's treasurer shall promptly notify such government unit accordingly, and shall also, in case such unit receives a share of any state tax or any type of state aid, certify to the state treasurer the existence and amount of such delinquency.

(d) Upon receipt of such certification, the state treasurer shall withold, from each sum of any such tax or aid thereafter payable to the government unit, until the delinquency is satisfied, the lesser of the following amounts:

1. The delinquent amount thus certified; or
2. One-half the sum otherwise payable to such government unit.

(e) Any amount withheld by the state treasurer under par. (d) shall be paid by him to the fund's treasurer, who shall duly credit such payment toward satisfying the delinquency.

(7) STATE COMPLIANCE AND APPROPRIATIONS. (a) Each of the state's budget subdivisions is a "government unit" under this section, and shall be and remain a covered "employer" with a separate employer account for all purposes under this chapter.

(b) Each such subdivision's reimbursements payable under this section shall be duly paid to the fund, upon filing by the fund's treasurer, through such subdivision, of a certificate to the department of administration specifying the amount of reimbursement due and the appropriation apparently chargeable.

(c) Each such subdivision shall have each such reimbursement amount charged to and deducted from its proper fund or appropriation, unless the commissioner of administration certifies that a stated amount thereof cannot be thus charged, in which event that amount shall be charged to the general fund under such certification.

(8) REPORTING. (a) Each government unit which is an "employer" shall give such suitable benefit notices to its employes as the commission may direct, and shall make benefit reports to the commission under the same conditions as apply to other employers.

(b) Each government unit shall designate one or more officers or employes who shall be responsible for filing the required benefit reports, and shall inform the commission as to the name and address of each person so designated. If it designates more than one such person, it shall specify for what groups or classes of employes each will report. Section 108.24 (2) applies to each person so designated.

(9) TERMINATION. (a) Any government unit which is subject to this chapter solely by its own election may terminate such coverage and election by written notice to the commission, pursuant to s. 108.02 (4) (f).

108.15 (9)

(b) In that event, any benefits payable to the employes of such government unit for any week of unemployment completed before the termination date shall be paid; but no other benefits shall become payable to such employes, based on their previous covered work, after any positive net balance then remaining in such unit's account has been used up by a benefit check which equals or exceeds such balance.

(10) ALLOCATING SALARY. In case a government unit, under its salary system, continues and pays a public employe's salary for any day on which he does no work for such unit, the amount of salary he thus receives for any such day shall be considered in determining whether he is unemployed for benefit purposes.

108.16 UNEMPLOYMENT RESERVE FUND.

(1) For the purpose of carrying out the provisions of this chapter there is established a fund to be known as the "Unemployment Reserve Fund," to be administered by the commission without liability on the part of the state beyond the amount of the fund. This fund shall consist of all contributions and moneys paid into and received by the fund pursuant to this chapter and of properties and securities acquired by and through the use of moneys belonging to the fund.

(2) (a) A separate employer's account shall be maintained by the commission as to each employer contributing to said fund.

(b) Each employer's account shall be credited with all his contributions paid into the fund, and shall be charged with all benefits duly paid from the fund to his employes based on their past employment by him, except as otherwise specified in this chapter.

(c) Any reference in this chapter to eligibility for, or to payment of, benefits "from an employer's account", or any similar reference, shall mean benefits payable or paid from the fund based on past employment by the employer in question.

(d) The fund shall be mingled and undivided, and nothing in this chapter shall be construed to grant to any employer or employe any prior claim or right to any part of the fund.

(e) Benefits to be "charged" against a given employer's account shall be so charged as of the date shown by the check covering such benefits; and such check shall be promptly mailed and shall, in determining the experience or status of such account for contribution purposes, be deemed "paid" on said date.

(f) The commission shall promptly advise the employer as to each benefit check thus charged to his account.

(2m) If a commission deputy finds that any benefits charged to an employer's account have been erroneously paid to an individual without fault by the employer, such individual and such employer and the fund's treasurer shall be notified as to such erroneous payment. In case benefits are currently payable to such individual from such employer's account, the deputy may correct the error by adjusting such benefits accordingly. To correct any error not thus adjusted, the fund's treasurer shall correct the fund's records by restoring the proper amount to the employer's account and by charging such amount to the fund's balancing account, and may at any time thereafter reimburse the balancing account by crediting to it benefits which would otherwise be payable to the individual in question or cash recovered from such individual.

(3) (a) As to any benefit overpayment still outstanding more than 6 years after the claimant's liability to reimburse the fund was duly established under s. 108.22 (8), the fund's treasurer shall write off and waive recovery of such overpayment, upon receipt of a certification by a commission deputy that reasonable efforts have been made to recover such overpayment.

(b) Any such waiver shall be recorded as satisfying any warrant then outstanding under s. 108.22 (8) as to such overpayment.

(4) Consistently with sub. (5), all contributions payable to the unemployment reserve fund shall be paid to the industrial commission, and shall promptly be deposited by the commission to the credit of the unemployment reserve fund, with such custodians as the commission may from time to time select, who shall hold, release and transfer the fund's cash in a manner approved by the commission. Payments from said fund shall be made upon vouchers or drafts authorized by the industrial commission, in such manner as the commission may from time to time approve or prescribe. Any procedure thus approved or prescribed shall be deemed to satisfy (and shall be in lieu of) any and all statutory requirements (for specific appropriation or other formal release by state officers of state moneys prior to their expenditure) which might otherwise be applicable to withdrawals from the fund. The commission shall designate a treasurer

of the unemployment reserve fund, who shall be either a regular salaried employe of the commission or the state treasurer and shall serve as treasurer of the fund until a successor designated by the commission has assumed the duties of this office. He shall give a separate bond conditioned upon his faithful performance of these duties pursuant to s. 19.01 (2), which bond shall be deemed likewise conditioned upon the faithful performance by his subordinates of their duties, in such amount as may be fixed by the industrial commission. All premiums upon the bond required pursuant to this section when furnished by an authorized surety company or by a duly constituted governmental bonding fund shall (except as otherwise provided in this section) be paid from the interest earnings of the unemployment reserve fund, but shall not exceed one-fourth of one per cent, per annum, of the amount of said bond.

(5) (a) All money received for the fund shall promptly upon such receipt be deposited to its credit in the "Unemployment Trust Fund" of the United States, in such manner as the secretary of the treasury of the United States (or other authorized custodian of said trust fund) may approve, so long as said trust fund exists and maintains for this state a separate book account (for the purposes of this chapter) from which no other state or agency can make withdrawals, any other statutory provision to the contrary notwithstanding.

(b) The commission shall requisition from this state's account in the "Unemployment Trust Fund" necessary amounts from time to time, shall hold such amounts consistently with any applicable federal regulations, and shall make withdrawals therefrom solely for benefits and for such other unemployment compensation payments or employment security expenditures as are expressly authorized by this chapter and consistent with any relevant federal requirements.

(c) While the state has an account in the "Unemployment Trust Fund," public deposit insurance charges on the fund's balances held in Wisconsin banks, the premiums on surety bonds required of the fund's treasurer under this section, and any other expense of administration otherwise payable from the fund's interest earnings, shall be paid from the administration fund.

(6) The commission shall maintain within the fund a "balancing account," to which shall be credited:

(a) All interest earnings, on moneys belonging to the fund, received by (or duly apportioned to) the fund, as of the close of the calendar quarter in which such interest accrued.

(b) Any reimbursement made pursuant to sub. (2m).

(c) Any balance credited to an employer's account, if and when he ceases to be subject to this chapter, except as provided in sub. (8).

(d) All amounts transferred from employer accounts pursuant to sub. (11).

(e) The amount of any benefit check duly issued and delivered or mailed to an employe, if such check has not been presented for payment within one year after its date of issue; provided that a substitute check may be issued and charged to the balancing account, at any time within the next following year.

(f) Any amount available for such crediting under s. 108.04 (11) or 108.07 (2) or 108.14 (8n) (e).

(g) Any payment received for the balancing account under s. 108.15.

(h) Any amount of solvency contribution received for or transferred to the balancing account pursuant to s. 108.18.

(i) Any federal reimbursement of benefits paid under any federal unemployment benefit program administered by the commission.

(j) Any federal reimbursement of benefits paid under this chapter, except as this chapter or a federal agreement requires otherwise.

(6m) There shall be charged against the fund's balancing account:

(a) The benefits thus chargeable under (and pursuant to) s. 108.04 (7) (e); 108.07 (2); 108.14 (8n) (e); 108.15 (1) (b); or subs. (2m), (6) (e), (7) (a) and (b).

(b) Any benefits paid under any federal unemployment benefit program administered by the commission, pending their reimbursement.

(c) The overdraft write-offs thus chargeable under (and pursuant to) s. 108.15 (4) (f) or sub. (7) (c).

(d) Any negative balance of a closed employer account, except as provided in sub. (8).

(7) (a) All benefits shall be paid from the fund. All benefits duly chargeable to an employer's account shall be so charged, whether or not such account is overdrawn. All other benefits shall be charged to the fund's balancing account.

(b) Benefit payments made with respect to an employer's account shall be charged directly against the fund's balancing account only when such payments cannot under this chapter be or remain charged against the account of any employer.

(c) Whenever, as of any computation date, the net overdrafts then charged against an employer's account would, even if reduced by any contributions known or subsequently discovered to be then payable

but unpaid to such account, exceed 10 per cent of his annual payroll (namely, the payroll amount used in determining his reserve percentage as of that computation date), the fund's treasurer shall, solely for the purpose of computing future reserve percentages, write off (by charging directly to the fund's balancing account) the amount by which such overdrafts would (if thus reduced) exceed 10 per cent of said payroll.

(8) (a) **If the business of any "employer" is transferred** in whole or in part, the transferee shall be deemed a successor for the purposes of this chapter. An employing unit shall not be deemed a successor, however, if the commission finds that there were less than 20 weeks lying wholly within the calendar year in which the transfer occurred (and also less than 20 weeks lying wholly within the preceding calendar year) within which the transferring "employer" employed as many as 3 persons in employment subject to this chapter in connection with the business or portion thereof transferred. In case of the transfer of any of the assets of a covered employer's business by any means whatever, otherwise than in the ordinary course of trade, such transfer shall be deemed a transfer of business and shall constitute the transferee a successor hereunder, unless the commission, on its own motion or on application of an interested party, finds that all the following conditions exist:

1. The transferee has not continued or resumed the business of the transferor, either in the same establishment or elsewhere; and

2. The transferee has not employed substantially the same employes as those the transferor had employed in connection with the assets transferred.

(b) The successor, if not already subject to this chapter, shall become an "employer" subject hereto on the date of such transfer, and shall accordingly become liable for contributions hereunder from and after said date.

(c) The successor shall take over and continue the employer's account, including its plus or minus balance and all other aspects of its experience under this chapter, in proportion to the payroll or employes assignable to the transferred business as determined for the purposes of this chapter by the commission. The successor shall be sec-

ondarily liable for any amounts owed by the employer to the fund (and to the administration fund) at the time of such transfer; but such liability shall be proportioned to the extent of the transfer of business and shall not exceed the value of the assets transferred.

(d) The benefit liability of a successor's account under s. 108.06, if it has not accrued before the transfer date, shall begin to accrue on the transfer date, in case the transferor's benefit liability was then accruing; or shall begin to accrue on the date otherwise applicable to the successor, or on the date otherwise applicable to the transferor, whichever is earlier, in case the transferor's benefit liability was not accruing on the transfer date. Similarly, benefits from a successor's account, if not payable before the transfer date, shall become payable on the transfer date, in case the transferor was then liable for benefit payments; or shall become payable on the date otherwise applicable to the successor, or on the date otherwise applicable to the transferor, whichever is earlier, in case the transferor was not liable for benefit payments on the transfer date.

(e) The account taken over by the successor employer shall remain liable with respect to accrued benefit and related rights based on employment in the transferred business, and all such employment shall be deemed employment performed for such employer.

(f) The contribution rates applicable with respect to the accounts of the successor employer and the transferring employer shall be respectively determined or redetermined as of the applicable computation date, to apply from the date of transfer of business until the close of the current calendar year, and shall thereafter be redetermined whenever required by s. 108.18, as follows: For the purposes of s. 108.18, the commission shall determine the "experience under this chapter" of the successor employer's account and of the transferring employer's account by allocating to the successor employer's account for each period in question the respective proportions of the transferring employer's payroll and benefits which the commission determines to be properly assignable to the business transferred.

108.16 (9)

(9) (a) Consistently with s. 3305 of the federal internal revenue code, relating to federal instrumentalities which are neither wholly nor partially owned by the United States nor otherwise specifically exempt from the tax imposed by s. 3301 of said code:

1. Any contributions required and paid under this chapter for 1939 or any subsequent year by any such instrumentality, including any national bank, shall be refunded to such instrumentality in case this chapter is not certified with respect to such year under s. 3304 of said code.

2. No national banking association which is subject to this chapter shall be required to comply with any of its provisions or requirements to the extent that such compliance would be contrary to s. 3305 of said code.

(10) All money withdrawn from the fund shall be used solely in the payment of benefits, exclusive of expenses of administration, and for refunds of sums erroneously paid into the fund and for refunds payable under sub. (9), and for expenditures made pursuant to s. 108.161 and consistently with the federal limitations applicable thereto.

(10m) The commission shall not pay any interest on any benefit payment or collect any interest on any benefit overpayment.

(11) Omitted here, because the "transfer" provisions of 108.16 (11) are suspended by sub. (12), below, through June 1969, pending adequate experience with the new solvency safeguard.

(12) Subsection (11) shall not be applied at any time after 1964 and before July 1, 1969, and no transfer shall be made thereunder by reason of the level of the fund's balancing account at any time within that period.

108.161 ADMINISTRATIVE FINANCING ACCOUNT. (1) The fund's treasurer shall maintain within the fund an employment security "Administrative Financing Account", and shall credit thereto all amounts credited to the fund pursuant to the federal employment security administrative financing act (of 1954) and section 903 of the federal social security act, as amended.

(1m) He shall also credit to said account all federal moneys credited to the fund pursuant to sub. (8).

(2) The requirements of said section 903 shall control any appropriation, withdrawal and use of any moneys in said account.

(3) Consistently with this chapter and said section 903, such moneys shall be used solely for benefits or employment security administration, including unemployment compensation, employment service and related statistical operations.

(4) Such moneys shall be encumbered and spent for employment security administrative purposes only pursuant to (and after the effective date of) a specific legislative appropriation enactment:

(a) Stating for which such purposes and in what amounts the appropriation is being made to the administration fund created by s. 108.20.

(b) Directing the fund's treasurer to transfer the appropriated amounts to the administration fund only as and to the extent that they are currently needed for such expenditures, and directing that there shall be restored to the account created by sub. (1) any amount thus transferred which has ceased to be needed or available for such expenditures.

(c) Specifying that the appropriated amounts are available for obligation solely within the 2 years beginning on the appropriation law's date of enactment.

(d) Limiting the total amount which may be so obligated during any fiscal year to the aggregate of all amounts credited under sub. (1), including amounts credited pursuant to sub. (8), within that year and the 9 preceding fiscal years, reduced by the sum of any moneys obligated and charged against any of the amounts thus credited within those 10 years.

(5) The total of the amounts thus appropriated for use in any fiscal year shall in no event exceed the moneys available for such use hereunder, considering the timing of credits hereunder and the sums already spent or appropriated or transferred or otherwise encumbered hereunder.

(6) The fund's treasurer shall keep a record of all such times and amounts; shall charge each such sum against the earliest credits duly available therefor; shall include any sum thus appropriated but not yet spent hereunder in computing the fund's net balance as of the close of any month, in line with the federal requirement that any such sum shall (until spent) be deemed part of the fund; and shall certify the relevant facts whenever necessary hereunder.

(7) If any moneys appropriated hereunder are used to buy and hold suitable land, with a view to the future construction of an employment security building thereon, and if such land is later sold or transferred to other use, the proceeds of such sale (or the value of such land when transferred) shall be credited to the account created by sub. (1).

(8) If any sums are appropriated and spent hereunder to buy land and to build a suitable employment security building thereon, then any federal moneys thereafter credited to the fund or paid to the commission by way of gradual reimbursement of such employment security capital expenditures, or in lieu of the estimated periodic amounts which would otherwise (in the absence of such expenditures) be federally granted for the rental of substantially equivalent quarters, shall be credited to the account created by sub. (1), consistently with any federal requirements applicable to the handling and crediting of such moneys.

(8m) To the extent that employment security moneys finance the capital cost of acquiring office quarters, either in a separate employment security building project or in a larger state building, no rental for the quarters thus financed (or for equivalent substitute quarters) shall be charged the commission or its employment security functions at any time. The commission shall so certify, in applying for the federal moneys specified in sub. (8).

(9) Any land and building or office quarters acquired hereunder shall continue to be used for employment security purposes. Such realty or quarters shall not be sold or transferred to other use without the governor's approval. If thus sold or transferred, the proceeds of such sale, or the value of such realty or quarters when transferred, shall, except as federally approved equivalent substitute rent-free quarters are provided, be allocated and credited to the account created by sub. (1) and/or to the fund created by s. 108.20, in accordance with any then applicable federal requirements; and shall, to the extent said requirements permit, be used to finance employment security quarters.

(10) Any realty acquired hereunder shall be excluded from the 2 per cent building fund computation specified in s. 13.351 (3).

108.17 PAYMENT OF CONTRIBUTIONS. (1) Contributions shall accrue and become payable by each employer then subject to this chapter on the first day of July, 1934, and shall be paid thenceforth in accordance with this chapter. Thereafter contributions shall accrue and become payable by any employer on and after the date on which he becomes newly subject to this chapter.

(1m) In the case of an employer who becomes, as of the beginning of 1937 or of any subsequent calendar year, newly subject to this chapter based on his employment during the given year, his contributions based on payrolls prior to the date on which his employment made him subject hereto shall not be considered as payable for the purposes of s. 108.22 until such subsequent date (ocurring within 60 days) as the commission may determine.

(2) All contributions required under this chapter from employers shall be paid to the industrial commission, at such times and in such manner as the commission may prescribe.

(2m) When a written statement of account is issued to an employer by the commission's unemployment compensation department, showing as duly credited a specified amount received from him under this chapter, no other form of state receipt therefor shall be required.

(3) If an employer (of any person) makes application to the commission to adjust an alleged overpayment by him of contributions or interest under this chapter, and files such application within 3 years after the close of the calendar year in which such payment was made, a commission deputy shall make a determination under s. 108.10 as to the existence and extent of any such overpayment, and the provisions of said section shall apply to such determination. As to any amount determined under said section to have been erroneously paid by the employer, the commission shall allow him a corresponding credit, without interest, against his future contribution payments; or, if the commission finds it impracticable to allow the given employer such a credit, it shall refund such overpayment to him, without interest, from the fund or the administration fund, as the case may be.

(4) However, in case an employer's contribution rate for any year has been incorrectly determined, it shall be corrected (and contributions shall be adjusted or become payable accordingly) only if due notice of such error is given during, or within 6 months after the close of, the calendar year to which such rate applies.

108.18 CONTRIBUTIONS TO THE FUND.

(1) TOTAL RATE. (a) Each employer shall pay contributions to the fund for each calendar year at whatever rate on his payroll for that year duly applies to him pursuant to this section and s. 108.02 (8) (d).

(b) An employer's contributions shall be credited to his account in the fund, but only after any solvency contribution paid or payable by him or deducted from his account under subs. (8) and (9) has been credited to the fund's balancing account (currently, as of the date when paid or deducted).

(2) INITIAL RATES. (a) An employer's contribution rate shall be 2.7 per cent on his payroll for each of the first 3 calendar years with respect to which contributions are credited to his account, except as additional contributions apply under this section.

(b) As to each of those first 3 calendar years, if the employer's payroll for any such year was $20,000 or more, he shall be required to pay an additional contribution at the rate of 1.3 per cent on that calendar year's payroll, within 60 days after notice from the commission that such additional contribution is payable, if his account:

1. At the close of that calendar year was overdrawn (on a cash basis, with the benefits paid and charged to the account exceeding the contributions paid and credited thereto, through said close of year); or

2. As of the next June 30 computation date was overdrawn (with a negative reserve percentage).

(3) REQUIREMENTS FOR REDUCED RATE. As to any calendar year, an employer shall be permitted to pay contributions to the fund at a rate lower than the standard rate of 2.7 per cent on his payroll for that year only when, as of the applicable computation date :

(a) Benefits have been chargeable to the employer's account during the 18 months preceding such date; and

(b) Such lower rate applies under this section; and

(c) Permitting him to pay such lower rate is consistent with the relevant conditions then applicable to additional credit allowance for such year under s. 3303(a) of the federal unemployment tax act, any other provision to the contrary notwithstanding.

(4) EXPERIENCE RATES. Except as otherwise specified in this section, an employer's contribution rate on his payroll for a given calendar year shall be based on the reserve percentage of his account as of the applicable computation date, as follows:

(a) If such reserve percentage is less than zero (because his account is overdrawn), such rate shall be:

1. 4 per cent, unless a higher rate applies under this paragraph.

2. For 1965 or any subsequent calendar year, 4.2 per cent, if such reserve percentage is minus 2 per cent or lower, unless a higher rate applies under this paragraph.

3. For 1966 or any subsequent calendar year, 4.4 per cent, if such reserve percentage is minus 4 per cent or lower, unless a higher rate applies under this paragraph.

(b) If such reserve percentage is zero or more, but less than 2 per cent, such rate shall be 3.5 per cent.

(c) If such reserve percentage is 2 per cent or more, but less than 4 per cent, such rate shall be 3 per cent.

(d) If such reserve percentage is 4 per cent or more, but less than 6 per cent, such rate shall be 2.5 per cent.

(e) If such reserve percentage is 6 per cent or more, but less than 7 per cent, such rate shall be 2 per cent.

(f) If such reserve percentage is 7 per cent or more, but less than 8 per cent, such rate shall be 1.5 per cent.

(g) If such reserve percentage is 8 per cent or more, but less than 9 per cent, such rate shall be one per cent.

108.18 (4)

(h) If such reserve percentage is 9 per cent or more, but less than 10 per cent, such rate shall be one-half of one per cent.

(i) If such reserve percentage is 10 per cent or more, such rate shall be zero per cent.

(5) LIMITATION. To prevent unduly sharp increases in contribution rates during bad years, an employer's contribution rate for any calendar year shall in no case exceed by more than one per cent (on payroll) the rate which applied to him at the close of the preceding calendar year, except under sub. (2).

(5m) The one per cent limit of sub. (5) shall be computed from the employer's experience rate assigned to him under subs. (4), (5) and (6) before applying sub. (10) or s. 108.02 (8) (d).

(6) COMPUTATION IN SPECIAL CASES. If during the year ending on a computation date an employer has been liable for contributions but has had no payroll, his reserve percentage as of that computation date shall be computed on the basis of his most recent year (ending on a computation date which applied to him) of some payroll; but his contribution rate for the calendar year following the computation date shall in no case be less than one per cent.

(7) VOLUNTARY CONTRIBUTIONS. Any employer may at any time make payments to the fund, in excess of the other requirements of this section. Each such payment shall be credited to the employer's account as of the date when paid, except that any such payment made during the period July 1 through November 30 shall, for the purpose of computing his reserve percentage, be credited thereto as of the immediately preceding computation date; and each such payment shall be treated as a contribution required and irrevocably paid under this chapter with respect to payrolls preceding the date as of which it is thus credited.

(8) SOLVENCY CONTRIBUTIONS. Each employer's solvency contribution for each period of a calendar year shall be figured by applying the solvency rate determined

for that year under sub. (9) to his payroll for that period, and shall be payable to the fund's balancing account by the due-date of his contribution report, as follows:

(a) If the employer's regular contribution rate for that year under this section is less than 3.7 per cent, the commission shall deduct his solvency contribution (figured at the solvency rate, on his relevant payroll) from his current contributions and/or (if necessary) from his account, except to the extent that he elects otherwise by paying some or all of his solvency contribution in addition to his other contributions by the due-date of his contribution report.

(b) If the employer's regular contribution rate for that year under this section is 3.7 per cent or more, his solvency contribution (figured at the solvency rate, on his relevant payroll) shall, without limitation by sub. (5), be added to and payable with his other contributions.

(c) As used in this subsection, an employer's "regular contribution rate" means the initial rate assigned to him under sub. (2) (a), or the experience rate assigned to him under subs. (4), (5) and (6) before applying sub. (10) or s. 108.02 (8) (d).

(9) SOLVENCY RATES. (a) The solvency rate for 1965 shall be 0.25 per cent.

(b) The solvency rate required for each subsequent calendar year shall depend on the extent to which the net balance of the fund's balancing account at the close of the preceding July falls short of the adequacy level then required, and shall be determined by the fund's treasurer pursuant to this subsection.

(c) The adequacy level required for the fund's balancing account shall be:

1. $15 million at the close of July 1965.

2. $18 million at the close of July 1966.

3. At the close of each subsequent July, the amount which equals 0.4 per cent of the gross wages paid by all employers in the immediately preceding calendar year, as determined pursuant to par. (h).

(d) The fund's treasurer shall determine the net balance of the fund's balancing account, at the close of each July, after deducting the debit balances of any employer accounts then overdrawn and any positive balance of any government unit, and after crediting any benefit payments reimbursable by any government unit.

(e) He shall subtract that net balance from the relevant adequacy level required by par. (c), to determine the "deficiency amount" for the balancing account at the close of July.

(f) He shall then compare that deficiency amount with the aggregate payrolls (for the preceding calendar year) determined under par. (h), to figure the lowest multiple of one-tenth per cent which would, if applied to those payrolls, yield the "deficiency amount."

(g) The multiple of one-tenth per cent thus computed shall be the solvency rate for the calendar year which follows that close of July.

(h) The commission shall determine for each calendar year, by the following June 1, from reports to the commission (including corrections thereof) filed within 3 months after the close of that year by employers (except government units) covered by this chapter as to their employes in employment covered by this chapter:

1. The gross wages thus reported by such employers as paid in that year for such employment; and

2. The aggregate "payrolls" thus reported by such employers as paid in that year for such employment.

(i) The fund's treasurer shall promptly make the calculations required by this subsection, and shall publish the resulting findings in the official state paper by October 15, and shall notify each employer by November 15 as to what solvency rate will apply to the ensuing calendar year.

(10) ADJUSTMENTS FOR 1966, 1967, 1968. In view of the higher "payroll" base which will apply after 1965 under s. 108.02 (8) (b), each experience rate of one-half per cent or more, as determined under subs. (4), (5) and

(6), shall be reduced by one-tenth per cent (on payroll) as to 1966 payrolls and by two-tenths per cent (on payroll) as to 1967 and 1968 payrolls.

108.19 CONTRIBUTIONS TO THE ADMINISTRATION FUND. (1) Each employer subject to this chapter shall regularly contribute to the unemployment administration fund created in s. 108.20 at the rate of two-tenths of one per cent per annum on his payroll as defined in s. 108.02. But the commission may prescribe at the close of any fiscal year such lower rates of contribution under this section, to apply to classes of employers throughout the ensuing fiscal year, as will in the commission's judgment adequately finance the administration of this chapter, and as will in the commission's judgment fairly represent the relative cost of the services rendered by the commission to each such class.

(2) If the commission finds, at any time within a fiscal year for which it has prescribed lower contribution rates to the administration fund than the maximum rate permitted hereunder, that such lower rates will not adequately finance the administration of this chapter or are excessive for that purpose, the commission may by general rule prescribe a new schedule of rates (in no case exceeding the specified maximum) to apply under this section for the balance of the fiscal year.

(2m) Within the limit specified by sub. (1), the commission may by rule prescribe at any time as to any period any such rate or rates or schedule as it deems necessary and proper hereunder. Unless thus prescribed, no such rate or rates or schedule shall apply under sub. (1) or (2).

(3) If the federal unemployment tax act is amended to permit a maximum rate of credit against said federal tax higher than the 90 per cent maximum rate of credit now permitted under s. 3302 (c) (1) of the internal revenue code, to an employer with respect to any state unemployment compensation law whose standard contribution rate on payroll under said law is more than 2.7 per cent, in that event the standard contribution rate as to all employers under this chapter shall, by a commission rule to be issued with the governor's approval, be increased from 2.7 per cent on payroll to that percentage on payroll which corresponds to the higher maximum rate of credit thus permitted against the federal unemployment tax; and such increase shall become effective on the same date as such higher maximum rate of credit becomes permissable under such federal amendment.

(4) If s. 303 (a) (5) of title III of the social security act and s. 3304 (a) (4) of the internal revenue code are amended to permit a state agency to use, in financing administrative expenditures incurred in carrying out its employment security functions, some part of the moneys collected or to be collected under the state unemployment compensation law, in partial or complete substitution for grants under said title III, in that event this chapter shall, by a commission rule to be issued with the governor's approval, be modified in the manner and to the extent and within the limits necessary to permit such use by the commission under this chapter; and such modifications shall become effective on the same date as such use becomes permissable under such federal amendments.

108.20 UNEMPLOYMENT ADMINISTRATION FUND AND APPROPRIATION. (1) To finance the administration of this chapter and to carry out its provisions and purposes there is established the

108.20 (1)

"Unemployment Administration Fund". This fund shall consist of all contributions and moneys paid to or transferred by the industrial commission for the administration fund as provided in s. 108.19, and of all moneys received for this fund by the state or by the commission from any source, including all federal moneys allotted or apportioned to the state or the commission for the Wisconsin state employment service or for administration of this chapter, or for services, facilities or records supplied to any federal agency; and the commission is hereby directed to make to federal agencies such reports as are necessary in connection with or because of such federal aid.

(2) All amounts received by the commission for such fund shall be paid over to the state treasurer and credited to the unemployment administration fund, and, as provided in s. 20.440 (1) (u) and (v), are appropriated to the commission for the administration of this chapter and the Wisconsin state employment service.

(3) There shall be included in the moneys governed by s. 20.440 (1) (v) any amounts collected by the commission under s. 108.19 (1) or (2), or under s. 108.04 (13) (c) or 108.22 (1) as tardy filing fees or as interest on delinquent payments.

(4) Any moneys transferred to the unemployment administration fund from the administrative financing account pursuant to s. 108.161 shall be expended (or restored to that account) in accordance with that section.

(5) If and to the extent that moneys transferred under sub. (4) are unavailable to finance some or all of the capital costs involved in any employment security building project or in constructing office space for use by the commission in connection with its employment security operations, the moneys available under s. 20.440 (1) (v) may be used for such financing.

(6) To the extent that moneys available under s. 20.440 (1) (v) are used to finance some or all of the capital costs involved in acquiring employment security office space, there shall be applied to the moneys thus used (the same as if they were moneys credited under s. 108.161) the provisions of s. 108.161 (7), (8), (8m) and (9), except that any resulting credits attributable to the moneys thus used shall be credited under s. 20.440 (1) (v) and s. 108.20.

(7) To the extent that federal grants hereunder, or moneys available under s. 20.440 (1) (v), or both, are used to amortize the capital costs of employment security office quarters in a state office building, s. 108.161 (9) shall apply to the costs and quarters thus amortized, except that any resulting credits shall be allocated according to the funds thus used. When such grants or moneys or both have fully amortized such costs, s. 108.161 (8m) shall apply to such quarters.

(8) As to office space used for employment security purposes in a state building, if and while federal grants for employment security administration do not fully cover the current costs (either gross rent, or operating costs) properly payable by the commission to the state with respect to such space, the commission may reserve and use the moneys available under s. 20.440 (1) (v) to assure the required payments to the state.

(9) There shall be charged to any moneys available under s. 108.161, until the moneys currently available are fully obligated, any amounts obligated for employment security local office building projects, with any remaining costs of such projects charged to the employment security moneys available under s. 20.440 (1) (v), pursuant to sub. (5).

108.21 RECORD AND AUDIT OF PAYROLLS. (1) Every employer of one or more persons in Wisconsin shall keep such a true and accurate employment record for each individual employed by him, including full name, address and social security number, as will permit determination of the weekly wages earned by each such individual from him, and shall furnish to the commission upon demand a sworn statement of the same. Such record and any other records which may show any wages paid by the employer shall be opened to inspection by any authorized commission representative at any reasonable time.

(2) The findings of any such authorized representative of the commission, based on examination of the records of any such employer and embodied in an audit report mailed to the employer, shall constitute a determination within the meaning of s. 108.10 and the provisions of said section shall apply accordingly.

(3) In the event that any such employer fails to keep adequate employment and payroll records under this section or fails to file such reports as the commission may require under this chapter, the employer's contribution liability with respect to the period for which such records are lacking or deficient or for which such reports have not been filed may be estimated by a commission deputy in a determination made pursuant to s. 108.10, and the provisions of said section shall apply to any such determination.

108.22 DELINQUENT PAYMENTS. (1) If any employer is delinquent in making by the assigned due-date any contribution report or payment to the commission required of him under this chapter, he shall be liable for a tardy filing fee of $1 for each such delinquency and shall become additionally liable for interest on such delinquent payment at the rate of one-half per cent per month (or fraction thereof) from the date such payment became due, except that said fee shall apply in lieu of such interest in any case where such interest (accrued up to the date on which such delinquent contribution and said fee are paid) is less than $1. Such tardy filing fees and interest shall be paid to the commission and credited to the unemployment administration fund.

108.22 (2)

(2) If any employer fails to pay to the commission any amount found to be due it in proceedings pursuant to s. 108.10, provided that no appeal or review permitted by said section is pending and that the time for taking an appeal or review has expired, the commission or any duly authorized representative may issue a warrant directed to the sheriff of any county of the state, commanding him to levy upon and sell sufficient of the real and personal property which may be found within his county of the employer who has defaulted in the payment of any amount thus found to be due to pay such amount, together with interest and costs and other fees, and to proceed upon the same in all respects and in the same manner as upon an execution against property issued out of a court of record, and to return such warrant to the commission and pay to it the money collected by virtue thereof within 60 days after the receipt of such warrant. The sheriff shall, within 5 days after the receipt of the warrant, file with the clerk of the circuit court of his county a copy thereof, unless the employer shall make satisfactory arrangements for the payment thereof with the commission, in which case the sheriff shall at the direction of the commission return such warrant to it. The clerk shall enter in the judgment docket the name of the employer mentioned in the warrant and the amount of the contributions, interest, costs and other fees for which the warrant is issued and the date when such copy is filed. Thereupon the warrant so docketed shall be considered in all respects as a final judgment creating a perfected lien upon the employer's right, title and interest in all of his real and personal property located in the county wherein the warrant is docketed.

(3) In the discretion of the commission, a warrant of like terms, force and effect may be issued and directed to any employe or agent of the commission duly authorized by it as a deputy, who may file a copy of such warrant with the clerk of circuit court of any county in the state, and thereupon such clerk shall docket the same and it shall become a lien in the same manner, and with the same force and effect as hereinbefore provided with respect to a warrant issued and directed to and filed by a sheriff. In the execution thereof such employe or agent shall have all the powers conferred by law upon a sheriff, but shall not be entitled to collect from the employer any fee or charge for the execution of such warrant in excess of the actual expenses paid in the performance of his duty.

(4) If a warrant be returned not satisfied in full, the commission shall have the same remedies to enforce the amount due for contributions, interest, and costs and other fees as if the commission had recovered judgment against the employer for the same and an execution returned wholly or partially not satisfied.

(5) When the contributions set forth in a warrant together with interest and other fees to date of payment and all costs due the commission have been paid to it, the commission shall issue a satisfaction of the warrant and deliver or mail it to the employer, and the warrant

shall be satisfied of record by the clerk upon presentation to him of such satisfaction and payment by the employer of the fees due such clerk.

(6) The commission, if it finds that the interests of the state will not thereby be jeopardized, and upon such conditions as it may exact, may issue a release of any warrant with respect to any real property upon which said warrant is a lien or cloud upon title, and such release shall be entered of record by the clerk upon presentation to him and payment of the fee for filing said release and the same shall be held conclusive that the lien or cloud upon the title of the property covered by the release is extinguished.

(7) As an alternative to any other remedy provided in this section the commission may in its own name collect any delinquent payments due it, together with interest and costs and other fees. A statement of the amount of such delinquent payments certified by the commission shall be prima facie evidence of the employer's liability for such amount. At any time before judgment in an action for the collection of such delinquent payments, the commission may commence and maintain a garnishee action as provided by ch. 267 for actions founded on contract, or may use the remedy of attachment as provided by ch. 266 for actions founded on contract. The place of trial of an action for the collection of such delinquent payments shall not be changed from the county in which such action is commenced, except upon consent of the parties.

(8) (a) In case benefits have been overpaid or improperly paid to an individual, an initial determination may be issued setting forth the individual's liability to reimburse the fund for such overpayment. In that event the individual may appeal therefrom, within 10 days after a copy thereof was mailed to his last known address; and the procedures and limitations prescribed in s. 108.09 shall apply to any such appeal.

(b) To recover any overpayment for which liability has been thus established, the commission may file a warrant against the liable individual in the same manner as is provided in this section for collecting delinquent payments from employers.

108.23 PREFERENCE OF REQUIRED PAYMENTS. In the event of an employer's dissolution, reorganization, bankruptcy, receivership, assignment for benefit of creditors, judicially confirmed extension proposal or composition, or any analogous situation including the administration of

estates in courts of probate, the payments required of the employer under this chapter shall have preference over all claims of general creditors and shall be paid next after the payment of preferred claims for wages. Provided, however, that if the employer is indebted to the federal government for taxes due under the federal unemployment tax act and a claim for such taxes has been duly filed, the amount of contributions which should be paid to allow the employer the maximum offset against such taxes shall have preference over preferred claims for wages and shall be on a par with debts due the United States, if by establishing such preference the offset against the federal tax can be secured under s. 3302 (a) (3) of the federal unemployment tax act.

108.24 PENALTIES. (1) Any person who knowingly makes a false statement or representation to obtain any benefit payment under this chapter, either for himself or for any other person, shall upon conviction be deemed guilty of a misdemeanor and be punished by a fine of not less than $25 nor more than $100, or by imprisonment in the county jail not longer than 30 days, or by both such fine and imprisonment; and each such false statement or representation shall constitute a separate and distinct offense. The commission may by civil action recover any benefits obtained by means of any statement or representation which is untrue.

(2) Any person who knowingly makes a false statement or representation in connection with any report or as to any information duly required by the commission hereunder, or who knowingly refuses or fails to keep any records or to furnish any reports or information duly required by the commission hereunder, shall upon conviction be deemed guilty of a misdemeanor and be punished by a fine of not less than $25 nor more than $100, or by imprisonment in the county jail not longer than 30 days, or by both such fine and imprisonment; and each such false statement or representation and every day of such refusal or failure shall constitute a separate and distinct offense.

(3) Any person who makes any deduction from the wages of any employe because of liability for contributions hereunder or because of the employe's potential right to benefits,

or who knowingly refuses or fails to furnish to an employe any notice, report or information duly required hereunder by the commission to be furnished to such employe, or who, directly or indirectly by promise of reemployment or by threat not to employ or not to reemploy or by any other means, attempts to induce any employe to refrain from claiming or accepting benefits or to waive any other right hereunder, or whose rehiring policy has discriminated against former employes by reason of their having claimed benefits, shall upon conviction be deemed guilty of a misdemeanor and be punished by a fine of not less than $25 nor more than $100, or by imprisonment in the county jail not longer than 30 days, or by both such fine and imprisonment; and each such deduction from wages, and every day of such refusal or failure, and each such attempt to induce shall constitute a separate and distinct offense.

108.26 SAVING CLAUSE. The legislature reserves the right to amend or repeal all or any part of this chapter at any time; and there shall be no vested private right of any kind against such amendment or repeal. All the rights, privileges, or immunities conferred by this chapter or by acts done pursuant thereto shall exist subject to the power of the legislature to amend or repeal this chapter at any time.

OTHER STATUTORY PROVISIONS

(Supplementing Chapter 108, above)

relating to unemployment compensation

101.37 ACCEPTANCE OF FEDERAL ACT RELATING TO PUBLIC EMPLOYMENT OFFICES.

(1) The legislature hereby accepts the provisions of an act of congress, approved June 6, 1933, entitled "An act to provide for the establishment of a national employment system and for co-operation with the states in the promotion of such system, and for other purposes."

(2) The industrial commission of Wisconsin is hereby authorized and directed to co-operate with the United States employment service in the administration of said act and in carrying out all agreements made thereunder.

(3) All funds made available to this state under said act shall, upon receipt thereof, be paid into the unemployment administration

fund under s. 20.440 (1) (u) and (v), and are appropriated therefrom to the industrial commission to be expended as required by the act of congress making such funds available and the rules and regulations issued thereunder.

20.440 (1) UNEMPLOYMENT ADMINISTRATION FUND.

(u) All federal moneys paid to the industrial commission or the state for the Wisconsin state employment service pursuant to s. 101.37 or for the administration of unemployment compensation under ch. 108, and any moneys paid to the industrial commission and deposited by it with the state treasurer pursuant to s. 108.20, and all moneys duly transferred to the unemployment administration fund pursuant to s. 20.440 are appropriated to the industrial commission for the performance of the functions of the commission under ch. 108, and for its conduct of public employment offices consistently with s. 101.37, and for its other efforts to regularize employment; to pay the compensation and expenses of appeal boards and of advisory committees; and to pay allowances stimulating education during unemployment. Any balance remaining in this fund at the close of any fiscal year shall not lapse but shall remain available for the purposes herein specified.
